3. Australia/Japan workshop on neutron capture therapy for malignant melanoma, Sydney (Australia), 13-14 Dec 1988). Order Number DE90002004. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

A study was designed to identify the most accurate and reliable procedures for the digestion of biological tissues prior to the determination of boron by inductively-coupled, plasma-atomic emission spectroscopy (ICP-AES). The four procedures used in this study were an acid bomb digestion and digestions performed in test tubes using perchloric acid and hydrogen peroxide, nitric acid and hydrogen peroxide, and nitric acid alone. Digestions using nitric acid and hydrogen peroxide and nitric acid alone were performed in a manner analogous to the perchloric acid/hydrogen peroxide procedure. The tissues used in the study were from dogs that had been administered a boron compound ($Na_2B_{12}H_{11}SH$) and included two brain tissues, a liver and a tongue. These tissues were selected in order to eliminate results that may be due to surface spiking only. None of the test tube procedures were successful in completely dissolving the samples, as was evidenced by residual color and a coagulated precipitate. The amount of precipitate was much larger for the brain tissues in all cases. The acid bomb digestion and the perchloric acid/hydrogen peroxide procedures gave comparable boron concentrations for all of the tissues in this study. 2 refs., 1 tab.

3610 (AD-A–210231/7/XAB) **Cloning and characterization of the recA gene of Aquaspirillum magnetotacticum.** Berson, A.E.; Hudson, D.V.; Waleh, N.S. SRI International, Menlo Park, CA (USA). Molecular Biology Dept. 1988. 21p. Available from NTIS, PC A03/MF A01.

The recA gene of Aquaspirillum magnetotacticum was isolated from a genomic library and introduced into a recA mutant strain of Escherichia coli K12. The cloned gene complemented both the recombination and DNA repair deficiency of the host and its protein product promoted the proteolytic cleavage of the LexA protein. A protein whose molecular weight is similar to that of the RecA protein of E. coli was associated with the cloned sequence.

3611 (AD-A–210332/3/XAB) **Genetic engineering of single-domain magnetic particles. Progress report, 1 March-15 June 1989.** Waleh, N.S. SRI International, Menlo Park, CA (USA). Molecular Biology Dept. 15 Jun 1989. 5p. Available from NTIS, PC A02/MF A01.

Magnetotactic bacteria selectively synthesize membrane-bound, nanometer-sized, single-domain magnetic particles known as magnetosomes. Because these bacteria have complex nutritional requirements, only one species, Aquaspirillum magnetotacticum has been grown in pure culture. This bacterium produces approximately twenty intracellular magnetic particles per cell of single-domain size. To synthesize these particles, A. magnetotacticum must possess a highly efficient system(s) to remove iron from the environment. To investigate the mechanism of iron uptake and the synthesis of magnetic particles in this microorganism, the author will construct and screen genomic libraries of A. magnetotacticum for the iron-uptake and magnetosome-synthesizing genes. He will also use the available information on the mechanisms of iron uptake in other bacteria to identify and characterize analogous systems, related genes, or homologous sequences in this magnetotactic bacterium. He has determined already that the genes of A magnetotacticum are functionally expressed in E. coli. Furthermore, he has identified in this bacterium a sequence homologous to the tonB gene of E. coli. The tonB gene is known to be required for iron assimilation in enteric bacteria. The long-term goal of this project is to clone the identified genes in a suitable host organisms that would make the large-scale, regulated production of single-domain magnetic particles possible.

3612 (PB–89-223622/XAB) **Utility of short-term tests for genetic toxicity.** DeMarini, D.M.; Lewtas, J.; Brockman, H.E. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 24p. (EPA–600/D-89/061). Available from NTIS, PC A03/MF A01.

By definition, short-term tests (STTs) for genetic toxicity detect genotoxic agents, not carcinogens specifically. However, there is sufficient evidence, based on mechanistic considerations alone, to say that genotoxic agents are potential carcinogens. STTs have high statistical power, are almost always replicated, can be performed rather easily under various sets of experimental conditions, are relatively inexpensive, and detect a variety of endpoints relevant to carcinogenesis. In addition, several STTs have shown considerable utility in evaluating the genotoxic effects of real-world, environmental complex mixtures as well as the antimutagenic effects of various pure compounds and complex mixtures. STTs are likely to continue to be refined, resulting in STTs that are increasingly more relevant to human mutation and disease. Their utility should not be judged solely against the questionable standard of a rodent carcinogenicity assay.

3614 (AD-A–210773/8/XAB) **Robust spatial calibration of a planar positron camera. Final report, October 1985-September 1987.** Weathersby, P.K.; Survanshi, S.S.; Meyer, P. Naval Medical Research Inst., Bethesda, MD (USA). Oct 1988. 29p. (NMRI–88-23). Available from NTIS, PC A03/MF A01.

The planar positron camera is a three-dimensional imaging device with two parallel and planar large crystal detectors. The spatial calibration problem is to define the relation between the raw digitized detector output to a physical coordinate system in the imaged space. In a calibration procedure, a positron point source is placed in a series of known emission locations during data acquisition. Data are then fit to a mathematical model to estimate spatial offsets and gains in the detector. Fitting procedures require some assumptions about error distribution, and the assumption of normally distributed error used in least-squares estimation does not appear suitable for these detectors. In simulated data sets, alternative non-normal distributions (robust estimators) allowed successful recovery of camera spatial parameters even with a few hundred total detected positron emissions. With experimental data, the robust procedures avoided the unreasonable camera performance parameters estimated by least squares.

3615 (BNL–43086) **Neutron capture therapy for melanoma.** Coderre, J.A.; Glass, J.D.; Micca, P.; Fairchild, R.G. Brookhaven National Lab., Upton, NY (USA). [1988]. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-8802102–6: Workshop on clinical aspects of Boron Neutron Capture Theory (BNCT), Upton, NY (USA), 1-2 Feb 1988). Order Number DE90001331. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The development of boron-containing compounds which localize selectively in tumor may require a tumor-by-tumor type of approach that exploits any metabolic pathways unique to the particular type of tumor. Melanin-producing melanomas actively transport and metabolize aromatic amino acids for use as precursors in the synthesis of the pigment melanin. It has been shown that the boron-containing amino acid analog p-borono-phenylalanine (BPA) is selectively accumulated in melanoma tissue, producing boron concentrations in

tumor that are within the range estimated to be necessary for successful boron neutron capture therapy (BNCT). We report here the results of therapy experiments carried out at the Brookhaven Medical Research Reactor (BMRR). 21 refs., 5 figs., 3 tabs.

3616 (DOE/ER/60561–T1) **New techniques for positron emission tomography in the study of human neurological disorders: Progress report, June 15, 1987–November 15, 1989.** Kuhl, D.E. Michigan Univ., Ann Arbor, MI (USA). Div. of Nuclear Medicine. Nov 1989. 26p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-87ER60561. Order Number DE90003375. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This progress report represents a summary of our performance during the two year period following initial start-up of these research activities at Michigan. Productivity has been excellent; already over 47 papers and abstracts have been published or accepted for publication from this still young program. They represent significant contributions to extending the technology of positron emission tomography in the study of human neurological disorders. Our focus is to develop more cost effective and efficient means for producing new functionally specific tracers and simpler, less expensive, means for acquiring and interpreting quantitative data. These improved processes are required for the future growth of PET as a sophisticated research tool and for the transfer of this technology to clinical use. Our approach concentrates on two separate yet related areas, radiosynthesis and data analysis. In subproject 1, Drs. Jewett and Mulholland have introduced innovative methods for improving 11C and 18F synthetic processes. In Subproject 2, Dr. Hutchins has laid the foundations for an objective analysis of the limitations and opportunities for quantifying regional PET data. In Subproject 3, Dr. Koeppe has extended rapid techniques for parameter estimation in kinetic modeling of new ligands. Finally, in Subproject 4, Dr. Frey has applied kinetic analysis to ligand tracing of the cholinergic neurotransmitter system in animal and human brain. These DOE supported studies have direct impact on clinical research here and elsewhere which is expected to improve diagnosis and treatment of degenerative neurological diseases, mental illness and brain tumors. 47 refs., 7 figs., 4 tabs.

3617 (DOE/ER/60634–1) **Theory of RBE: Annual progress report, January 1, 1989–December 31, 1989.** Katz, R. Nebraska Univ., Lincoln, NE (USA). Dept. of Physics. 15 Jul 1989. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER60634. Order Number DE90002692. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Improvement in our knowledge of the radial distribution of dose about the path of an energetic heavy ion in different media. We wish to scale our calculated radial dose distribution for liquid water to other media through a simplified model based on the electron density in different media, and in which the parameters of our radial dose expression are, adjusted so that the radial integral of the dose agrees with tabulated values of the stopping power of protons in these media. We have generated an approximation to the radial dose in NaI, LiF, SiO_2, and Si, and have found that our calculation for Si is in reasonable agreement with a Monte Carlo calculation for Si made at Oak Ridge. We have now applied these results to LiF TLD's and to scintillation in NaI(Tl). We intend to apply them to other track phenomena. Our analytic expression for the radial dose distribution is presently segmented into two parts, for very low and for high energy ions. This is because the range energy data for electrons in aluminum falls into two parts, with the range proportional to the electron energy at low electron energies, and varying as the 5/3 power of the energy at higher energies. 22 refs.

3618 (DOE-tr–89-34) **Thiourea derivatives: Process for their production and for their use for neutron capture therapy of malignant melanomas.** (Thioharnstoffderivate: Verfahren zu ihrer herstellung sowie ihre verwendung fuer die neutroneneinfangtherapy von malignen melanomen). USDOE, Washington, DC (USA). 1989. 43p. Translation source information not available. Sponsored by U.S. DOE Management & Administration. Order Number DE90002745. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This invention is concerned with a new kind of thiourea derivative; a process for their preparation, and their use for neutron capture therapy of malignant melanomas. Thiourea derivatives are known as substance which can be selectively accumulated in malignant melanomas, due either to active melanin synthetics or to the presence of melanin. Malignant melanomas are tumors of the melanocytes. Their incidence rate is particularly high in the light-skinned population. The rate is rising in most industrial countries.

3619 (FNAL-TM–1622) **Proton linac for hospital-based fast neutron therapy and radioisotope production.** Lennox, A.J.; Hendrickson, F.R.; Swenson, D.A.; Winje, R.A.; Young, D.E. Fermi National Accelerator Lab., Batavia, IL (USA). Sep 1989. 2p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8909244–1: International heavy particle therapy workshop, Villigen (Switzerland), 18-20 Sep 1989). Order Number DE90001875. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Recent developments in linac technology have led to the design of a hospital-based proton linac for fast neutron therapy. The 180 microamp average current allows beam to be diverted for radioisotope production during treatments while maintaining an acceptable dose rate. During dedicated operation, dose rates greater than 280 neutron rads per minute are achievable at depth, DMAX = 1.6 cm with source to axis distance, SAD = 190 cm. Maximum machine energy is 70 MeV and several intermediate energies are available for optimizing production of isotopes for Positron Emission Tomography and other medical applications. The linac can be used to produce a horizontal or a gantry can be added to the downstream end of the linac for conventional patient positioning. The 70 MeV protons can also be used for proton therapy for ocular melanomas. 17 refs., 1 fig., 1 tab.

3620 (IAEA-R–3948-F) **Quality control scheme for thyroid related hormones measured by radioimmunoassay. Final report for the period 1 January 1985 - 1 April 1989.** Kamel, R.S. Iraq Atomic Energy Commission, Baghdad (Iraq). Nuclear Research Centre; International Atomic Energy Agency, Vienna (Austria). Sep 1989. 117p. Order Number DE90608415. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

A regional quality control scheme for thyroid related hormones measured by radioimmunoassay is being established in the Middle East. The scheme started in January 1985, with eight laboratories which were all from Iraq. At the present nineteen laboratories from Iraq, Jordan, Kuwait, Saudi Arabia and United Arab Emirates (Dubai) are now participating in the scheme. The scheme was supported by the International Atomic Energy Agency. All participants received monthly three freeze dried quality control samples for assay. Results for T3, T4 and TSH received from participants are analysed statistically batch by batch and returned to the participants. Laboratories reporting quite marked bias results were contacted to check the assay performance for that particular batch and to define the weak points. Clinical interpretation for certain well defined samples were reported. A regular case study report is recently introduced to the scheme and will be distributed regularly as one of the guidelines in establishing a trouble shooting programme throughout the scheme. The overall mean between the laboratory performance showed a good result for the T4, moderate but acceptable for T3 and poor for TSH. The statistical analysis of the results based on the concept of a "target" value is derived from the believed correct value the "Median". The overall mean bias values (ignoring signs) for respectively low, normal and high concentration samples were for T4 18.0 +- 12.5, 11.2 +- 6.4 and 11.2 +- 6.4, for T3 28.8 +- 23.5, 11.2 +- 8.4 and 13.4 +- 9.0 and for TSH 46.3 +- 50.1, 37.2 +- 28.5 and 19.1 +- 12.1. The scheme proved to be effective not only in improving the overall performance but also it helped to develop awareness of the need for internal quality control programmes and gave confidence in the results of the participants. The scheme will continue and will be expanded to involve more laboratories in the region. Refs, fig and tabs.

3621 (INIS-BR–1734) **Rapid purification of radiodinated glucagon with Sep-Pak^R reversed phase cartridges.** Borghi, V.C.; Nascimento, M.; Wajchenberg, B.L. Sao Paulo Univ., SP (Brazil). Faculdade de Medicina. [1989]. 15p. Order Number DE90608416. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A simple, rapid method is described for the purification of radioiodinated glucagon for use in radioimmunoassay. Samples of the

radioiodinated hormone, before and after purification are analysed on polyacrylamide gel electrophoresis. The ^{125}I incorporation in these samples is also checked through thrichloroacetic acid precipitation. The usefulness of this labeled glucagon in radioimmunoassay is demonstrated by its biding to specific antibodies. (M.A.C.).

3624 (INIS-mf–12015) **Design and test of a MR-imager with superconducting magnet. Final report.** Hentschel, D.; Vetter, J. Siemens A.G., Erlangen (Germany, F.R.). Unternehmensbereich Medizinische Technik; Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.). Feb 1988. 101p. (In German). Contract BMFT 01 VF042/0. Order Number DE90722246. Available from NTIS (US Sales Only), PC A06/MF A01.

Today magnets with small bores of some centimeters in diameter and flux densities of up to 12 T are used for Magnetic Resonance (MR) examinations of small animals and samples of tissue. To investigate the possibilities of MR imaging and spectroscopy of humans at high flux densities, two superconducting whole-body magnets have been built by the Siemens AG and completed to research-type MR systems. First a 2 T magnet with a 1 m bore and second a 4 T magnet with a 1.25 m bore and a total weight of 10.6 t have been built. With the 2 T system methods for fast imaging (FISP) and precise determination of the longitudenal relaxation time T_1 were developed. For sepctroscopic applications several volume selection techniques were investigated. Phosphorus spectroscopy at the 4 T system demonstrated the gain in signal-to-noise ratio and spectral resolution. Hydrogen imaging of the head at 170 MHz is still possible without image degradation of the RF-field by penetration effects. Sodium imaging at 4 T offers the ability to reduce the measurement time or improve the spatial resolution. The clinical relevance of a 4 T MR-system has still to be investigated. (orig.) With 28 refs., 5 tabs., 60 figs.

3637 (INIS-SU–114, pp. 5-6) **Efficiency of larynx cancer radiotherapy in dose multifractionating.** Berezhnov, I.P.; Gorienko, V.V.; Koleda, A.A. Minskij Meditsinskij Inst., Minsk (Byelorussian SSR). 1988. (In Russian). (CONF-8809380–: 4. conference of roentgenologists and radiologists of Byelorussian SSR, Grodno (USSR), 8 Sep 1988). In *Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports.* Order Number DE90705937. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

AT-11764.

Short note. NEOPLASMS/radiotherapy; RADIOTHERAPY/fractionated irradiation; LARYNX; NEOPLASMS; RADIOTHERAPY; PATIENTS; RADIATION DOSES; RADIATION EFFECTS

3638 (INIS-SU–114, pp. 6-8) **Evaluation of radiocurability of small cell pulmonary carcinoma according to full value of local control during radiotherapy in clinic.** Bojko, A.V.; Zvekotkina, L.S.; Frank, G.A. Minskij Meditsinskij Inst., Minsk (Byelorussian SSR). 1988. (In Russian). (CONF-8809380–: 4. conference of roentgenologists and radiologists of Byelorussian SSR, Grodno (USSR), 8 Sep 1988). In *Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports.* Order Number DE90705937. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

AT-11764.

Short note. CARCINOMAS/radiosensitivity; CARCINOMAS/radiotherapy; CARCINOMAS; RADIOSENSITIVITY; RADIOTHERAPY; FRACTIONATED IRRADIATION; INTEGRAL DOSES; LUNGS; PATIENTS; RESPIRATORY SYSTEM DISEASES

3639 (INIS-SU–114, pp. 8-9) **Possibilities of radiation and combined therapy in treatment of patients with esophagus cancer.** Gerasimyak, V.G. Minskij Meditsinskij Inst., Minsk (Byelorussian SSR). 1988. (In Russian). (CONF-8809380–: 4. conference of roentgenologists and radiologists of Byelorussian SSR, Grodno (USSR), 8 Sep 1988). In *Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports.* Order Number DE90705937. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

AT-11764.

Short note. NEOPLASMS/radiotherapy; NEOPLASMS/surgery; EARLY RADIATION EFFECTS; ESOPHAGUS; INTEGRAL DOSES; NEOPLASMS; RADIOTHERAPY; SURGERY; PATIENTS; SIDE EFFECTS; SURVIVAL CURVES

3640 (INIS-SU–114, pp. 9-10) **Evolution of radiotherapy methods in breast cancer.** Datsenko, V.S. Minskij Meditsinskij Inst., Minsk (Byelorussian SSR). 1988. (In Russian). (CONF-8809380–: 4. conference of roentgenologists and radiologists of Byelorussian SSR, Grodno (USSR), 8 Sep 1988). In *Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports.* Order Number DE90705937. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

AT-11764.

Short note. 1 tab. NEOPLASMS/radiotherapy; DELAYED RADIATION EFFECTS; FRACTIONATED IRRADIATION; HYPERTHERMIA; MAMMARY GLANDS; NEOPLASMS; RADIOTHERAPY; PATIENTS; SURGERY

3641 (INIS-SU–114, pp. 11-12) **Radionuclidetherapy of metastases of thyroid cancer to lungs.** Demidchik, E.N.; Kruglova, E.N.; Babich, N.P.; Minajlo, T.I. and others. Minskij Meditsinskij Inst., Minsk (Byelorussian SSR). 1988. (In Russian). (CONF-8809380–: 4. conference of roentgenologists and radiologists of Byelorussian SSR, Grodno (USSR), 8 Sep 1988). In *Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports.* Order Number DE90705937. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

AT-11764.

Short note. METASTASES/radioimmunoassay; METASTASES/radiotherapy; RADIOTHERAPY/iodine 131; LABELLED COMPOUNDS; LUNGS; METASTASES; RADIOIMMUNOASSAY; RADIOTHERAPY; NEOPLASMS; ORAL ADMINISTRATION; PATIENTS; SURGERY; THYROID

3642 (INIS-SU–114, pp. 12-13) **Radiation response in patients with pulmonary carcinoma during remote gamma therapy by means of dynamic multifractionating.** Dzhevechka, I.I.; Atkochyus, V.B.; Mamontov, V.V. Minskij Meditsinskij Inst., Minsk (Byelorussian SSR). 1988. (In Russian). (CONF-8809380–: 4. conference of roentgenologists and radiologists of Byelorussian SSR, Grodno (USSR), 8 Sep 1988). In *Methods of increasing of radiation*

action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports. Order Number DE90705937. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

AT-11764.

Short note. CARCINOMAS/radiotherapy; LUNGS/radiation injuries; RADIOTHERAPY/side effects; CARCINOMAS; RADIOTHERAPY; FRACTIONATED IRRADIATION; GAMMA RADIATION; INTEGRAL DOSES; LUNGS; PATIENTS; RESPIRATORY SYSTEM DISEASES

3643 (INIS-SU–114, pp. 14-15) **Prospects for development of radiotherapy of patients with esophagus cancer (role of modifying factors).** Isaev, I.G.; Goldobenko, G.V.; Tkachev, S.I.; Kim, F.P. Minskij Meditsinskij Inst., Minsk (Byelorussian SSR). 1988. (In Russian). (CONF-8809380–: 4. conference of roentgenologists and radiologists of Byelorussian SSR, Grodno (USSR), 8 Sep 1988). In *Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports.* Order Number DE90705937. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

This document contains a summary of AIDS-related research being conducted at the Los Alamos National Laboratory. Topics include mathematical models of AIDS epidemiology, risk assessment models for various human populations, baseline studies of the virus, and aspects of viral infectivity. (TEM)

3677 (LBL–27919) **Treatment planning for stereotactic heavy-charged particle radiosurgery of the brain.** Frankel, K.A.; Phillips, M.H.; Lyman, J.T.; Chuang, F.Y.S.; Fabrikant, J.I.; Levy, R.P.; Rosander, K. Lawrence Berkeley Lab., CA (USA). Sep 1989. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8905227–3: International conference on radiosurgery a neurosurgical approach to intracranial lesions, Charlottesville, VA (USA), 1-5 May 1989). Order Number DE90003275. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.
Treatment planning techniques for stereotactic charged particle (helium ion) Bragg peak radiosurgery of intracranial vascular and other disorders are described. Stereotactic neuroradiological procedures (cerebral angiography, x-ray computed tomography (CT) and magnetic resonance image (MRI) scanning) define precise intracranial treatment targets on axial, and reformatted coronal and sagittal CT slices. For a given target, beam ports are selected, and aperture size and shape, ranges, compensation, and Bragg peak spread are determined using interactive computer programs. Beam ports are selected to protect critical and sensitive brain structures, or to minimize radiation dose to adjacent normal brain, while delivering a uniform dose distribution through out the target volume. Two-dimensional isodose treatment plans are generated by computer for each CT slice of interest on a pixel-by-pixel basis. Three-dimensional, CT-based treatment planning is developed for specialized clinical uses. In conjunction with dose-volume histograms, three-dimensional plans provide a method for comparing treatment plans of differing radiation modalities, i.e., photons, protons, and heavy charged particles. Treatment plans are presented for a range of intracranial target volumes. 9 refs., 3 figs.

3678 (PB–89-216204/XAB) **Technique for chest radiography for pneumoconiosis.** Sargent, E.N. American Coll. of Radiology, Chicago, IL (USA). 1982. 148p. Available from NTIS, PC A07/MF A01.
Routine radiographic chest examinations have been performed using a variety of techniques. Although chest radiography is one of the most commonly performed radiographic examinations, it is often difficult to obtain consistently good quality roentgenograms. This publication provides a simple guide and relatively easy solution to the many problems that radiologic technologists might encounter. The language is purposely relatively simple and care has been taken to avoid difficult mathematical and physical explanations. The intent is to provide an easily referrable text for those who may encounter difficulties in producing acceptable chest radiographs.

3679 (PB–89-221139/XAB) **Handbook of selected tissue doses for projections common in diagnostic radiology.** Rosenstein, M. Food and Drug Administration, Rockville, MD (USA). Center for Devices and Radiological Health. Dec 1988. 71p. (HHS/PUB/FDA–89-8031). Available from NTIS, PC A04/MF A01.
Supersedes PB–257-482.
This handbook provides data for estimating the radiation doses absorbed by various tissues depending on the projection used in diagnostic radiology. The effect of dosage changes on tissues can be evaluated from the material. Variations due to anthropometric characteristics of the human body and its organs are not considered.

3680 (UCRL–100702) **Radiation damage and its influence on source requirements for high resolution x-ray holography.** London, R.A. Lawrence Livermore National Lab., CA (USA). [1989].

8p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8905192–2: Conference on X-ray microimaging for the life sciences, Berkeley, CA (USA), 24-26 May 1989). Order Number DE90002508. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Soft x-ray holography offers the possibility of obtaining high resolution, 3-D images of living cells and organelles therein. To achieve a specified resolution, a certain number of photons must be scattered by the smallest features of interest within the sample. This requires a certain irradiating fluence, the magnitude of which depends on the wavelength of the x rays and the scattering cross- sections of the features. Unfortunately, irradiation of the sample will be accompanied by the absorption of x rays. If the dose is large, the sample will be damaged, possibly compromising the quality of the image. A theoretical study of the scattering and absorption of x rays during the creation of a hologram is described. Using a new prescription for scattering by condensed biological materials (e.g., protein and/or DNA) within the aqueous environment of a cell, we estimate the irradiating fluence required for a certain resolution and the associated sample dose. The relative merits of different x-ray wavelengths are discussed. A wavelength of about 44Å, just outside the "water window" (23.2–43.7Å), appears to be optimal in that the required fluence and dose are minimized, while reasonable x-ray penetrability is maintained. Estimates are given for the minimum source energy required and the maximum duration of an exposure to capture an image before blurring due heat induce motion. The use of colloidal gold tagging can enhance image contrast and reduce the required irradiating fluence and sample damage. 6 refs., 5 figs.

3681 **Positron emission tomography of the lung.** Schuster, D.P. (Dept. of Internal Medicine, Washington Univ., Medical School, St. Louis MO); Green, M.A. pp. 385 of Pulmonary nuclear medicine. Loken, M.K Appleton and Lange, E Norwalk, CT (1987).

The major function of the lung is to exchange the respiratory gases, and carbon dioxide. This vital process is accomplished through the regional matching of ventilation to perfusion. Much of what they know in this area has been the result of semiquantitative studies using radiopharmaceuticals and external radiation counting techniques. These approaches have been less successful when applied to disease states because accurate quantitative regional measurements have been difficult to obtain in such circumstances. This paper discusses the development of positron emission tomography (PET), an important technological step forward in resolving these differences in regional function. To date, most of the experience with PET has come from neurological and cardiovascular applications. Its application to lung physiology is just beginning, but the ability to measure ventilation, perfusion, vascular permeability, extravascular water, and metabolism-accurately and repetitively on a regional level-will undoubtedly provide important new information.

3682 **Antigen-specific composition and in-vivo methods for detecting and localizing an antigenic site and for radiotherapy.** Larson, S.M.; Finn, R.; Carrasquillo, J.A. To Department of Health and Human Services, Washington, DC (US). USA Patent Application 7-386,095. 28 Jul 1989. 39p. Available from NTIS, PC A03/MF A01.

This Government-owned invention available for U.S. licensing and, possibly, for foreign licensing. Copy of application available NTIS.

The in-vivo method of radiotherapy directed to an antigenic site comprises administering to a subject in need of the therapy an amount of the antigen-specific composition in a dose that will reduce the size of a tumor associated with the antigen. The in-vivo method for detecting and localizing an antigenic site in a subject in need of such detection comprises administering an amount of the antigen-specific composition of the invention effective to localize the antigen-antibody binding site and scanning the subject's body with a positron-emitter (PET) detector to attain the localization of the site. The in-situ method of radiotherapy directed to an antigenic site in a subject in need of such therapy comprises detecting and localizing the site by the in-vivo method described above followed by PET.

3683 **Analysis of cell lineage during early mouse embryogenesis.** Pedersen, R.A. (California Univ., San Francisco, CA (USA). Lab. of Radiobiology and Environmental Health). pp. 359 of Developmental toxicology: Mechanisms and risk. McLachlan, J.A.; Pratt, R.M.; Markert, C.L. Cold Spring Harbor Laboratory, Cold Spring Harbor, NY (1987). DOE Contract AC03-76SF01012.

The analysis of cell lineage in early mouse embryogenesis has been undertaken using microinjected lineage tracers. This approach reveals the fate of individual or pairs of sister progenitor cells in the intact preimplantation or early postimplantation embryo. The authors' results indicate that the inner cell mass of the mouse embryo is established during the fourth and fifth cleavage divisions and that all remaining outer cells contribute to the trophectoderm. Their results do not, however, support the idea that trophectoderm and inner cell mass are mutually exclusive clonal entities at the blastocyst stage. The authors find that inner cells contribute to the polar trophectoderm during blastocyst growth. An analysis of cell fate in the early postimplantation endoderm, using this approach, indicates that individual embryonic endoderm cells labeled at mid- or late-primitive-streak stages contribute descendants either to extraembryonic visceral endoderm or to endoderm lining the embryonic gut, but rarely to both tissue populations.

3684 (PB–89-230239/XAB) **Testimony of the National Institute for Occupational Safety and Health on the Occupational Safety and Health Administration's proposed rule on hazard communication.** Millar, J.D.; Niemeier, R.W.; Reed, L.D.; Johnson, D.L.; Ahlers, H.W. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). 6 Dec 1988. 8p. Available from NTIS, PC A02/MF A01.

The testimony was presented in support of earlier information concerning OSHA's final rule to extend coverage of the Hazard Communication Standard to those workers in nonmanufacturing employment as well as those employed in the manufacturing sector. The concept of hazard communication in the workplace was fully supported by NIOSH. It would be desirable to achieve uniformity in the design of and information contained on labels generated by the various industries. One general concern about the OSHA rule was the lack of detailed guidelines on scientific criteria for making the determination of whether a substance is hazardous. The efforts of NIOSH which would be useful as a source of information in determining hazards were again cited. NIOSH agreed with OSHA's view that the extent of risk or size of employer should not be determining factors with regard to a decision as to whether the information must be conveyed. Consumer products used in an industrial setting may carry hazards beyond those anticipated in the home and should also be covered in the label requirements. Material-safety data sheets would provide a base determination of hazard potential and enhance the ability of both employers and workers to identify hazardous chemicals.

3686 (INIS-BR–1735) **Bud irradiation to obtain resistence to citrus canker through induction of mutation.** Menten, J.O.M.; Pompeu Junior, J.; Dragone, P.; Sobrinho, J.T.; Prada, V.A.; Tulmann Neto, A.; Ando, A. Centro de Energia Nuclear na Agricultura, Piracicaba, SP (Brazil). [1989]. 9p. (In Portuguese). Order Number DE90608255. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The radiosensitivity to gamma rays of the bud of the orange cultivar Pera is determined through irradiation of buds with several doses; the irradiated buds were grafted onto rootstocks of lemon cu. Cravo. The grafting percentage and the development of the V_1 stem from the irradiated buds are analysed; it is concluded that the best dose for induction of mutation is 4,0 OK. New buds are irradiated and grafted with this dose. The V_1 stems are Separeted into 3 Groups, according to the position of the buds on the stem. The V_2 stems are analysed according to the morphological alteraTions due to irradiation. (M.A.C.).

3687 (INIS-mf–11543(No.1)) **Activities of the Entomology Unit. Report No.1, 1988.** International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Nov 1988. 75p. Order Number DE90608276. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

This semiannual report describes the activities carried out by the staff of the Entomology Unit at the Agency's Laboratories, Seibersdorf, between 1 January and 31 July 1988. The colonization of Glossina spp. was continued to provide insects for ongoing and anticipated control programmes and supporting research activities. Hybridization of the two subspecies palpalis palpalis (GPP) and palpalis gambiensis (GPG) was studied. Rearing of medfly was studied. Figs and tabs.

3688 (PB–89-860035/XAB) **Food and grain preservation through irradiation. January 1970-April 1989 (Citations from the NTIS data base). Report for January 1970-April 1989.** National Technical Information Service, Springfield, VA (USA). Apr 1989. 156p. Available from NTISPC N01/MF N01.

Supersedes PB–88-856372.

This bibliography contains citations concerning the principles, methods, and results of using ionized irradiation to preserve grains and foods through reduction of spoilage and infestation. The citations cover irradiation chemistry as it affects food wholesomeness, nutrition, and changes in food value. Irradiation methods include sources of irradiation, primarily gamma rays, and dosage for specific foods. Many articles reference public health and safety, studies of effect of irradiated food on laboratory animals, and associated standards and legislation. (This updated bibliography contains 338 citations, 13 of which are new entries to the previous edition.)

3689 (AD-A–211160/7/XAB) **Gamma-radiation affects active electrolyte transport by rabbit ileum. 2. Correlation of alanine and theophylline response with morphology.** Gunter-Smith, P.J. Armed Forces Radiobiology Research Inst., Bethesda, MD (USA). 1989. 15p. (AFRRI-SR–89-16). Available from NTIS, PC A03/MF A01.

Pub. in Radiation Research, Vol. 117, 419-432(1989).

The response of ileal segments isolated from rabbits to an actively transported amino acid and a secretagogue was evaluated following exposure to 10-Gy whole-body gamma irradiation. The ability of ileal segments to respond to the actively transported amino acid, alanine, was not significantly diminished until 96 h postexposure. Decreased responsiveness to the secretagogue, theophylline, occurred earlier at 72 h. These effects did not appear to be accounted for by decreased food intake of irradiated animals alone. Examination of intestinal morphological changes with respect to these changes in electrolyte transport revealed that decreased amino acid transport coincides with loss of intestinal villi. Although a morphological correlate of decreased secretory response was not as striking as that for absorption, the theophylline response appeared to decline concomitant with the appearance of increased mitotic activity in the intestinal crypts. The result of this study indicate that, following a dose of 10 Gy, the inability of these tissues to respond to amino acids is due to a loss of mature villus absorptive cells subsequent to denudation of the intestinal mucosa. There appeared to be little impairment of cell membrane transport processes for alanine. In contrast, the decreased secretory response could not be correlated with the disappearance of any one cell type and perhaps results from increased proliferation in the crypts at the expense of differentiation.

3690 (AD-A–211185/4/XAB) **Effect of gamma radiation on DNA methylation.** Kalinich, J.F.; Catravas, G.N.; Snyder, S.L. Armed Forces Radiobiology Research Inst., Bethesda, MD (USA). 1989. 14p. (AFRRI-SR–89-19). Available from NTIS, PC A03/MF A01.

Pub. in Radiation Research, Vol. 117, 185-197(1989).

The effect of ^{60}Co gamma radiation on DNA methylation was studied in four cultured cell lines. In all cases a dose-dependent decrease in 5-methylcytosine was observed at 24,48, and 72 h postexposure to 0.5-10 Gy. Nuclear DNA methyltransferase activity decreased while cytoplasmic activity increased in irradiated (10 Gy) V79A03 cells as compared to controls. No DNA demethylase activity was detected in the nuclei of control or irradiated V79A03 cells. Additionally gamma radiation resulted in the differentiation of C-1300 N1E-115 cells, a mouse neuroblastoma line, in a dose- and time-dependent manner. These results are consistent with the hypothesis that (1) genes may be turned on following radiation via a mechanism involving hypomethylation of cytosine and (2) radiation-induced hypomethylation results from decreased intranuclear levels of DNA methyltransferase.

3691 (AD-A–211190/4/XAB) **Radiation quality and rat motor performance.** Bogo, V.; Zeman, G.H.; Dooley, M. Armed Forces Radiobiology Research Inst., Bethesda, MD (USA). 1989. 13p. (AFRRI-SR–89-15). Available from NTIS, PC A03/MF A01.

Pub. in Radiation Research, Vol. 118, 341-352(1989).

The effects of bremsstrahlung, electron, gamma, and neutron radiations were investigated on the motor performance of male Sprague-Dawley rats. Rats were irradiated at a midline tissue dose rate of 20 Gy/min + or -1 with one of the following:18.6-MeV electrons (N = 40) or 18.1-MVp bremsstrahlung (N = 57) from, a linear accelerator, 60 Co 1.25-MeV gamma-ray photons (N = 48), or reactor neutrons at 1.67-MeV tissue-kerma weighted-mean energy (N = 43). Radiation effects were determined by establishing median effective doses (ED50) for rats trained on an accelerod, a shock-avoidance motor performance test. ED50's were based on 10-min postexposure performance. The ED50's were 61 Gy for electrons, 81 Gy for bremsstrahlung, 89 Gy for gamma-ray photons, and 98 Gy for neutrons. In terms of relative biological effectiveness to produce early performance decrement (10 min from the start of irradiation), significant differences existed between the electrons and the other three fields and between the bremsstrahlung and neutron fields. These differences could not be explained by macroscopic dose distribution patterns in the irradiated animals. The data imply that different radiation qualities are not equally effective at disrupting performance, with high-energy electrons being the most effective and neutrons the least.

3692 (AD-A–211220/9/XAB) **Enhanced acoustic startle responding in rats with radiation-induced hippocampal granule cell hypoplasia.** Mickley, G.A.; Ferguson, J.L. Armed Forces Radiobiology Research Inst., Bethesda, MD (USA). 1989. 8p. (AFRRI-SR–89-20). Available from NTIS, PC A02/MF A01.

Pub. in Experimental Brain Research, Vol. 75, 28-34(1989).

Irradiation of the neonatal rat hippocampus reduces the proliferation of granule cells in the dentate gyrus and results in locomotor hyperactivity, behavioral preservation, and deficits on some learned tasks. In order to address the role of changes in stimulus salience and behavioral inhibition in animals with this type of brain damage, irradiated and normal rats were compared in their startle reactions to an acoustic stimulus. Irradiated rats startled with a consistently higher amplitude than control and were more likely to exhibit startle responses. These animals with hippocampal damage also failed to habituate to the startle stimulus and, under certain circumstances, showed potentiated startle responses after many tone presentations.

3693 (CONF-8909236–2) **Applied exposure modeling for residual radioactivity and release criteria.** Lee, D.W. Oak Ridge National Lab., TN (USA). [1989]. 8p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC05-84OR21400. From JAERI/EPA workshop on residual radiation and recycle criteria; St. Michaels, MD (USA); 27-28 Sep 1989. Order Number DE90002429. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The protection of public health and the environment from the release of materials with residual radioactivity for recycle or disposal as wastes without radioactive contents of concern presents a formidable challenge. Existing regulatory criteria are based on technical judgment concerning detectability and simple modeling. Recently, exposure modeling methodologies have been developed to provide a more consistent level of health protection. Release criteria derived from the application of exposure modeling methodologies share the same basic elements of analysis but are developed to serve a variety of purposes. Models for the support of regulations for all applications rely on conservative interpretations of generalized conditions while models developed to show compliance incorporate specific conditions not likely to be duplicated at other sites. Research models represent yet another type of modeling which strives to simulate the actual behavior of released material. In spite of these differing purposes, exposure modeling permits the application of sound and reasoned principles of radiation protection to the release of materials with residual levels of radioactivity. Examples of the similarities and differences of these models are presented and an application to the disposal of materials with residual levels of uranium contamination is discussed. 5 refs., 2 tabs.

3694 (DOE/ER/60631–2) **Radiation physics, biophysics, and radiation biology: Progress report, December 1, 1988–November 30, 1989.** Hall, E.J.; Zaider, M.; Delegianis, M.J. (ed.). Columbia Univ., New York, NY (USA). Coll. of Physicians and Surgeons. Jul 1989. 99p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER60631. Order Number DE90001465. Available from NTIS, PC A05/MF A01; OSTI; INIS; GPO Dep.

An important event of the year was the designation of our Laboratory as a Center for Radiological Research by the Dean of the Faculty of Medicine and Vice-President for Health Sciences. Center status acknowledges the size and importance of the research efforts in this area, and allows a greater measure of independence in administrative matters. While the name has changed from a Laboratory to a Center within the Medical School, the mission and charge remain the same. The efforts of the Center are a multidisciplinary mix of physics, chemistry, and biology, mostly at a basic level, with the admixture of a small proportion of pragmatic or applied research in support of radiation protection or radiation therapy. About a quarter of our funding, mostly individual research awards, could be regarded as in direct support of radiotherapy, with the remainder (an NCI program project grant and DOE grants) being in support of research addressing more basic issues. An important effort currently underway concerns ab-initio calculations of the dielectric response function of condensed water. This investigation has received the coveted designation, "Grand Challenge Project," awarded by DOE to research work which represents "distinct advance on a major scientific or engineering problem that is broadly recognized as important within the mission of the Department."

3695 (DOE/ER/60631–T4) **The Radiological Research Accelerator Facility: Progress report, December 1, 1988–November 30, 1989.** Hall, E.J. Columbia Univ., New York, NY (USA). Coll. of Physicians and Surgeons. Jul 1989. 20p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER60631. Order Number DE90001464. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The Radiological Research Accelerator Facility (RARAF) is based on a 4-MV Van de Graaff accelerator, which is used to generate a variety of well characterized radiation chemistry. It is part of the Center for Radiological Research (CRR) – formerly the Radiological Research Laboratory (RRL) – of Columbia University, and its operation is supported as National Facility by the US Department of Energy (DOE). As such, RARAF is available to all potential users on an equal basis, and scientists outside the CRR are encouraged to submit proposals for experiments at RARAF. The operation of the Van de Graaff is supported by the DOE, but the research projects themselves must be supported separately. Data obtained from experiments using RARAF have been of pragmatic value to radiation protection and neutron therapy. At a more fundamental level, the research protection and neutron therapy. At a more fundamental level, the research at RARAF has provided insight into the biological action of radiation and especially its relation to energy distribution in the cell. High-LET radiations are an agent of special importance because measurable cellular effects can be caused by single particles, eliminating some of the complexities of multievent action and more clearly disclosing basic features. This applies particularly to radiation carcinogenesis.

3696 (INIS-BR–1740) **Effects of gamma radiation on Crotalus durissus terrificus venom.** Murata, Y. Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo, SP (Brazil). 1988. 68p. (In Portuguese). Order Number DE90608198. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

A poll of crotomine positive Crotalus durissus terrificus venom was dissolved in 0.15 M NaCl and the supernatant irradiated using ^{60}CO. Doses of 100,250,750,1000,1500 and 2000 Cy were used at a dose rate of 1.190Gy/h. The presence of free SH, casein hydrolytic degradation, SDS-PAGE and molecular exclusion chromatography analysis together with LD_{50} determination in mice were studied. The antigenic properties of samples were investigated by immunodiffision and immunoprecipitation. (M.A.C.).

3697 (INIS-BR–1741) **Nursering assistance to the radiological accident patients in Goias-Brazil.** Graciotti, M.E. Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo, SP (Brazil). Div. de Assistencia Medico-Social. [1989]. 61p. (In Portuguese). Order Number DE90608313. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

A report of a personal experience, during two months of nursing care to the radiological accident victims, due to the disruption of a caesium-137 source, is presented. The biological radiation effects, the radiation hazards due to the doses received and the Kind of exposure, are studied. (M.A.C.).

3698 (INIS-BR–1759) **Acute radiation syndrome in the ^{137}Cs Brazilian accident, 1987.** Valverde, N.J.; Cordeiro, J.M.; Oliveira, A.R.; Brandao Mello, C.E. Instituto de Radioprotecao e Dosimetria, Rio de Janeiro, RJ (Brazil). [1989]. 21p. Order Number DE90608314. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Eight patients with the most severe degreed of bone marrow impairment are studied. Case descriptions are limited to manifestations and complications related to the 'Acute Radiation Syndrome' (ARS). Medical facilities, exams and therapeutic management are discussed. (MAC).

3699 (INIS-mf–12012) **Free-radical- and radiation-induced damage to DNA.** Schriftenreihe des Max-Planck-Instituts fuer Strahlenchemie. Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. 99p. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

This issue contains 39 abstracts about DNA damage by free radicals and radiation. Methods: ESR, ENDOR, FSE, pulse radiolysis, gamma radiation, microcalorimetry. (AJ).

3700 (INIS-mf–12012, pp. 1-3) **Transition metal complexes as sensitizers or protectors against $O_2\cdot^-$ toxicity.** Czapski, G.

(Hebrew Univ., Jerusalem (Israel). Dept. of Physical Chemistry); Goldstein, S. Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). In *Free-radical- and radiation-induced damage to DNA.* Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

Published in summary form only. COMPLEXES/radioprotective substances; OXYGEN; TOXICITY; COMPLEXES; TRANSITION ELEMENTS; COPPER IONS; DNA; SULFUR IONS; RESPONSE MODIFYING FACTORS; HYDROXYL RADICALS; PEROXY RADICALS

3701 (INIS-mf–12012, pp. 4-6) **Oxygen enhancement of free radical damage to DNA. A comparison of radiation-induced degradation with copper-catalyzed degradation by H_2O_2.** Pruetz, W.A. (Freiburg Univ. (Germany, F.R.). Inst. fuer Biophysik und Strahlenbiologie). Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). In *Free-radical- and radiation-induced damage to DNA.* Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

Published in summary form only. DNA/oxygen enhancement ratio; DNA/gamma radiation; DNA; COMPARATIVE EVALUATIONS; COPPER IONS; OXYGEN; RESPONSE MODIFYING FACTORS; AQUEOUS SOLUTIONS; ELECTRON TRANSFER; HYDROGEN PEROXIDE; RADIOLYSIS; HYDROXYL RADICALS

3702 (INIS-mf–12012, pp. 7-8) **Free radicals formed by electron gain in oligomers of DNA.** Bernhard, W.A. (Rochester Univ., NY (USA). Dept. of Biophysics). Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. Grant PHS-R01-CA32546. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). In *Free-radical- and radiation-induced damage to DNA.* Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

Published in summary form only. OLIGONUCLEOTIDES/radicals; DNA; OLIGONUCLEOTIDES; RADICALS; ELECTRON SPIN RESONANCE; SPECTRA; DNA ADDUCTS; STRAND BREAKS; X RADIATION; ELECTRON TRANSFER

3703 (INIS-mf–12012, pp. 9-10) **Theoretical studies of molecular mechanisms of DNA damage induced by hydroxyl radicals.** Osman, R. (Mount Sinai School of Medicine, New York, NY (USA). Dept. of Physiology and Biophysics); Clark, W.J.; Mazurek, A.P.; Weinstein, H. Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. Grant DE-FG02-88ET60675. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). In *Free-radical- and radiation-induced damage to DNA.* Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

Published in summary form only. HYDROXYL RADICALS/configuration interaction; THEORETICAL DATA; DNA; FUNCTIONAL MODELS; DAMAGE; ULTRASTRUCTURAL CHANGES; PHASE TRANSFORMATIONS; STRAND BREAKS

3704 (INIS-mf–12012, pp. 11-12) **Oxidative DNA sugar damage by targeted antibiotic free radicals.** Goldberg, I.H. (Harvard Medical School, Boston, MA (USA). Dept. of Biological Chemistry and Molecular Pharmacology). Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). In *Free-radical- and radiation-induced damage to DNA.* Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

Published in summary form only. RADICALS/dna; RADICALS/damage; RADICALS; DNA; DAMAGE; ANTIBIOTICS; DNA ADDUCTS; ELECTROSTATICS; CONFIGURATION INTERACTION; STRAND BREAKS

3705 (INIS-mf–12012, pp. 13-14) **Pulse radiolysis of DNA - effects of environment.** O'Neill, P. (Medical Research Council, Chilton (UK). Radiobiology Unit). Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). In *Free-radical- and radiation-induced damage to DNA.* Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

Published in summary form only. DNA/radiolysis; DNA; RADIOLYSIS; MUTAGENESIS; LETHAL IRRADIATION; BIOLOGICAL MODELS; ENVIRONMENTAL EFFECTS; ELECTRON SPIN RESONANCE; ELECTRIC CONDUCTIVITY; LUMINESCENCE; PULSES; CONFORMATIONAL CHANGES; RADIOSENSITIVITY; RADIOSENSITIZERS; HYDRATION

3706 (INIS-mf–12012, pp. 15-16) **Radiation induced clustered damage in DNA.** Hagen, U. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenbiologie); Bertram, H.; Geigl, E.M.; Kohfeldt, E.; Wendel, S. Max-Planck-Institut fuer Strahlenchemie, Muelheim an der Ruhr (Germany, F.R.). 1988. (CONF-8809414–: International symposium on free-radical and radiation-induced damage to DNA, Muelheim an der Ruhr (Germany, F.R.), 25-30 Sep 1988). In *Free-radical- and radiation-induced damage to DNA.* Order Number DE90722496. Available from NTIS (US Sales Only), PC A05/MF A01.

3744 (LA--11652-MS) **Quality-assurance plan for the Basic Environmental Compliance and Monitoring Program (BECAMP).** Essington, E.H. Los Alamos National Lab., NM (USA). Sep 1989. 16p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. Order Number DE90002278. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This quality-assurance plan (QAP) provides guidance for the preparation of detailed procedures to document the steps and considerations for executing a range of activities from environmental sampling and observations, to data archiving, reporting, and dose assessment calculations. The QAP is administered and updated by the quality-assurance principal investigator as a management tool to track the progress of the tasks of the Basic Environmental Compliance and Monitoring Program. Proper execution of the quality-assurance program assures that methodology and data are defensible and usable for such activities as cleanup and treatment and for dose assessment calculations of radionuclides at the Nevada Test Site. 1 fig.

3745 (LBL--27918) **DNA damage in mammalian cells following heavy-ion irradiation.** Rosander, K.; Frankel, K.A.; Cerda, H.; Phillips, M.H.; Lo, E.H.; Fabrikant, I.; Fabrikant, J.I.; Levy, R.P. Lawrence Berkeley Lab., CA (USA). Sep 1989. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8905227--2: International conference on radiosurgery a neurosurgical approach to intracranial lesions, Charlottesville, VA (USA), 1-5 May 1989). Order Number DE90003116. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In our laboratory we have been investigating DNA damage and repair in the endothelial and oligodendroglial cells of the mouse brain after irradiation using two different types of heavy ions, helium and neon. The method used, the unwinding technique with subsequent staining of the DNA with acridine orange, has been proven to be useful for nondividing cells and analysis using a microscope photometric technique. Our primary goal has been to obtain a measure of RBE, in the dose range used in clinical treatment of various brain disorders using heavy charged particle radiosurgery. 12 refs., 5 figs.

3746 (ORNL--6579) **Radionuclide deposition and exposure in the Federal Republic of Germany after the Chernobyl accident.** Winkelmann, I.; Haubelt, R.; Neumann, P.; Fields, D.E. Oak Ridge National Lab., TN (USA). Nov 1989. 30p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC05-84OR21400. Order Number DE90003104. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Analyses of air, water, and foodstuff samples, together with in situ gamma spectrometric measurements in the Federal Republic of Germany, have documented the deposition and exposure consequences of the Chernobyl accident. In some cases, exposure values are significantly higher than background levels. Data compiled for the period from the initial identification of excess atmospheric radioactivity to the present, represent a unique resource for testing and validating models of environmental transport and human exposure. These data will serve as the bases for future studies of organism response, both somatic and genetic, to nuclear radiation. They will also prove useful in suggesting modifications to environmental sampling and monitoring systems. 14 refs., 13 figs., 4 tabs.

3747 (ORNL/FTR--3415) **[Environmental transport and health effects of radioactive materials]: Foreign trip report, September 16, 1989--October 7, 1989.** Eckerman, K.F. Oak Ridge National Lab., TN (USA). 16 Oct 1989. 64p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE90002511. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

The objectives of the traveler were to participate in the first meeting of Working Group 7 of the US--USSR. Joint Coordinating Committee on Civilian Nuclear Reactor Safety (JCCCNRS) in an effort to outline future collaborative research programs. The traveler participated in the discussion on environmental transport held in Moscow and those on health effects held in Kiev. The purpose of this research is to improve the capability of both countries to rapidly forecast the potential environmental and health consequences of large nuclear accidents. Soviet scientists are eager to participate in collaborative research with the US. Following the meetings in the USSR, the traveler, as a member of Committee 2, attended the meeting of the ICRP in Oxford, UK, during the first week of October 1989.

3748 (PNL-SA--16690) **The microdosimetry of radon decay products in the respiratory tract.** Fisher, D.R.; Hui, T.E.; Poston, J.W. Pacific Northwest Lab., Richland, WA (USA). 1989. 29p. Sponsored by U.S. DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-890517--5: 10. symposium on microdosimetry, Rome (Italy), 21-26 May 1989). Order Number DE90002893. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The purpose of this study was to develop methods for calculating the probability density in specific energy for cell nuclei of the respiratory tract epithelium irradiated by inhaled radon and daughter products. Microdosimetry also provides the probability that cell nuclei may be hit by alpha particles, the probability that cell nuclei are completely missed, and the mean (absorbed) dose to cell nuclei.

Such information is useful for interpreting the significance of an inhalation exposure to radon and daughters. 23 refs., 5 figs., 3 tabs.

3749 (PNL-SA–16859-HEDR) **The Hanford Environmental Dose Reconstruction Project: Overview.** Haerer, H.A.; Freshley, M.D.; Gilbert, R.O.; Morgan, L.G.; Napier, B.A.; Rhoads, R.E.; Woodruff, R.K. Pacific Northwest Lab., Richland, WA (USA). Oct 1989. 10p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC06-76RL01830. (CONF-891072–3: 27. Hanford symposium on health and the environment: multilevel research–molecules to man, Richland, WA (USA), 18-20 Oct 1989). Order Number DE90001899. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In a multi year effort that began in 1988, researchers at the Pacific Northwest Laboratory are estimating radiation doses that people could have received since 1944 from nuclear operations at the US Department of Energy's Hanford Site. Known as the Hanford Environmental Dose Reconstruction Project, the work has required the development of new methods and tools for dealing with unique technical and communication challenges. Scientists are doing probabilistic dose assessment – rather than the more typical deterministic approach – to generate dose distributions rather than single-point estimates. Uncertainties in input parameters are reflected in the dose results. Sensitivity analyses are used to optimize project resources in defining the project's scope. An independent technical steering panel directs and approves the work in a public forum. 3 figs.

3750 (PNL-SA–16874-HEDR) **Hanford environmental dose reconstruction project: Technical approach.** Napier, B.A.; Haerer, H.A.; Rhoads, R.E.; Gilbert, R.O.; Woodruff, R.K.; Freshley, M.D. Pacific Northwest Lab., Richland, WA (USA). Oct 1989. 15p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC06-76RL01830. (CONF-891072–4: 27. Hanford symposium on health and the environment: multilevel research–molecules to man, Richland, WA (USA), 18-20 Oct 1989). Order Number DE90002723. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Historical measurements and current assessment techniques are being combined in the Hanford Environmental Dose Reconstruction (HEDR) Project to estimate radiation doses that people could have received from radionuclide releases from the Hanford Site since 1944. Doses are being estimated on the basis of geographic location, age, lifestyle, ethnic group, and dietary habits. Demographic groups under study include the general population, Native American tribes, Army personnel, construction workers, and migrant workers. The model structure enables the input of calculated or measured data at each step. The ability to incorporate uncertainties – caused by natural variability and by gaps in historical data – is woven into the model structure for every key parameter and reflected in the dose results. Final results will be ranges of potential doses with distributions of expected values. The approach is the largest application of stochastic analysis attempted from the very inception of a dose reconstruction project. 3 figs.

3751 (PNL-SA–17026) **Environmental monitoring for radionuclides, chemicals, fish and wildlife at a US energy research facility: A case story.** Gray, R.H. Pacific Northwest Lab., Richland, WA (USA). Sep 1989. 11p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC06-76RL01830. (CONF-8909243–2: Global natural resource monitoring and assessments: preparing for the 21st century, Venice (Italy), 24-30 Sep 1989). Order Number DE90002665. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Environmental monitoring has been an ongoing activity on the US Department of Energy's 560 m^2 Hanford Site in southeastern Washington, USA, for 45 years. Objectives are to detect and assess potential impacts of site operations on air, surface and ground water, foodstuffs, fish, wildlife, soils and vegetation. Data from monitoring efforts are used to calculate the overall radiological dose to humans working onsite or residing in nearby communities. In 1988, measured Hanford Site perimeter concentrations of airborne radionuclides were below applicable guidelines. Tritium and nitrate continued to be the most widespread constituents in onsite ground water. Concentrations of radionuclides and nonradiological water quality in the Columbia River were in compliance with applicable standards. Foodstuffs irrigated with river water downstream of the Site showed low levels of radionuclides that were similar to concentrations found in foodstuffs from control areas. Low levels of ^{90}Sr and ^{137}Cs in some onsite wildlife samples and concentrations of radionuclides in soils and vegetation from onsite and offsite locations were typical of those attributable to worldwide fallout. The calculated dose potentially received by a maximally exposed individual (i.e., based on hypothetical assumptions for all routes of exposure) in 1988 (0.08 mrem/yr) was similar to that calculated for 1985 through 1987. 31 refs., 3 figs.

3752 (UCID–21824) **Bounding dispersion analysis for rare-earth elements as it pertains to the Engineering Demonstration System surrogate testing.** Ernst, K. Lawrence Livermore National Lab., CA (USA). Oct 1989. 13p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract W-7405-ENG-48. Order Number DE90001788. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In order to provide a perspective of the maximum consequences associated with the handling of the rare-earth elements as it pertains to the Engineering Demonstration System (EDS), we have evaluated a hypothetical (nonmechanistic) material dispersion in which no action is taken to mitigate the consequences. The following scenario has been devised to impart a maximum impact to the environment. There is no basis to assume that such a dispersion could ever occur during the conduct of the EDS surrogate tests. The term "lanthanon" as used in this report refers to any members of the lanthanide series (atomic numbers 57 to 71) of rare-earth elements with the exception of lutetium, promethium, and samarium. The included lanthanons have a level of natural radioactivity comparable to, or orders-of-magnitude less than that of typical soil. If there were any risk to the environment, it would result from any chemical toxicity of the lanthanons. 8 refs., 1 fig., 3 tabs.

3753 **The behavior and chemical toxicity of U in the kidney: A reassessment.** Leggett, R.W. (Oak Ridge National Lab., TN (USA)). *Health Physics (USA),* 57(3): 365-383 (Sep 1989).

By the late 1950s, the views had evolved that (1) U does not enter cells but damages the kidneys by binding to the luminal membranes of renal tubular cells, interfering with reabsorption of glucose, sodium, amino acids, protein, water, and other substances, and causing slow cell death by suppression of respiration; and (2) U does not cause significant damage to the kidneys at concentrations below 3 micrograms U g-1 kidney. Although there has not been a major unified effort in the past three decades to update the toxicology of U as a nephrotoxin, there have been numerous isolated studies that may be useful in reevaluating these longstanding views on the behavior and action of U in the kidneys and the renal U concentration at which toxic effects may become evident. This paper is a brief review and synthesis of current information on U nephrotoxicity. Much more experimental research and reevaluation of existing data are needed concerning U nephrotoxicity, particularly for the case of chronic exposure. 164 references.

3754 **Radiobiology of ultrasoft X rays. IV. Flat and round-shaped hamster cells (CHO-10B, HS-23).** Carpenter, S. (Los Alamos National Lab., NM (USA)); Cornforth, M.N.; Harvey, W.F.; Raju, M.R.; Schillaci, M.E.; Wilder, M.E.; Goodhead, D.T. *Radiation Research (USA),* 119(3): 523-533 (Sep 1989).

The results reported earlier in this series indicated that the relative biological effectiveness (RBE) of ultrasoft X rays decreases with decreasing cell thickness, approaching unity for the thinnest cells used, plateau-phase human skin fibroblasts (HSF). The possible dependence of RBE on the configuration of the cell nucleus is investigated further in this paper using two CHO cell lines that attach well and have similar intrinsic radiosensitivities to 60Co gamma rays. One of the lines forms monolayers similar to V79 cells, while the other remains more spherical during growth. We find an increasing RBE with decreasing X-ray energy for both of these cell lines, consistent with our results using V79 cells. Also consistent with our results obtained with 10T1/2 and HSF cells, we find an increasing RBE with increasing cell thickness. The possible dependence of RBE on radiosensitivity and the use of the concept of mean dose for ultrasoft X rays is discussed.

3755 (AD-A-210344/8/XAB) **Human-health studies of carbon monoxide (CO) under conditions of military weapons systems crewman exposures. Protocol 1: Formation of cohb. Final report, September 1982-March 1985.** Benignus, V.A.; Hazucha, M.; Petrovick, M.L.; McCartney, M.L.; Kizakevich, P.N. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 29 Sep 1988. 128p. Available from NTIS, PC A07/MF A01.

The present experiment was performed as a first step to evaluate the accuracy of prediction of carboxyhemoglobin (COHb) formation due to quasi-steady-state carbon monoxide (CO) exposure by use of the Coburn-Forster-Kane equation (CFKE) and related models. Thirteen healthy young males were exposed to CO in room air for 120 minutes. While they were being exposed to CO, they either rested or performed bicycle exercise at one of two moderate work levels (25 or 40 watts). Also during exposure to CO, blood samples were drawn every five min to assess the COHb level. Many of the variables of the CFKE were measured in individual subjects rather than using published norms.

3756 (AD-A-211221/7/XAB) **Effects of iron particles on behavior and brain function: Initial studies.** Hunt, W.A.; Rabin, B.M.; Joseph, J.A.; Dalton, T.K.; Murray, W.E. Armed Forces Radiobiology Research Inst., Bethesda, MD (USA). 1988. 16p. (AFRRI-SR-89-17). Available from NTIS, PC A03/MF A01.

Pub. in Terrestrial Space Radiation and Its Biological Effects, 537-551(1988).

Successful operations in space depend in part on the performance capabilities of astronauts and little is known about potential consequences of exposure to ionizing radiation on behavior and the brain during manned space flights. This possible threat has not been given much attention, since all manned missions have been located in low equatorial orbit and radiation which have not been considered hazardous. Future missions in space will probably involve polar orbits, long-term space travel beyond the Earth, and extended periods during which astronauts are operating outside their spacecraft. Since exposure to radiation increases under these conditions because of the absence of the Earth's normally protective transpolar magnetosphere, astronauts may be placed at considerable additional risk. An understanding of this risk may be vital to the survival and effective performance of future missions in space. Therefore, it is desirable to understand the medical and operational risks to personnel, including an assessment of possible behavioral and neurobiological deficits.

3757 (AD-A-211270/4/XAB) **Validation and application of pharmacokinetic models for interspecies extrapolations in toxicity risk assessments of volatile organics. Annual report No. 2, 1 July 1988-30 June 1989.** Dallas, C.E.; Bruckner, J.V.; Gallo, J.; Ramanathan, R.; Muralidhara, S. Georgia Univ., Athens, GA (USA). 21 Jul 1989. 129p. Available from NTIS, PC A07/MF A01.

In pursuit of the goal of establishing a scientific basis for the interspecies extrapolation of pharmacokinetic data in health-risk assessments, a series of studies were conducted involving pharmacokinetic determinations in rats to several aliphatic halocarbons (with parallel studies initiated in the dog). Direct measurements of the uptake and elimination of halocarbon in rats were completed during the following inhalation exposures and following oral administration of dichloroethylene (DCE) and perchloroethylene (PCE). An assay for the measurement of halocarbons in the tissues of exposed animals has been successfully developed, and tissue-concentration profiles in the liver, kidney, lung, fat, brain, muscle, and heart were completed for oral and intraarterial administrations of PCE. The utility of the physiologically-based pharmacokinetic model for the accurate computer simulations of the pharmacokinetics of three halocarbons with wide variation in physicochemical properties (TRI, TCE, and PCE) has been demonstrated.

3758 (CONF-890422-1) **A perspective on human exposure to PCDDs and PCDFs emitted form municipal waste combustors.** Hattemer-Frey, H.A.; Travis, C.C. Environmental Protection Agency, Washington, DC (USA). [1989]. 15p. DOE Contract AC05-84OR21400. From International conference on municipal waste combustion; Hollywood, FL, US; April 11, 1989. Order Number DE89008725. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper discusses the following key issues concerning human exposure to polychlorinated dibenzo-p-dioxins (PCDDs) and dibenzofurans (PCDFs) emitted from modern municipal waste combustors (MWCs): (1) Are MWCs the major source of PCDD/PCDF input into the environment? (2) Are environmental concentrations around MWCs substantially elevated relative to background levels? and (3) Are MWCs the major source of human exposure to PCDDs and PCDFs? Current scientific evidence indicates that: (1) combustion sources in general (including steel mills, copper melting plants, motor vehicles, hospital incinerators, and MWCs) are major sources of PCDD/PCDF input in the environment; (2) environmental concentrations of PCDDs and PCDFs around operating MWCs are not substantially elevated; and (3) 99% of human exposure to PCDDs and PCDFs is from background environmental contamination, even for individuals living near a modern municipal waste combustor. 43 refs., 4 tabs.

3759 (CONF-8910275-1) **PCBs in humans: What we know and what we don't know.** Erickson, M.D. Argonne National Lab., IL (USA). [1989]. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Electric Power Research Institute PCB seminar; San Diego, CA (USA); 3-6 Oct 1989. Order Number DE90001912. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

PCBs are found in the adipose tissue of humans through environmental, dietary, and occupational exposure. Measurement of PCB concentrations in human adipose, blood, and other tissues has begun to give a picture of the human body burden. Total aggregate PCB concentrations are of some use, but the fingerprint chromatograms from the individual congeners tell much more about the exposure (e.g., which Aroclor is involved), uptake, and metabolism of PCBs.

3760 (DOE/ER/60015-7) **Interactions of carcinogens with DNA [deoxyribonucleic acid]: Final progress report, July 1, 1987-July 31, 1989.** Broyde, S.; Shapiro, R. New York Univ., NY (USA). Oct 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-81ER60015. Order Number DE90002880. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The principal goal of this research has been the determination of the conformational changes produced in DNA by the covalent binding of a carcinogenic aromatic amine, and the correlation of these changes with the mutations and carcinogenic effects initiated by the same substances. To this end, we have devised new synthetic methods for the preparation of oligonucleotides modified by derivatives af 4-aminobiphenyl and aniline. We have also performed potential energy minimization studies on the above substances and on single and double stranded DNA fragments bearing the above amines as well as acetylaminofluorene, aminofluorene, aminopyrene and the antibiotic mitomycin. Our computations have been carried out on DOE supercomputers using our program, DUPLEX. We have defined a number of novel structures for these modified DNAs, including Hoogsteen, "wedge" (see below) denatured, cross-linked and intercalated forms. Some suggestions have been made about the relation of these forms to mutagenesis. 7 refs.

3761 (DOE/ER/60588-3) **The impact of energy related pollutants on chromosome structure: Progrss report, May 1, 1987-April 30, 1990.** Rill, R.L. Florida State Univ., Tallahassee, FL (USA). Inst. of Molecular Biophysics. 30 Oct 1989. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-87ER60588. Order Number DE90002541. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The sequence preferences of DNA binding by five intercalating chemicals were examined by techniques analogous to chemical DNA sequencing. The intercalators used were 7R, 8S-dihydroxy-9S, 10R-epoxy-7, 8, 9, 10-tetrahydrobenzo[a]pyrene [anti-(+)-BPDE]

and its enantiomer, anti-(−)-BPDE; 8-azido-ethidium, 7-azido-actinomycin D, and bis-(1, 10-phenanthroline)Cu(I). The former four compounds form covalent adducts, some fraction of which are labile and cause DNA chain cleavage upon treatment with hot piperidine. The latter compound causes spontaneous chain cleavage via activated oxygen species generated in the presence of molecular oxygen and a reducing agent. Quantitative mapping data on the DNA cleavages caused by these chemicals were obtained on over 1200 DNA bases in restriction fragments and were statistically analyzed. The sequence preferences of all compounds were best described in terms of base triplets, but bases flanking the preferred triplets also influenced binding in many cases. Although the intercalators differed in degree of sequence selectivity and triplet sequences most preferred, YRY and YGG sequences were generally preferred, especially when the 5'-Y was T, while RRY and oligo-purine/oligo-pyrimidine tracts were generally avoided. Details of individual intercalator preferences and other features of the DNA binding of these compounds are described. 17 refs.

3762 (ETDE-mf–0718061) **Effects of acid and lime on mesofauna of forest soils in the laboratory and in the field. Final report.** Winter, K.; Huang Pa. Niedersaechsische Forstliche Versuchsanstalt, Goettingen (Germany, F.R.); Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.). 1988. 35p. (In German). BMFT 0373215. Order Number DE90718061. Available from NTIS (US Sales Only), PC A03/MF A01.

The increasing soil acidity, but also the artificial liming against acidity change chemical and biological conditions of forest soils. Reactions of soil fauna in the field are different. Object of our researching is to test the effects of acid and lime in the laboratory and in the field on selected species of Collembola (Isotoma tigrina) and Onychiurus furcifer, and to develop standard methods for experimenting with and for breeding these species. Their preference to acid and lime was tested. In acidifying and liming experiments under labortory and field conditions, mortality and reproductivity of the two species were tested. In the laboratory heavy damages occured at very low (pH = 2) and very high pH-values. In the field damages were not noticed before 6 months after beginning the experiment. (orig.) With 23 refs., 2 tabs., 20 figs.

3763 (KFK-PEF–52) **Changes in ground vegetation of forest ecosystems in the middle and southern regions of the Black Forest.** Buerger, R. Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftre. Aug 1988. 229p. (In German). Contract PEF 84/019/1A. Order Number DE90718175. Available from NTIS (US Sales Only), PC A11/MF A01.

This study examines the changes in ground vegetation found in the Black Forest/West Germany in connection with the forest-decline ('Waldsterben'). To this end, the species composition was examined in areas of varying degrees of decline. Special attention was paid to ecological groups and their indications. These releves were compared laterally as well as with historical data. The focus of the analysis turned from sociological groups to specific species, whereby, on the basic of current literature on phytoindicators, the development of these species was recorded as a measure of pollutions impact. The altered composition of species exhibited itself in an increase in the high-nitrogen group in all of the communities. Similarly, in most communities an increase in the level of the reaction-group was observed. Evidence of succession due to acidification could not be significantly demonstrated. The observed changes were in accordance with the increase in the high-light group, except in the submountainous Luzulo-Fagetum. A comparison to the earlier proportional composition of ecological groups was used for more detailed interpretation. The observations indicate two primary influences on succession; first, increased levels of light, due to the thinning of the trees' crowns and second, increased levels of nitrogen due to pollution. (orig./MG) With 82 figs., 103 refs., 7 tabs. in annex.

3764 (LA–11474) **Attempted use of zinc in vivo to protect against nitrogen mustard toxicity in tumor-free and in L1210 leukemia-bearing B6D2F$_1$ mice.** Shackelford, M.E.; Tobey, R.A. Los Alamos National Lab., NM (USA). Dec 1989. 13p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. Order Number DE90002969. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The use of alkylating agents in treating cancer is limited by their toxicity to both normal and tumor tissue. Early in vitro and in vivo studies had indicated that zinc could be effective in mitigating this toxicity to normal tissue. The present studies were done to determine the capability of zinc to induce in living tissue a protective response to an alkylating agent, without also contributing to mortality. Tumor-free and leukemia-bearing B6D2F$_1$ mice were treated with zinc before administration of the alkylating agent nitrogen mustard (HN_2). Protocols for administration route and frequency and chemical formulation of the zinc were varied. The effect of a phytate-free diet was studied. Two parameters were used to judge the effectiveness of zinc in protecting animals from the toxicity of HN_2: the number of tumor-free mice who survived and any increase in the median life span of the tumor-bearing mice. Zinc provided a limited degree of protection against HN_2 toxicity in tumor-free mice, but in tumor-bearing animals, the protective response elicited with the protocols examined was too small to provide a significant therapeutic benefit. 6 refs., 3 figs., 2 tabs.

3765 (ORNL/M–948) **Biological (molecular and cellular) markers of toxicity: Semi-annual technical progress report (No. 2), April 1, 1989–September 30, 1989.** McCarthy, J.F. Oak Ridge National Lab., TN (USA). 1 Oct 1989. 21p. Sponsored by U.S. Department of Defense; U.S. DOE Environment Health & Safety. DOE Contract AC05-84OR21400. Order Number DE90002746. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The objectives of this research are to evaluate the Japanese Medaka as a model for prediction of potential health effects from environmental contaminants. Progress to date has concentrated on efforts to describe the molecular and biochemical events resulting from exposure to a well-characterized model carcinogen, diethylnitrosamine (DEN). There are two goals underlying this approach. Fundamental understanding of the molecular and biochemical events underlying the carcinogenesis process in Medaka may make it possible to employ these responses as biomarkers estimate exposure and predict cellular effects of genotoxic chemicals. Thus, it may be possible to determine if an individual chemical, or waste effluent from Department of Defense facilities, poses a health threat based on exposure of Medaka to the contaminant for the short time required for the biomarker to respond, rather than for the six months required to evaluate a histopathological effect. More fundamentally, critical evaluation of the molecular carcinogenesis process in Medaka provides a foundation for using this convenient and cost-effective animal model for more directly extrapolating to human health effects, based on pharmacodynamic models. Before this approach could be accepted, it is necessary to demonstrate the molecular, biochemical and cellular events in carcinogenesis are similar in fish and humans. If the results of this research support such a conclusion, a later task of this project involves development of a pharmacodynamic model for extrapolating human health effects from bioassays using the Japanese Medaka. 1 fig., 4 tabs.

3766 (PB–89-218275/XAB) **Genetic activity profiles: Use in management of risk from genotoxic substances in the environment.** Waters, M.D.; Stack, H.F.; Brady, A.L. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 27p. (EPA–600/D-89/004). Available from NTIS, PC A03/MF A01.

A methodology has been developed to display and evaluate multiple test quantitative information on genetic toxicants for purposes of hazard/risk assessment. Genetic activity profiles were prepared which illustrate a quantitative data base on the genetic and related effects of nearly 200 chemicals for which some data are available on carcinogenicity in humans. This information may be used for purposes of comparative chemical-hazard assessment. Together with information derived from animal cancer tests and human epidemiological studies, assessments may be made regarding potential human health risks associated with exposure to chemical substances.

3767 (PB–89-218804/XAB) **Pathophysiological and disease constraints on aerosol delivery.** Gerrity, T.R. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects

Research Lab. 1989. 112p. (EPA–600/D-89/005). Available from NTIS, PC A06/MF A01.

The dose of inhaled particles to the respiratory tract depends upon many factors. These factors include the size of the particles, the pattern of breathing (flow and tidal volume), the physical properties of the articles (hygroscopic or non-hygroscopic), anatomy of the respiratory tract, and the pathophysiologic status of the respiratory tract. In addition to these factors, which are primarily related to the deposition of particles, the rate of particle clearance from the respiratory tract also influences the dose of particles. The paper is a review of the various factors influencing dose of inhaled particles to the respiratory tract. The emphasis of the paper is on therapeutic aerosol particles, though the principals discussed also apply to toxic particles as well. An important area of consideration is the influence of disease on the delivery of particle dose. From the point of view of toxic particles this is important when considering potential susceptible populations.

3768 (PB–89-218812/XAB) **Genetic-activity profiles and hazard assessment.** Waters, M.D.; STack, H.F.; Brady, A.L. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 6 Oct 1988. 27p. (EPA–600/D-89/007). Available from NTIS, PC A03/MF A01.

A methodology was developed to display and evaluate multiple-test quantitative information on genetic toxicants for purposes of hazard/risk assessment. Dose information is collected from the open literature: either the lowest effective dose (LED) or the highest ineffective dose (HID) tested is recorded for each agent and bioassay system. For each agent in the data base, the quantitative results from genetic and related test systems are represented by computer-generated bar graphs genetic activity profiles. The x-axis unit values correspond to approximately 200 different test systems. Bioassay systems are organized according to classes of genetic activity and subdivided by the phylogenetic level of the test organism. The y-axis values are the logarithmically transformed LED or HID values. Genetic activity profiles were prepared which illustrate a quantitative data base on the genetic and related effects of nearly 200 chemicals for which some data are available on carcinogenicity in humans. The information may be used for purposes of comparative chemical hazard assessment. Together with information derived from animal cancer tests and human epidemiological studies, assessments may be made regarding potential human health risks associated with exposure to chemical substances.

3769 (PB–89-220990/XAB) **Gastric response to methyl methacrylate vapor. Progress report.** Tansy, M.F. Temple Univ., Philadelphia, PA (USA). 29 Mar 1976. 6p. Available from NTIS, PC A02/MF A01.

The report summarizes the experiments designed to determine or confirm the effects of methyl methacrylate on the gastrointestinal system in dogs and rats. There is a direct action of methyl methacrylate on the gastrointestinal motor effector systems. Significant blood chemical changes were observed in rats exposed to 116 ppm of methyl methacrylate vapor in air for six months. Similar concentrations for three months caused reductions of visceral and subcutaneous fat, and after three and six months liver damage was observed.

3770 (PB–89-221014/XAB) **Walk-through survey report: Northeast Utilities Service Co./Stone and Webster Engineering Corp., Millstone Plant No. 3, Waterford, Connecticut, August 29, 1979.** Johns Hopkins Univ., Baltimore, MD (USA). 14 Dec 1979. 7p. Available from NTIS, PC A02/MF A01.

A walk-through survey of the Northeast Utilities Service Company's Millstone nuclear power facility in Waterford, Connecticut was conducted on August 29, 1979 to determine if the site would be suitable for inclusion in an in-depth epidemiological, industrial hygiene, and medical study of health hazards in the paint industry. The facility presently employs 23 painters. This total probably will increase to 150 during the final years of a construction program. Epoxy paints are the primary type of paint used and these are applied with brushes, rollers and spraying. Because of the highly detailed records kept at the site, and the type of paint used, it is concluded that the facility would be an excellent location to examine the exact exposures to individuals and to associate these exposures with health effects.

3771 (PB–89-221204/XAB) **Case-control study of bladder cancer in Massachusetts among populations receiving chlorinated and chloraminated drinking water.** Zierler, S.; Feingold, L.; Danley, R.A.; Craun, G. Brown Univ., Providence, RI (USA). Dept. of Community Health. 1989. 29p. Available from NTIS, PC A03/MF A01.

Studies of the occurrence of bladder cancer in relation to exposure to chlorinated drinking water, in general, have found a small excess frequency of bladder cancer among consumers of chlorinated drinking water. Despite near consistent findings of a small positive association, interpretation of the association has been cautious because of the inability to control for potential confounding by unmeasured differences in surface and ground water, as the index frequently used for exposure to levels of chlorination in drinking water compares chlorinated surface water to unchlorinated ground water. The authors undertook a case-control study to collect detailed data on residential history that was obtained from telephone interviews with informants of 614 individuals who died of primary bladder cancer and 1,074 individuals who died of other causes. The study was based in an area where surface water has been disinfected with either chlorine or a combination of chlorine and ammonia (chloramine) since 1938.

3772 (PB–89-222673/XAB) **Assessment of ecologic risks related to chemical exposure: Methods and strategies used in the United States.** Falco, J.W.; Moraski, R.V. Environmental Protection Agency, Washington, DC (USA). Office of Health and Environmental Assessment. May 1988. 16p. (EPA–600/D-89/069). Available from NTIS, PC A03/MF A01.

Pub. in Risk Management of Chemicals in the Environment, Vol. 12 of NATO: Challenges of Modern Society, Jan 1989.

The state-of-the-art assessment of risk to the ecosystem is still evolving. Although single-species tests have provided valuable information for the assessment of ecologic risk, it is necessary to focus on ecosystems-level tests and analyses. The increasing availability of predictive models makes assessment of risk to the environment, rather than simply to a single species, more possible. This paper presents a partial compilation of methods used in performing ecological risk assessments developed by the U.S. Environmental Protection Agency or published by the American Society for Testing and Materials and looks at the future directions of the EPA in the development of new ecological risk assessment methodologies and approaches.

3773 (PB–89-222707/XAB) **Methods used in the United States for the assessment and management of health risk due to chemicals.** Falco, J.W.; Moraski, R.V. Environmental Protection Agency, Washington, DC (USA). Office of Health and Environmental Assessment. May 1988. 27p. (EPA–600/D-89/070). Available from NTIS, PC A03/MF A01.

Pub. in Risk Management of Chemicals in the Environment, Vol. 12 of NATO: Challenges of Modern Society, Jan 1989.

A key factor in the development of a strategy for the control of environmental pollution or the protection of human health is the assessment of the risk associated with the accidental or intentional release of the chemical. A risk assessment may be used to estimate the degree of risk reduction that could result from the consideration of control scenarios that may be implemented in the regulatory process. As legislation and regulations have been enacted over the years to control chemical releases and to institute risk strategies, a diversity of approaches and technical quality in risk assessments resulted and complicated the management of environmental risks. This paper reviews the recent major U.S. reports on the issues of risk assessment and risk management and the response of federal agencies to the recommendations made in those reports. A more detailed description in this area is provided including as an example the recent risk assessment for dichloromethane (methylene chloride).

3774 (PB–89-222798/XAB) **Mutagenicity of combustion emissions from a biomedical-waste incinerator.** Driver, J.H.; Rogers, H.W.; Claxton, L.D. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 15p. (EPA–600/D-89/093). Available from NTIS, PC A03/MF A01.

The Ames Salmonella typhimurium (TA98) assay was used to determine the mutagenicity of stack fly ash from a medical/pathological waste incinerator. Stack fly ash also collected from a boiler plant adjacent to the incinerator and ambient air particles (upwind and downwind of the incinerator and boiler facilities) were collected and bioassayed. Downwind particulate mutagenicity (revertants per cubic meter of air) was significantly greater than upwind particulate mutagenicity. Mutagenic emission-rate estimates (revertants per kilogram waste feed) for the incinerator and boiler were less than estimates for ash and downwind ambient-air particulate samples collected during incinerator auxiliary burner failure and demonstrated significant increase in mutagenicity compared to samples collected during routine incinerator operation.

3775 (PB–89-222830/XAB) **Use of genotoxic activity profiles in assessment of carcinogenesis and transmissible genetic effects.** Waters, M.D.; Stack, H.F.; Brady, A.L. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1988. 27p. (EPA–600/D-89/087). Available from NTIS, PC A03/MF A01.

A methodology has been developed to display and evaluate multiple test quantitative information on genetic toxicants for purposes of assessing carcinogenesis and transmissible genetic effects. Genetic activity profiles were prepared which illustrate a quantitative data base on the genetic and related effects of nearly 200 chemicals for which some data are available on carcinogenicity in humans. This information may be used for purposes of comparative chemical hazard assessment. Together with information derived from animal cancer tests and human epidemiological studies, assessments may be made regarding potential human health risks associated with exposure to chemical substances.

3776 (PB–89-223606/XAB) **Detection of genetic hazards from environmental chemicals with plant test systems.** Gill, B.S.; Sandhu, S.S. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 45p. (EPA–600/D-89/062). Available from NTIS, PC A03/MF A01.

This book chapter reviews the methodology and utility of five plant bioassays for detecting the mutagenicity of environmental chemicals. The bioassays described in this chapter are Vicia faba root tip, Tradescantia micronucleus for chromosome aberrations, tradescantia stamen hair, Arabidopsis embryo for gene mutation, and wheat seedling assay for aneuploidy.

3777 (PB–89-223630/XAB) **Effects of atmospheric mix and toxic fumes on military performance.** Benignus, V.A. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 85p. (EPA–600/D-89/060). Available from NTIS, PC A05/MF A01.

The individual and combined neurobehavioral effects of carbon monoxide, hydrogen cyanide, carbon dioxide and hypoxic hypoxia are discussed. The effects of each are reviewed separately, and then the literature of the effects of combined exposures were covered. The latter is a relatively sparse literature. The empirical and physiological information available was encoded as a series of dose-effects and pharmacokinetic equations. Assuming additive effects, a mathematical model was proposed for the combined exposure. Several pharmacokinetic interactions make the received dose of the combined pollutants nonadditive, however, and thus introduce nonadditivity into the combined model. The model was useful in pointing out the kind of information still needed to make predictions. The model thus serves a mainly heuristic purpose.

3778 (PB–89-223804/XAB) **Structural properties for determining mechanisms of toxic action.** Bradbury, S.P.; Lipnick, R.L. Environmental Protection Agency, Duluth, MN (USA). Environmental Research Lab. 1989. 10p. (EPA–600/D-89/089). Available from NTIS, PC A02/MF A01.

The results of a workshop co-sponsored by EPA through the Health and Environmental Review Division, Office of Toxic Substances and the Environmental Research Laboratory-Duluth, of the Office of Research and Development are briefly summarized as an introduction to a series of manuscripts dealing with the structural properties of chemicals that determine their toxic mechanisms. Results of the workshop are intended to be incorporated in an expert system to predict mechanisms from chemical structure and aid in predictive toxicology applications in the Agency. The goal of the workshop was to review current understanding of fundamental mechanisms, and develop an initial knowledge base on chemical features and properties from which toxic mechanisms could be predicted from structure. Areas addressed included general anesthesia, or narcosis, oxidative phosphorylation uncoupling, electrophile and free-radical reactivity, and a variety of pesticide-based mechanisms.

3779 (PB–89-223952/XAB) **Risk assessment is a developing science: Approaches to improve evaluation of single chemicals and chemical mixtures.** Stara, J.F.; Bruins, R.J.F.; Dourson, M.L.; Erdreich, L.S.; Hertzberg, R.C. Environmental Protection Agency, Cincinnati, OH (USA). Office of Environmental Criteria and Assessment. 1989. 28p. (EPA–600/D-89/033). Available from NTIS, PC A03/MF A01.

Pub. in Methods for Assessing the Effects of Mixtures of Chemicals, 719-743(1987).

The US Environmental Protection Agency is engaged in the development of risk-assessment guidelines and methodologies as part of the regulatory program of the Agency. The primary goal of the Agency was originally to accurately assess the effects of human exposure to single chemicals in a single medium (e.g. water) over a human lifetime. Assessment methods for estimating low-dose lifetime cancer risk for known or suspected human carcinogens, or long-term acceptable daily intake (ADI) levels for threshold-acting toxicants, were developed and successfully applied to meet this need. Now there is an increasing need for methods which address more complex exposure situations, including multichemical, multiroute, and partial-lifetime exposures. Improvements in the current methods are also needed. Several issues now under study are briefly described.

3780 (PB–89-223986/XAB) **Electrophysiological systems for neurotoxicity field testing: PEARL II and alternatives.** Otto, D.A.; Hudnell, H.K. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 10 Feb 1989. 22p. (EPA–600/D-89/092). Available from NTIS, PC A03/MF A01.

PEARL II, a computerized battery of electrophysiological tests designed for neurotoxicity field testing, was developed a decade ago. The battery includes sensory evoked potentials (auditory, somatosensory, and visual), event-related slow brain potentials (CNV, P300), and associated behavioral measures. Field-testing capabilities have been demonstrated in pediatric lead studies. Several dozen PEARL II systems are currently being used in fixed-base laboratories. Factors which limit the use of PEARL II in neurotoxicity field testing include: operation and maintenance of the system requires a highly trained staff; PEARL II is a relatively expensive system; it is not commercially available or serviced; the hardware is obsolescent. Although sensory-evoked potential tests have proven to be very sensitive to chemical exposure in humans and animals, the effectiveness of such tests for neurotoxicity screening of exposed populations has not been demonstrated. Several commercial systems suitable for neurotoxicity field testing are reviewed briefly. Electrophysiological tests of visual toxicity currently under development are also described.

3781 (PB–89-224554/XAB) **Chronic exposure to ozone causes restrictive lung disease.** Grose, E.C.; Costa, D.L.; Hatch, G.E.; Miller, F.J.; Graham, J.A. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 11p. (EPA–600/D-89/102). Available from NTIS, PC A03/MF A01.

A chronic study to determine the progression and/or reversibility of ozone-induced lung disease was conducted. Male rats were exposed to a diurnal pattern of ozone (O_3) for 1 week, 3 weeks, 3 months, 12 months, or 18 months. The occurrence of chronic lung disease was determined by structural and functional endpoints. Structurally, a biphasic response was observed with an initial acute inflammatory response after 1 week of exposure, a reduced acute response after 3 weeks of exposure, and an epithelial and interstitial response observed after 3 months which persisted or increased in intensity up to 18 months of exposure. Functional studies showed a persistence of decreased total lung capacity and residual volumes at 3, 12, and 18 months of exposure, a response indicative of restrictive lung disease. Biochemical changes in antioxidant

metabolism were also observed after 12 and 18 months of exposure. Most significant changes were resolved after the clean-air recovery period. The study has shown that chronic exposure to O_3 causes restrictive lung disease as characterized by the development of focal interstitial fibrosis.

3782 (PB–89-224570/XAB) **Application of a simple short-term bioassay for the identification of genotoxins from hazardous wastes.** Sandhu, S.S.; Acedo, G.N. Environmental Health Research and Testing, Inc., Research Triangle Park, NC (USA). 1989. 12p. Available from NTIS, PC A03/MF A01.

The proper disposal of hazardous wastes currently generated and cleanup of waste disposal sites of the past are challenges facing regulatory agencies in the industrialized nations. The estimation of levels of toxicity is an essential step in prioritizing industrial effluents and solid wastes for treatment and disposal. A number of short-term bioassays have been developed to supplement information from chemical analysis for evaluating the potential of chemical complex mixtures to induce adverse human health effects and environmental contamination. Among these bioassays, plant test systems provide simple, inexpensive, and rapid means of evaluating toxic effects of industrial wastes based on multimedia exposure. Two such assays, Tradescantia paludosa and Zea mays, have been used for monitoring the genotoxic effects of ambient air, municipal wastes, industrial effluents, solid wastes, water sediments, and pesticides. The Arabidopsis embryo assay was applied to evaluate the mutagenicity of complex environmental mixtures including industrial effluents and sludges. The industrial-waste samples were tested either unextracted or as dichloromethane aqueous extracts. The significance of short-term plant bioassays for use in environmental assessment will be discussed.

3783 (PB–89-224588/XAB) **Estimating human-equivalent no observed adverse-effect levels for VOCs (volatile organic compounds) based on minimal knowledge of physiological parameters. Technical paper.** Overton, J.H.; Jarabek, A.M. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 15p. (EPA–600/D-89/097). Available from NTIS, PC A03/MF A01.

The U.S. EPA advocates the assessment of health-effects data and calculation of inhaled reference doses as benchmark values for gauging systemic toxicity to inhaled gases. The assessment often requires an inter- or intra-species dose extrapolation from no observed adverse effect level (NOAEL) exposure concentrations in animals to human equivalent NOAEL exposure concentrations. To achieve this, a dosimetric extrapolation procedure was developed based on the form or type of equations that describe the uptake and disposition of inhaled volatile organic compounds (VOCs) in physiologically-based pharmacokinetic (PB-PK) models. The procedure assumes allometric scaling of most physiological parameters and that the value of the time-integrated human arterial-blood concentration must be limited to no more than to that of experimental animals. The scaling assumption replaces the need for most parameter values and allows the derivation of a simple formula for dose extrapolation of VOCs that gives equivalent or more-conservative exposure concentrations values than those that would be obtained using a PB-PK model in which scaling was assumed.

3784 (PB–89-224596/XAB) **Complex mixtures of urban air pollutants: identification and comparative assessment of mutagenic and tumorigenic chemicals and emission sources.** Lewtas, J.; Gallagher, J. Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab. 1989. 23p. (EPA–600/D-89/098). Available from NTIS, PC A03/MF A01.

Advances in the cancer risk assessment of complex mixtures of urban air pollutants requires the development of new methods in predicting human risk. Current research is focusing on the identification and source apportionment of airborne carcinogens and the development of new exposure, dosimetry and extrapolation methods which can be applied to complex mixture problems. Research on the identification of the genotoxic compounds in urban air and particularly on the polar mutagenic compounds, many of which appear to be nitrated and or oxygenated aromatic compounds, is advancing with the use of micromutagenesis methods coupled to analytical fractionation and new chemical characterization methods. Source apportionment of the mutagenic activity observed in urban air shows that the small-area combustion sources, vehicles and residential heating, are the major contributors to the ambient mutagenicity of the aerosol fraction. The potential hazard and sources of the gaseous emissions appear to be significantly increased by atmospheric transformation by ozone and nitrogen oxides. Studies are being conducted with current environmental combustion emission sources and urban aerosol samples as well as with emission sources for which human lung-cancer data and human tissues are available for comparative assessment.

3785 (PB–89-225403/XAB) **Toxicological profile for selected PCBs (polychlorinated biphenyls) (Aroclor-1260, -1254, -1248, -1242, -1232, -1221, and -1016). Final report.** Syracuse Research Corp., NY (USA). Jun 1989. 146p. Available from NTIS, PC A07/MF A01.

The Toxicological Profile for selected PCBs is intended to characterize succinctly the toxicological and health effects information for the substance. It identifies and reviews the key literature that describes the substance's toxicological properties. The profile begins with a public-health statement which describes in nontechnical language the substance's relevant toxicological properties. Following the statement is material that presents levels of significant human exposure and, where known, significant health effects. The adequacy of information to determine the substance's health effect is described as well as research gaps in nontoxic and health-effects information. Research gaps that are of significance to the protection of public health will be identified in a separate effort. The focus of the document is on health and toxicological information.

3786 (PB–89-225627/XAB) **EPA (Environmental Protection Agency) programs and the regulation of carcinogens: Methods and philosophies. Technical report.** Jackson, M.; Johnson, L.; Kelly, J.; Ledeboer, T.; Malave, M. Drexel Univ., Philadelphia, PA (USA). Environmental Studies Inst. 1988. 124p. Available from NTIS, PC A06.

Portions of this document are not fully legible.

This paper discusses the manner in which the EPA identifies, assesses risk for, and regulates substances determined to cause cancer in humans. The report provides an overall perspective of the carcinogen standard-setting process as it is affected by scientific, legal, and political influences. Discussed are: history and methods of carcinogen regulation; toxicological methods for determining carcinogenicity; the use of human-exposure data to regulate carcinogens; an overview of the agency's system for classifying chemical agents suspected or known to cause cancer; significant Federal court cases and decisions that have influenced attempts by Federal agencies to regulate carcinogens; and factors affecting EPAs regulation of carcinogens.

3787 (PB–89-227862/XAB) **Respiratory effects of inhaled gases and aerosols. Report for 1 November 1973-31 March 1977.** Frank, R.; Morgan, M.S.; Koenig, J.Q.; Horike, N.; Covert, D.S. Washington Univ., Seattle, WA (USA). Dept. of Environmental Health. Jul 1977. 57p. Available from NTIS, PC A04/MF A01.

This study shows the effects of exposure to combinations of sulfur dioxide with sodium sulfate or ammonium sulfate at controlled relative humidities on the respiratory systems of animals or man. Female COBS guinea pigs were exposed to 5 parts per million (ppm) SO_2, 1 mg/m^3 ammonium sulfate, or ammonium sulfate plus 1, 5 or 10 ppm SO_2. When SO_2 was given alone, the effects implicated the upper and/or central airways and occurred early in the exposure period. Effects associated with ammonium sulfate exposure implicated the peripheral airways and either appeared or extended into the latter half of the exposure period. For human studies, 18 nonsmoking adults were exposed to a droplet aerosol of ammonium sulfate (1.0 mg/m^3) alone, a dry aerosol of ammonium sulfate plus SO_2, or a droplet aerosol of ammonium-sulfate plus SO_2. In these healthy subjects, the average short-term effects of the two inhaled agents, alone or combined, were slight. Ammonium sulfate was mildly irritating alone, but did not show evidence of biological interaction with SO_2. No evidence for additive or synergistic action was noted.

3788 (PB–89-230551/XAB) **Accumulation patterns of heavy metals and chlorinated hydrocarbons by sea otters, Enhydra lutris, in California. Final report.** Risebrough, R.W. California

Univ., Santa Cruz, CA (USA). Inst. of Marine Sciences. 30 Jun 1989. 53p. Available from NTIS, PC A04/MF A01.

Chemical contaminants and naturally occurring toxic compounds in the coastal ecosystem of California currently inhabited by sea otters, Enhydra lutris, do not appear to have, or have had, any effect on the status of the population. Ratios of pups to adults appear to be within the expected ranges and do not indicate any depressed productivity that might be caused by one or a combination of environmental toxicants. Polychlorinated biphenyls (PCBs), however, which cause nearly complete reproductive failures when fed at levels as low as 0.6 ppm in another member of the family Mustelidae, the mink, Mustela vison, were present in livers of a number of animals at higher levels than those associated with reproductive failure in mink. An interspecific difference in sensitivity, or relatively lower amounts of the more toxic PCB compounds in the sea otter population, is indicated. A decline in PCB (and DDE) levels along the California coast recorded in mussels, Mytilus californianus, and the ending of PCB uses reduce any potential threat to the otter population from PCB contamination.

3789 (PB–89-871214/XAB) **Toxicity: Polymeric materials in food-contact applications. January 1977-September 1989 (Citations from the Rubber and Plastics Research Association data base). Report for January 1977-September 1989.** National Technical Information Service, Springfield, VA (USA). Sep 1989. 108p. Available from NTISPC N01/MF N01.

Supersedes PB–88-868542.

This bibliography contains citations concerning toxicity investigations of polymeric materials in food-contact applications. Polymeric food-packaging materials and regulations are discussed. Toxicity testing, polymeric equipment in food processing, and the use of additives in food packaging are included. Discussions also include coating materials for food containers and pigments for food packaging films. (This updated bibliography contains 275 citations, 10 of which are new entries to the previous edition.)

3790 (PB–89-900300/XAB) **Registry of Toxic Effects of Chemical Substances (RTECS), 1988 computer tape. Data file.** National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Apr 1989. mag ta Available from NTISSubscription.

Supersedes PB–87-900300. Source tape is in the EBCDIC character set. This restricts preparation to 9 track, one-half inch tape only. Identify recording mode by specifying density only. Call NTIS Computer Products if you have questions. Price includes documentation, PB–87-222246. Available on subscription, North American Continent price $2000.00/year; all others write for quote. Issued quarterly.

The tapes contain the data and bibliographic CODEN files of the 1986 Registry of Toxic Effects of Chemical Substances (RTECS). The Registry is an annual compendium of toxicity data abstracted from the scientific literature by the National Institute for Occupational Safety and Health (NIOSH) in compliance with the Occupational Safety and Health Act of 1970. For each compound, the following data are provided: prime name and synonyms, CAS number, molecular weights and formulas, date when substance record was last updated, Wiswesser Line Notations irritation, mutation, reproductive effects, tumorigenic, and toxic dose data with references; toxicology reviews; carcinogenic assessments; government standards and regulations; ACGIH-Threshold Limit Values; NIOSH Recommended Exposure Limits; Current Intelligence Bulletins and Analytical Methods; NTP bioassay results; and EPA status.

3791 (UCID–21822) **Environmental considerations for the conduct of surrogate tests in the Engineering Demonstration System.** Mode, V.A. Lawrence Livermore National Lab., CA (USA). Oct 1989. 17p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract W-7405-ENG-48. Order Number DE90001790. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

An evaluation of a number of environmental factors shows that the incremental increases due to rare-earth testing in the Engineering Demonstration System (EDS) are insignificant. The conduct of tests would neither require the construction of new facilities nor modification of existing LLNL facilities. All wastes generated by tests would be within established LLNL operational capabilities and environmental or safety impacts have been identified. 2 figs., 3 tabs.

3792 (UCID–21823) **A review of the literature on the toxicity of rare-earth metals as it pertains to the Engineering Demonstration System surrogate testing.** Wald, P.H. Lawrence Livermore National Lab., CA (USA). Oct 1989. 27p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract W-7405-ENG-48. Order Number DE90001789. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A review of data on animal and damaging human exposure to the rare-earth elements has been made. Incidental oral ingestion is considered to be harmless and accidental nonrespiratory uptake does not represent a health risk. Equipment design and operating procedures mitigate against dermatologic or ophthalmologic risk to workers and the public. Animal and human inhalation studies confirm the use of the Threshold Limit Value-Time Weighted Average (TLV-TWA) for yttrium as a conservative measure for evaluation of the Engineering Demonstration System (EDS) emission of the lanthanons. This value (1 mg/m^3) is also consistent with the OSHA-established permissible exposure limit (PEL). Environmental exposures that are maintained at a level below the TLV/PEL value should result in no health impact to workers, visitors, or the public. 38 refs., 7 tabs.

3793 **Asbestos cement dust inhalation by hamsters.** Wehner, A.P. (Pacific Northwest Laboratories, Richland, WA (USA)); Dagle, G.E.; Cannon, W.C.; Buschbom, R.L. *Environmental Research (USA),* 17(3): 367-389 (Dec 1978).

Two groups of 96 male Syrian golden hamsters were exposed to respirable asbestos cement aerosol at concentrations of approximately 1 and approximately 10 micrograms/liter, respectively, 3 hours/day, 5 days/week. Average fiber counts ranged from 5 to about 120 fibers/cm3. Each group was randomly divided into six subgroups of 16 animals. The first subgroup was sacrificed after 3 months of exposure, the second after 6 months, and the third after 15 months. The fourth subgroup was withdrawn from exposure after 3 months, observed for an additional 3 months, and then sacrificed. The fifth and sixth subgroups were withdrawn after 3 and 6 months of exposure, respectively, and maintained for observation up to the 15-month exposure point of the third subgroup at which time all surviving animals were sacrificed. All other experimental procedures were similar to those delineated in a previous publication describing the development of an animal model, techniques, and an exposure system for asbestos cement dust inhalation. The asbestos cement exposures had no significant effect on body weight and mortality of the animals. Higher aerosol concentration and longer exposure times increased the number of macrophages and ferruginous bodies found in the lungs of the exposed animals. Recovery periods had no effect on the incidence of macrophages and ferruginous bodies. The incidence of very slight to slight fibrosis in the animals sacrificed after 15 months of exposure shows a significant (P less than 0.01) trend when the untreated control group and the 1 and 10 microgram/liter dose level groups are compared, indicating a dose-response relationship. Development of minimal fibrosis continued in animals withdrawn from exposure. No primary carcinomas of the lung and respiratory tract and no mesotheliomas were found.

3794 **Production of oxidative DNA damage during the metabolic activation of benzo[α]pyrene in human mammary epithelial cells correlates with cell killing.** Leadon, S.A. (Lawrence Berkeley Lab., CA (USA)); Stampfer, M.R.; Bartley, J. *Proceedings of the National Academy of Sciences of the United States of America (USA),* 85(12): 4365-4368 (Jun 1988). DOE Contract AC03-76SF00098.

The authors have studied the generation of reactive oxygen species during the metabolism of a carcinogen, benzo[α]pyrene, by human mammary epithelial cells. They have quantitated the production of one type of oxidative DNA damage, thymine glycols, by using a monoclonal antibody specific to this base modification. Thymine glycols were produced in DNA in a dose-dependent manner after exposure of human mammary epithelial cells to benzo[α]pyrene. The number of thymine glycols formed in the DNA was similar to that of 7,8-dihydroxy-9,10-epoxy-7,8,9,10-tetrahydrobenzo[α]pyrene covalently bound to the DNA. Exposure of cells to the carcinogen in the presence of superoxide dismutase, which reduced superoxide anions, inhibited the production of thymine glycols and increased cell survival but had little effect on adduct formation. At equitoxic

doses, ≈10-fold more thymine glycols were formed after exposure to benzo[α]pyrene than to γ-irradiation. Thymine glycols, produced by either agent, were efficiently removed from the DNA of the cells. Since thymine glycols represent only a portion of the oxidative damage possibly produced, the results indicate that the total amount of oxidative damage induced during the exposure of human mammary epithelial cells to benzo[α]pyrene greatly exceeds the amount produced by direct adduct formation and that this indirect damage plays an important role in the cytotoxicity of benzo[α]pyrene.

3795 (AD-A–210200/2/XAB) **ELF (extremely low frequency) communications system ecological monitoring program: Electromagnetic field measurements and engineering support – 1988. Technical report, 1982-1988.** Haradem, D.P.; Gauger, J.R.; Zapotosky, J.E. IIT Research Inst., Chicago, IL (USA). May 1989. 306p. (IITRI-E–06595-5). Available from NTIS, PC A14/MF A01.

A long-term program for studying possible effects from the operation of the Navy's ELF Communications System is being conducted on biota and ecosystems components in northwestern Wisconsin and the Upper Peninsula of Michigan. Sixteen general types of organisms from three major ecosystems in the ELF system area are being examined. Formulation of an ELF Ecological Monitoring Program was completed in early 1982 by the Department of the Navy, and studies were initiated in late summer of the same year. Beginning in 1983 and continuing during 1984, major activities of the program consisted of characterization of critical aspects of each study, collection of data to validate assumptions made in proposals, and selection of study sites. From 1985 through 1988, activities centered on the operation of full-scale studies. This report documents electromagnetic (EM) field measurements at investigator selected study sites from 1982 through 1988. Other engineering support activities are also described.

3796 (AD-A–210267/1/XAB) **Behavioral measurement of laser flashblindness in rhesus monkeys. Final report, June-August 1985.** Rhodes, J.W.; Garcia, P.V.; Cosgrove, D.J. Krug International, San Antonio, TX (USA). Technology Services Div. Aug 1985. 7p. Available from NTIS, PC A02/MF A01.

Flashblindness was measured in rhesus monkeys performing a visual-detection task. Stimulus field subtense was 3.5, and a mean luminance was 10 cd/m^2. Laser exposures (doubled Nd:glass, 530-nm wavelength, 20-ns pulsewidth) were presented in Maxwellian view and formed a 12.5 diameter spot centered on the fovea. The independent variables were: (1) test grating contrast (10%, 98%); (2) test grating spatial frequency (1, 4, 12 c/deg); and (3) laser exposure average energy (1% to 94% retinal maximum permissible exposure). The dependent variable was flashblindness, operationally defined as the time between a laser exposure and the first response in a pair of consecutive correct responses (referred to as time to criterion).

3797 (AD-A–210284/6/XAB) **Treatment of laser-induced retinal injuries. Final report, 12 February 1985-31 January 1987.** Belkin, M.; Naveh, N. Tel Aviv Univ. (Israel). 29 Jun 1989. 36p. Available from NTIS, PC A03/MF A01.

This study investigated the effect of steroids know for their inflammatory effect on the laser-induced retinal injury. In an attempt to minimize this, the authors studied prostaglandin E2 (PGE2), known for their mediatory role in any inflammatory reaction, as well as changes in protein leakage. The latter is indicative of blood retinal barrier disruption. The study revealed an enhanced PGE2 response as manifested by: (1) excessive production in vitro of PGE2 by the retina/choroid of laser-exposed eyes; (2) accumulation of both PGE2 and protein in the vitreous body to above prelaser values. Corticosteroid treatment abolished the increase in the vitreal PGE2 response, but it only partially reduced the excessive PGE2 production in vitro by retina/choroid. Treatment was effective during the first week, but later failed. The finding of the transient nature of the anti-PGE2 effect of the steroids does not necessarily point to the steroids inefficacy as anti-inflammatory agents, but rather may point to the cytoprotective nature of PGs themselves.

3798 (AD-A–210599/7/XAB) **Eye/sensor protection against laser irradiation: Organic nonlinear optical materials. Final report, April-December 1988.** Boyle, M.E.; Cozzens, R.F. Naval Research Lab., Washington, DC (USA). 12 Jun 1989. 100p. (NRL-MR–6482). Available from NTIS, PC A05/MF A01.

Recent developments in organic nonlinear optical materials for application to eye and sensor protection are reviewed. This compendium includes a brief discussion of the functioning of the eye, delineation of some of the important eye-protection parameters, and an introduction to the origin of nonlinear optical effects and how they are measured. Specific examples of proposed or prototyped protection devices are also presented. A compilation of noteworthy organic third-order nonlinear optical materials is included as an appendix. Lasers are playing an important and increasing role in modern society. Their present uses range from compact-disc players to optical data-storage and communication systems. Because of this wide-spread use, the continuing expansion of lasers into other arenas and the low-damage thresholds of human eyes and electro-optic sensors, there is increasing concern about eye and sensor protection from laser irradiation.

3799 (AD-A–210698/7/XAB) **Thermodynamic principles of the process of the effect of electromagnetic fields on a polymer melt.** Miroshnichenko, V.F.; Semenyuk, N.I. Foreign Technology Div., Wright-Patterson AFB, OH (USA). 23 Jun 1989. 12p. (FTD-ID(RS)T–1133-88). Available from NTIS, PC A03/MF A01.

Partially edited machine trans. of Plasticheskiye Massy (USSR), No. 10, 35-36(1970).

The effect of electromagnetic fields on a polymer melt leads to an increase in the strength of polymers while magnetostatic field virtually does not have an effect on the immobile polymer melt. However, if relative motion of magnetic field and polymer melt occurs, then, according to the laws of electrodynamics, besides magnetic field in the polymer melt appears the electric field, which will interact with the macromolecules of polymer. As a result of this can be changed the structure of polymer melt, which will be fixed/recorded in proportion to cooling fusion/melt, which must immediately be reflected in the properties of solid polymer. Change in structure of polymer melt can be considered as peculiar phase transitions. Apparently, for the polymer melts besides the phase transformations of the first and second kind there are other, possibly, mixed phase transitions. We experimentally established presence of Delta T-effect in polymer melts, which is characteristic for phase second-order transformations. Therefore in this article we use theory of second-order phase transitions in application to the phenomena in question.

3800 (BFR-R–49-1989) **Effects on zooplankton when passing through an open lake water heat pump.** Laennergren, C. Swedish Council for Building Research, Stockholm (Sweden). 1989. 26p. (In Swedish). Order Number DE90719422. Available from NTIS (US Sales Only), PC A03/MF A01.

The report deals with lake water heat pumps with an open system that can utilize a comparatively large fraction of the available volume in a lake. Organisms, which follow the water through the system, may be injured during the passage of the tubes, pumps and heat exchangers. Three types of influences have been studied: Momentary death, egg losses and injuries observed in the microscope. Long-term effects have been studied through follow-up of changes in the fraction of dead individuals during up to seven days. Taken together, the effects from the heat pump at the investigated locality is regarded as small. Care is recommended at siting of heat pumps with recirculation. Injuries varied from broken antennas to halved, decapitated or completely crushed individuals. The most common injury was broken posterodorsal spine in Daphnia, which at direct through-flow, without recirculation, increased with 6-20%. Recirculation resulted in a marked greater occurrence of injuries, and the fraction of injured Daphnia increased with approx. 50%. The rise in the number of dead individuals was approx 5-30% at direct through-flow. With recirculation the mortality was 100% for Chydorus, 50% for Nauplier and Cyclops, and 30% for Bosmina. Cyclops was the only species with egg carrying females in any numbers. The fraction of egg carrying individuals decreased at two samples, from 12 to 4% and 29 to 21% respectively. Recirculation caused total loss of eggs. The survival experiments gave diffuse and partly unexplainable results. The increase in the fraction of

dead individuals was not greater in the samples with water that had passed the heat pump than in unaffected water.

3801 (CONF-8910193–4) **Development of a centralized solvent recovery system at Carswell Air Force Base.** Summers, J.R.; Nicholas, W.D.; Tull, D.E. Oak Ridge National Lab., TN (USA). Hazwrap Support Contractor Office. [1989]. 14p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC05-84OR21400. From DOE model conference; Oak Ridge, TN (USA); 2-6 Oct 1989. Order Number DE90003060. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

With current regulatory trends, waste minimization has received increased attention during the last several years. The US Air Force has implemented waste minimization studies at Strategic Air Command bases to select options to reduce the volume of generated hazardous waste and develop ongoing waste minimization programs. This paper provides an overview of the study conducted at Carswell Air Force Base and focuses on the aspects of the development of the central recycle center waste minimization option. 1 fig., 1 tab.

3802 (LBL–27867) **The influence of oscillating electromagnetic fields on membrane structure and function: Synthetic liposome and natural membrane bilayer systems with direct application to the controlled delivery of chemical agents.** Liburdy, R.P.; de Manincor, D.; Fingado, B. Lawrence Berkeley Lab., CA (USA). Sep 1989. 20p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8905236–1: Royal Swedish Academy of Sciences symposium on interaction mechanisms of low-level electromagnetic fields, Stockholm (Sweden), 25-27 May 1989). Order Number DE90002454. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Investigations have been conducted to determine if an imposed electromagnetic field can influence membrane transport, and ion and drug permeability in both synthetic and natural cell membrane systems. Microwave fields enhance accumulation of sodium in the lymphocyte and induce protein shedding at Tc. Microwaves also trigger membrane permeability of liposome systems under specific field exposure conditions. Sensitivity varies in a defined way in bilayers displaying a membrane structural phase transition temperature, Tc; maximal release was observed at or near Tc. Significantly, liposome systems without a membrane phase transition were also found to experience permeability increases but, in contrast, this response was temperature independent. The above results indicate that field-enhanced drug release occurs in liposome vesicles that possess a Tc as well as non-Tc liposomes. Additional studies extend non-Tc liposome responses to the in vivo case in which microwaves trigger Gentamicin release from a liposome "depot" placed subcutaneously in the rat hind leg. In addition, evidence is provided that cell surface sequestered liposomes can be triggered by microwave fields to release drugs directly into target cells. 24 refs., 6 figs.

3803 (LIS–84) **Hints and search strategies for the substances listed in the Accident Ordinance.** Wefers, H.; Schulz, T.; John, R. Landesanstalt fuer Immissionsschutz des Landes Nordrhein-Westfalen, Essen (Germany, F.R.). 1988. 238p. (In German). Available from Available from Landesanstalt fuer Immissionsschutz des Landes Nordrhein-Westfalen, Essen (Germany, F.R.).

The Accident Ordinance of 1980 (BGBl. I, p. 772) (Stoerfall-Verordnung 80) was amended by the new version of 19 May 1988 (BGBl. I, p. 625) (Stoerfall-Verordnung 88), which came into force on 1 September 1988. While the older version listed 142 hazardous substances and groups of substances, the new version contains a list of 320 hazardous substances and groups of substances. Both lists are presented in the report. On the basis of these lists, the Zentralstelle Stoerfallverordnung und gefaehrliche Stoffe (ZStVO) of the LIS established a rational database of hazardous substances, which can be operated on PC with hard disk and MS-DOS (IMB-compatible). This report addresses licensing and supervisory authorities as well as operators of plants subject to the Accident Ordinance. Registers of trivial names and trade names facilitate access to the substances. (orig./HP).

3804 (PNCT-N–8410-89-010) **Natural analogue study of volcanic glass. A case study of basaltic glasses in pyroclastic fall deposits of Fuji volcano, Japan.** Arai, T.; Yusa, Y.; Sasaki, N.; Tsunoda, N.; Takano, H. Power Reactor and Nuclear Fuel Development Corp., Tokyo (Japan). Feb 1989. 16p. (CONF-881066–: 12. international symposium on the scientific basis for nuclear waste management, Berlin (Germany, F.R.), 10-13 Oct 1988). Order Number DE90719553. Available from NTIS (US Sales Only), PC A03/MF A01.

A considerable range in alteration rates of basaltic glasses in various environments has been reported in previous studies. However, these studies paid only cursory attention to the environmental conditions under which the glass had been altered. In this study, the alteration of basaltic glasses was investigated and the environmental conditions and the alteration rate were discussed. Two sample ages were represented: 280 years and 2800 years. Basaltic glasses and their alteration layers were analyzed by electron probe microanalyzer (EMPA) and the thickness of the alteration layers were measured by scanning electron microscope (SEM). The ground water collected near the sampling point of Zunazawa Scoria (2800 years) and the pore water of both samples were analyzed. The alteration temperature and flow rate of water are estimated to be about 13degC and 0.2 $l/cm^2/y$ respectively on the basis of meteorological data. The alteration layers of young aged basaltic glasses in freshwater conditions are similar to those of leached borosilicate glasses. The alteration rates of these basaltic glasses are estimated to be several $\mu m/1000y$. The elemental concentrations in the ground water can be roughly explained as the result of leaching of the glasses. (author).

3805 (DOE/ER/13472–3) **Rapid inversion of multi-dimensional magnetotelluric data.** Smith, J.T. Washington Univ., Seattle, WA (USA). Aug 1988. 160p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-86ER13472. Order Number DE90003659. Available from NTIS, PC A08/MF A01 - OSTI; GPO Dep.

This dissertation addresses the problem of computationally efficient ways to recover the distribution of the earth's electrical conductivity as a function of position from magnetotelluric (MT) data, for one-, two-, and three-dimensional conductivity distributions. A method is developed for inversion of two-dimensional data that is roughly 70 times faster per iteration than standard methods of inversion for small sized problems, with increased savings for larger problems. Approximate partial derivatives of MT data with respect to the conductivity directly beneath it are obtained from a perturbation argument in which only cross terms involving both horizontal gradients and variations in conductivity are neglected. At each iteration of the method the partial derivatives are used in single site inversions at each site, the conductivity profiles below the various sites interpolated to obtain a 2-D model, and 2-D forward modeling performed to obtain a new set of residuals. The rapid inversion method is demonstrated in several inversions of synthetic data. The rapid method is extended to inversion of 3-D data in two different manners; one using single site inversions and the other using multiple site inversions. Estimated operation counts are down by factors of 500 and 80, respectively, from 3-D inversions formulated in a conventional manner, making three-dimensional inversion affordable on current day computers. Our implementation of the rapid method makes use of a general purpose linear inversion that can minimize

weighted norms of a model or its first or second derivatives and may be used in conventional inversions of one- and two-dimensional MT data. Step size control is particularly important for assuring the improvement of an objective function when the general purpose inversion is used in an iterative nonlinear inversion. Nonlinear 1-D MT inversions are also discussed briefly.

3806 (DOE-tr–89-0021) **Construction standards and practices, SNIP II-7-81: Part 2, Design standards: Chapter 7, Construction in seismic regions.** USDOE, Washington, DC (USA). 1989. 52p. The standards of chapter 7 (Construction in seismic regions) of the Construction Standards and Practices manual can be useful in the design of buildings in seismic areas. (JF)

3807 (EGG-M–89182) **Earthquake strong ground motion studies at the Idaho National Engineering Laboratory.** Wong, I.; Silva, W.; Darragh, R.; Stark, C.; Wright, D.; Jackson, S.; Carpenter, G.; Smith, R.; Anderson, D.; Gilbert, H. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1989]. 13p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC07-76ID01570. (CONF-8910192–15: 2. DOE natural phenomena hazards mitigation conference, Knoxville, TN (USA), 3-5 Oct 1989). Order Number DE90002029. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Site-specific strong earthquake ground motions have been estimated for the Idaho National Engineering Laboratory assuming that an event similar to the 1983 M_s 7.3 Borah Peak earthquake occurs at epicentral distances of 10 to 28 km. The strong ground motion parameters have been estimated based on a methodology incorporating the Band-Limited-White-Noise ground motion model coupled with Random Vibration Theory. A 16-station seismic attenuation and site response survey utilizing three-component portable digital seismographs was also performed for a five-month period in 1989. Based on the recordings of regional earthquakes, the effects of seismic attenuation in the shallow crust and along the propagation path and local site response were evaluated. This data combined with a detailed geologic profile developed for each site based principally on borehole data, was used in the estimation of the strong ground motion parameters. The preliminary peak horizontal ground accelerations for individual sites range from approximately 0.15 to 0.35 g. Based on our analysis, the thick sedimentary interbeds (greater than 20 m) in the basalt section attenuate ground motions as speculated upon in a number of previous studies. 26 refs., 6 figs.

3808 (EGG-M–89193) **Seismic design criteria at the Idaho National Engineering Laboratory (INEL).** Harris, B.G. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1989]. 8p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC07-76ID01570. (CONF-8910192–16: 2. DOE natural phenomena hazards mitigation conference, Knoxville, TN (USA), 3-5 Oct 1989). Order Number DE90002047. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

During the 40-year existence of the INEL site, the criteria used for the seismic design of facilities have evolved based on the increased understanding of earthquakes, their effect on structures, and the specific seismic characteristics of the INEL. Several studies, including one scheduled for completion this year, have been initiated since 1970 for the purpose of utilizing evolving technology to better define reasonable, yet conservative, seismic design criteria. 26 refs., 1 fig.

3809 (IC–89/50) **Thermal stress and seismogenesis.** Zhou Huilan; Wei Dongping. International Centre for Theoretical Physics, Trieste (Italy). May 1989. 19p. Order Number DE90608161. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In this paper, the Fourier stress method was applied to deal with the problem of plane thermal stress, and a computing formula was given. As an example, we set up a variate temperature field to describe the uplifted upper mantle in Bozhong area of China, and the computing results shows that the maximum value of thermal plane shear stress is up to nearly $7x10^7$ P_α in two regions of this area. Since the Bohai earthquake (18 July, 1969, M_s = 7.4) occurred at the edge of one of them and Tangshan earthquake (28 July, 1976, M_s = 7.8) within another, their occurrences can be related reasonably to the thermal stress. (author). 15 refs, 7 figs.

3810 (IC–89/51) **Self-similar growth of three-dimensional fault.** Zhou Huilan. International Centre for Theoretical Physics, Trieste (Italy). Apr 1989. 13p. Order Number DE90608162. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

By using forthright mathematical treatment, this paper expands the two-dimensional Self-Similar model of faulting proposed by Fukao and Furumoto (1985) in three-dimensions, and explains the energy ratio of α of precursor to main shock, magnitude difference ΔMU between the main shock and its largest aftershock, and b value in magnitude-frequency relationship. The present model gives α 0.08, ΔMU = 1.21 and b = 1.5, respectively. These results are more consistent with the observations than the two-dimensional model. (author). 3 refs, 2 figs, 2 tabs.

3811 (LBL–26362) **Earth Sciences Division annual report 1988.** Lawrence Berkeley Lab., CA (USA). Aug 1989. 194p. Sponsored by U.S. Department of Defense; U.S. DOE Conservation & Renewable Energy; U.S. DOE Energy Research; U.S. DOE Fossil Energy; U.S. DOE Radioactive Waste Management; U.S. Department of the Interior; Environmental Protection Agency; Gas Research Ins DOE Contract AC03-76SF00098. Order Number DE90002617. Available from NTIS, PC A09/MF A01 - OSTI; GPO Dep.

Scientists and engineers of the Earth Sciences Division, following the mission of a multipurpose National Laboratory, conduct research on a wide variety of topics relevant to the nation's energy development programs. This report summarizes the activities for 1988. The Earth Sciences Division has developed unique expertise in several research areas. Much of the Division's research deals with the physical and chemical properties and processes in the earth's crust, from the partially saturated, low-temperature near-surface environment to the high-temperature environments characteristic of regions where magmatic-hydrothermal processes are active. Strengths in laboratory and field instrumentation, numerical modeling, and in situ measurement allow study of the transport of mass and heat through geologic media – studies that now include the appropriate chemical reactions and the hydraulic-mechanical complexities of fractured rock systems. Related and parallel laboratory and field investigations address the effects of temperature, pressure, stresses, pore fluids, and fractures on the elastic and electrical properties of rock masses. These studies are concerned with rock behavior in the brittle and ductile crustal regimes, and they drive the development of improved geomechanical and geophysical tools and techniques for mapping and characterizing heterogeneity in the subsurface.

3812 (LBL–27778) **VSP [Vertical Seismic Profiling] and cross hole tomographic imaging for fracture characterization.** Majer, E.L.; Peterson, J.E.; Myer, L.R.; Karasaki, K.; Daley, T.M.; Long, J.C.S. Lawrence Berkeley Lab., CA (USA). Sep 1989. 10p. Sponsored by U.S. DOE Radioactive Waste Management. DOE Contract AC03-76SF00098. (CONF-890928–13: Nuclear waste isolation in the unsaturated zone: FOCUS '89, Las Vegas, NV (USA), 18-21 Sep 1989). Order Number DE90002680. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

For the past several years LBL has been carrying out experiments at various fractured rock sites to determine the fundamental nature of the propagation of seismic waves in fractured media. These experiments have been utilizing high frequency (1000 to 10000 Hz.) signals in a cross-hole configuration at scales of several tens of meters. Three component sources and receivers are used to map fracture density, and orientation. The goal of the experiments has been to relate the seismological parameters to the hydrological parameters, if possible, in order to provide a more accurate description of a starting model for hydrological characterization. The work is ultimately aimed at the characterization and monitoring of the Yucca Mountain site for the storage of nuclear waste. In addition to these controlled experiments multicomponent VSP work has been carried out at several sites to determine fracture characteristics. The results to date indicate that both P-wave and S-wave can be used to map the location of fractures. In addition, fractures that are open and conductive are much more visible to seismic waves that nonconductive fractures. The results of these tests indicate direct use in an unsaturated environment. 12 refs., 10 figs.

3813 (NUREG/CR–5269) **Evaluation of hypotheses for the cause of the 1886 Charleston earthquake: Final report.** White, R.M.; Long, L.T. Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering; Law Environmental, Inc., Kennesaw, GA (USA); Georgia Inst. of Tech., Atlanta, GA (USA). Oct 1989. 489p. Sponsored by Nuclear Regulatory Commission. Available from NTIS, PC A21/MF A01 - GPO; OSTI; INIS.

This report describes a geophysical/geological investigation of the earth's crust at seismogenic depths in the Charleston, South Carolina area. This investigation was made for the purpose of narrowing the range of theories that have been used to explain the historic 1886 Charleston earthquake. Since a number of these theories are based on only a portion of the available data, we have established a comprehensive data set in order to allow these hypotheses to be subjected to the entire data set. Specifically, we combined existing and new gravity, magnetic and topographic data in grids of 128 km, 256 km and 1028 km on a side centered on Charleston. Seismic, geologic and drilling data were collected and summarized. A magnetotelluric survey consisting of 12 soundings interpreted to depths of over 40 kilometers defined the bottom of the rigid crust with assistance from seismic reflection and other data. A geologic model of the crust in the area of Charleston was constructed and it defined the locations of Triassic/Jurassic basins Paleozoic plutons in greater detail than has previously been achieved. 102 refs., 75 figs.

3814 (NUREG/CR–5418) **Near-surface neotectonic deformation associated with seismicity in the northeastern United States.** Alexander, S.S.; Gold, D.P.; Gardner, T.W.; Slingerland, R.L.; Thornton, C.P. Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering; Pennsylvania State Univ., University Park, PA (USA). Dept. of Geosciences. Oct 1989. 313p. Sponsored by Nuclear Regulatory Commission. Available from NTIS, PC A14/MF A01 - GPO; OSTI; INIS.

For the Lancaster, PA seismic zone a multifaceted investigation revealed several manifestations of near-surface, neotectonic deformation. Remote sensing data together with surface geological and geophysical observations, and recent seismicity reveal that the neotectonic deformation is concentrated in a NS-trending fault zone some 50 km in length and 10–20 km in width. Anomalies associated with this zone include distinctive lineament and surface erosional patterns; geologically recent uplift evidenced by elevations of stream terraces along the Susquehanna River; and localized contemporary travertine deposits in streams down-drainage from the inferred active fault zone. In the Moodus seismic zone the frequency of tectonically-controlled lineaments was observed to increase in the Moodus quadrangle compared to adjacent areas and dominant lineament directions were observed that are perpendicular and parallel to the orientation of the maximum horizontal stress direction (N80-85E) recently determined from in-situ stress measurements in a 1.5 km-deep borehole in the seismic zone and from well-constrained earthquake focal mechanisms. 284 refs., 33 figs.

3815 (SAND–89-1508) **Seismic signal modeling of the RSTN and the NORESS/ARCESS data.** Hardin, T.L.; Breding, D.R. Sandia National Labs., Albuquerque, NM (USA). Sep 1989. 52p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE90001798. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A Seismic Signal Modeling software package has been implemented for the RSTN and the NORESS/ARCESS data. The key features of the software are: (1) It removes over a limited band the gain and phase effects that were introduced by the seismometer and its associated filters. This removal was accomplished by using Finite Impulse Response (FIR) filter techniques to produce a resulting signal in terms of either ground-motion velocity or displacement. (2) It combines two separate bands of data, which are sampled at different rates, into a single broadband signal. (3) It produces a time-domain plot of the signals. (4) It produces a spectral analysis of the signals, including signal-to-noise ratio and comparison of the signals. 5 refs., 22 figs., 3 tabs.

3816 (NUREG/CR–5429-Vol.2) **UDEC (Universal Distinct Element Code) version ICG1.5: User's manual: Volume 2.** Board, M. Nuclear Regulatory Commission, Washington, DC (USA). Div. of High-Level Waste Management; Itasca Consulting Group, Inc., Minneapolis, MN (USA). Sep 1989. 429p. Sponsored by Nuclear Regulatory Commission. Available from NTIS, PC A19/MF A01 - GPO - OSTI.

UDEC (Universal Distinct Element Code) is a two-dimensional distinct element program written for the static and dynamic analysis of the mechanical, thermal and hydrologic behavior of jointed rock masses. This program has been applied to a wide variety of problems in civil construction, mining, nuclear waste disposal, and geologic modeling. This document presents the theoretical basis for the mathematical models, the details of solution procedures, user's manual and presentation of verification and example problems. A description of the program support and documentation methodology which is employed is also given. This document is given in three volumes: Volume 1 – Description of Mathematical Models and Numerical Methods, Volume 2 – User's Manual, and Volume 3 – Verification and Example Problems. Three volumes are intended to satisfy the requirements and guidelines set forth in Final Technical Position and Documentation of Computer Codes for High-Level Waste Management (NUREG-0856). 28 refs., 108 figs., 10 tabs.

3817 (DOE/ER/60555–3) **Transport and transfer rates in the waters of the continental shelf and slope: SEEP: Triennial report, 1 May 1987–30 April 1990.** Biscaye, P.E.; Anderson, R.F. Columbia Univ., Palisades, NY (USA). Lamont-Doherty Geological Observatory. Oct 1989. 56p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-87ER60555. Order Number DE90002970. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

The SEEP Program was conceived in about 1980/1981 when most of the DOE-funded investigators in the Northeast decided to collaborate on a common experiment which was, for most, the next logical extension of their current research, but which was too large for any one or small subset to attempt on their own. Through a SEEP Executive Committee (consisting then of Walsh, Chairman; Biscaye, Csanady and Spencer), we proposed an experiment that had as its objective the quantitative determination of the fate of the fine-grained particulate material – both biogenic and abiogenic – observed in the waters of the continental shelf, but notably lacking in shelf sediments. Because most of the energy-related pollutants with which DOE is concerned become rapidly associated with fine-grained particles in the marine environment, a study of those particles and some pollutant proxies associated with them is, in effect, a study of the fate of pollutants. Specifically, it was posited that this fine material is transferred from the shelf to the slope waters by any of a number of mechanisms, and accumulated as part of the sediment on the continental slope. The SEEP Program was originally proposed in three successive phases in which experiments would be mounted first off New England and ending just north of Hatteras, with an intermediate experiment about mid-way between. The first experiment – SEEP-I, off New England – was carried out from 1983 to 1984, most of the papers from which were published in a special issue of Continental Shelf Research.

3818 (DOE/ER/60647–2) **Boundary processes in the nutrient-bearing stratum of the North Atlantic: Progress report, March 1, 1989–February 28, 1990.** Churchill, J.H.; Csanady, G.T. Old Dominion Univ., Norfolk, VA (USA). Research Foundation. Sep 1989. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-88ER60647. Order Number DE90002540. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Three parallel lines of work were initiated in the new three-year cycle of this grant which begun in March 1988. One deals with the role of the continental margins in the circulation and mass balance of the "nutrient bearing stratum" of the North Atlantic, another aims

at elucidating the physics of cross-shelf exchange processes, and the object of the third one is analysis and interpretation of observations taken in the SEEP I and II and MASAR experiments. The major effort of the PI was devoted to the role of the Gulf Stream in raising nutrient-rich upper thermocline fluid from the Sargasso Sea to a near-surface band on the shore-side of the Stream, and transporting it northeastward into the northern North Atlantic. The first accomplishment was a theoretical model quantifying "western boundary upwelling" and linking it to the energy dissipation occurring in such boundary currents as the Gulf Stream. Building upon the theoretical ideas, a calculation of nutrient transport by the Gulf Stream was undertaken at a succession of sections from the Florida Straits to the Grand Banks. The calculations were carried out by Jose Pelegri, a mature-age graduate student who joined the project in December 1988. First, the northeastward transport of nutrients by the Stream more than doubles between the Florida Straits and Cape Hatteras. This verifies the idea that the Stream collects a large inflow from the upper thermocline, the nutrient bearing stratum. Second, the core of the alongstream Reynolds flux (velocity times concentration) lies at a depth of only about 400 m. This again conforms to the notion that waters from the upper thermocline rise under the Stream and release their potential energy. Also, of course, they come into closer contact with the near surface layers. 6 refs.

3819 (PNL-SA–17111) **Current and suspended sediment measurements on the central California continental shelf.** Sherwood, C.R.; Coats, D.; Walls, B. Pacific Northwest Lab., Richland, WA (USA). Sep 1989. 7p. Sponsored by U.S. Department of Defense. DOE Contract AC06-76RL01830. (CONF-8909128–6: Oceans '89 conference, Seattle, WA (USA), 18-21 Sep 1989). Order Number DE90002676. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The US Army Corps of Engineers, San Francisco District (USACE), is evaluating the suitability of sites for ocean disposal of dredged material from several projects in the San Francisco Bay area. In conjunction with those efforts, the USACE maintained current meter moorings at two candidate disposal sites (Sites B1B and 1M) on the California continental shelf. Optical backscatterance (OBS) sensors mounted on these moorings near the sea bed were used to determine suspended sediment concentrations. The initial deployments at Site 1M (42 m) and Site B1B (86 m) occurred in April 1988; data were recovered in June and September 1988, and January 1989. Final instrument recovery was scheduled for May 1989, and the program should provide a full year of information on tidal and low-frequency shelf currents and near-bed suspended sediment concentrations. This is a preliminary report of the data from the 86-m site. The data showed evidence of strong vertical coherence in the currents, net southward flow at all depths during upwelling season, frequent flow reversals in fall and winter, and more frequent resuspension of sediment during the winter months. 9 refs., 5 figs., 2 tabs.

In his recently published book A Brief History of Time, S. Hawking describes his remarkable insights into the problem of the origin of our universe. In this talk a more quantitative description of some of the important principles from this book is presented as a mathematical appendix to it. A brief review of the ideas of the Standard Big Bang Model of the Universe is given in terms of the evolution equation that follows from Einstein's theory. The meaning of the Cosmological Constant, its relation to Vacuum Energy, the model of the empty DeSitter Space and Gravity is derived. By analogy to Schroedinger mechanics one can give the general features of Quantum Cosmology', in which the origin of the universe can be viewed as a quantum tunneling process in imaginary time from a Quantum Chaos state of no space, no time, no matter to an inflationary expanding DeSitter space which eventually transits into the Hot Big Bang Expansion that we see.

3823 (INIS-mf–12013, pp. 148) **Acceleration of cosmic rays in SNR shock waves.** Drury, L.O'C.; Markiewicz, W.J.; Voelk, H.J. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The time dependence of the energy density of cosmic rays accelerated in the outer shock of a supernova is studied in simple nonlinear models. The solutions are classified in their dependence on the parameters of the system. (orig.).

3824 (INIS-mf–12013, pp. 149) **Cosmic ray spectrum produced by supernova remnants with an upper limit on wave dissipation.** Voelk, H.J.; Zank, L.A.; Zank, G.P. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

By taking into account an upper limit to the wave dissipation we have shown that, within the limitations of test particle theory, supernova remnants (SNR) remain the prime candidates for the interstellar cosmic ray population below 10^{14} to 10^{15} eV/n. (orig.).

3825 (INIS-mf–12013, pp. 149) **Nonlinear waves in cosmic ray magnetohydrodynamics.** Zank, G.P. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The non-linear evolution and stability of waves arising in the two-fluid hydrodynamical model used to describe cosmic ray acceleration by the first-order Fermi process in astrophysical shocks has been studied in detail. In this way, we hope to capture some of the essential physics that applies in the fully non-linear case. (orig.).

3826 (INIS-mf–12013, pp. 150) **Stochastic acceleration of relativistic particles.** Carioli, S.M. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The relativistic formulation of the stochastic acceleration of a charge by means of an electric field wave packet in a magnetic field is given. The results are discussed in the framework of the problem of the acceleration of very high energy cosmic rays. (orig.).

3827 (INS–746) **Universe as a topological defect in a higher-dimensional Einstein-Yang-Mills theory.** Nakamura, A.; Shiraishi, K. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1989. 12p. Order Number DE90719507. Available from NTIS (US Sales Only), PC A03/MF A01.

An interpretation is suggested that a spontaneous compactification of space-time can be regarded as a topological defect in a higher-dimensional Einstein-Yang-Mills (EYM) theory. We start with D-dimensional EYM theory in our present analysis. A compactification leads to a D-2 dimensional effective action of Abelian gauge-Higgs theory. We find a 'vortex' solution in the effective theory. Our universe appears to be confined in a center of a 'vortex', which has D-4 large dimensions. In this paper we show an example with SU (2) symmetry in the original EYM theory, and the resulting solution is found to be equivalent to the 'instanton-induced compactification'. The cosmological implication is also mentioned. (author).

3828 (LBL–27747) **Supernovae, compact stars and nuclear physics.** Glendenning, N.K. Lawrence Berkeley Lab., CA (USA). 25 Aug 1989. 27p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890826–6: International nuclear physics conference, Sao Paulo (Brazil), 20-26 Aug 1989). Order Number DE90002682. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We briefly review the current understanding of supernova. We investigate the implications of rapid rotation corresponding to the frequency of the new pulsar reported in the supernovae remnant SN1987A. It places very stringent conditions on the equation of state if the star is assumed to be bound by gravity alone. We find that the central energy density of the star must be greater than 12 times that of nuclear density to be stable against the most optimistic estimate of general relativistic instabilities. This is too high for the matter to plausibly consist of individual hadrons. We conclude that the newly discovered pulsar, if its half-millisecond signals are attributable to rotation, cannot be a neutron star. We show that it can be a strange quark star, and that the entire family of strange stars can sustain high rotation under appropriate conditions. We discuss the conversion of a neutron star to strange star, the possible existence of a crust of heavy ions held in suspension by centrifugal and electric forces, the cooling and other features. 39 refs., 8 figs., 2 tabs.

3829 (N–89-18288, pp. 65-66) **Isotopic and chemical evolution of planets: Mars as a missing link.** Depaolo, D.J. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

The study of planetary bodies has advanced to a stage where it is possible to contemplate general models for the chemical and physical evolution of planetary interiors, which might be referred to as UMPES (Unified Models of Planetary Evolution and Structure). UMPES would be able to predict the internal evolution and structure of a planet given certain input parameters such as mass, distance from the sun, and a time scale for accretion. Such models are highly dependent on natural observations because the basic material properties of planetary interiors, and the processes that take place during the evolution of planets are imperfectly understood. The idea of UMPES was particularly unrealistic when the only information available was from the earth. However, advances have been made in the understanding of the general aspects of planetary evolution now that there is geochemical and petrological data available for the moon and for meteorites.

3830 (N–89-18288, pp. 69-70) **Accretion and primary differentiation of Mars.** Drake, M.J. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

In collecting samples from Mars to address questions such as whether Mars accreted homogeneously or heterogeneously, how Mars segregated into a metallic core and silicate mantle, and whether Mars outgassed catastrophically coincident with accretion or more serenely on a longer timescale, we must be guided by our experience in addressing these questions for the Earth, Moon, and igneous meteorite parent bodies. A key measurement to be made on any sample returned from Mars is its oxygen isotopic composition. A single measurement will suffice to bind the SNC meteorites to Mars or demonstrate that they cannot be samples of that planet. A positive identification of Mars as the SNC parent planet will permit all that has been learned from the SNC meteorites to be applied to Mars with confidence. A negative result will perhaps be more exciting in forcing us to look for another object that has been geologically active in the recent past. If the oxygen isotopic composition of Earth and Mars are established to be distinct, accretion theory must provide for different compositions for two planets now separated by only 0.5 AU.

3831 (N–89-18288, pp. 73-74) **In situ chemical analyses of extraterrestrial bodies.** Economou, T.E.; Turkevich, A.L. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Abstract Only.

One of the most important tasks on any sample return mission will have to be a quick sample characterization in order to guarantee a variety of collected samples. An alpha particle instrument with alpha, proton and X-ray modes can provide a quick and almost complete chemical analysis of Mars samples. This instrument is based on three interactions of the alpha particles from a radioactive source with matter: elastic scattering of the alpha particles by nuclei (alpha mode), (alpha,p) nuclear reaction with some light elements (proton mode), and excitation of the atomic structure of atoms by alpha particles, leading to emission of characteristic X-rays of the lunar surface at three sites during the Surveyor mission of 1967 to 1968. Since then the instrument has been improved and miniaturized substantially. As shown in the past, the alpha particle instrument can operate under Martian conditions without any degradation in the performance. The alpha and proton modes can provide vital information about the light elements, while the X-ray mode with its ambient temperature X-ray detector will be useful for the heavier elements. The excitation of the atomic structure is provided by the same alpha radioactive source that is used by alpha and proton modes or by an auxiliary X-ray source that is selected to enhance the sensitivity to some important geochemical elements.

3832 (N–89-18288, pp. 75-76) **Cosmogenic nuclides in the Martian surface: constraints for sample recovery and transport.** Englert, P.A.J. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Stable and radioactive cosmogenic nuclides and radiation damage effects such as cosmic ray tracks can provide information on the surface history of Mars. A recent overview on developments in cosmogenic nuclide research for historical studies of predominantly extraterrestrial materials was published previously. The information content of cosmogenic nuclides and radiation damage effects produced in the Martian surface is based on the different ways of interaction of the primary galactic and solar cosmic radiation (GCR, SCR) and the secondary particle cascade. Generally the kind and extent of interactions as seen in the products depend on the following factors: (1) composition, energy and intensity of the primary SCR and GCR; (2) composition, energy and intensity of the GCR-induced cascade of secondary particles; (3) the target geometry, i.e., the spatial parameters of Martian surface features with respect to the primary radiation source; (4) the target chemistry, i.e., the chemical composition of the Martian surface at the sampling location down to the minor element level or lower; and (5) duration of the exposure. These factors are not independent of each other and have a major influence on sample taking strategies and techniques.

3833 (N–89-18288, pp. 88-89) **Martian weathering products as tracers of climate change and atmosphere/hydrosphere evolution on Mars.** Gooding, J.L. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science,

Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Primary objectives for exploration of Mars include determination of: (1) the distribution, abundance, and sources and sinks of volatile materials, and (2) the interaction of surface materials with the atmosphere. Both objectives fall within the purview of planetary surface weathering studies and require documented samples of weathered materials, including rock surfaces, soils, and sediments. Major issues to be addressed in selecting and studying Martian samples in this context are summarized.

3834 (N–89-18288, pp. 113-114) **Valles Marineris, Mars: an optimum science-sample site.** Lucchitta, B.K. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

The Valles Marineris troughs offer an opportunity to sample rocks that reflect various ages and compositions, giving insight into important processes on Mars. Most of the samples would be located within reasonable proximity and could be easily reached by rovers or balloons. Although landing a spacecraft on the floor of the Valles Marineris may be too dangerous for the first sample-return mission to Mars, the scientific rewards would be so great that such a landing should be considered for later flights.

3835 (N–89-18288, pp. 124-125) **Zeolites on Mars: Possible environmental indicators in soils and sediments.** Ming, D.W.; Gooding, J.L. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Weathering products should serve as indicators of weathering environments and may provide the best evidence of the nature of climate change on Mars. No direct mineralogical measurements of Martian regolith were performed by the Viking missions, but the biology and X-ray fluorescence experiments provided some information on the physiochemical properties of Martian regolith. Most post-Viking studies of candidate weathering products have emphasized phyllosilicates and Fe-oxides; zeolites are potentially important, but overlooked, candidate Martian minerals. Zeolites would be important on Mars for three different reasons. First, they are major sinks of atmospheric gases and, per unit mass, are stronger and more efficient sorbents than are phyllosilicates. Secondly, they can be virtually unique sorbents and shelters for organic compounds and possible catalysts for organic-based reactions. Finally, their exchangeable ions are good indicators of the chemical properties of solutions with which they have communicated. Accordingly, the search for information on past compositions of the Martian atmosphere and hydrosphere should find zeolites to be rich repositories.

3836 (N–89-18288, pp. 126-127) **What ferric oxide/oxyhydroxide phases are present on Mars.** Morris, R.V. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

The weathering history of Mars can be deduced largely from the mineralogy and distribution of ferric oxide/oxyhydroxide phases. As discussed, some insights can be gained through spectrophotometric remote sensing, but absolute determinations must depend on direct laboratory analysis of returned Martian samples.

3837 (N–89-18288, pp. 140) **Climate, atmosphere, and volatile inventory evolution: polar processes, climate records, volatile inventories.** Pollack, J.B. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Abstract Only.

Climate change on Mars was driven by long term changes in the solar luminosity, variations in the partitioning of volatiles between the atmosphere and near-surface reservoirs, and astronomical variations in axial and orbital properties. There are important parallels between these drives for Mars and comparable ones for Earth. In the early history of the solar system, the Sun's luminosity was 25 to 30 percent lower than its current value. It is suggested that an early benign climate on Earth was due to the presence of much more carbon dioxide in its atmosphere at these early times than currently resides there. Such a partitioning of carbon dioxide, at the expense of the carbonate rock reservoir, may have resulted from a more vigorous tectonic and volcanic style at early times. Such a line of reasoning may imply that much more carbon dioxide was present in the Martian atmosphere during the planet's early history than resides there today. It is now widely recognized that astronomical variations of the Earth's axial and orbital characteristics have played a dominant role in causing the succession of glacial and interglacial periods characterizing the last several million years. The magnitude of the axial and eccentricity variations are much larger for Mars than for Earth. Such changes on Mars could result in sizeable variations in atmospheric pressure, dust storm activity, and the stability of perennial carbon dioxide and water ice polar caps. These quasi-periodic climate changes occur on periods of 100,000 to 1,000,000 years and may be recorded in the sedimentary layers of the polar layered terrain.

3838 (N–89-18288, pp. 142) **Degassing history of Mars from Martian atmosphere samples.** Rao, A.S.P. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Abstract Only.

A comparison of the abundances of Ar-40 and He-4 (radiogenic) in various terrestrial planetary atmospheres provides clues to the volcanic and tectonic histories of the planets while the amount of primordial noble gases in the planetary atmospheres provides clues to the quantities of volatile rich materials captured by each planet. The noble gas contents of Mars, Earth, and Venus clearly show that the absolute abundances of isotopes of gases are directly proportional to the amounts of degassed CO2 into the planetary atmosphere. Several basic geological units can be seen on the global geological map of Mars. The enormous size of volcanic and tectonic structures of Mars, despite its smaller size, provide invaluable clues to the degassing history of Mars. Therefore, the collection of samples of Martian atmosphere and soil volatiles is imperative to understand the origin and evolution of the atmosphere and its interaction with the Martian surface. Surface properties of Martian rocks, soils, breccias, and regolith and their chemistry are also generic to any discussion on the origin and evolution of the atmosphere of Mars. The differences in absolute abundances of gases in the planetary atmospheres are amenable to many alternative interpretations. These alternative interpretations can be tested by imposing additional constraints derived from the isotopic results of noble gases in the atmospheres of the planets.

3839 (N–89-18288, pp. 143-144) **Cosmogenic nuclides: Observable effects of Martian volatiles.** Reedy, R.C.; Drake, D.M.; Feldman, W.C. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Cosmic-ray produced (cosmogenic) nuclides in returned Martian samples could be used to study the amounts and distributions of volatiles in the recent past on Mars. In planning for the gamma-ray spectrometer experiment that is scheduled to fly on the Mars Observer, many calculations were done on the nuclear reactions that should occur in the Martian surface, studying especially the production and transport of neutrons. It is found that three aspects of Mars can very significantly affect the production of cosmogenic products in Mars: the Martian atmosphere and the presence of H2O in or CO2 on the surface of Mars. These volatile components can greatly affect the energy and spatial distributions of neutrons, expecially

those with thermal or near thermal energies, in the surface of Mars. In turn, these neutrons produce many cosmogenic nuclides that can be observed in samples returned from Mars.

3840 (N–89-18288, pp. 147-148) **Volcanic rocks and the geologic history of Mars.** Salpas, P.A. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

A number of questions exist regarding the geology of Mars which can be addressed by the proposed Mars rover-sample return mission. The use of a rover during the proposed mission greatly enhances the ability to investigate multiple aspects of Martian geology and geological history. Attempting to address all of the important questions may dilute the amount of information that can be obtained regarding each question and may result in no satisfactory answers. Prioritization is essential to a successful mission. The task of setting priorities is simplified somewhat when it is considered that answers to some of these questions do not require taking samples, and that for some questions, sample location is not as important as for others. The surface of Mars presents two distinct terrains, both of which have the potential to contain valuable information regarding the composition of Mars.

3841 (N–89-18288, pp. 149-150) **Role of impact cratering for Mars sample return.** Schultz, P.H. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

The preserved cratering record of Mars indicates that impacts play an important role in deciphering Martian geologic history, whether as a mechanism to modify the lithosphere and atmosphere or as a tool to sample the planet. The various roles of impact cratering in adding a broader understanding of Mars through returned samples are examined. Five broad roles include impact craters as: (1) a process in response to a different planetary localizer environment; (2) a probe for excavating crustal/mantle materials; (3) a possible localizer of magmatic and hydrothermal processes; (4) a chronicle of changes in the volcanic, sedimentary, atmospheric, and cosmic flux history; and (5) a chronometer for extending the geologic time scale to unsampled regions. The evidence for Earth-like processes and very nonlunar styles of volcanism and tectonism may shift the emphasis of a sampling strategy away from equally fundamental issues including crustal composition, unit ages, and climate history. Impact cratering not only played an important active role in the early Martian geologic history, it also provides an important tool for addressing such issues.

3842 (N–89-18288, pp. 163) **Experimental simulations of oxidizing conditions and organic decomposition on the surface of Mars.** Stoker, C.R.; Mancinelli, R.L.; Mckay, C.P. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Abstract Only.

One important scientific objective of a Mars Rover Sample Return mission would be to look for traces of living and extinct life on Mars. An instrument to search for organic carbon may be the simplest instrument that could screen samples which are interesting from a biological point of view. An experimental program is described which would help to understand the nature of the oxidizing soil on Mars and the mechanism responsible for organic degradation on the Martian surface. This is approached by lab simulations of the actual conditions that occur on Mars, particularly the oxidant production by atmospheric photochemistry, and the combined effects of UV light and oxidants in decomposing organic compounds. The results will be used to formulate models of the photochemistry of the atmospheric, the atmosphere-soil interaction, and the diffusion of reactive compounds into the soils. This information will provide insights and constraints on the design of a sampling strategy to search for organic compounds on Mars.

3843 (N–89-18288, pp. 164) **Noble gases as tracers of the origin and evolution of the Martian atmosphere and the degassing history of the planet.** Swindle, T.D. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Noble gas analysis of Martian samples can provide answers to a number of crucial questions. Some of the most obvious benefits will be in Martian chronology, using techniques that have been applied to lunar samples. However, these are by no means the only relevant noble gas studies possible. Since Mars has a substantial atmosphere, noble gases can be used to study the origin and evolution of that atmosphere, including the degassing history of the planet. This type of study can provide constraints on: (1) the total noble gas inventory of the planet, (2) the number of noble gas reservoirs existing, and (3) the exchange of gases between these reservoirs. How to achieve these goals are examined.

3844 (N–89-18288, pp. 166) **Examination of Martian sedimentary rocks to understand possible paleo-ocean and its age.** Tanaka, T. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Abstract Only.

It is well known that the terrestrial marine sediments have large cerium anomaly on their chondrite-normalized REE pattern. Siliceous shale and calcaleous sediments have negative Ce-anomaly. Ferromanganese nodule have positive or negative Ce-anomaly. The Ce-anomaly is considered to be a result of tetravalent state of cerium rather than common trivalent. Ferromanganese nodule which formed under reducing condition has negative Ce-anomaly. Then, combined study of Ce-anomaly with Ce isotopes is expected to play an important role in geochemistry. La-138 decays to Ce-138 and Ba-138 with a total half life of about 1 x 10 to the 11th years. Cerium anomalies (positive or negative) are expected in Martian paleo-ocean and in sediments as observed in the terrestrial environment. A list of things to be examined is given.

3845 (N–89-18288, pp. 167-168) **U-Th-Pb, Sm-Nd, Rb-Sr, and Lu-Hf systematics of returned Mars samples.** Tatsumoto, M.; Premo, W.R. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

The advantage of studying returned planetary samples cannot be overstated. A wider range of analytical techniques with higher sensitivities and accuracies can be applied to returned samples. Measurement of U-Th-Pb, Sm-Nd, Rb-Sr, and Lu-Hf isotopic systematics for chronology and isotopic tracer studies of planetary specimens cannot be done in situ with desirable precision. Returned Mars samples will be examined using all the physical, chemical, and geologic methods necessary to gain information on the origin and evolution of Mars. A returned Martian sample would provide ample information regarding the accretionary and evolutionary history of the Martian planetary body and possibly other planets of our solar system.

3846 (N–89-18288, pp. 171-172) **Crystal fractionation in the SNC meteorites: Implications for sample selection.** Treiman, A.H. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

Almost all rock types in the SNC meteorites are cumulates, products of magma differentiation by crystal fractionation (addition or removal of crystals). If the SNC meteorites are from the surface of

Mars or near subsurface, then most of the igneous units on Mars are differentiated. Basaltic units probably experienced minor to moderate differientation, but ultrabasic units probably experienced extreme differentiation. Products of this differentiation may include Fe-rich gabbro, pyroxenite, periodotite (and thus serpentine), and possibly massive sulfides. The SNC meteorites include ten lithologies (three in EETA79001), eight of which are crystal cumulates. The other lithologies, EETA79001 A and B are subophitic basalts.

3847 (N–89-18288, pp. 175-176) **Overview of Mars: SNC meteorite results.** Waenke, H. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

The SNC meteorites according to their oxygen isotope ratios and various trace element ratios form a distinct group of 8 achondrites. Their young crystallization ages and fractionated REE pattern which exclude an asteroidal origin, were the first observations to point towards Mars as their parent body. In spite of the many arguments for Mars as the parent body of the SNC meteorites there does not exist a generally accepted model for the ejecting process and other dynamical problems involved. In this discussion it is, however, assumed that Mars is the SNC parent body. The chemical composition of Mars is examined.

3848 (N–89-18288, pp. 179-180) **Stable isotopic studies of H,C,N,O and S in samples of Martian origin.** Wright, I. P.; Pillinger, C.T. Lunar and Planetary Inst., Houston, TX (USA). 1988. (NASA-CR–183337;NAS–1.26:183337;LPI-TR–88-07;CONF-8711303–: Workshop on Mars sample return science, Houston, TX (USA), 16 Nov 1987). In *Workshop on Mars Sample Return Science.* Available from NTIS, PC A09/MF A01.

The present day geochemical cycles of volatile elements through the various reservoirs on Earth are largely understood within the context of the planet's standing as a geologically and biologically evolved body. In terrestrial studies stable isotope measurements of light elements (H, C, N, O and S) can be utilized to obtain insight into the conditions prevailing during formation of rocks of various types. Perhaps the most important problem which could be addressed by light element studies of the sorts of specimen likely to be available from remote automatic sampling, would be the role of volatiles during evolution. Of fundamental importance here is the question of whether Mars was volatile rich or volatile poor. The only way to fully comprehend the effects of volatile cycling through the mantle crust and regolith atmosphere polar cap system of Mars, is by analyses of appropriate returned samples. In order to interpret the record of geological activity in Martian samples it will be necessary to understand how the past, or present, surface environment may have acted to disturb the primary characteristics of the rocks.

3849 (N–89-27608) **Cosmic evolution of non-topological solitons, paper 1.** Frieman, J.A.; Olinto, A.V.; Gleiser, M.; Alcock, C. Fermi National Accelerator Lab., Batavia, IL (USA). May 1989. 37p. (NASA-CR–185353;NAS–1.26:185353;FERMILAB-PUB–89/128-A-PAPER-1;NSF-ITP–89-87-PAPER-1). Available from NTIS, PC A03/MF A01.

Nontopological solitons are stable field configurations which may be formed in a primordial phase transition. Their cosmic evolution is studied, and the possibility that such objects could contribute significantly to the energy density of the Universe is examined. As the Universe cools, initially all but the largest lumps evaporate into free particles; those which survive may subsequently enter a brief accretion phase before they freeze out at a final size. Although the minimum critical charges which survive depend on particle masses and couplings, researchers develop an analysis which applies to a wide class of models. In most cases, solitons of moderate size survive the evaporation process only if there is a significant charge asymmetry or if they form at a temperature well below their binding energy per charge.

3850 (N–89-27629) **Statistical study of the correlation of hard X-ray and type 3 radio bursts in solar flares.** Hamilton, R.J.; Petrosian, V. Stanford Univ., CA (USA). May 1989. 39p. (NASA-CR–185833;NAS–1.26:185833;CSSA-ASTRO–89-03). Available from NTIS, PC A03/MF A01.

A large number of hard X-ray events which were recorded by the Hard X-Ray Burst Spectrometer (HXRBS) on the Solar Maximum Mission (SMM) during the maximum of the 21st solar cycle (circa 1980) are analyzed in order to study their statistical correlation with type 3 bursts. The earlier finding by Kane (1981) are confirmed qualitatively that flares with stronger hard X-ray emission, especially those with harder spectra, are more likely to produce a type 3 burst. The observed distribution of hard X-ray and type 3 events and their correlations are shown to be satisfactorily described by a bivariate distribution consistent with the assumption of statistical linear dependence of X-ray and radio burst intensities. From this analysis it was determined that the distribution of the ratio of X-ray intensity (in counts/s) to type 3 intensity (in solar flux units) which has a wide range and a typical value for this ratio of about 10. The implications of the results for impulsive phase models are discussed.

3851 (N–89-28454, pp. 3-13) **Toward a descriptive model of solar particles in the heliosphere.** Shea, M.A.; Smart, D.F.; Adams, J.H. Jr.; Chenette, D.; Feynman, J.; Hamilton, D.C.; Heckman, G.R.; Konradi, A.; Lee, M.A.; Nachtwey, D.S. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

During a workshop on the interplanetary charged particle environment held in 1987, a descriptive model of solar particles in the heliosphere was assembled. This model includes the fluence, composition, energy spectra, and spatial and temporal variations of solar particles both within and beyong 1 AU. The ability to predict solar particle fluences was also discussed. Suggestions for specific studies designed to improve the basic model were also made.

3852 (N–89-28454, pp. 14-32) **Toward a descriptive model of galactic cosmic rays in the heliosphere.** Mewaldt, R.A. (Chicago Univ., IL (USA)); Cummings, A.C.; Adams, J.H. Jr.; Evenson, P.; Fillius, W.; Jokipii, J.R.; Mckibben, R.B.; Robinson, P.A. Jr. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

Researchers review the elements that enter into phenomenological models of the composition, energy spectra, and the spatial and temporal variations of galactic cosmic rays, including the so-called anomalous cosmic ray component. Starting from an existing model, designed to describe the behavior of cosmic rays in the near-Earth environment, researchers suggest possible updates and improvements to this model, and then propose a quantitative approach for extending such a model into other regions of the heliosphere.

3853 (N–89-28454, pp. 49-56) **Current models of the intensely ionizing particle environment in space.** Adams, J.H. Jr. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

The Cosmic Ray Effects on MicroElectronics (CREME) model that is currently in use to estimate single event effect rates in spacecraft is described. The CREME model provides a description of the radiation environment in interplanetary space near the orbit of the earth that contains no major deficiencies. The accuracy of the galactic cosmic ray model is limited by the uncertainties in solar modulation. The model for solar energetic particles could be improved by making use of all the data that has been collected on solar energetic particle events. There remain major uncertainties about the environment within the earth's magnetosphere, because of the uncertainties over the charge states of the heavy ions in the anomalous component and solar flares, and because of trapped heavy ions. The present CREME model is valid only at 1 AU, but it could be extended to other parts of the heliosphere. There is considerable data on the radiation environment from 0.2 to 35 AU in the ecliptic plane. This data could be used to extend the CREME model.

3854 (N–89-28454, pp. 58-71) **A new proton fluence model for E greater than 10 MeV.** Feynman, J. (Boston Coll., Chestnut Hill, MA (USA)); Armstrong, T.P.; Dao-Gibner, L.; Silverman, S. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

Researchers describe a new engineering model for the fluence of protons with energies greater than 10 MeV. The data set used is a combination of observations made primarily from the Earth's surface between 1956 and 1963 and observations made from spacecraft in the vicinity of Earth between 1963 and 1985. With this data set we find that the distinction between ordinary proton events and anomalously large proton events made in earlier work disappears. The greater than 10 MeV fluences at 1 AU calculated with the new model are about twice those expected on the basis of models now in use. In contrast to earlier models, results do not depend critically on the fluence from any one event.

3855 (N–89-28454, pp. 75-84) **Intensity/time profiles of solar particle events at one astronomical unit.** Shea, M.A. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

A description of the intensity-time profiles of solar proton events observed at the orbit of the earth is presented. The discussion, which includes descriptive figures, presents a general overview of the subject without the detailed mathematical description of the physical processes which usually accompany most reviews.

3856 (N–89-28454, pp. 86-90) **The radial dependence of the solar energetic particle flux.** Hamilton, D.C. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

Researchers discuss the radial dependence of the peak flux and the fluence of solar flare produced energetic particles under the assumption that they propagate diffusively in the heliosphere.

3857 (N–89-28454, pp. 91-100) **Solar proton event forecasts.** Heckman, G.R. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

The United States operates a space weather service to provide information on space hazards including solar proton events to Federal government agencies and other users who operate systems that are affected by disturbances in the upper atmosphere and interplanetary environment. The observation and prediction of solar proton events has been continuous through solar cycle 21 (1976 to 1986), establishing a base of experience that can be used in providing similar support to space operations in the 1990's. The observations, indices, alerts, and forecasts used in the service are described. Also provided is a short summary of the experience obtained from making proton event predictions in solar cycle 21 including the years 1976 to 1986.

3858 (N–89-28454, pp. 101-110) **Predicting the arrival times of solar particles.** Smart, D.F. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

A procedure has been developed to generate a computerized time-intensity profile of the solar proton intensity expected at the earth after the occurrence of a significant solar flare on the sun. This procedure is a combination of many pieces of independent research and theoretical results. Many of the concepts used were first reported by Smart and Shea (1979) and are summarized by Smart and Shea (1985). Extracts from the general procedure that relate to predicting the expected onset time and time of maximum at the earth after the occurrence of a solar flare are presented.

3859 (N–89-28454, pp. 111-116) **Particles accelerated by shocks in the heliosphere.** Lee, M.A. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

The populations of energetic ions accelerated by shocks in the heliosphere are reviewed briefly. Characteristic spectra and representative fluxes are given.

3860 (N–89-28454, pp. 117) **High-energy particles very near the sun.** Goldstein, B.E. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

NASA's long range plans include a Solar Probe (Star Probe) mission in which a spacecraft is placed in an eccentric orbit with perihelion at four solar radii. As part of the study effort for this mission, a Solar Probe Environment Workshop was sponsored by JPL. The report of this committee was issued in September 1978 as JPL Publication 78-64. A brief abstract of this document is given. There are considerable uncertainties in the models of solar energetic particle release and transport. The committee addressed this problem by using different modelling techniques when possible to provide a cross-check on the estimates. These models were used to extrapolate observation at 1 AU to the vicinity of the Sun. Additionally, the occurrence of a flare of a given magnitude must be estimated on a statistical basis. Therefore, it is possible to state a likelihood that the fluxes and fluences will be less than a certain magnitude, but in the event of an extremely large solar flare (occurrence of perhaps once a decade, e.g., August 4, 1972) it is likely that the hazard would be insurmountable. A brief first look indicates that the near-solar particle environment is not a worse hazard than Jupiter.

3861 (N–89-28454, pp. 121-132) **Elemental composition and energy spectra of galactic cosmic rays.** Mewaldt, R.A. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

A brief review is presented of the major features of the elemental composition and energy spectra of galactic cosmic rays. The requirements for phenomenological models of cosmic ray composition and energy spectra are discussed, and possible improvements to an existing model are suggested.

3862 (N–89-28454, pp. 133-134) **The anomalous cosmic-ray component.** Cummings, A.C.; Stone, E.C. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

This brief report is intended to update the anomalous component section of the summary report of the galactic cosmic-ray working group (Mewaldt et al., 1987), which was drafted at the March 1987 Workshop on the Interplanetary Charged Particle Environment at the Jet Propulsion Laboratory. The description of the spectrum of the anomalous cosmic-ray component is contained in section 3.3 of that report. That description is based on data analyzed through day 310 of 1986, and in it we proposed that the energy spectrum of the various species of the anomalous component could be derived by scaling from two generic spectra. Two generic spectra were required because the energy spectrum of the anomalous component

changed shape near the time of the solar magnetic field reversal in 1980. These two generic spectra are shown in Figure 2 of the summary report.

3863 (N–89-28454, pp. 135-148) **Gradients of galactic cosmic rays and anomalous components.** McKibben, R.B. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

Measurements of radial and latitudinal gradients of galactic cosmic rays and anomalous components now cover radii from 0.3 to 40 AU from the sun and latitudes up to 30 deg above the ecliptic plane for particle energies from approx. 10 MeV/n up to relativistic energies. The most accurate measurements cover the period 1972 through 1987, which includes more than one full 11 year cycle of solar activity. Radial gradients for glactic cosmic rays of all energies and species are small (similar to less than 10 percent AU), and variable in time, reaching a minimum of near 0 percent AU out to 30 AU for some species at solar maximum. Gradients for anomalous components are larger, of order 15 percent AU, may show similar time variability, and are relatively independent of particle species and energy. For the period 1985 through 1986 the intensity decreased away from the ecliptic for all species and energies. For galactic cosmic rays, the measured gradients are approx. 0.5 percent/degree near 20 AU, while for anomalous components the gradients are larger, ranging from 3 to 6 percent/degree. Comparison with a similar measurement for anomalous helium in 1975 through 1976 suggests that the latitude gradients for anomalous components have changed sign between 1975 and 1985. For galactic cosmic rays, the available evidence suggests no change in sign of the latitudinal gradient for relativistic particles.

3864 (N–89-28454, pp. 149-161) **Time variation of galactic cosmic rays.** Evenson, P. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

Time variations in the flux of galactic cosmic rays are the result of changing conditions in the solar wind. Maximum cosmic ray fluxes, which occur when solar activity is at a minimum, are well defined. Reductions from this maximum level are typically systematic and predictable but on occasion are rapid and unexpected. Models relating the flux level at lower energy to that at neutron monitor energy are typically accurate to 20 percent of the total excursion at that energy. Other models, relating flux to observables such as sunspot number, flare frequency, and current sheet tilt are phenomenological but nevertheless can be quite accurate.

3865 (N–89-28454, pp. 162-163) **Galactic cosmic rays in three dimensions.** Jokipii, J.R. Jet Propulsion Lab., Pasadena, CA (USA). Apr 1988. (NASA-CR–185461;JPL-PUBL–88-28;NAS–1.26:185461;CONF-8703326–: Conference on interplanetary particle environment, Pasadena, CA (USA), 16-17 Mar 1987). In *Interplanetary particle environment. Proceedings of a conference.* Available from NTIS, PC A08/MF A01.

A general conclusion is that the cosmic rays increase with increasing distance from the Sun at approximately 2 percent a.u. There is a strong correlation of the cosmic ray intensity with distance with the tilt of the heliospheric current sheet. Moreover, researchers find that the variation of the cosmic rays with time changes in alternate sunspot cycles. Finally, it seems that during alternate sunspot minima (1965 and 1985) the cosmic rays access to the inner solar system was along the equatorial current sheet, wheras in 1975 the cosmic rays came in over the poles. The recently discovered anomalous component of cosmic rays is very much related to this whole problem, and probably corresponds to particles being accelerated at the termination of the solar wind at some 50 to 100 astonomical units from the sun. In summary, many predictions of the models remain controversial in detail. Nonetheless, it appears now that we can expect more cosmic rays over the poles in the next sunspot cycle, and the intensity will continue to increase with heliocentric radius out to the interstellar medium.

3866 (N–89-28471) **Silicon chemistry in interstellar clouds.** Langer, W.D.; Glassgold, A.E. Bell Telephone Labs., Inc., New York, NY (USA). May 1989. 32p. (NASA-CR–185862;NAS–1.26:185862). Available from NTIS, PC A03/MF A01.

Interstellar SiO was discovered shortly after CO but it has been detected mainly in high density and high temperature regions associated with outflow sources. A new model of interstellar silicon chemistry that explains the lack of SiO detections in cold clouds is presented which contains an exponential temperature dependence for the SiO abundance. A key aspect of the model is the sensitivity of SiO production by neutral silicon reactions to density and temperature, which arises from the dependence of the rate coefficients on the population of the excited fine structure levels of the silicon atom. This effect was originally pointed out in the context of neutral reactions of carbon and oxygen by Graff, who noted that the leading term in neutral atom-molecule interactions involves the quadrupole moment of the atom. Similar to the case of carbon, the requirement that Si has a quadrupole moment requires population of the J = 1 level, which lies 111K above the J = 0 ground state and has a critical density n(cr) equal to or greater than 10(6)/cu cm. The SiO abundance then has a temperature dependence proportional to exp(-111/T) and a quadratic density dependence for n less than n(cr). As part of the explanation of the lack of SiO detections at low temperatures and densities, this model also emphasizes the small efficiencies of the production routes and the correspondingly long times needed to reach equilibrium. Measurements of the abundance of SiO, in conjunction with theory, can provide information on the physical properties of interstellar clouds such as the abundances of oxygen bearing molecules and the depletion of interstellar silicon.

3867 (N–89-28474) **Time-variable phenomena in the Jovian system.** Belton, M.J.S.; West, R.A.; Rahe, J.; Pereyda, M. National Aeronautics and Space Administration, Washington, DC (USA). 1989. 406p. (NASA-SP–494;NAS–1.21:494;LC–88-25450;CONF-8708335–: International workshop on time-variable phenomena in the Jovian System, Flagstaff, AZ (USA), 25 Aug 1987). Available from NTIS, PC A18/MF A01.

Original contains color illustrations.

The current state of knowledge of dynamic processes in the Jovian system is assessed and summaries are provided of both theoretical and observational foundations upon which future research might be based. There are three sections: satellite phenomena and rings; magnetospheric phenomena, Io's torus, and aurorae; and atmospheric phenomena. Each chapter discusses time dependent theoretical framework for understanding and interpreting what is observed; others describe the evidence and nature of observed changes or their absence. A few chapters provide historical perspective and attempt to present a comprehensive synthesis of the current state of knowledge.

3868 (N–89-28476) **Coronagraph observations and analyses of the ultraviolet solar corona. Semiannual status report, 1 April 1987-31 March 1989.** Kohl, J.L. Smithsonian Institution, Cambridge, MA (USA). Smithsonian Astrophysical Observatory. Mar 1989. 20p. (NASA-CR–185830;NAS–1.26:185830;SASR–10;SASR–11;SASR–12;SASR–13). Available from NTIS, PC A03/MF A01.

The major activities on the Spartan Ultraviolet Coronal Spectrometer project include both scientific and experimental/technical efforts. In the scientific area, a detailed analysis of the previously reported Doppler dimming of HI Ly-alpha from the July 1982 rocket flight has determined an outflow velocity at 2 solar radii from sun center to be between 153 and 251 km/s at 67 percent confidence. The technical activities include, several improvements made to the instrument that will result in enhanced scientific performance or in regaining a capability that had deteriorated during the delay time in the launch date. These include testing and characterizing the detector for OVI radiation, characterizing a serrated occulter at UV and visible wavelengths, fabricating and testing telescope mirrors with improved edges, testing and evaluating a new array detector system, modifying the slit mask mechanism and installing a mask in the instrument to block the Ly-alpha resonance line when the electron scattered component is being observed.

3869 Pulsations of B stars: A review of observations and theories. . Cox, A.N. (Los Alamos National Lab., Los Alamos, NM (US)). pp. 422 of Stellar pulsation. Cox, A.N. Sparks, W.M. Starrfield, S.G Springer-Verlag New York Inc., New York, NY (1987). (CONF-8608130--: Stellar pulsation conference, Los Alamos, NM (USA), 11-15 Aug 1986).

The author discusses the observational and theoretical status for several classes of variable B stars. The older classes now seem to be better understood in terms of those stars than probably have at least one radial mode and those that have only nonradial modes. The former are the δ CePhei variables, and the latter are the slowly rotating 53 Persei and the rapidly rotating zeta Ophiuchi variables. It seems that in this last class there are also some Be stars that show nonradial pulsations from the variations of the line shapes and their light. Among the nonradial pulsators, the author must also include the supergiants which show pulsations with very short lifetimes. A review of the present observational and theoretical problems is given. The most persistent problem of the cause for the pulsations is briefly discussed, and many proposed mechanisms plus some new thoughts are presented.

3870 The evolution of variable stars. Becker, S.A. (Los Alamos National Lab., Los Alamos, NM (US)). pp. 422 of Stellar pulsation. Cox, A.N. Sparks, W.M. Starrfield, S.G Springer-Verlag New York Inc., New York, NY (1987). DOE Contract W-7405-ENG-36. (CONF-8608130--: Stellar pulsation conference, Los Alamos, NM (USA), 11-15 Aug 1986).

Throughout the domain of the H-R diagram lie groupings of stars whose luminosity varies with time. These variable stars can be classified based on their observed properties into distinct types such as β Cephei stars, δ Cephei stars, and Miras, as well as many other categories. The underlying mechanism for the variability is generally felt to be due to four different causes: geometric effects, rotation, eruptive process, and pulsation. In this review the focus is on pulsation variables and how the theory of stellar evolution can be used to explain how the various regions of variability on the H-R diagram are populated. To this end a generalized discussion of the evolutionary behavior of a massive star, an intermediate-mass star, and a low-mass star is presented.

3871 Linear nonadiabatic pulsations of homogeneous ZAMS stars. Cahn, J.H. (Dept. of Astronomy, Univ. of Illinois, Urbana, IL (US)); Cox, A.N.; Ostlie, D.A. pp. 422 of Stellar pulsation. Cox, A.N. Sparks, W.M. Starrfield, S.G Springer-Verlag New York Inc., New York, NY (1987). (CONF-8608130--: Stellar pulsation conference, Los Alamos, NM (USA), 11-15 Aug 1986).

Current uncertainty about the most massive observed stars has led to reexamination of the most massive star that is stable against radial pulsation. The nuclear energy generation equations in the LNA linear, nonadiabatic code have been considerably improved, so that it is now appropriate to redo the study to determine the maximum mass of ZAMS star that will be stable against pulsation.

3872 Nonlinear RR Lyrae models with time dependent convection. Ostlie, D.A. (Dept. of Physics, Weber State College, Ogden, UT (US)); Cox, A.N. pp. 422 of Stellar pulsation. Cox, A.N. Sparks, W.M. Starrfield, S.G Springer-Verlag New York Inc., New York, NY (1987). (CONF-8608130--: Stellar pulsation conference, Los Alamos, NM (USA), 11-15 Aug 1986).

Results of convective, nonlinear RR Lyrae models are presented. The standard mixing length theory has been used with time dependence being introduced through the convective velocity phase lag technique. Turbulent pressure and turbulent viscosity are also included. Results are compared with those of other time dependent convection theories.

3873 Nonlinear pulsations of luminous He stars. Proffitt, C.R. (Los Alamos National Lab., Los Alamos, NM (US)); Cox, A.N. pp. 422 of Stellar pulsation. Cox, A.N. Sparks, W.M. Starrfield, S.G Springer-Verlag New York Inc., New York, NY (1987). (CONF-8608130--: Stellar pulsation conference, Los Alamos, NM (USA), 11-15 Aug 1986).

Radial pulsations in models of R Cor Bor stars and BD+$1^0$4381 have been studied with a nonlinear hydrodynamic pulsation code. Comparisons are made with previous calculations and with observed light and velocity curves.

3874 An asteroseismology explorer. Brown, T.M. (High Altitude Observatory/National Center for Atmospheric Research, Boulder, CO (US)); Cox, A.N. pp. 422 of Stellar pulsation. Cox, A.N. Sparks, W.M. Starrfield, S.G Springer-Verlag New York Inc., New York, NY (1987). (CONF-8608130--: Stellar pulsation conference, Los Alamos, NM (USA), 11-15 Aug 1986).

In response to a NASA opportunity, a proposal has been made to study the concept of an Asteroseismology Explorer (ASE). The goal of the ASE would be to measure solar-like oscillations on many (perhaps hundreds) of stars during a 1-year mission, including many members of open clusters. In this paper, the authors describe this proposal's observational goals, a strawman technical approach, and likely scientific rewards.

3875 Hydrodynamic studies of oxygen, neon, and magnesium novae. Starrfield, S. (Dept. of Physics and Astronomy, Arizona State Univ., Tempe, AZ (US)); Sparks, W.M.; Truran, J.W. pp. 422 of Stellar pulsation. Cox, A.N. Sparks, W.M. Starrfield, S.G Springer-Verlag New York Inc., New York, NY (1987). (CONF-8608130--: Stellar pulsation conference, Los Alamos, NM (USA), 11-15 Aug 1986).

In this paper the authors present the results of recent theoretical studies that have examined the properties of nova outbursts on ONeMg white dwarfs. These outbursts are much more violent and occur much more frequently then outbursts on CO white dwarfs. Hydrodynamic simulations of both kinds of outbursts are in excellent agreement with the observations.

3876 Inflation and non-equilibrium dynamics. Pi, S. (Physics Department, Boston University, Boston, Massachusetts 02215 (US)). *Annals of Physics (New York) (USA)*, 192(2): 421-431 (Jun 1989).

Herman Feshbach is a premier nuclear physicist. Although I do no research in his physics subfield, I have found it useful to apply methods developed in that area to early universe investigations that rely on a field-theoretic description for the time evolution of pure and/or mixed initial states. On the occasion of his seventieth birthday, I offer for his enjoyment this essay in which I describe how time-dependent Hartree–Fock methods and their generalizations to mixed states are used in attempts to establish various cosmological scenarios, in particular, inflation. © 1989 Academic Press, Inc.

3877 Testing the inverse-square law of gravity: Error and design with the upward continuation integral. Thomas, J. (Norman Bridge Laboratory of Physics, 161-33, California Institute of Technology, Pasadena, California 91125 (US)). *Physical Review [Section] D: Particles and Fields (USA)*, 40(6): 1735-1740 (15 Sep 1989).

It has been reported that the inverse-square law of gravity is violated over a range of a few hundred meters. I present a different method for the analysis of the data from that experiment. In this method, the experimental error can be evaluated analytically and I confirm the previous analysis but show that it is a 2σ effect. The method can also be used to design new experiments that will yield minimum errors for a fixed number of data points.

3878 Designing density fluctuation spectra in inflation. Salopek, D.S. (Department of Physics, University of Toronto, Toronto, Canada M5S 1A7 (CA)); Bond, J.R.; Bardeen, J.M. *Physical Review [Section] D: Particles and Fields (USA)*, 40(6): 1753-1788 (15 Sep 1989).

Scale-invariant (flat) fluctuation spectra are the most natural outcomes of inflation. Nonetheless current large-scale-structure observations seem to indicate more fluctuation power on large scales than flat spectra give. We consider a wide variety of models based on the chaotic inflation paradigm and sketch the effects that varying the expansion rate, structure of the potential surface, and the curvature coupling constants have on the quantum fluctuation spectra. We calculate in detail the quantum generation of fluctuation spectra by numerically solving the linearized perturbation equations for multiple scalar fields, the metric, and the radiation into which the scalars dissipate, following the evolution from inside the horizon through reheating.

3879 Bubble dynamics and spontaneous compactification. Blau, S.K. (Theoretical Division, T8, Mail Stop B-285, Los Alamos

National Laboratory, Los Alamos, New Mexico 87545 (US)); Guendelman, E.I. *Physical Review [Section] D: Particles and Fields (USA),* 40(6): 1909-1918 (15 Sep 1989).

As a laboratory for studying dimensional reduction in inhomogeneous spacetimes, we consider several five-dimensional models in which a bubble of a spacetime with a small compact dimension is sewn to a spacetime with all five dimensions macroscopic. Obliging the five-dimensional metric to be well behaved at the domain boundary constrains the parameters of the composite spacetimes under study. Given a suitable potential, it is possible that the domain wall is created by the rapid variation of the size of the compact dimension. Then it is appropriate to reduce the five-dimensional theory to an effective four-dimensional theory in which the size of the compact dimension plays the role of a scalar field. It is the effective four-dimensional metric which must be well defined at the domain boundary. We discuss several models of this latter type including some in which there is no singular contribution to the effective energy-momentum tensor even at the domain boundary.

3880 **Surface tension of strange-quark matter in the early Universe.** Berger, M.S. (Department of Physics, University of California, Berkeley, California 94720 (US)). *Physical Review [Section] D: Particles and Fields (USA),* 40(6): 2128-2130 (15 Sep 1989). DOE Contract AC03-76SF00098.

The surface tension of strange-quark matter at finite temperature and pressure is calculated using the MIT bag model and is applied to strange-quark matter created in the QCD phase transition in the early Universe. The surface tension is sufficiently small that any strange-quark matter would have boiled away in the early Universe.

3881 (AD-A–210337/2/XAB) **Space radiation environment at 840 km.** Mullen, E.G.; Gussenhoven, M.S.; Hardy, D.A. Air Force Geophysics Lab., Hanscom AFB, MA (USA). 1989. 16p. (GL-TR–89-0164). Available from NTIS, PC A03/MF A01.

The Defense Meteorological Satellite Program (DMSP) F7 satellite, launched in November 1983, carries a dosimeter provided by the Air Force Geophysics Laboratory. The dosimeter uses planar silicon detectors behind four thicknesses of aluminum shielding to measure both radiation dose and high-energy particle fluxes in the space-radiation environment at 840 km. Energy thresholds in the detectors are set to distinguish low (electron), high (proton), and very high (>40 MeV)-energy particle depositions. The dosimeter returns accurate, high-time-resolution dose measurements. Maps of the radiation dose (electron and proton) at 840 km are presented and compared to the NASA models. Maps of the very high-energy deposits which can produce Single Event Upsets (SEUs) in the microelectronic components are also presented. Characteristics of energetic particles that enter the polar-cap regions during solar-particle events are discussed and compared to inner-belt proton and cosmic-ray-background levels. Included is an analysis of two of the largest solar-proton events since launch of the satellite, those of 16 February, 1984, and 26 April, l984.

3882 (AD-A–210522/9/XAB) **Auroral energy deposition over the polar ionosphere during substorms. Technical report.** Ahn, B.; Kroehl, H.W.; Kamide, Y.; Gorney, D.J.; Akasofu, S. Aerospace Corp., El Segundo, CA (USA). Laboratory Operations. 15 Jun 1989. 44p. Available from NTIS, PC A03/MF A01.

The global Joule heating distributions are estimated through the magnetogram inversion method. This study employs instantaneous ionospheric conductance distributions deduced from the DMSP-F6 bremsstrahlung x-ray image data. Also estimated from the x-ray data are instantaneous global particle heating distributions. The two heating distributions thus obtained allow us to investigation of various aspects of heat energy processes over the polar ionosphere on an instantaneous basis. A special emphasis is placed on their spatial and temporal behaviors. Several important results of this study are summarized as follows: (1) Regions of significant Joule heating are closely associated with the auroral electrojets prominently in the dawn and dusk sectors. (2) The major Joule heating usually occurs poleward of the major particle-heating region, particularly in the morning sector. On the other hand, the two heating patterns are complementary in the longitudinal direction. (3) There is a higher correlation between the global Joule heating rate (U Sub J) and AE(12) than between the global particle heating rate (U Sub A) and AE(12). (4) The particle heating rate tends to be more prominent during the maximum phase of substorms and afterward than during the pre-expansion phase. (5) The U Sub J/U Sub A ratio varies by more than a factor of 10, suggesting the wide variability in the relative importance of the two heating rates. On the average, however, U Sub J is larger than U Sub A by a factor of 6.

3883 (AD-A–210791/0/XAB) **CRRES (Combined Release and Radiation Effects Satellite) SAPCERAD Plasma Wave Experiment. Final report, 20 April 1982-30 June 1988.** Anderson, R.R.; Gurnett, D.A. Iowa Univ., Iowa City, IA (USA). Dept. of Physics and Astronomy. Oct 1988. 43p. Available from NTIS, PC A03/MF A01.

This document discusses the Main Electronics Package, two Electric Field Preamps and Search Coil Magnetometer. The AFGL 701 SPACERAD instrumentation on the CRRES (Combined Release and Radiation Effects Satellite) project. This document discusses the scientific objectives and the importance of the Plasma Wave Experiment in the CRRES SPACERAD mission and describes the instrument design rationale and the instrument development philosophy. The instrument description describes the instrument commands and their verifications. This document also discusses the testing and operations of the experiment and contains a schematic drawing of the instrumentation electronics and lists of the schematics, drawings, and wiring diagrams that describe the as-built configuration of the Plasma Wave Experiment instrumentation. Problems encountered during the construction and testing of the instrument and their resolutions are discussed. Test results from already completed environmental and EMC/RFI tests have already been submitted to AFGL and to the Air Force Headquarters Space Division Space Test Program. The recertification of the calibration of the instrument is recommended in the near future under a new contract covering the re-delivery (necessitated due to the removal during the launch-delay storage period), pre-launch, and launch operations.

3884 (AD-A–210792/8/XAB) **Optical instrumentation support for the airborne ionospheric observatory. Report for 1 July 1987-30 June 1988.** Eather, R.H.; Lance, C.A. Keo Consultants, Brookline, MA (USA). 1 Jul 1988. 36p. (KEO-ANNUAL–2). Available from NTIS, PC A03/MF A01.

The objectives were to participate in ionospheric research programs using the new optical equipment that was planned to be installed on the Airborne Ionospheric Observatory (AIO), a research aircraft operated by the Ionospheric Effects Branch at AFGL. This participation was to include: (a) testing, improvement, and continuing development of the software operating systems that control the instrument operation, (b) Complete testing, calibration, and documentation of all optical properties of the optical systems, (c) Improvements and continuing development of data recording systems for all instruments, and techniques for quick-look data presentation, (d) Assistance in analysis of optical data obtained on airglow and auroral experiments, and (e) Provide personnel assistance on research flights and field trips as required by AFGL.

3886 **Propagation of a laser beam through self-induced turbulence.** Chitanvis, S.M. (Los Alamos National Laboratory, Theoretical Division, Los Alamos, New Mexico 87545 (US)). *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 490-492 (1 Oct 1988). (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

Using a model developed by us previously for thermal fluctuations induced in clean or aerosol/obscurant-loaded air by a high-energy laser beam, we compute the mutual coherence function of this high-energy laser beam as it propagates through self-induced turbulence. We use the plane wave approximation to the laser beam. Results are presented for the case of a CW beam with a flux level of $5 \times 10^3 W/cm^2$ propagating through air loaded with fog-oil droplets of total optical depths up to 2.5. The computed mutual coherence function indicates that propagation through induced turbulence in this case can affect the average size of a speckle spot considerably.

3887 (AD-A–210858/7/XAB) **Trajectory analysis of low-energy and hyperthermal ions scattered from Cu(110).** McEachern, R.L.; Goodstein, D.M.; Cooper, B.H. Cornell Univ., Ithaca, NY (USA). Lab. for Atomic and Solid State Physics. 15 May 1989. 13p. Available from NTIS, PC A03/MF A01.

Pub. in Physical Review B, Vol. 39, No. 15, 503-510(15 May 1989).

Trajectories of Na^+ ions scattered from the Cu(110) surface in the <1 1bar 0> and <001> azimuths were studied for a range of incident energies from 56 eV to 4 keV. The goal is to explain the trends observed in the energy spectra and determine what types of trajectories contribute to these spectra. Using the computer program SAFARI, simulations were performed with trajectory analyses for 100-, 200-, and 400-eV scattering. We show results from the 100-eV simulations in both azimuths and compare them with the experimental data. The simulated energy spectra are in excellent agreement with the data. Ion trajectories and impact parameter plots from the simulations are used to determine the relative importance of different types of ion-surface-atom collisions. The simulations have shown that the striking differences observed in comparing the <1 1bar 0> and <001> spectra are mostly due to ions which scatter from second-layer atoms. This system exhibits strong focusing onto the second-layer atoms by the first-layer rows, and the focusing is very sensitive to the spacing between the rows. At the lower beam energies, scattering from the second layer dominates the measured spectra.

3888 (IC–89/211) **QED based on self-energy: The relativistic $2S_{1/2}$ -> $1S_{1/2}+1\gamma$ decay rates of hydrogenlike atoms.** Barut, A.O.; Salamin, Y.I. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 8p. Order Number DE90607151. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Within the framework of the recently advanced formulation of QED based on self-energy, we calculate the relativistic rates of the $2S_{1/2}$ -> $1S_{1/2}+1\gamma$ transition in the hydrogen isoelectronic sequence for values of Z ranging between 1 and 92. We compare our results with those of Johnson (Phys. Rev. Lett. 29, 1123 (1972)) and Parpia and Johnson (Phys. Rev. A 26, 1142 (1982)) and find them to be in good agreement with both. (author). 12 refs, 1 tab.

The cross-sections for the dielectronic recombination of $C^{5+}+e^- -> C^{4+}$ have been calculated. (orig.).

3891 (LBL–27423) **Operational characteristics of a metal vapor vacuum arc ion source.** Shiraishi, Hiroshi; Brown, I.G. Lawrence Berkeley Lab., CA (USA). Jun 1989. 13p. Sponsored by U.S. Department of Defense. DOE Contract AC03-76SF00098. (CONF-890703–21: International conference on ion sources, Berkeley, CA (USA), 10-14 Jul 1989). Order Number DE90002453. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The MEVVA ion source can produce high current pulsed beams of metallic ions using a metal vapor vacuum arc discharge as the plasma medium from which the ions are extracted. In this study, the operational characteristics of the MEVVA IV ion source are summarized. Results are presented of measurements of the ion beam current as a function of arc current over a range of extraction voltage. Ti, Ta and Pb were examined as the cathode materials. The arc current ranged from 50A to 250A and the extraction voltage from 10kV to 80kV. The ion beam current was measured at two different distances from the ion source using Faraday cups, so as to investigate the beam divergence. Additionally, the cathode erosion rates were measured. Optimum operating conditions of the MEVVA ion source were determined. 10 refs., 6 figs.

3892 (NAL-TR–962) **Spectral characteristics of arc-heated low density plasma flows (3). Helium plasma.** Watanabe, Yasuo; Hirabayashi, Noriaki. National Aerospace Lab., Chofu, Tokyo (Japan). Feb 1988. 17p. (In Japanese). Order Number DE88757171. Available from NTIS (US Sales Only), PC A03/MF A01.

The spectral characteristics of helium plasma were examined in an arc-heated low density wind tunnel. HeI lines in the plenum chamber showed large broadening and the profiles of 492.2 (2^1P-4^1D) and 447.1 (2^3P-4^3D) nm lines were recorded and compared with theoretical profiles of Barnard to yield electron densities. Electron densities were also estimated by the Inglis-Teller relation from the determination of merging quantum number of 2^3P-n^3D series lines. These results were by several orders of magnitude larger than the values expected on the measured kinetic temperature and suggest large deviations from local thermodynamic equilibrium state in the plenum chamber. Oxygen was added to the flow and the resulting spectra were indentified as several OI lines and O_2^+ first negative system which were results from interactions with the helium flow. It was suggested that the use of these OI lines might be helpful in flow characterization and surface chemistry studies in a simulation facility for atomic oxygen interactions with spacecraft surfaces in low earth orbit. (17 figs, 1 tab, 18 refs)

3893 (RAL–89-070) **Light kaonic and antiprotonic atoms.** Batty, C.J. Rutherford Appleton Lab., Chilton (UK). Jul 1989. 12p. Sponsored by U.K. Science and Engineering Research Council. (CONF-8907127–4: 12. few body conference: few body problems in physics, Vancouver (Canada), 2-8 Jul 1989). Order Number DE90000520. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI.

Recent progress in the study of light kaonic and antiprotonic atoms is reviewed. Results for $\bar{p}$-He atoms are in good agreement with Optical Model calculations in contrast to the situation for K^--He atoms, the latter possibly indicating the existence of a kaon-nucleus bound state. The extensive results for $\bar{p}$-p atoms now available are generally in accord with theoretical expectations. Early results for K^--p atoms showed significant discrepancies and there is an urgent need for further experiments. 33 refs., 3 figs.

3894 (SAND–89-1685) **Physics guide to CEPXS: A multigroup coupled electron-photon cross-section generating code: Version 1.0.** Lorence, L.J. Jr.; Morel, J.E.; Valdez, G.D. Sandia National Labs., Albuquerque, NM (USA). Oct 1989. 108p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC04-76DP00789. Order Number DE90002804. Available from NTIS, PC A06/MF A01; OSTI; INIS; GPO Dep.

CEPXS is a multigroup-Legendre cross-section generating code. The multigroup-Legendre cross sections produced by CEPXS enable coupled electron-photon transport calculations to be performed with the one-dimensional discrete ordinates code, ONEDANT. We recommend that the 1989 version of ONEDANT that contains

linear-discontinuous spatial differencing and S2 synthetic acceleration be used for such calculations. CEPXS/ONEDANT effectively solves the Boltzmann-CSD transport equation for electrons and the Boltzmann transport equation for photons over the energy range from 100 MeV to 1.0 keV. The continuous slowing-down approximation is used for those electron interactions that result in small-energy losses. The extended transport correction is applied to the forward-peaked elastic scattering cross section for electrons. A standard multigroup-Legendre treatment is used for the other coupled electron-photon cross sections. CEPXS extracts electron cross-section information from the DATAPAC data set and photon cross-section information from Biggs-Lighthill data. The model that is used for ionization/relaxation in CEPXS is essentially the same as that employed in ITS. 43 refs., 8 figs.

3895 (SAND–89-2668C) **RADLAC-II propagation experiments.** Leifeste, G.T.; Crist, C.E. Sandia National Labs., Albuquerque, NM (USA). [1989]. 4p. Sponsored by U.S. Department of Defense; U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8909216–9: DARPA/SDIO service annual charged particle beam review, Monterey, CA (USA), 18-21 Sep 1989). Order Number DE90002531. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In previous RADLAC-II beam propagation experiments, stable propagation over a Nordsieck length, in full pressure Albuquerque air (p ~640 Torr) was observed. In these experiments, high transverse momentum resulted in a large equilibrium radius and thus a long betatron wavelength. Following the completion of the RADLAC-II upgrade, a new set of experiments with a small diameter (d ~2 cm), high current (I ~40 kA), low transverse momentum ($\beta\perp$ ~0.2) should be possible. The development of time-resolved diagnostics, data analysis codes, and the formulation of output from theoretical calculations in a format as seen by these diagnostics in the lab continues to be a major source of effort in the program. 2 figs.

3896 (UCRL–21256) **Relativistic cross sections for excitation of highly charged ions to specific magnetic sublevels by an electron beam.** Zhang, Hong Lin; Sampson, D.H.; Clark, R.E.H. Lawrence Livermore National Lab., CA (USA). [1989]. 22p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE90002815. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A program has been developed for making calculations of fully relativistic distorted wave cross sections for excitation of highly charged ions to specific magnetic sublevels M_f by a beam of electrons. The approach uses the same Dirac-Fock-Slater potential for all electrons and is expected to be accurate for nuclear charge number $Z \gtrsim 2.5N$, where N is the number of bound electrons per ion. To our knowledge there is presently no other fully relativistic program available with which we could compare results for this type of cross sections. however, the present results for He-like, Li-like and Ne-like iron and for Ne-like molybdenum are compared with other partially relativistic results and generally good agreement is obtained for these ions. It is expected that the present program will be useful for comparison with and interpretation of experimental results for very lightly charged ions, such as obtained in EBIT experiments at Livermore. 23 refs., 4 tabs.

3897 (UCRL–21257) **Relativistic distorted wave collision strengths and oscillator strengths for the 85 Li-like ions with 8 $\leq$ Z $\leq$ 92.** Zhang, Hong Lin; Sampson, D.H.; Fontes, C.J. Lawrence Livermore National Lab., CA (USA); Pennsylvania State Univ., University Park, PA (USA). Dept. of Astronomy. [1989]. 51p. Sponsored by U.S. Department of Defense; U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48;FG02-85ER53208. Order Number DE90002824. Available from NTIS, PC A04/MF A01 - OSTI.

Relativistic distorted wave collision strengths are given for the 3 transitions among the $2s_{1/2}$, $2p_{1/2}$ and $2p_{3/2}$ levels and for the 63 transitions from these levels to the excited levels nlj with n = 3, 4 and 5 in the 85 Li-like ions with nuclear charge number Z in the range 8 $\leq$ Z $\leq$ 92. The calculations were made for the six final, or scattered, electron energies $E' = 0.008, 0.004, 0.10, 0.21, 0.41$, and 0.75, where E′ is in units Z_{eff}^2 Rydbergs with $Z_{eff} = Z - 1.66$. In addition, the transition energies and electric dipole oscillator strengths are given. To our knowledge the present work is the first comprehensive publication of the results of fully relativistic calculations of the collision strengths for excitation of Li-like ions. 13 refs., 3 tabs.

3898 (UCRL–101247-Pts.1-2) **Investigation of an electron beam evaporative source: Part 1, Theory; Part 2, Measurements.** Sze, J.S.; Self, S.A. Lawrence Livermore National Lab., CA (USA). 14 Sep 1989. 37p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8910187–1: 6. annual conference on electron beam melting and refining: state of the art, Reno, NV (USA), 29-31 Oct 1989). Order Number DE90003025. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A theory for evaluating the performance parameters of linear electron beam evaporative source is presented. The electron beam is considered to be generated from a linear gun and its trajectory is curved by a uniform magnetic field onto a target. A model has been developed to estimate the trajectory of the electron beam. The performance of the electron gun is characterized by two coefficients: α, the divergence effect of the beam as it enters into the electric field free space region, and B, the space charge parameter, which is proportional to the magnitude of the current density of the beam. These two parameters determine the location (angular position) of the beam waist and the current density at the target. In addition, neutralization of the electron space charge by vapor ions generated near the target is considered. A discussion is also given of the shape of the depression in the surface of the molten metal, which is due to the pressure on the surface associated with the momentum recoil from the evaporative vapor flux. By relating the characteristic depth and width of the depression to magnitude and the shape of the pressure profile, useful analytical and numerical results are presented for a given pressure profile. The implication of the results for the design of electron beam evaporative sources are also discussed. Measurements are discussed a the end of the paper. 11 refs., 15 figs.

3899 **A review of radiative and dielectronic recombination for C and O ions.** Griffin, D.C. (Rollins Coll., Winter Park, FL (USA). Dept. of Physics). *Physica Scripta (Sweden),* 28: 28 (1989). DOE Contract AC05-84OR21400. (CONF-8805213–: IAEA specialists' meeting on carbon and oxygen collision data for fusion plasma research, Vienna (Austria), 12-13 May 1988).

Theoretical calculations of radiative and dielectronic recombination rate coefficients for carbon and oxygen ions are reviewed. For radiative recombination into excited states, various hydrogenic formulae for recombination are considered, and results for total rates obtained by using explicit calculations of photoionization cross sections from the ground states of these ions in conjunction with such hydrogenic formulae are reported. For dielectronic recombination, the isolated-resonance approximation for the calculation of cross sections and rates is discussed, and rate coefficients for several carbon and oxygen ions are presented. The effects of electric fields and electron density on dielectronic recombination rates are considered. (orig.).

3900 **A new nonlinear-optical perturbation expansion and diagrammatic approach.** Trebino, R. (Combustion Research Facility, Sandia National Laboratories, Livermore, California 94550 (US)). *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 275-279 (1 Oct 1988). Sponsored by U.S. DOE Energy Research. (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

A new nonlinear-optical perturbation expansion and diagrammatic approach are derived yielding expressions for higher-order dephasing-induced phenomena.

3901 **Dephasing-induced coherences: higher-order selection rules and experiments in a magnetic field.** Rahn, L.A. (Combustion Research Facility, Sandia National Laboratories, Livermore, California 94550 (US)); Trebino, R. *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 272-274 (1 Oct 1988). Sponsored by U.S. DOE Energy Research. (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

We observe dephasing-induced third-and higher-order wave-mixing spectra of Zeeman and hyperfine coherences in a sodium-seeded flame in a magnetic field. As the perturbation parameter approaches unity, we compare our experimental spectra with theoretical higher-order selection rules.

3902 The Autler-Townes effect in hydrogen at low pressure. Lau, A.M.F. (Combustion Research Facility, Sandia National Laboratories, Livermore, CA 94550 (US)). *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 323-325 (1 Oct 1988). Sponsored by U.S. DOE Energy Research. (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

The Autler-Townes effect (also known as ac, optical or dynamical Stark splitting) on the Balmer-α transition of hydrogen in 0.5–5 torr of helium is investigated. In the double optical resonance scheme, H(3p) is excited by absorption of two 243-nm photons and a 656-nm photon via the 2s resonant intermediate level. Calculated results show that in a Doppler-free or a "Doppler-reduced" beam configuration, the required intensity of the 656 nm laser (0.2 cm^{-1}bandwidth) for observing the Autler-Townes doublet has to be greater than 2×10^4 W/cm^2 and 2×10^5 W/cm^2 for a 243-nm laser bandwidth of 0.1 cm^{-1} and 0.5 cm^{-1}, respectively.

3903 High-order multiphoton ionization photoelectron spectroscopy of NO. Carman, H.S. Jr. (Chemical Physics Section, Oak Ridge National Laboratory P.O. Box X, Oak Ridge, Tennessee 37831-6125 (US)); Compton, R.N. *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 334-336 (1 Oct 1988). DOE Contract AC05-84OR21400. (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

Photoelectron energy and angular distributions of NO following three different high-order multiphoton ionization (MPI) schemes have been measured. The 3+3 resonantly enhanced multiphoton ionization (REMPI) via the $A^2\Sigma^+$ (v=0) level yielded a distribution of electron energies corresponding to all accessible vibrational levels (v^+=0–6) of the nascent ion. Angular distributions of electrons corresponding to v^+=0 and v^+=3 were significantly different. The 3+2 REMPI via the $A^2\Sigma^+$ (v=1) level produced only one low-energy electron peak (v^+=1). Nonresonant MPI at 532 nm yielded a distribution of electron energies corresponding to both four- and five-photon ionization. Prominent peaks in the five-photon photoelectron spectrum (PES) suggest contributions from near-resonant states at the three-photon level.

3904 Energy transfer studies with lasers. Weston, R.E. Jr. (Chemistry Department, Brookhaven National Laboratory, Upton, New York 11973 (US)). *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 622-627 (1 Oct 1988). Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

Using pulsed lasers to produce energetic species, we have observed their interaction with other molecules in real time by absorption spectroscopy with a cw infrared diode laser. This technique has been used to observe the vibrational excitation of carbon dioxide by energy transfer from azulene and azulene-d_8 excited to energies of 30,000 and 40,000 cm^{-1}, and the relative populations of the bending and antisymmetric stretching modes of CO_2 are found to be very nonstatistical. Diode laser spectroscopy of CO has also been utilized to determine the efficiency of energy transfer from $O(^1D)$ atoms to vibrations of CO excited to v=1 through 4.

3905 Very high resolution saturation spectroscopy of lutetium isotopes via cw single-frequency laser resonance ionization mass spectrometry. Fearey, B.L. (Isotope and Nuclear Chemistry Group INC-7, Chemical and Laser Sciences Group CLS-2, Los Alamos National Laboratory, Los Alamos, NM 87545 (US)); Parent, D.C.; Keller, R.A.; Miller, C.M. *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 776-778 (1 Oct 1988). DOE Contract W-7405-ENG-36. (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

In this paper, we discuss the use of Resonance Ionization Mass Spectrometry (RIMS) to perform isotopically selective saturation spectroscopy of lutetium isotopes. Utilizing this technique, it is shown that accurate measurements of the relative frequencies of hyperfine (HF) components for different isotopes easily can be made without the need for an isotopically enriched sample. The precision with which the HF splitting constants can be determined is estimated to be ~5 times greater than in previous work.

3906 Image-projection ion-beam lithography. Miller, P.A. (Surface Processing Sciences Division-1126, Sandia National Laboratories, Box 5800, Albuquerque, New Mexico 87185 (US)). *Journal of Vacuum Science and Technology, B: Microelectronics Processing and Phenomena (USA),* 7(5): 1053-1063 (Sep 1989). DOE Contract AC04-76DP00789.

Image-projection ion-beam lithography is an attractive alternative for submicron patterning because it may provide high throughput; it uses demagnification to gain advantages in reticle fabrication, inspection, and lifetime; and it enjoys the precise deposition characteristics of ions which cause essentially no collateral damage. This lithographic option involves extracting low-mass ions (e.g., He^+) from a plasma source, transmitting the ions at low voltage through a stencil reticle, and then accelerating and focusing the ions electrostatically onto a resist-coated wafer. While the advantages of this technology have been demonstrated experimentally by the work of IMS (Austria), many difficulties still impede extension of the technology to the high-volume production of microelectronic devices. We report a computational study of a lithography system designed to address problem areas in field size, telecentricity, and chromatic and geometric aberration. We present a novel ion-column-design approach and conceptual ion-source and column designs which address these issues. We find that image-projection ion-beam technology should in principle meet high-volume-production requirements. The technical success of our present relatively compact-column design requires that a glow-discharge-based ion source (or equivalent cold source) be developed and that moderate further improvement in geometric aberration levels be obtained. Our system requires that image predistortion be employed during reticle fabrication to overcome distortion due to residual image nonlinearity and space-charge forces. This constitutes a software data preparation step, as do correcting for distortions in electron lithography columns and performing proximity-effect corrections. Areas needing further fundamental work are identified.

3907 Direct and resonance contributions to electron-impact excitation of n=2 to n=3 transitions in neonlike ions. Chen, M.H. (High Temperature Physics Division, Lawrence Livermore National Laboratory, Livermore, California 94550 (US)); Reed, K.J. *Physical Review [Section] A: General Physics (USA),* 40(5): 2292-2300 (1 Sep 1989). DOE Contract W-7405-ENG-48.

Rate coefficients for electron-impact excitation have been calculated for transitions from the ground state to n=3 excited states of six neonlike ions with atomic numbers Z=15, 17, 26, 34, 42, and 54. The direct-excitation rate coefficients were calculated using relativistic multiconfiguration target wave functions and a relativistic distorted-wave approximation. The contributions from autoionizing resonances were evaluated using a multiconfiguration Dirac-Fock model. These resonances enhance the rate coefficients for transitions to the $2p^53s$ states by as much as a factor of 3. The peak rate coefficient and the relative importance of resonance excitation diminish with increasing atomic number. However, we find that resonance enhancements are generally quite large for electron temperatures less than the temperature where peak excitation occurs. Our total rate coefficients for Se^{24+} are in good agreement with close-coupling results obtained with R-matrix calculations. The resonance contributions from the present work differ from the results by Smith *et al.* [Astrophys. J. 298, 898 (1985)] for the Fe^{16+} ion by as much as a factor of 3–5.

3908 Electron degradation and yields of initial products. VI. Energy spectra of subexcitation electrons in argon and molecular hydrogen. Kimura, M. (Argonne National Laboratory, Argonne, Illinois 60439 (US)); Inokuti, M.; Kowari, K. *Physical Review [Section] A: General Physics (USA),* 40(5): 2316-2320 (1 Sep 1989). DOE Contract W-31-109-ENG-38.

Energy spectra of subexcitation electrons for Ar and H_2 are studied by using rigorous theory based on the Spencer-Fano equation. The origins of the structure in the energy spectrum and the differences between the two spectra are discussed.

3909 Superelastic scattering of spin-polarized electrons from sodium. McClelland, J.J. (National Institute of Standards and Technology, Gaithersburg, Maryland 20899 (US)); Kelley, M.H.; Celotta, R.J. *Physical Review [Section] A: General Physics (USA),* 40(5): 2321-2329 (1 Sep 1989).

Superelastic scattering of spin-polarized electrons from laser-excited sodium atoms has been measured at incident energies of 2.0, 17.9, and 52.3 eV over the angular range 10°–120°. Circularly polarized excitation of the sodium atoms was used to produce pure $3\,^2P_{3/2}$ (F=3, M_F=±3) states, which are deexcited by collisions with spin-polarized electrons. The spin polarization of both the target electron and the incident electron allows the resolution of triplet and singlet contributions to $L_\perp$, the angular momentum transferred in the collision perpendicular to the scattering plane, and the measurement of r, the ratio of triplet to singlet cross sections. At low energy, agreement with theory is good over the entire angular range for r, but only at small angles for $L_\perp$. At high energy, agreement is excellent over the full angular range.

3910 Comparison of single-electron removal processes in collisions of electrons, positrons, protons, and antiprotons with hydrogen and helium. Schultz, D.R. (Department of Physics and Laboratory for Atomic and Molecular Research, University of Missouri-Rolla, Rolla, Missouri 65401 (US))). *Physical Review [Section] A: General Physics (USA),* 40(5): 2330-2334 (1 Sep 1989).

We present and compare total cross sections for single-electron removal in collisions of electrons, positrons, protons, and antiprotons with atomic hydrogen and helium. These cross sections have been calculated using the classical trajectory Monte Carlo technique in the velocity range of 0.5–7.0 a.u. (6.25–1224 keV/u). The cross sections are compared at equal collision velocities and exhibit differences arising from variations in mass and sign of charge of the projectile. At low and intermediate velocities these differences are large in both the ionization and charge transfer channels. At high velocities the single-ionization cross section for each of these singly charged particles becomes equal. However, the differences in the single-charge-transfer cross sections for positron and proton impact persist to very large velocities. We extend our previous work [Phys. Rev. A 38, 1866 (1988)] to explain these mass and sign of the charge effects in single-electron removal collisions.

3911 Effects of relativity and configuration interaction on *L*-shell Auger and radiative decays of the doubly excited $3l3l'$ states of sodiumlike ions. Chen, M.H. (High Temperature Physics Division, Lawrence Livermore National Laboratory, Livermore, California 94550 (US)). *Physical Review [Section] A: General Physics (USA),* 40(5): 2365-2372 (1 Sep 1989). DOE Contract W-7405-ENG-48.

Auger and radiative transition energies and rates for the states from the $2p^5 3l3l'$ and $2s2p^6 3l3l'$ configurations of the Na-like ions have been calculated for 18 ions with atomic number $18 \le Z \le 92$ using the multiconfiguration Dirac-Fock method. The Z dependence of the transition rates for a few selected states has been analyzed. Numerous irregularities are present in many transitions due to the level-crossing interaction. The effects of relativity and configuration interaction are simultaneously important for medium and heavy ions. These effects can sometimes change the rates for weak transitions by orders of magnitude. Strong configuration interaction between states from the $2p^5 3p^2$ and $2p^5 3s3d$ configurations has been found. Inclusion of the Breit interaction in calculations of the Auger matrix elements can change the Auger rates by as much as a factor of 2. The spin-orbit mixing and Breit interaction are responsible for the decay of most of the quartet states. In particular, the $2p^5 3s3p^4 D_{7/2}$ metastable state of low-Z ions decays predominantly by Auger-electron emission via the magnetic interaction.

3912 One-dimensional model for photodetachment in a static electric field. Peek, J.M. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)). *Physical Review [Section] A: General Physics (USA),* 40(5): 2393-2399 (1 Sep 1989).

The photodetachment of a particle bound in a one-dimensional square well and subject to a static electric field is considered. This cross section is shown to have a rich structure that can be analyzed in relatively simple terms. The appearance of regularly spaced zeros in the cross section, as a function of photon energy, is one such feature. The spacing of the intervening peaks is either identical to or similar to that found in other studies. The peak asymmetry, the oscillatory amplitude, and another type of zero in the oscillator strength, which are related to the target's binding potential, are properties of this model not found in other studies. A connecting formula between the finite- and zero-field oscillator strengths is derived and found to be useful for field strengths between zero and that for which tunneling from the initial state becomes a competing mechanism for ionization. An approximate final-state function provides a particularly simple relationship between the two cases and it displays a part of the structure found in the full calculation. The possible connections between this model and experiment are discussed.

3913 Radiative and nonradiative charge transfer in He^++H collisions at low energy. Zygelman, B. (Harvard-Smithsonian Center for Astrophysics, 60 Garden Street, Cambridge, Massachusetts 02138 (US)); Dalgarno, A.; Kimura, M.; Lane, N.F. *Physical Review [Section] A: General Physics (USA),* 40(5): 2340-2345 (1 Sep 1989). DOE Contract W-31-109-ENG-38.

We report the calculated cross sections for the removal of He^+ ions in collisions with hydrogen atoms for the collision energy range between 0.01 meV and 100 eV. Radiative association is the dominant mechanism at the low-energy extreme and for collision energies above 10 meV radiative charge transfer is dominant. Above 8 eV the radiative processes are negligible, and direct charge transfer is the primary removal mechanism. Using a quantum-mechanical method, we obtain the spectrum of the emitted radiation for the radiative charge transfer process at several collision energies. The emission spectrum has a main peak at wavelengths near 113 nm, which corresponds to the energy difference between the $A\,^1\Sigma^+$ and $X^1\Sigma^+$ states of the molecular ion HeH^+ at large internuclear distances. At higher collision energies, significant contributions to the emission spectra occur at shorter wavelengths, and distinct peaks appear. We interpret these peaks as a result of orbiting in the outgoing channel.

3914 Symmetric charge transfer to multiply charged ions. Bardsley, J.N. (Lawrence Livermore National Laboratory, Livermore, California 94550 (US)); Gangopadhyay, P.; Penetrante, B.M. *Physical Review [Section] A: General Physics (USA),* 40(5): 2742-2744 (1 Sep 1989). DOE Contract W-7405-ENG-48.

The asymptotic theory of symmetric charge transfer is adapted to apply to ion-ion collisions through allowance for curved nuclear trajectories. The theory compares well with *ab initio* quantum calculations on He^{2+}-He^+ collisions and is applied to five members from each of the Li-like and Na-like sequences.

3915 Effective *L*-shell fluorescence yields for sodiumlike and neonlike low-lying autoionizing states. Chen, M.H. (High Temperature Physics Division, Lawrence Livermore National Laboratory, Livermore, California 94550 (US)). *Physical Review [Section] A: General Physics (USA),* 40(5): 2758-2761 (1 Sep 1989). DOE Contract W-7405-ENG-48.

The statistically averaged L-shell fluorescence yields for the doubly excited $3l3l'$ and $3l4l'$ configurations of Na- and Ne-like ions have been calculated for ions with $18 \le Z \le 92$ using Dirac-Fock wave functions. The average n=3→2 radiative rates and Auger rates for the $3l3l'$ states of the Na-like ions scale as $Z^{5.1}$ and $Z^{0.71}$, respectively. The procedure for calculating the average fluorescence yield as ratio between the average x-ray rate and average total decay rate underestimates the average fluorescence yield by as much as a factor of 3 for low-Z ions and overestimates by 50% for heavy ions. Inclusion of $E2$ transitions leads to a 25% increase in the average fluorescence yield for the Na-like $3l3l'$ states at Z=80.

3916 Experimental study of atomic structure in strong electromagnetic fields. Szoke, A. (Lawrence Livermore National Laboratory, Livermore, California 94550 (US)); Landen, O.L.; Perry, M.D. *Physical Review [Section] A: General Physics (USA),* 40(5): 2766-2769 (1 Sep 1989). DOE Contract W-7405-ENG-48.

We have measured the energy spectrum of photoelectrons emitted in multiphoton ionization of atoms by a short-pulse, tunable laser. The spectrum shows prominent resonances, confirming the observations of Freeman *et al.* [Phys. Rev. Lett. 59, 1092 (1987)]. The study of the position and intensity of such resonances, as a function of laser wavelength and intensity, probes the structure of the atom in the presence of the strong electromagnetic field and allows their spectroscopic assignment. A systematic study of the ac Stark shift of one of the resonances, the $7s[3/2]^\circ$ level of xenon, is presented.

3917 Electron-impact ionization of La^{q+} ions (q=1,2,3). Muller, A. (Institut fur Kernphysik, Universitat Giessen, D-6300 Giessen, Federal Republic of Germany (DE)); Tinschert, K.; Hofmann, G.; Salzborn, E.; Dunn, G.H.; Younger, S.M.; Pindzola, M.S. *Physical Review [Section] A: General Physics (USA),* 40(7): 3584-3598 (1 Oct 1989).

Experimental cross sections for single ionization of La^+, La^{2+}, and La^{3+} ions as well as for double ionization of La^+ and La^{2+} ions and for triple ionization of La^{2+} ions are presented in an electron-impact energy range from threshold up to 1000 eV. By using a fast energy-scanning technique with step widths of about 40 meV and an energy resolution of 0.4 eV, fine details in the cross sections and especially resonant contributions could be observed. Resonant excitation of La^{2+} at 95 eV with subsequent emission of three electrons appears in our interpretation to account for 30% of the total measured double-ionization cross section. The data are interpreted on the basis of calculations of energy levels and distorted-wave calculations of direct ionization from various electron subshells and of excitation-autoionization processes. A detailed analysis of the La^{3+} single ionization both for ground-state and $5p^5 4f$ metastable ions is presented.

3918 Absolute differential cross sections for small-angle H^+-He direct and charge-transfer scattering at keV energies. Johnson, L.K. (Department of Physics, Department of Space Physics and Astronomy, and Rice Quantum Institute, Rice University, P.O. Box 1892, Houston, Texas 77251 (US)); Gao, R.S.; Dixson, R.G.; Smith, K.A.; Lane, N.F.; Stebbings, R.F.; Kimura, M. *Physical Review [Section] A: General Physics (USA),* 40(7): 3626-3631 (1 Oct 1989).

This paper reports measurements and calculations of absolute differential cross sections for H^+-He charge-transfer and direct scattering. Charge-transfer measurements have been obtained at 5.0 keV laboratory energy over the laboratory angular range 0.02°–1.0°, while direct scattering has been observed at 0.5, 1.5, and 5.0 keV laboratory energy over a closely corresponding angular range. Calculations are reported for 0.5, 1.5, and 5.0 keV charge-transfer and direct scattering. The measured cross sections are in good agreement with those derived from fully quantum-mechanical molecular-orbital close-coupling calculations. Direct scattering cross sections are also found to be in agreement with single-potential calculations using directly summed Jeffreys-Wentzel-Kramers-Brillouin phase shifts derived from proposed H^+-He ground-state interaction potentials. The cross sections exhibit significant structure over the range of angles and energies studied. The measured cross sections have been integrated over the experimental angular range providing absolute integral cross sections for comparison with theoretical results and previously measured total cross sections.

3919 Electron removal from molecular hydrogen by fully stripped ions at intermediate energies. Meng, L. (Department of Physics and Laboratory for Atomic and Molecular Research, University of Missouri-Rolla, Rolla, Missouri 65401-0249 (US))); Reinhold, C.O.; Olson, R.E. *Physical Review [Section] A: General Physics (USA),* 40(7): 3637-3645 (1 Oct 1989).

A classical phase-space model of the hydrogen molecule is presented and applied to the study of the electron-capture and -ionization processes in collisions of fully stripped ions with H_2 at intermediate impact energies and charge states from 1 to 10. The model is based on the independent-electron and the impact-parameter approximations. The electron–impinging-ion and electron–target-nuclei interactions are exactly taken into account. The interaction between the electrons is approximated by model potentials. The calculated total cross sections for production of free electrons and capture of one electron are in good agreement with different experimental data. The ratio between the capture cross sections from molecular and atomic hydrogen targets is also analyzed and compared with available empirical scalings. It is found that this ratio varies from a value less than 1 at low impact energy to 4 at higher energies. The reasons for these differences are discussed. A comparison is made between the capture cross sections for different orientations of the hydrogen molecule.

3920 Impact-parameter treatment of high-velocity electron capture from diatomic molecules at fixed orientation. Wang, Y.D. (J. R. McDonald Laboratory, Department of Physics, Kansas State University, Manhattan, Kansas 66506 (US)); McGuire, J.H.; Rivarola, R.D. *Physical Review [Section] A: General Physics (USA),* 40(7): 3673-3680 (1 Oct 1989).

Scattering of charged particles at high velocity from diatomic molecules is formulated in the impact-parameter treatment using a Fourier transform of the amplitude in the quantum-mechanical treatment. Probabilities and total cross sections are evaluated for electron capture for a fixed orientation of the intermolecular axis. Total cross sections, integrated over projectile impact parameters, for capture from H_2 predict variations of a factor of 2 or more for various orientations of the molecular axis. Capture from heteronuclear diatomic molecules is also considered.

3921 Single and double ionization of helium by hydrogen-atom impact. DuBois, R.D. (Pacific Northwest Laboratory, Richland, Washington, 99352 (US)); Kover, A. *Physical Review [Section] A: General Physics (USA),* 40(7): 3605-3612 (1 Oct 1989). DOE Contract AC06-76RL01830.

Cross sections for single and double ionization of helium resulting from pure ionization and from electron transfer (capture or loss) are reported for 25–1000-keV/u hydrogen-atom impact. The single-target ionization data are compared with existing first Born calculations. Good agreement is found above 200 keV, and inadequacies for specific channels at lower energies are identified. Double-target ionization is shown to occur more frequently for H^0 impact than for fast electron or proton impact. It is also demonstrated that, for impact energies greater than 150 keV, double ionization of helium results from a single projectile-target interaction.

3922 Natural line shape. Milonni, P.W. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)); Cook, R.J.; Ackerhalt, J.R. *Physical Review [Section] A: General Physics (USA),* 40(7): 3764-3768 (1 Oct 1989).

For many years there have been two expressions for the natural radiative line shape, depending on the form of the Hamiltonian assumed for the interaction of an atom with the radiation field. It is shown that this difference arises from artificial assumptions about the atom-field interaction, and that the same line shape is obtained from either form under the appropriate physical assumptions.

3923 Partial and total cross sections and multiplet structure in the photoionization of atomic manganese. Jimenez-Mier, J. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831-6201 (US)); Krause, M.O.; Gerard, P.; Hermsmeier, B.; Fadley, C.S. *Physical Review [Section] A: General Physics (USA),* 40(7): 3712-3720 (1 Oct 1989). DOE Contract AC05-84OR21400.

We determined the absolute partial photoionization cross section σ and the angular distribution parameter β of the $3d$, $3p$, and $3s$ photoelectrons in atomic manganese for $65 \leq h\nu \leq 250$ eV. The total photoionization cross section is in satisfactory accord with the single-particle Hartree-Slater calculation and in very good agreement with a relativistic time-dependent local-density-approximation calculation. Binding energies and intensity ratios of the $3s^{-1}$ and $3p^{-1}$ multiplet lines were obtained. Five lines were identified within the $3p^{-1}$ multiplet, and the measured spacings are close to those found in solid MnF_2. Similarly, the spacings in the $3s^{-1}$ multiplet are equal to the ones measured in solid MnF_2. There is good accord between our results for the angular-distribution parameter of the $3p^{-1}$ (^7P) line and those of Malutzki *et al.* [J. Phys. B 18, 1735 (1985)]. The intensity ratios of $^5P(1)$ to ^7P and $^5S(1)$ to ^7S were seen to increase slowly somewhat above their thresholds. More rapid variations of all multiplet ratios were found within about 30 eV of threshold.

3924 Coupled-channel calculations of partial capture cross sections in multiply charged ion collisions with hydrogen.

Hansen, J.P. (Institute of Physics, Bergen University, N-5007 Bergen, Norway (NO)); Taulbjerg, K. *Physical Review [Section] A: General Physics (USA),* 40(7): 4082-4084 (1 Oct 1989).

Partial cross sections for electron capture in 1–50-keV collisions of Ar^{6+} and Ar^{8+} with atomic hydrogen have been calculated using an atomic expansion including two complete principal shells of final states (n=4,5 for Ar^{6+} and n=5,6 for Ar^{8+}). The qualitative structure of the results is in good accord with a reaction window picture. The results for Ar^{6+} ions are in agreement with published experimental data when precaution is taken with respect to uncertainties in absolute normalization of the data and with respect to a proper analysis of translation energy spectra at lower impact energies. The limited experimental data for Ar^{8+} do not agree with the present results.

3925 **Measurement of relative electron-impact-excitation cross sections for Fe^{24+}.** Brown, C.M. (E. O. Hulburt Center for Space Research, Naval Research Laboratory, Washington, D.C. 20375-5000 (US)); Feldman, U.; Doschek, G.A.; Seely, J.F.; LaVilla, R.E.; Jacobs, V.L.; Henderson, J.R.; Knapp, D.A.; Marrs, R.E.; Beiersdorfer, P.; and other *Physical Review [Section] A: General Physics (USA),* 40(7): 4089-4092 (1 Oct 1989). DOE Contract W-7405-ENG-48.

We present measurements of the relative electron-impact-excitation cross sections for the $1s^2\ {}^1S_0$–$1s2p\ {}^1P_1$, $1s^2\ {}^1S_0$–$1s2p\ {}^3P_2$, $1s^2\ {}^1S_0$–$1s2p\ {}^3P_1$, and $1s^2\ {}^1S_0$–$1s2s\ {}^3S_1$ transitions for the He-like ion, Fe^{24+}. The measurements were made at two electron energies: 6.86 and 9.94 keV. The cross-section measurements are compared with theoretical calculations.

3926 **Test of predicted $\Delta n \geq 1$ *L*-shell dielectronic-recombination cross sections.** Bernstein, E.M. (Department of Physics, Western Michigan University, Kalamazoo, Michigan 49008 (US)); Clark, M.W.; Tanis, J.A.; Woodland, W.T.; Berkner, K.H.; Schlachter, A.S.; Stearns, J.W.; DuBois, R.D.; Graham, W.G.; Morgan, T.J.; and others. *Physical Review [Section] A: General Physics (USA),* 40(7): 4085-4088 (1 Oct 1989).

The predicted charge-state dependence of dielectronic-recombination cross sections involving Δn>=1 *L*-shell excitation has been tested by measurements of resonant transfer and excitation (RTE) for $_{41}Nb^{q+}+H_2$ (q=28 to 32) collisions at 3.7 and 4.0 MeV/u. The measured RTE cross sections increase significantly with increasing charge state and thus disagree substantially with theoretical calculations that predict essentially equal cross sections for Nb^{29+}, Nb^{30+}, and Nb^{31+}. This disagreement is contrary to the good agreement previously found between theory and experiment for *K*-shell RTE.

3927 **Structure and bonding in the B_2H_5 radical and cation.** Ruscic, B. (Chemistry Division, Argonne National Laboratory, Argonne, Illinois 60439 (US)); Schwarz, M.; Berkowitz, J. *Journal of Chemical Physics (USA),* 91(7): 4183-4188 (1 Oct 1989). DOE Contract W-31-109-ENG-38.

The B_2H_5 radical has been generated by the $F+B_2H_6$ reaction, and studied by photoionization mass spectrometry. The photoion yield curve for $B_2H^+{}_5$ (B_2H_5) is extremely weak at the adiabatic threshold (~6.945 eV), at least three orders of magnitude weaker than at its maximum (~9.67 eV). This observation provides support for recent *ab initio* calculations, which predict a singly bridged B_2H_5 and a triply bridged $B_2H^+{}_5$ as ground states. Evidence is presented for the coexistence of a doubly bridged B_2H_5 isomer, ~3 kcal/mol higher in energy. From the appearance potential of $B_2H^+{}_3$ (B_2H_5), a B_2H_5–H bond energy of $\lesssim$102.7 kcal/mol is obtained. From the photoion yield curve of $B_2H^+{}_3$ (B_2H_5), at least one, and perhaps two, excited states of $B_2H^+{}_5$ can be inferred. The lower one also branches into parent B_2H_5, an apparent violation of QET.

3928 **Theoretical study of the ionization of B_2H_5.** Curtiss, L.A. (Argonne National Laboratory, Chemical Technology Division/Materials Science Division, Argonne, Illinois 60439-4837 (US)); Pople, J.A. *Journal of Chemical Physics (USA),* 91(7): 4189-4192 (1 Oct 1989). DOE Contract W-31-109-ENG-38.

Ab initio molecular orbital calculations at the G1 level of theory have been carried out on neutral B_2H_5 radical, doubly bridged $B_2H^+{}_5$ cation, and the first triplet excited state of $B_2H^+{}_5$. Singly bridged B_2H_5 is 4.0 kcal/mol (without zero-point energies) more stable than doubly bridged B_2H_5. Based on this work and previous theoretical work on triply bridged $B_2H^+{}_5$, ionization potentials (vertical and adiabatic) are determined for B_2H_5. The adiabatic ionization potentials of the two B_2H_5 structures are 6.94 eV (singly bridged) and 7.53 eV (doubly bridged). A very large difference is found between the vertical and adiabatic ionization potentials (3.37 eV) of the singly bridged B_2H_5 structure. The first triplet state of $B_2H^+{}_5$ is found to be 4.55 eV higher in energy than the lowest energy $B_2H^+{}_5$ cation (triply bridged). The results of this theoretical study support the interpretation of Ruščic, Schwarz, and Berkowitz of their recent photoionization measurements on B_2H_5.

3929 **Fluorescence near a phase-conjugating mirror: Amplification of quantum noise.** Milonni, P.W. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)); Bochove, E.J.; Cook, R.J. *Physical Review [Section] A: General Physics (USA),* 40(7): 4100-4102 (1 Oct 1989).

We consider the spontaneous emission by an atom near a phase-conjugating mirror (PCM). The effect of the PCM on the decay rate may be understood equivalently in terms of vacuum-field modes reflected and conjugated by the PCM, or in terms of vacuum modes transmitted and amplified without conjugation by the PCM.

3930 **Solutions to the time-dependent three-dimensional Schroedinger equation: Atoms in intense electric fields.** Collins, L.A. (Group T-4, MS B212, Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)); Merts, A.L. *Physical Review [Section] A: General Physics (USA),* 40(7): 4127-4130 (1 Oct 1989).

We develop a technique for solving the time-dependent three-dimensional Schroedinger equation by expanding in terms of a set of Volkov functions and converting to a system of first-order temporal equations. Solutions are obtained through standard multivalue propagation schemes. We apply the method to several cases including the interaction of an intense, oscillating electric field with a model three-dimensional atomic system, observing the above-threshold ionization structure.

3931 **Direct determination of scattering time delays using the *R*-matrix propagation method.** Walker, R.B. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)); Hayes, E.F. *Journal of Chemical Physics (USA),* 91(7): 4106-4110 (1 Oct 1989). DOE Contract W-7405-ENG-36.

A direct method for determining time delays for scattering processes is developed using the *R*-matrix propagation method. The procedure involves the simultaneous generation of the global *R* matrix and its energy derivative. The necessary expressions to obtain the energy derivative of the *S* matrix are relatively simple and involve many of the same matrix elements required for the *R*-matrix propagation method. This method is applied to a simple model for a chemical reaction that displays sharp resonance features. The test results of the direct method are shown to be in excellent agreement with the traditional numerical differentiation method for scattering energies near the resonance energy. However, for sharp resonances the numerical differentiation method requires calculation of the *S*-matrix elements at many closely spaced energies. Since the direct method presented here involves calculations at only a single energy, one is able to generate accurate energy derivatives and time delays much more efficiently and reliably.

3932 **Solution of reference interaction site model for mixtures of short-chain polyatomic molecules.** Wu, R. (School of Chemical Engineering and Materials Science, University of Oklahoma, Norman, Oklahoma 73019 (US)); Lee, L.L.; Harwell, J.H. *Journal of Chemical Physics (USA),* 91(7): 4254-4264 (1 Oct 1989).

Mixtures of chain molecules—monomers, dimers, trimers, and tetramers—are studied using the soft interaction site model. The site–site Ornstein–Zernike equations are solved using the Percus–Yevick closure. The site–site potential is of the Lennard-Jones 12-6 type. The method of solution, based on the efficient algorithm of Labik and employing Newton–Raphson accelerations, is shown to be fast, accurate and stable; it also shows good convergence behavior even with inaccurate initial estimates. New symmetrical properties among the atom–atom pairs are used to simplify the Jacobian matrix of solution. Pure as well as mixture systems are investigated. Comparison with simulation data of Banon *et al.* and Massobrio *et al.* is made. The structure is qualitatively described by

the integral equations. The internal energy is well predicted by the reference interaction site model calculations.

3933 **Quantum state-resolved study of pure rotational excitation of CO_2 by hot atoms.** Hershberger, J.F. (Department of Chemistry and Columbia Radiation Laboratory, Columbia University, New York, New York 10027 (US)); Hewitt, S.A.; Sarkar, S.K.; Flynn, G.W.; Weston, R.E. Jr. *Journal of Chemical Physics (USA)*, 91(8): 4636-4642 (15 Oct 1989). DOE Contract FG02-88ER13937;FG05-85ER75213.

Rotationally inelastic scattering of carbon dioxide by translationally hot H, D, and Cl atoms was studied by time-resolved diode laser absorption. The high *J* rotational distribution falls off quite rapidly between *J*=60 and *J*=80. D atom collisions have roughly twice the excitation cross section versus H atom collisions, with the H*/D* ratio decreasing with increasing *J*. These results are consistent with a constraint on the total reagent orbital angular momentum available for rotational excitation. Transient Doppler profiles measured immediately after hot atom/CO_2 collisions indicate that CO_2 molecules excited to high *J* levels have a larger recoil velocity than molecules excited to lower *J* levels. This result is consistent with predictions based on a simple model which treats the CO_2 potential as a hard shell ellipsoid.

3934 **Theroretical study of $B_2H^+_3$, $B_2H^+_2$, and B_2H^+.** Curtiss, L.A. (Chemical Technology Division/Materials Science Division, Argonne National Laboratory, Argonne, Illinois 60439-4837 (US)); Pople, J.A. *Journal of Chemical Physics (USA)*, 91(8): 4809-4812 (15 Oct 1989). DOE Contract W-31-109-ENG-38.

An *ab initio* molecular orbital study is presented of $B_2H^+_3$, $B_2H^+_2$, and B_2H^+ at the G1 level of theory, including correlation energy beyond fourth-order perturbation theory and large basis sets. The structures of these ions are found to contain no hydrogen bridges in contrast to the previously studied ions ($B_2H^+_6$, $B_2H^+_5$, and $B_2H^+_4$) in this series. Good agreement is found with a recent photoionization measurement of the appearance potentials of the $B_2H^+_3$ and $B_2H^+_2$ ions from B_2H_6.

3935 (AD-A–210465/1/XAB) **Numerical simulation of the compressible Orszag-Tang vortex. Interim report, June 1988-February 1989.** Dahlburg, R.B.; Picone, J.M. Naval Research Lab., Washington, DC (USA). 8 Jun 1989. 53p. (NRL-MR–6486). Available from NTIS, PC A04/MF A01.

Results of fully compressible, Fourier collocation, numerical simulations of the Orszag-Tang vortex system are presented. Initial conditions consist of a nonrandom, periodic field in which the magnetic and velocity fields contain X-points but differ in modal structure along one spatial direction. The velocity field is initially solenoidal, with the total initial pressure-field consisting of the superposition of the appropriate incompressible pressure distribution upon a flat pressure field corresponding to the initial, average flow Mach number of the flow. In the numerical simulations, this initial Mach number is varied from 0.2 to 0.6. These values correspond to average plasma beta values ranging from 30.0 to 3.3, respectively. Compressible effects develop within one or two Alfven transit times, as manifested in the spectra of compressible quantities such as mass density and nonsolenoidal flow field. These effects include (1) retardation of growth of correlation between the magnetic field and the velocity field, (2) emergence of compressible small-scale structure such as massive jets, and (3) bifurcation of eddies in the compressible-flow field. Differences between the incompressible and compressible results tend to increase with increasing initial average Mach number.

3936 (AD-A–210586/4/XAB) **Experimental study of microwave transmission through a decaying plasma. Final report, January 1986-February 1988.** Hendricks, K.J. Air Force Weapons Lab., Kirtland AFB, NM (USA). May 1989. 31p. (AFWL-TR–89-35). Available from NTIS, PC A03/MF A01.

Original contains color plates: All DTIC reproductions will be in black and white.

The physics of pulsed-microwave, or radio-frequency (r-f), transmission through a decaying plasma column, is studied experimentally. A plasma column is formed in argon or nitrogen gases, to represent the neutral-gas breakdown due to an rf pulse. Initially, the electron frequency is greater than the microwave frequency. An r-f pulse capable of plasma reionization is applied across the plasma column at varying times in the plasma's decay phase (the plasma afterglow). Variation of the transmitted rf pulse characteristics, pulse width, and amplitude was studied as a function of the time into the afterglow. The ionization frequency of argon by a microwave pulse is found experimentally to be within 20% of the theoretical value. The comparison of ionization frequency is useful in establishing the applicability of earlier cavity measurements to present-day open-geometry systems used in transmission/propagation experiments.

3937 (EGG-M–38887) **Simulations of local Nusselt number using an algebraic stress model (ASM) for turbulent flow in a square 180 degree bend.** Johnson, R.W. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1988]. 20p. Sponsored by U.S. DOE Conservation & Renewable Energy. DOE Contract AC07-76ID01570. (CONF-880469–2: 2. international symposium on transport phenomena, dynamics, and design of rotating machinery, Honolulu, HI (USA), 3-6 Apr 1988). Order Number DE90001998. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Numerical simulations for local Nusselt number for the curved three-dimensional incompressible turbulent flow of air with heat transfer in a square-sectioned duct with a 180° bend are presented and compared with experiment. Predictions are obtained using an algebraic stress model (ASM) of turbulence, which has a better track record for curved flows than eddy viscosity models. The effects of employing central/upwind differencing vs. quadratic upwinding for convective coefficients, a "local equilibrium" wall treatment vs. one that allows diffusion of turbulent kinetic energy and staggered vs. unstaggered locations for turbulent shear stresses are examined. The numerical results are obtained using a finite-volume discretization of the Reynolds and energy equations employed in a semi-elliptic algorithm that marches iteratively through the flow domain. Objectives of the present study are to examine the behavior of the ASM, and wall treatments, which have been tuned against 2-D data, in predicting the local Nusselt number Nu for the present 3-D flow (Re = 55 565). 35 refs., 8 figs.

3938 **Quantum fluids and solids, 1989.** AIP Conference Proceedings 194. Ihas, G.G.; Takano, Yasumasa (eds.). 429p. American Institute of Physics, New York, NY (USA) (1989). Sponsored by American Institute of Physics. (CONF-8904257–: Quantum fluids and solids, Gainesville, FL (USA), Apr 1989).

This report contains papers on the following topics: tunneling and phase slippage in superfluids; superfluid ^{3}He; quantum interactions; low dimensional helium; polarized quantum systems; solid helium; nuclear magnetic ordering; exotic studies at low temperatures; and low temperature techniques. 3939 **Statistical properties and numerical implementation of a model for droplet dispersion in a turbulent gas.** O'Rourke, P.J. (Theoretical Division, Group T-3, Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)). *Journal of Computational Physics (USA)*, 83(2): 345-360 (Aug 1989).

We explore the statistical properties of a model proposed by Dukowicz for calculating the dispersion of spray droplets due to turbulent gas motions. The distributions of turbulent velocity and position changes are derived, making no assumptions concerning the relative magnitudes of the drag time, turbulence correlation time, and the time at which the distributions are evaluated. We also tell how the model is implemented in the computer program KIVA and give some computational examples. © 1989 Academic Press, Inc.

3940 **Current drive via magnetohydrodynamic helicity waves.** Mett, R.R. (University of Wisconsin, Madison, Wisconsin 53706 (US)); Tataronis, J.A. *Physical Review Letters (USA)*, 63(13): 1380-1383 (25 Sep 1989).

We explore fundamentals of low-frequency current drive produced by a packet of arbitrarily polarized nonlinear shear Alfven waves in an infinite, uniform magnetized plasma. Analysis of the magnetohydrodynamic equations with resistivity and viscosity yields coupled

nonlinear equations for the Alfven wave amplitude and an induced magnetic field. Particular solutions relate the plasma current to the helicity of the Alfven wave and the difference between the viscosity and magnetic diffusivity.

3941 **Stability of core-annular flow in a rotating pipe.** Hu, H.H. (Department of Aerospace Engineering and Mechanics, University of Minnesota, Minneapolis, Minnesota 55455 (US)); Joseph, D.D. *Physics of Fluids A: Fluid Dynamics (USA),* 1(10): 1677-1685 (Oct 1989).

The linear stability of core-annular flow in rotating pipes is analyzed. Attention is focused on the effects of rotating the pipe and the difference in density of the two fluids. Both axisymmetric and nonaxisymmetric disturbances are considered. Major effects of the viscosity ratio, interfacial tension, radius ratio, and Reynolds number are included. It is found that for two fluids of equal density the rotation of the pipe stabilizes the axisymmetric (n=0) modes of disturbances and destabilizes the nonaxisymmetric modes. Except for small R, where the axisymmetric capillary instability is dominant, the first azimuthal mode of disturbance $|n|$=1 is the most unstable. When the heavier fluid is outside centripetal acceleration of the fluid in the rotating pipe is stabilizing; there exists a critical rotating speed above which the flow is stabilized against capillary instability for certain range of small R. When the lighter fluid is outside the flow is always unstable.

Available from NTIS, PC A07/MF A01; OSTI; INIS; GPO Dep.

We describe theoretical work on effective action expansion of an effective low energy theory of hadrons, dynamical symmetry breaking, and lattice gauge theories. The high energy experimental group at Louisiana State University has finished taking data on a neutrino oscillation experiment at LAMPF. Results for the 1987 data have been published. Analysis of 1988 and 1989 data is in progress. LSU is also participating in an electron-positron experiment, AMY, that is running at TRISTAN in Japan. LSU is responsible for the muon detector for AMY. Many results have been published. We have recently joined an electron-proton experiment, ZEUS.

3947 (AD-A–207482/1/XAB) **Potential for a near-term very-low-energy antiproton source at Brookhaven National Laboratory. Special report.** Nordley, G.D. Air Force Astronautics Lab., Edwards AFB, CA (USA). Apr 1989. 197p. (AFAL-SR–89-001). Available from NTIS, PC A09/MF A01.

The resolution of key issues in the use of antimatter for applications ranging from aerospace-materials analysis in the near term and propulsion energy storage in the far term requires experiments with low-energy, relatively slow-moving, or thermal, antiprotons. There is no United States source of antiprotons at that energy; therefore, a task was initiated with Brookhaven National Laboratory to determine what would be required in time, equipment, and money to create a source producing antiprotons at a rate (approx 10^{14}/yr) sufficient to support applications experiments. The estimate eventually derived from this first-order analysis was approximately $8.6M for an initial source of 20 KeV antiprotons plus another roughly estimated $5M for cooling to increase the production rate to 10^{14} - 10^{15} antiprotons per year.

The present experiment, E-735, is a search for a deconfined quark-gluon plasma phase of hadronic matter predicted to occur when temperatures of 240 MeV are achieved. The primary data were obtained in 1988–1989, and operations concluded with the current phase of the Fermilab Tevatron Collider in May 1989. Based on these data, the collaboration is analyzing the charged particle multiplicity and transverse momentum distributions, with particle identification, of the produced secondaries. These measurements are regarded on theoretical grounds to be sensitive indicators of the

formation of a high-temperature plasma. First results will be described. The next experimental program, experiment L3 at LEP/CERN, is presented, and the role of Iowa State University is outlined. There is a long and well-known history establishing the importance of precision measurements of photons and leptons, and the L3 detector represents the current state of the art in these measurements. Our previous experience in high-level triggers, data acquisition systems, high-precision detectors, and e^+e^- technology and physics will contribute significantly to the L3 program.

3950 (DOE/ER/40389–61) **$K_L^0 \rightarrow \mu^{\mp}e^{\pm}$ at the Fermilab main injector.** Cooper, M.D.; McFarlane, W.K.; Shinkawa, T. Temple Univ., Philadelphia, PA (USA). Dept. of Physics. [1989]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40389. (CONF-890872–3: Workshop on physics at Fermilab in the 1990's, Breckenridge, CO (USA), 15-24 Aug 1989). Order Number DE90002566. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Some of the attempts to replace the Standard Model with more satisfactory theories result in predictions that lepton flavor (separate lepton number) is not absolutely conserved. A new generation of experiments is underway to study decays in which lepton flavor conservation might be violated, such as $K_L^0 \rightarrow \mu^{\mp}e^{\pm}$, $K^+ \rightarrow \pi^+\mu^+e^-$, $\mu \rightarrow e\gamma$, $\mu \rightarrow eee$, and $\mu^-A \rightarrow e^-A$. Since the form of a lepton number violating interaction is unknown, it is useful to probe all of these decays, and perhaps decays of B and D mesons, to whatever level is technically feasible. However, here we concentrate on the decay $K_L^0 \rightarrow \mu^{\mp}e^{\pm}$. The three most recent experiments on this process have been E780 at BNL, E791 at BNL, and KEK E137, which currently report (90% C.L.) upper limits on the branching fraction of 1.9×10^{-9}, 2.2×10^{-10}, and 4.3×10^{-10} respectively. While E780 is complete, the two other experiments are in the process of collecting larger samples and a combined sensitivity of about 2×10^{-11} is likely (by sensitivity we mean the branching fraction which would produce one observed event). Any new experiment should aim at a sensitivity of 10^{-13}. There are several places which might offer a suitable beam: the BNL AGS with the Booster, the Fermilab Main Injector (MI), and the TRIUMF KAON facility. 5 refs.

3951 (DOE/ER/40389–62) **Experimental investigations in particle physics at intermediate energies: Performance report, December 1, 1988–December 31, 1989.** Auerbach, L.B.; Highland, V.L.; Martoff, C.J.; McFarlane, K.W.; Buchholz, P.; Sivertz, M.B. Temple Univ., Philadelphia, PA (USA). Dept. of Physics. 31 Oct 1989. 21p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40389. Order Number DE90002565. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The major emphasis of this project continues to be on fundamental symmetries and parameters of the Standard Model. The primary project is BNL E791, a search for the decay $K_L^0 \rightarrow \mu e$, which would violate the rule of separate lepton number conservation. The technique uses a drift-chamber spectrometer, with particle identification, picking out candidate decays from 2-particle triggers by measuring the two-particle invariant mass m, and the collinearity angle Θ_c. For reconstructed $K_L^0 \rightarrow \pi^+\pi^-$ decays the rms resolution in m was $\sim$1.4 MeV/c^2, and in Θ_c it was $\sim$0.3 mrad; these values match the design specifications. All the data from the 1988 run of E971 have been analyzed for K_L^0 μe, $K_L^0 \rightarrow \mu e$, $K_L^0 \rightarrow \mu\mu$, and $K_L^0 \rightarrow ee$ events, and the results submitted for publication. We find an upper limit from the 1988 data for the branching fraction of $K_L^0 \rightarrow \mu e$ of 2.2×10^{-10} and a limit of 3.1×10^{-10} for $K_L^0 \rightarrow ee$. We also measured the branching fraction for K_L^0 $\mu\mu$ to be $(5.8 \pm 0.6 \pm 0.4) \times 10^{-9}$, with a sample of 87 events. Our limits are the best reported. The limit on the decay $K_L^0 \rightarrow \mu e$ places a lower limit on the mass of a new particle mediating such decays of 50 TeV. The other neutrino work at Los Alamos, E764, will result in a final publication. Calculations are being completed of the neutrino flux, necessary for the measurement of the ν_μ ^{12}C inclusive cross sections. These will be the best measurements of ν-nuclear scattering.

Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40416. Order Number DE90003182. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

This report describes the work done at Valparaiso University on LAMPF experiment E764, to conclude the neutrino flux calculations, and work done at Valparaiso University and at LANL on LAMPF E969, the MEGA experiment, specifically on the positron arm of the MEGA spectrometer.

3953 (FNAL/C–89/207-E) **Recent results from the CDF [Collider Detector at Fermilab] experiment at the Tevatron proton-antiproton collider.** Geer, S. CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (USA). Sep 1989. 28p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8907162–1: 8. Eloisatron Project workshop on Higgs Boson, Erice (Italy), 15-26 Jul 1989). Order Number DE90002186. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Recent results from the CDF experiment are described. The Standard Model gives a good description of jet production, and W/Z production and decay. There is no evidence yet for the top quark, for fourth generation quarks, or for deviations from the Standard Model ascribable to quark substructure, supersymmetric particles, or heavy additional W-like or Z-like bosons. Limits are given where applicable. A search for a light Higgs Boson is also described. 11 refs., 24 figs.

3954 (IC–89/137) **Search for proton decay and supernova neutrino bursts with a lunar base neutron detector.** Cline, D.B. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 23p. Order Number DE90607644. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We describe the current status of the search for proton decay on earth, emphasizing the decay mode P -> $K^+\nu^-$ and discuss the possibility of detecting this mode with a single detector on a lunar base station. The same detector could be used to search for neutrino bursts from distant supernova using the neutral current signature $\nu_{\mu,tau}$+N -> n+ν_x by detecting the produced neutrons. The key advantage of the lunar experiment is the low neutrino flux and possible low radioactive background. (author). 5 refs, 4 tabs, 3 figs.

3955 (INIS-mf–12013, pp. 117-118) **Measurement of proton-antiproton cross sections at low momenta.** Brueckner, W. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Dworschak, K.; Povh, B.; Paul, S.; Cujec, B.; Doebbeling, H.; Shibata, T.A.; Kneis, H.; Nomachi, M.; Ransome, R.D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Measurements of antiproton-proton cross sections at the LEAR facility of CERN have been performed in 1983-86, and the analysis of the data is in progress. This year we have completed the analysis of the S-resonance search in the annihilation cross section. No structure for such a resonance is seen around the beam momentum of 500 MeV/c. The upper limit for the resonance has been derived from this result. The analysis of the annihilation cross section has been further extended down to 180 MeV/c. It is found that the annihilation cross section is larger than the geometrical limit of pure s-wave, indicating a sizable contribution of p-wave even at very small beam momenta. (orig.).

3956 (INIS-mf–12013, pp. 118-122) **Deep-inelastic myon-nucleus scattering at the CERN SPS; EMC and NMC Collaboration.** Alberich, T.; Bird, I.G.; Brueckner, W.; Dierberger, B.; Doebbeling, H.; Harrach, D. von; Kabuss, E.M.; Mizuno, Y.; Mueller, A.; Mueller, B. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Our group is involved in deep inelastic muon nucleon and muon nucleus experiments performed by the EMC and NMC collaborations at the CERN SPS. The evaluation of the polarized target data of the EMC has been finalized. A significant violation of the Ellis-Jaffe sum rule is found. In addition the deep inelastic data on nuclear targets (D_2, C, Cu, Sn), obtained parasitically to the polarized target run, have been analysed. Together with preliminary results of the NA28 shadowing experiment of the EMC on Ca-D

they provide for the first time evidence that shadowing in deep inelastic scattering persists for $Q^2>3$ GeV^2. (orig.).

3957 (INS–747) **Study of hypernuclei via (π^+, K$^+$) reactions at KEK.** Akei, M.; Amann, J.F.; Chiba, J. and others. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. May 1989. 9p. Order Number DE90719711. Available from NTIS (US Sales Only), PC A02/MF A01.

Since the possibility of using a (π^+, K$^+$) reaction for studying of hypernuclei was first suggested by Thiessen, interesting theoretical and experimental works have been reported. The present report briefly outlines the performance of the PIK spectrometer, results of $^{12}C(\pi^+, K^+)_\Lambda{}^{12}C$ and $^{56}Fe(\pi^+, K^+)_\Lambda{}^{56}Fe$ reactions, and estimation of the asymmetry of the decaying particle from a polarized$_\Lambda{}^{12}C$ hypernucleus. The PIK spectrometer has been installed at the K2 beam line at KEK. It shows good performance for studying (π^+, K$^+$) reactions. The $^{12}C(\pi^+, K^+)_\Lambda{}^{12}C$ and $^{56}Fe(\pi^+, K^+)_\Lambda{}^{56}Fe$ reactions are studied by means of the PIK spectrometer. The observed spectrum is consistent with a calculation made in a framework of the single neutron hole + lambda single particle system and DWIA for the (π^+, K$^+$) reaction. Refined calculation taking into account the effect of pairing correlation and spreading of neutron hole states seems to give better agreement with the spectrum in the effective Λ bound region. Since the PIK spectrometer gives spectra with small background and has reasonably large acceptance, it is quite feasible to carry out coincidence experiments. The estimated large asymmetry of the nonmesonic decay of the polarized hypernuleus may promise the observation of polarized hypernuclei by using the PIK spectrometer. If they are found to exist, it will open a new field or hypernuclear spectroscopy. (N.K.).

3958 (INS–752) **Possible measurement of the gravitational acceleration of molecules, atoms, nuclei, elementary particles and antiparticles.** Terazawa, Hidezumi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jun 1989. 11p. Order Number DE90719559. Available from NTIS (US Sales Only), PC A03/MF A01.

A possible laboratory measurement of the gravitational acceleration of ionized molecules, ionized atoms, nuclei, charged elementary particles and charged antiparticles is proposed. It is simple by detecting their falling distance to an accuracy of the order of 1μm after one turn of circular orbit with a radius of the order of 1m in the variable static homogeneous weak magnetic field of the orders of 10^{-3}-1 gauss, which is available in the air-core β spectrometer. The technical points are also presented and discussed in detail. (author).

3959 (LA-UR–89-3695) **Neutrino mass: Recent results.** Robertson, R.G.H. Los Alamos National Lab., NM (USA). 1989. 19p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-890979–1: Fundamental symmetries in nuclei and particles, Pasadena, CA (USA), 7-9 Sep 1989). Order Number DE90003171. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Some recent developments in the experimental search for neutrino mass are discussed. Simpson and Hime report finding new evidence for a 17-keV neutrino in the β decay of ^{3}H and ^{35}S. New data from Los Alamos on the electron neutrino mass as measured in tritium beta decay give an upper limit of 13.5 eV at the 95% confidence level. This result is not consistent with the long-standing ITEP result of 26(5) eV within a "model-independent" range of 17 to 40 eV. It now appears that the electron neutrino is not sufficiently massive to close the universe by itself. 38 refs., 1 figs., 2 tabs.

3960 (LBL–27599) **Low energy $\bar{p}p$ physics.** Amsler, C.; Crowe, K. Lawrence Berkeley Lab., CA (USA). Feb 1989. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8902143–1: Workshop on hadron spectroscopy, Vancouver (Canada), 21 Feb 1989). Order Number DE90002452. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A detailed investigation of proton-antiproton interactions at low energy has become feasible with the commissioning of the LEAR facility in 1983. We shall shortly review the status of $\bar{p}p$ annihilation at rest and the physics motivations for second generation experiments with the Crystal Barrel detector. This type of detector would be adequate for the study of both Kp and $\bar{p}p$ interactions on an extracted beam of the KAON Factory. We shall conclude with a few remarks on the physics opportunities with $\bar{p}$'s at the KAON Factory which, in our opinion, will not be covered by the present LEAR facility. 11 refs., 10 figs., 2 tabs.

3961 (RAL–89-026) **Particle physics experiments 1988.** Bairstow, R. Rutherford Appleton Lab., Chilton (UK). 1989. 157p. Order Number DE90607643. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

This report describes work carried out in 1988 on experiments approved by the Particle Physics Experiments Selection Panel. The contents consist of unedited contributions from each experiment. More than forty projects at different accelerators (SPS, ISIS, PETRA, LAMPF, LEP, HERA, BNL, ILL, LEAR) are listed. Different organisations collaborate on different projects. A brief progress report is given. References to published articles are given. (author).

3962 (SLAC–343) **Proceedings of the tau-charm factory workshop: Study of tau, charm and J/psi physics; development of high luminosity esup +esup minus rings; design of esup +esup minus detectors for tau-charm physics.** Beers, L.V. (ed.). Stanford Linear Accelerator Center, Menlo Park, CA (USA). Jun 1989. 976p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8905144–: Tau-Charm Factory workshop, Stanford, CA (USA), 23-27 May 1989). Order Number DE90001785. Available from NTIS, PC A99/MF A01; OSTI; INIS; GPO Dep.

This report contains papers on the following main topics: machine physics; tau physics; D and D_s physics; J/Ψ and charmonium physics; tau charm factories; workshop summary; accelerator physics; tau physics; charmed meson physics; J/Ψ and charmonium physics; and detector.

3963 (SLAC–347) **Study of four-lepton final states in electron-positron interactions at 29 GeV.** Petradza, A. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Aug 1989. 129p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00515. Order Number DE90002629. Available from NTIS, PC A07/MF A01; OSTI; INIS; GPO Dep.

This thesis presents a study of electron-positron scattering to four light leptons. The motivations behind it are twofold. Firstly, the study is a test of the theory of electron-positron interactions to 4th order in the fine structure constant α. A deviation from the theory could indicate the existence of a heavy new particle. Secondly, a measurement of these processes may prove useful in the understanding of other QED-type reactions. The method for simulating the four-lepton processes by the Monte Carlo event generator of Berends, Daverveldt and Kleiss is described. Theoretical predictions are compared to data from the Mark II and HRS experiments at the PEP storage ring. The observed events consist of four leptons at large angles. Data for all three $e^+e^-e^+e^-$, $e^+e^-\mu^+\mu^-$ and $\mu^+\mu^-\mu^+\mu^-$ processes are well described by the QED Monte Carlo calculation. The various kinematical distributions are in good agreement with QED to order α^4. 18 refs., 64 figs., 19 tabs.

3964 (SLAC–350) **A search for single electron production in electron positron annihilation at E = 29 GeV.** Steele, T.R. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Sep 1989. 124p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00515. Order Number DE90002638. Available from NTIS, PC A07/MF A01; OSTI; INIS; GPO Dep.

This thesis presents experimental results from the ASP detector which took data on e^+e^- interactions in the PEP storage ring at SLAC. Its design was particularly suitable for searching for production of supersymmetric particles. The motivations for and phenomenology of Supersymmetry are discussed. In particular, the production of a single supersymmetric electron ("selectron", $\tilde{e}$) in combination with a supersymmetric photon ("photino", $\tilde{\gamma}$) would result in events in which a single electron and no other particles are observed in the detector at an e^+e^- collider such as PEP, provided the masses of these particles are not too large. Such events would also result from the production of a single supersymmetric W-boson ("wino", $\tilde{W}$) in combination with a supersymmetric neutrino ("sneutrino", $\tilde{\nu}$). These processes make it possible to search for electrons and winos with masses greater than the beam energy. Observation

of these unusual events would distinctly indicate the production of new particles. The ASP detector was designed to be hermetic and to provide efficient event reconstruction for low multiplicity events. The detector is described and its performance is evaluated; it is found to be well-suited to this study. The data sample collected with the detector was thoroughly analyzed for evidence of single-electron events. The various possible background processes are considered and Monte Carlo calculations of the distributions from single selectron and single wino production are presented. Using this information an efficient off-line event selection process was developed, and it is described in detail. 82 refs., 41 figs., 4 tabs.

3965 (SLAC-PUB–4984) **Rare decays.** Gilman, F.J. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Sep 1989. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8904226–9: 12. international workshop on weak interactions and neutrinos, Ginosar (Israel), 9-14 Apr 1989). Order Number DE90001814. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Recent theoretical and experimental progress on rare decays is summarized, principally for K and B mesons, as discussed in the parallel sessions of this workshop. 51 refs., 6 figs.

3966 (SLAC-PUB–5048) **B physics at the Z^0 pole.** Atwood, W.B.; Mours, B. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Oct 1989. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8906210–4: Workshop on B-factories and related issues, Blois (France), 26 Jun - 1 jul 1989). Order Number DE90001815. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The SLC has been running at SLAC since April, and more than 100 Z^0 events have been reconstructed. Shortly the new European facility at CERN-LEP-will also turn on, and by the end of the year we anticipate that more than 10,000 Z^0 events will have been registered by each of the four LEP detectors. Most of the experimental facilities at these two machines are equipped with excellent particle tracking and identification. Some have close-in tracking devices which will provide unparalleled precision in trajectory reconstruction, and lead to the possibility of identifying a large proportion of the charmed and beauty particles. Not only does the Z^0 pole offer a relatively large production cross section for e^+e^- machines, but a large proportion of the events are $b\bar{b}$ pairs. One sees from this figure that a gain of six or more is obtained from running at the Z^0. An SLC producing 10^5 events per year yields 20,000 $b\bar{b}$ events. Similarly, for LEP, over 200,000 $b\bar{b}$ events will become available per year. In addition, the planned upgrade for LEP will increase its luminosity by about an order of magnitude, and the SLC will run with polarized electron beams. The physics that may be studies from these event samples fall into two general categories: tests of the Standard Model; and studies of B mesons and B baryons, including lifetimes, mixing, spectroscopy, and CP violation. 8 refs., 8 figs., 1 tab.

3967 (SLAC-PUB–5118) **Recent results on weak decays of charmed mesons from the Mark III experiment.** Browder, T.E. Stanford Linear Accelerator Center, Menlo Park, CA (USA). 20 Oct 1989. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8907134–2: 17. SLAC summer institute: physics at the 100 GeV mass scale, Stanford, CA (USA), 10-21 Jul 1989). Order Number DE90001818. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Recent results from the Mark III experiment on weak decays of charmed mesons are presented. Measurements of the resonant substructure of $D^0 \rightarrow K^-\pi^+\pi^-\pi^+$ decays, the first model independent result on $D_s \rightarrow \phi\pi^+$, as well as limits on $D_s \rightarrow \eta\pi^+$ and $D_s \rightarrow \eta'\pi^+$ are described. The implications of these new results are also discussed. 37 refs., 7 figs., 4 tabs.

3968 **Fermilab fixed-target program.** Dixon, R.L. (Fermi National Accelerator Lab., Batavia, IL (USA)). pp. 503 of Proceedings of the II Mexican school of particles and fields. Lucio, J.L. Zepeda, A World Scientific Pub. Co., Teaneck, NJ (1987). (CONF-8612111–: 2. Mexican school on particles and fields, Cuernavaca (Mexico), 4-12 Dec 1986).

This paper reviews a series of lectures that were given by the author on the Fermilab fixed-target physics program at the Second Mexican School of particles and Fields held in Cuernavaca, Mexico., The emphasis is on recent physics results that have come from the most recent fixed-target run of the TEVATRON which occurred in 1985. There is a brief summary of expected results from that run as well as some results from earlier runs. An attempt is made to summarize the future program at Fermilab and to tabulate the overall program. The physics program at Fermilab has been broken into the following categories: electroweak; decays and CP; heavy quarks; and hard collisions.

3969 **Study of $\omega\omega$ systems produced in 38 GeV/c π^-p collisions.** Alde, D.; Binon, F.G.; Bricman, C.; Donskov, S.V.; Gouanere, M.; Inyakin, A.V.; Kachanov, V.A.; Khaustov, G.V.; Knapp, E.A.; Kulik, A.V.; and others. IHEP-IISN-LANL-LAPP-TSUIHEP Collaboration. *Soviet Journal of Nuclear Physics (English Translation) (USA)*, 49(4): 636 (Apr 1989).

The $\pi^-p \rightarrow \omega\omega n$ reaction has been studied for the first time at the 70 GeV IHEP accelerator. The six photons from the decay of the two ω mesons were detected in GAMS-2000, a hodoscope multiphoton spectrometer. Two resonances decaying into $\omega\omega$,$X(1640)$ and $X(1960)$, have been observed. Their quantum numbers are $J^{PC}=2^{++}$, $I^G=0^+$. The reaction is dominated by the one-pion exchange mechanism. The production cross sections $\sigma \cdot BR$ ($X \rightarrow \omega\omega$) are 0.65 ± 0.15 μb and 1.0 ± 0.2 μb, respectively.

3970 **Search for unstable heavy neutral leptons in e^+e^- annihilations at $\sqrt{s}$ from 50 to 60.8 GeV.** Shaw, N.M. (University of Rochester, Rochester, NY (USA)); Blanis, D.; Bodek, A.; Budd, H.; Coombes, R.; Eno, S.; Fry, C.A.; Harada, H.; Ho, Y.H.; Kim, Y.K.; and others. AMY Collaboration. *Physical Review Letters (USA)*, 63(13): 1342-1345 (25 Sep 1989).

A search for unstable heavy neutral leptons has been made at center-of-mass energies from 50 to 60.8 GeV with the AMY detector at the KEK Storage ring TRISTAN. The neutral leptons are assumed to decay via mixing to electrons and muons. Events with two leptons were searched for. No evidence for their existence was found. Limits in the mass range $7.8 \leq M_{L^0} \leq 28.1$ GeV/c^2 and mixing-parameter range $9 \times 10^{-10} \leq |U_{iL}|^2 \leq 1$ are presented for Dirac- and Majorana-type neutrinos.

3971 **Radiative kaon capture at rest in hydrogen.** Whitehouse, D.A. (Boston University, Boston, MA (USA)); Booth, E.C.; Gall, K.P.; McIntyre, E.K.; Miller, J.P.; Roberts, B.L.; Fickinger, W.J.; Robinson, D.K.; Hasinoff, M.D.; Measday, D.F.; Noble, A.J.; Hessey, N.P.; Lowe, J.; Horvath, D.; Sakitt, M.; Salo *Physical Review Letters (USA)*, 63(13): 1352-1355 (25 Sep 1989).

The photon spectrum from K^- stopping in liquid hydrogen has been measured with a high-resolution (1.5% FWHM at 300 MeV) NaI(Tl) detector. The branching ratios for $K^-p \rightarrow \Lambda\gamma$ (E_γ=281.4 MeV) and $K^-p \rightarrow \Sigma^0\gamma$ (E_γ=219.5 MeV) were obtained. The results are $R_{\Lambda\gamma}=(0.86 \pm 0.07^{+0.10}_{-0.08}) \times 10^{-3}$ and $R_{\Sigma^0\gamma}=(1.44 \pm 0.20^{+0.12}_{-0.10}) \times 10^{-3}$ where the first error is statistical and the second systematic. These results are not in good agreement with published predictions or with previous $\Lambda\gamma$ measurements.

3972 (ANL-HEP-CP–89-69) **The role of the axial anomaly in determining spin-dependent parton distributions.** Carlitz, R.D.; Collins, J.C.; Mueller, A.H. Argonne National Lab., IL (USA). 27 Jul 1989. 15p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract W-31109-ENG-38. (CONF-8903175–1: Recontre de Moriond conference, Les Arcs (France), 12-17 Mar 1989). Order Number DE90002226. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

It is shown that the forward matrix elements of j_5^μ, the flavor singlet axial vector current, do not measure the helicity carried by quarks and anti-quarks but also include a spin-dependent gluonic component due to the anomaly. Detailed phenomenological and field theoretic reasons are given for the necessity of a gluonic component in the matrix element of j_5^μ. The first higher order corrections

to the basic box and triangle graphs are discussed and shown not to modify the conclusions drawn in the leading order calculation. We close with a few comments on the possible phenomenological implications of the anomalous contribution. 25 refs., 6 figs.

3973 (ANL-HEP-CP-89-109) **B production in hadron collisions: Theory.** Berger, E.L. Argonne National Lab., IL (USA). 28 Sep 1989. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-8906210-3: Workshop on B-factories and related physics issues, Blois (France), 26 Jun - 1 jul 1989). Order Number DE90002205. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A review is presented of heavy quark production in $\bar{p}p$, π^-p, and pp interactions at fixed target and collider energies. Calculations of total cross sections and of single quark inclusive differential cross sections $d^2\sigma/dk_T dy$ are described including contributions through next-to-leading order in QCD perturbation theory. Comparisons with available data on charm and bottom quark production show good agreement for reasonable values of the charm and bottom quark masses and other parameters. Predictions and open issues in the interpretation of results are summarized. 20 refs., 5 figs.

3974 (ANL-HEP-CP-89-112) **Search for supersymmetric particles at CDF.** Wagner, R.G. Argonne National Lab., IL (USA). 1989. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-8904226-11: 12. international workshop on weak interactions and neutrinos, Ginosar (Israel), 9-14 Apr 1989). Order Number DE90002843. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Analyses of events with large unbalanced transverse energy from the 1987 and 1988-89 CDF data runs have set limits on the masses of supersymmetric squarks and gluinos. In a simple model with a stable photino as the lightest supersymmetric particle, the 1987 data with an integrated luminosity of 25.3 nb^{-1} have excluded at the 90% CL, squarks of mass less than 73 GeV/c^2 and gluinos of mass less than 74 GeV/c^2. Preliminary results from an analysis of 1 pb^{-1} of data from the current 1988-89 run imply that the existence of a squark of mass less than 150 GeV/c^2 is unlikely. 4 refs., 2 fig., 1 tab.

3975 (ANL/PPRNT-89-192) **Pion distribution in the nucleon.** Lee, T.-S.H. Argonne National Lab., IL (USA). 1989. 27p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90003003. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A model is presented for calculating the pion wave function inside the nucleon. By assuming that all pions around a core of the nucleon are in the lowest eigenstate of the system, it is shown that both the bound state and πN scattering amplitude can be consistently described by an exactly soluble model defined in the subspace spanned by the core state and the physical πN state. The parameters of the model are determined by fitting the data of the nucleon mass, πNN coupling constant and low energy πN scattering phase shifts. The model predicts that the probability of finding the pion component inside the nucleon is about 20%. The calculated πNN form factor differs significantly from the conventional monopole form. The dynamical consequences of the differences are demonstrated in a calculation of electromagnetic production of pions from the nucleon and the deuteron. 7 refs., 4 figs., 1 tab.

3976 (CEA-CONF-9796) **Theoretical aspect of J/PSI production in nucleus-nucleus collisions.** Blaizot, J.P. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique. 1988. 15p. (CONF-8809203-: Quark Matter '88: 7th international conference on ultrarelativistic nucleus-nucleus collisions, Lenox, MA (USA), 26-30 Sep 1988). Order Number DE90721236. Available from NTIS (US Sales Only), PC A03/MF A01.

A review of various theoretical works on the J/PSI suppression in nucleus-nucleus collisions is given. The suggestion of Matsui and Satz, that Debye screening in a quark-gluon plasma could prevent the binding of a charm quark-antiquark pairs is discussed. Works attempting to explain the observed suppression in terms of absorptions on the secondaries of the collisions are shown. The question whether J/PSI suppression in nucleus-nucleus collisions can be understood in terms of what is observed in hadron nucleus collisions is considered.

3977 (CONF-8907127-3) **Neutral pion photoproduction of the nucleon near threshold.** Nozawa, S.; Lee, T.S.H.; Blankleider, B. Argonne National Lab., IL (USA). 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 12. few body conference; Vancouver (Canada); 2-8 Jul 1989. Order Number DE90002838. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Neutral pion photoproduction on the nucleon near threshold is investigated using a dynamical model. It is shown that the commonly used procedure, based on an analytical continuation of the K-matrix to the unphysical region, is not compatible to a dynamical approach. We show that the final state interaction (FSI) amplitude derived from a dynamical model could involve large cancellation between the different pion photoproduction mechanisms. This leads that the FSI due to the intermediate π^0p state can be as important as that due to the π^+n intermediate state. At threshold, we obtain $E_{0+} = -1.92 \times 10^{-3}/m_{\pi+}$. This number is close to the measured value of $E_{0+} = -1.5 \times 10^{-3}/m_{\pi+}$. No violation of the low energy theorem is required to obtain good agreement between the calculated total cross sections and experimental data drum threshold to about 400 MeV incident photon energy. 10 refs., 4 figs., 3 tabs.

3978 (DOE/ER/03956-T4) **[Elementary particle interactions]: Progress report.** Close, F.E. Tennessee Univ., Knoxville, TN (USA). Dept. of Physics. 1988. 8p. DOE Contract AS05-76ER03956. Order Number DE89004682. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper briefly discusses high energy physics research in inelastic scattering of leptons from hadron and nuclear targets; nuclear dependence of parton distributions; and shadowing of nuclear structure functions. (LSP)

3979 (DOE/ER/40224-90) **Average transverse momentum in the geometrical branching model with jets.** Hwa, R.C.; Wang, Xin-nian. Oregon Univ., Eugene, OR (USA). Inst. of Theoretical Science. Sep 1989. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-85ER40224. (CONF-8806260-4: 19. international symposium on multiparticle dynamics - new data and theoretical trends, Arles (France), 13-17 Jun 1988; OITS-397). Order Number DE90003327. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The dependence of the average transverse momentum $\langle p_T \rangle_n$ on multiplicity is investigated in the framework of the geometrical branching model with minijets. A ledge effect in the rise-plateau-rise structure is found. The physical reasons for such an effect are given. 11 refs., 4 figs.

3980 (DOE/ER/40224-91) **Towards a unification of the geometrical, stochastic and dynamical properties of hadronic matter in collision.** Hwa, R.C. Oregon Univ., Eugene, OR (USA). Nov 1988. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-85ER40224. (CONF-8810264-14: Conference on hadronic matter in collision, Tucson, AZ (USA), 6-12 Oct 1988; OITS-400). Order Number DE90003328. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This is a review of the geometrical branching model for multiparticle production in hadron-hadron and hadron-nucleus collisions. Topics included are: KNO scaling and its violation, geometrical scaling and its violation, multiplicity dependence of $\langle p_T \rangle$ due to jet production, and formulation of the hA collision problem that allows the incident hadron to be broken. It is suggested that this model provides a framework in which the geometrical, stochastic and dynamical properties of the soft and semihard production processes can be unified. 22 refs.

3981 (DOE/ER/40224-108) **Intermittency in multiparticle dynamics.** Hwa, R.C. Oregon Univ., Eugene, OR (USA). Dept. of Physics. 1989. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-85ER40224. (OITS-417;CONF-8905208-3: 3. international conference on elastic and diffractive scattering, Evanston, IL (USA), 2-6 May 1989). Order Number DE90003353. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A review is given on the recent studies of multiplicity fluctuations in narrow rapidity windows in multiparticle production processes. Simple models involving sequential branching are given to show how power-law behaviors of appropriate moments can arise. The specific branching model in ϕ^3 theory is discussed in the skeleton form. Questions related to diffractive process are raised. 20 refs.

3982 (DOE/ER/40224–110) **QCD corrections to weak decays.** Deshpande, N.G. Oregon Univ., Eugene, OR (USA). Inst. of Theoretical Science. Jun 1989. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-85ER40224. (CONF-8904226–12: 12. international workshop on weak interactions and neutrinos, Ginosar (Israel), 9-14 Apr 1989; OITS–419). Order Number DE90003332. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Weak decays are significantly altered by effects of strong interaction. In the K system these corrections give rise to $\Delta I = 1/2$ rule, and have measurable effects on rare weak process like $K \to \pi\nu\bar{\nu}$, $K \to \pi e^+e^-$ and ε'/ε. The situation in the K system is briefly reviewed. Strong interaction effects are also important in D and B system. A possible mechanism for D^+-D^0 life-time difference is reviewed and then rare B processes are dealt with extensively. Electromagnetic penguin diagrams are enhanced by QCD corrections, giving rise to process like $B \to K^*\gamma$ and $B \to Ke^+e^-$. Process mediated by gluon penguins are also discussed. 24 refs., 8 figs.

3983 (DOE/ER/40224–114) **When is a heavy quark not a parton? Charged Higgs production and heavy quark mass effects in the QCD-based parton model.** Olness, F.I.; Tung, Wu-Ki. Oregon Univ., Eugene, OR (USA). Inst. of Theoretical Science. Oct 1989. 16p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract FG06-85ER40224. (CONF-8905223–2: 12. Warsaw symposium on elementary particle physics, Kazimierz (Poland), 29 May - 2 jun 1989; OITS–426). Order Number DE90003320. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Applications of the QCD-based parton model to new physics processes involving heavy partons are illustrated using charged Higgs production. The naive parton model predictions are found to overestimate the actual cross section by a factor of 2 to 5. The role of the top quark as a "parton" is examined, and the energy range over which heavy quarks (or other particles) should or should not be naturally treated as "partons" is delineated. 12 refs., 5 figs.

3984 (DOE/ER/40389–54) **Status of BNL E791: Study of very rare K_L^0 decays.** McFarlane, W.K. Pennsylvania Univ., Philadelphia, PA (USA). Dept. of Physics. [1989]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40389. (CONF-8904226–10: 12. international workshop on weak interactions and neutrinos, Ginosar (Israel), 9-14 Apr 1989). Order Number DE90002563. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

BNL E791 is a search for the lepton-number non-conserving decay $K_L^0 \to \mu e$. During the 1988 run, the apparatus was also sensitive to the decays $K_L^0 \to \mu\mu$, $K_L^0 \to ee$, and $K_L^0 \to \pi^0 ee$. Preliminary limits on the branching fractions from this run are: $B(K_L^0 \to \mu e) < 3 \times 10^{-10}$ and $B(K_L^0 \to ee) < 3 \times 10^{-10}$. For the decay $K_L^0 \to \mu\mu$, we identified 87 candidate events. We expect to reach a single-event sensitivity in the 10^{-11} range in the future. 10 refs., 3 figs.

3985 (DOE/ER/40427–11-N9) **Neutrino disintegration of deuterium.** Ying, S.; Haxton, W.; Henley, E.M. Washington Univ., Seattle, WA (USA). Dept. of Physics. [1989]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. (CONF-8905187–6: WEIN '89: international symposium on weak and electromagnetic interactions in nuclei, Montreal (Canada), 15-19 May 1989). Order Number DE90003336. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

We calculate the rate of both neutral- and charged-current neutrino and antineutrino disintegration of deuterium. These rates are of interest for solar ^8B and hep (^3He + p) spectra and supernovae neutrinos, and are relevant for the Sudbury Neutrino Observatory (SNO).

3986 (FNAL/C–89/232-T) **Status of glueball mass calculations in lattice gauge theory.** Kronfeld, A.S. Fermi National Accelerator Lab., Batavia, IL (USA). Nov 1989. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8909221–2: HADRON '89: 3rd international conference on hadron spectroscopy, Ajaccio (France), 23-27 Sep 1989). Order Number DE90003345. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The status of glueball spectrum calculations in lattice gauge theory is briefly reviewed, with focus on the comparison between Monte Carlo simulations and small-volume analytical calculations in SU(3). The agreement gives confidence that the large-volume Monte Carlo results are accurate, at least in the context of the pure gauge theory. An overview of some of the technical questions, which is aimed at non-experts, serves as an introduction. 19 refs., 1 fig.

3987 (IC–89/74) **On the interactions of charged particles with cosmic string.** Kogan, Ya.I.; Selivanov, K.G. International Centre for Theoretical Physics, Trieste (Italy). May 1989. 16p. Order Number DE90607636. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We discuss the scattering of charged particles on cosmic string. The cases of the small and large (comparing the string scale) momentum of particles are considered. Anisotropical amplitude which describes the action of the string's "magnetic" field on the particles obtained. Physical applications are briefly discussed. (author). 8 refs, 2 figs.

3988 (IC–89/141) **Composite scalar mesons in QCD.** Bodyulkov, A.; Novozhilov, V. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 10p. Order Number DE90607607. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The effective Lagrangian is derived by the bosonization method to describe the low-lying scalar mesons in the QCD low-energy region. The mass spectra and two-photon width $\Gamma(f_0(975) \to \gamma\gamma) = 0.17$ KeV are in good agreement with the experiment. (author). 19 refs, 1 tab.

3989 (IC–89/178) **Polarization asymmetries of large P_t leptons at hadron colliders in E_6 theories.** Pankov, A.A.; Satsunkevich, I.S. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 21p. Order Number DE90607608. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Possible observation of P-odd asymmetries initiated by extra superstring Z' bosons in longitudinally polarized hadronic collision with inclusive production of high-mass dileptons with large transverse momentum is studied in the QCD lowest order. The polarized asymmetry and polarized forward-backward one of lepton are numerically estimated for various E_6 models. These asymmetries can be used to probe the couplings of a new Z' boson. Results are presented for the present pp-bar colliders at CERN and FERMILAB. (author). 20 refs, 8 figs.

3990 (IC–89/196) **Renormalization scheme dependence in the next-to-next-to-leading order and the high energy behaviour in QCD.** Raczka, P.A.; Raczka, R. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 13p. Order Number DE90607635. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

It is pointed out that the renormalization scheme dependence of the next-to-next-to-leading order predictions for observable quantities in QCD is very strong. For example, formally one may always find a scheme, in which the predicted energy dependence is different from that implied by the asymptotic freedom. Therefore any conclusions obtained in one chosen fixed renormalization scheme - for example MS-bar - are of a limited scientific value. (author). 19 refs, 3 figs.

3991 (INIS-BR–1706) **Study of Angra I reactor core with inserted control rods.** Pina, C.M. Comissao Nacional de Energia Nuclear, Rio de Janeiro, RJ (Brazil). Dept. de Reatores. 1981. 42p. (In Portuguese). Order Number DE90607581. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The Angra 1 reactor core with inserted control rods is calculated using computer codes.

3992 (INIS-mf–12007) **Beam propagation.** Hermansson, B.R. Lund Univ. (Sweden). 27 Feb 1989. 19p. Order Number

DE90718756. Available from NTIS (US Sales Only), PC A03/MF A01.

The main part of this thesis consists of 15 published papers, in which the numerical Beam Propagating Method (BPM) is investigated, verified and used in a number of applications. In the introduction a derivation of the nonlinear Schroedinger equation is presented to connect the beginning of the soliton papers with Maxwell's equations including a nonlinear polarization. This thesis focuses on the wide use of the BPM for numerical simulations of propagating light and particle beams through different types of structures such as waveguides, fibers, tapers, Y-junctions, laser arrays and crystalline solids. We verify the BPM in the above listed problems against other numerical methods for example the Finite-element Method, perturbation methods and Runge-Kutta integration. Further, the BPM is shown to be a simple and effective way to numerically set up the Green's function in matrix form for periodic structures. The Green's function matrix can then be diagonalized with matrix methods yielding the eigensolutions of the structure. The BPM inherent transverse periodicity can be untied, if desired, by for example including an absorptive refractive index at the computational window edges. The interaction of two first-order soliton pulses is strongly dependent on the phase relationship between the individual solitons. When optical phase shift keying is used in coherent one-carrier wavelength communication, the fiber attenuation will suppress or delay the nonlinear instability. (orig.).

3993 (INIS-mf–12013, pp. 127) **Rapidity distribution and scaling violation in a statistical approach to string fragmentation.** Aichelin, J.; Huefner, J.; Kurihara, Y. 4002 (INS–757) **Super-hypernuclei in the quark-shell model, 2.** Terazawa, Hidezumi. Tokyo Univ., Tanashi (Japan). Inst.

for Nuclear Study. Jul 1989. 15p. Order Number DE90719577. Available from NTIS (US Sales Only), PC A03/MF A01.

By following the previous paper, where the quark-shell model of nuclei in quantum chromodynamics is briefly reviewed, a short review of the MIT bag model of nuclei is presented for comparison and a simple estimate of the Hλ ('hexalambda') mass is also made for illustration. Furthermore, an even shorter review of the 'nucleon cluster model' of nuclei is presented for further comparison. (J.P.N.).

4003 (IPNO-TH–88-61) **High density matter state equation and phase transitions.** Vautherin, D. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Sep 1988. 50p. (In French). Order Number DE90721242. Available from NTIS (US Sales Only), PC A03/MF A01.

The models and methods applied to quark and gluon plasmas are studied. Statistical-mechanics equations concerning density operator, entropy, equilibrium-distribution partition functions, free fermions and ensemble equivalences are reviewed. The nuclear-matter thermal-properties calculation and experimental data are shown. The quark-matter properties, at finite-density and finite-temperature conditions, are calculated by means of Nambu and Jona-Lasinio model.

4004 (JYFL-RR–1/1989) **Hydrodynamics in high-energy nuclear collisions. Quarterly report 3. quarter 1987.** Kataja, Markku. Jyvaeskylae Univ. (Finland). Dept. of Physics. May 1989. 48p. Order Number DE90607609. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

This thesis is a review of six publications in which we make use of relativistic hydrodynamics to solve the evolution of matter produced in extremely energetic nucleus-nucleus collisions. In the first one of these papers we study the thermodynamics, the hydrodynamics and the decoupling conditions of such matter. We discuss the initial conditions for the flow, the hydrodynamic equations for the transverse expansion of matter assuming cylindrical symmetry and longitudinal boost invariance and finally present a numeric algorithm, which we use to integrate these equations. In the subsequent three papers this framework is utilized to calculate the transverse momentum spectra of hadrons, the dilepon production and the abundance of strange particles in the final state. The bag model equation of state is used to simulate the first-order phase transition between baryonless hadronic matter and quark-gluon plasma. In the fifth paper we include the particle production from decaying color electric field according to the flux tube model for heavy ion collisions. The hadronization is incorporated by introducing an equilibrium 'mixed state' of hadrons gas, plasma and the color field in analogy to the mixed phase described by the ordinary bag model equation of state. In the last paper I apply a 1+2 dimensional numeric code to analyze a 1+3 dimensional cylindrically symmetric flow of matter assumed to be formed in a central O+Pb collision at 200 GeV/nucleon. The flow data is used to calculte the pseudorapidity distribution of transverse energy for the produced pions.

4005 **Finite temperature QCD with four light quark flavours.** Sinclair, D.K. (Argonne National Lab., IL (USA). High Energy Physics Div.); Kogut, J.B. *Physics Letters [Section] B (Netherlands)*, 229(1/2): 93-96 (5 Oct 1989). DOE Contract W-31-109-ENG-38. PHY-87-01775.

QCD with four light flavours of dynamical staggered quarks (m=0.025 lattice units) was simulated on a 12^3x4 lattice using the hybrid algorithm. We found clear evidence for a first order transition to a quark-gluon plasma. This is in agreement with simulations on smaller lattices (up to 8^3x4). This contrasts with the intermediate mass range (m> or approx.0.1) where transitions seen on smaller lattices appear to be a finite size effect rather than true first order transitions. (orig.).

4006 **What is the order of the transition from hadronic matter to the quark-gluon plasma?.** Kogut, J.B. (Illinois Univ., Urbana (USA). Dept. of Physics); Sinclair, D.K. *Physics Letters [Section] B (Netherlands)*, 229(1/2): 107-111 (5 Oct 1989). DOE Contract W-31-109-ENG-38.

Simulations of SU(3) gauge theory with a realistic spectrum of quarks are done on a 4x12^3 lattice. Comparing with similar simulations on a 4x8^3 lattice, we find a narrower region of metastability at the hadronic matter/quark-gluon plasma phase transition. Tunneling events are observed and discontinuities in order parameters and energy densities are measured which are in good agreement with the 4x8^3 results. A decisive determination of the order of the transition will require larger lattices, higher statistics and a finite-size analysis. (orig.).

4007 **Can $\theta_{QCD}=\pi$?.** Cline, J.M. (Department of Physics, The Ohio State University, Columbus, Ohio 43210 (US)). *Physical Review Letters (USA)*, 63(13): 1338-1341 (25 Sep 1989).

Recent work suggests that wormholes in spacetime may drive θ_{QCD} to π, and it has been argued that this is not in conflict with any observations. We have therefore determined current-mass ratios of the light quarks in second-order chiral perturbation theory, with attention to the relative sign of the up-quark mass. We discuss an ambiguity which makes it impossible to determine the quark mass ratios from chiral-Lagrangian considerations alone. Using results from lattice QCD we resolve the ambiguity to obtain $m_u/m_d=0.61\pm0.26$, $m_s/m_d=21\pm2$, implying that $\theta_{QCD}=0$.

4008 **Contribution of two-pion annihilation to dilepton emission from proton-nucleon collisions.** Kapusta, J. (School of Physics and Astronomy, University of Minnesota, Minneapolis, Minnesota 55455 (US)); Lichard, P. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1574-1576 (Oct 1989).

The Dilepton Spectrometer collaboration has reported a bump in the e^+e^- mass distribution at around $2m_\pi$ in 4.9 GeV proton-Be collisions. Previous calculations have shown that this bump does not have its origin in nucleon-nucleon bremsstrahlung nor in the Dalitz decay of the Δ resonance. In this paper we estimate the contribution from two-pion annihilation based on relativistic kinetic theory, on the experimentally measured cross sections for the production of up to five pions, and on a phase space generator for the pion momentum distributions. The calculation fails to reproduce the data.. The origin of the bump remains unexplained.

4009 **Sewing relations and duality for BRST off-shell string tadpole amplitudes.** Ordonez, C.R. (Theory Group, The Rockefeller University, New York, New York 10021 (US)); Rey, S.; Rubin, M.A.; Zucchini, R. *Physical Review [Section] D: Particles and Fields (USA)*, 40(6): 1987-1992 (15 Sep 1989).

Using a Becchi-Rouet-Stora-Tyutin- (BRST-)invariant first-quantized formalism for closed-bosonic-string theory, we construct amplitudes for closed-string tadpoles in the conformal gauge and discuss the connection with covariant string field theory in the Siegel gauge. We also show that the application of the sewing rules, previously found for propagators, to pairs of these tadpole amplitudes yields the Klein-bottle and annulus one-loop vacuum amplitudes as required by duality and factorization.

4010 **Heavy-Majorana-neutrino production.** Ma, E. (Department of Physics, University of California, Riverside, California 92521 (US)); Pantaleone, J. *Physical Review [Section] D: Particles and Fields (USA)*, 40(7): 2172-2176 (1 Oct 1989).

Heavy-Majorana-neutrino production and detection at colliders is examined. Majorana-neutrino decay is shown to be simply calculable from Dirac-neutrino results. Majorana-neutrino production $f\bar{f}\to Z\to N\bar{N}$ is calculated and compared to Dirac-neutrino production. Near the threshold, the Dirac cross section rises much more quickly. Far above the threshold, the two types of neutrinos have the same spin-independent cross sections while the spin-dependent cross sections are very different. This difference could be observed in the correlations between the angle and energy dependence of the heavy-neutrino decay products.

4011 **One-jet inclusive cross section at order α_s^3. I. Gluons only.** Ellis, S.D. (Department of Physics, University of Washington, Seattle, Washington 98195 (US)); Kunszt, Z.; Soper, D.E. *Physical Review [Section] D: Particles and Fields (USA)*, 40(7): 2188-2222 (1 Oct 1989).

The next-to-leading-order jet cross section is calculated for the simplified case in which there are only gluons. Numerical results of this calculation have been presented elsewhere. Here, we describe the calculational method in some detail, deriving all of the formulas that are necessary for the numerical evaluation of the cross section. The calculation is based on the matrix elements of Ellis and Sexton.

In a future paper, we will extend the calculation to include quarks as well as gluons. When quarks are included, the algebraic complexity of the problem increases substantially. However, the method to be applied is essentially the same as in the gluon-only case, since there are no new singularities in the amplitudes that are not present in the gluon-only amplitudes.

4012 **How to study longitudinal *W*'s in the TeV region.** Kane, G.L. (Randall Physics Laboratory, University of Michigan, Ann Arbor, Michigan 48109 (US)); Yuan, C. *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2231-2244 (1 Oct 1989).

Using some new techniques we examine ways to experimentally study interactions of longitudinal *W* bosons in the TeV region, and to detect a heavy Higgs boson (mass $\geq$1 TeV) if it exists. This is a problem that must be solved if we are eventually to fully understand and test how the SU(2)×U(1) symmetry of the standard model is broken. To do so at a hadron collider requires methods to discriminate against large backgrounds. We use a new method based on the color properties of the signal and background, leading to a multiplicity cut, and we use analysis techniques that do not reduce the signal events by strong cuts. Our techniques do not bias *W* decay distributions and we conclude that it is possible to detect longitudinal *W*'s even in the presence of background. Results are given for how it is possible to study these matters at the Superconducting Super Collider. The use of the "equivalence theorem" between longitudinal *W*'s and Goldstone scalars is examined in several ways; in particular, we emphasize that in practice the equivalence does not hold numerically when the widths of heavy resonances are included in the traditional way, i.e., using the Breit-Wigner prescription. The violations are numerically large.

4013 **Weak decays of *K* and π mesons.** Galic, H. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94309 (US)). *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2279-2289 (1 Oct 1989). DOE Contract AC03-76SF00515.

Through a special interplay of strong and weak interactions, small but significant pieces with a "wrong" flavor could be introduced into wave functions of mesons. Thus, e.g., not only a ($u\bar{s}$) pair, but also a ($u\bar{d}$) pair can be found with some probability within K^+, etc. The possible importance of such "anomalous" terms in understanding of *K*-meson decays is discussed in a new scheme. The scheme is characterized by diagrammatic calculations of full amplitudes in the long-distance environment. Two classes of models which correctly reproduce the main *K*-meson branching ratios and the ΔI=1/2 rule are constructed. The predictive power of the scheme is then tested in a decay of a kaon into a pion and a light hyperphoton.

4014 ***Z*-boson bremsstrahlung in heavy-quark decay.** Barger, V. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706 (US)); Keung, W.; Rizzo, T.G. *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2274-2278 (1 Oct 1989). DOE Contract AC02-76ER00881.

We calculate the rate for *Z*-boson bremsstrahlung in the charged-current decay $Q \rightarrow qWZ$ of a heavy fermion *Q* to a light fermion *q*. This process may be used to test the *WWZ* trilinear gauge-boson coupling of the standard model. We evaluate the branching fraction for this decay mode of fourth-generation and E_6 exotic fermions; the branching fraction increases dramatically with increasing m_Q and may reach 1% for TeV fermion masses.

4015 **Flavor-changing decays of the Z^0 and leptoquarks.** Doncheski, M.A. (Department of Physics, The Pennsylvania State University, University Park, Pennsylvania 16802 (US)); Grotch, H.; Robinett, R.W.; Schilcher, K.; Belanger, G.; Moxhay, P. *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2301-2304 (1 Oct 1989).

Many extensions of the standard model, e.g., certain composite models and some superstring-"inspired" E_6 models, contain new scalar matter fields which couple to both quarks and leptons, i.e., leptoquarks. We consider leptonic flavor-changing decays of the Z^0, e.g., $Z^0 \rightarrow \mu^+\tau^-$, due to one-loop diagrams involving such leptoquarks. We find branching ratios which are at most $\approx 10^{-7}$, even assuming generous values for unknown Yukawa couplings.

4016 **Pair production from photon-pulse collisions.** Blankenbecler, R. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94309 (US)); Drell, S.D.; Kroll, N. *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2462-2476 (1 Oct 1989). DOE Contract AC03-76SF00515.

The high-energy expansion for extended targets developed previously is used to describe the problem of electron pair production by photons, a problem of interest in linear-collider design. The treatment is valid throughout the range of possible parameters, from the classical regime to the extreme quantum domain. The relation between this process and pair production in a constant external field is discussed.

4017 (DOE/ER/40224–115) **Left-right symmetric electroweak models.** Olness, F.I. Oregon Univ., Eugene, OR (USA). Inst. of Theoretical Science. Oct 1989. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-85ER40224. (CONF-8905223–3: 12. Warsaw symposium on elementary particle physics, Kazimierz (Poland), 29 May - 2 jun 1989). Order Number DE90003323. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We present a critical analysis of the spontaneous symmetry breaking and the Higgs sector of the conventional $SU(2)_L \otimes SU(2)_R \otimes U(1)_{B-L}$ left-right symmetric theory involving bi-doublet and triplet Higgs fields. We examine the phenomenological constraints imposed on the minimization of the Higgs potential arising from experimental observations, and explore the resulting consequences including the problem of "fine- tuning" arising from the hierarchy of mass scales involved. We show that it is non-trivial to satisfy all of these constraints. We contrast the benefits of this general class left-right models against the required "fine-tuning" necessary to force the phenomenology to conform to experimental fact. 17 refs., 1 fig.

4018 (DOE/ER/40427–13-N9) **Status of time reversal invariance.** Henley, E.M. Washington Univ., Seattle, WA (USA). Dept. of Physics. 1989. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. (CONF-8905187–8: WEIN '89: international symposium on weak and electromagnetic interactions in nuclei, Montreal (Canada), 15-19 May 1989). Order Number DE90003350. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Time Reversal Invariance is introduced, and theories for its violation are reviewed. The present experimental and theoretical status of Time Reversal Invariance and tests thereof will be presented. Possible future tests will be discussed. 30 refs., 2 figs., 1 tab.

4019 (DOE/ER/40427–14-N9) **Chiral symmetry restoration and quasi-elastic electron-nucleus scattering.** Henley, E.M.; Krein, G. Washington Univ., Seattle, WA (USA). Dept. of Physics. [1989]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. (CONF-8905187–7: WEIN '89: international symposium on weak and electromagnetic interactions in nuclei, Montreal (Canada), 15-19 May 1989). Order Number DE90003349. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Chiral symmetry is known to be an important concept in hadronic interactions. It holds in QCD, but is known to be broken at low energies. It is therefore useful to study chiral symmetry and its breaking together with its consequences in nuclear physics. It is the latter phenomena we consider here. It is difficult to study nonperturbative QCD at low energies and models are needed. The Nambu-Jona-Lasinio (NJL) model fits this category; it incorporates chiral symmetry and its breaking, and allows one to study its effects in nucleons and nuclei. In particular, the constituent quark mass varied with density (ρ) and temperature (T). At high ρ and T chiral symmetry is restored. It is the ρ dependence which yields important effects in electron scattering due to partial restoration of chiral symmetry in nuclei. 4 refs., 2 figs.

4020 (INS–754) **Double-periodic wormholes in theories with global symmetries.** Midorikawa, Shoichi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jun 1989. 12p. Order Number

DE90719575. Available from NTIS (US Sales Only), PC A03/MF A01.

We examine the quantum theory of a complex scalar field with global U(1) symmetry minimally coupled to gravity. We find numerically that there exists a double-periodic wormhole solution in addition to a single-periodic one if a potential has a local maximum at a finite value of the scalar field. Spontaneous breakdown of the U(1) symmetry is irrelevant to the existence of the wormholes of finite action. (author).

4021 (INS–755) **Degenerate fermion and Wilson loop in 1+1 dimensions.** Shiraishi, K. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jul 1989. 16p. Order Number DE90719576. Available from NTIS (US Sales Only), PC A03/MF A01.

We investigate the effect of finite fermion density on symmetry breaking by Wilson loops in (1+1) dimensions. We find breaking and restoration of symmetry at finite density in the models with SU(2) and SU(3) gauge symmetries and adjoint fermions. It is shown that the transition can occur even if the boundary condition of the fermion field is set to a periodic or an antiperiodic one; it is contrary to the finite-temperature case examined by Ho and Hosotani, where the boundary condition of fractional twist is necessary for the occurrence of the phase transition. (author).

4022 (INS–756) **Estimation of the one-loop mass shifts in open superstring theory.** Nishioka, Tsuyoshi; Tsuchiya, Akihiko; Yamamoto, Hisashi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jul 1989. 15p. Order Number DE90719578. Available from NTIS (US Sales Only), PC A03/MF A01.

The quantitative studies of the one-loop mass shifts for the first excited states in ten-dimensional open superstring are given. Removing the apparent singularities in the on-shell integral expressions by an off-shell analytic continuation, we obtain the finite mass shifts with imaginary parts. We numerically evaluate the real part to find the smallness of the magnitude of one-loop effect. (author).

4023 (LBL–27452) **Tests of time reversal invariance via transmission experiments.** Conzett, H.E. Lawrence Berkeley Lab., CA (USA). Jun 1989. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8906235–1: Symposium on spin and symmetries, Vancouver (Canada), 30 Jun - 2 jul 1989). Order Number DE90002121. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The existing formalism used to describe spin observables in neutron transmission experiments is found to be inadequate. A suitable formalism is developed, through which time-reversal violating (and parity non-conserving) forward scattering amplitudes are identified, along with their corresponding spin observables. It is noted that new and more precise tests of T-symmetry are provided in transmission experiments and that such investigations are applicable more generally in nuclear and particle physics.

4024 (RAL–89-077) **90-GeV Higgs boson in supersymmetric models.** Grzadkowski, B.; Kalinowski, J.; Pokorski, S. Rutherford Appleton Lab., Chilton (UK). Jul 1989. 11p. Sponsored by U.K. Science and Engineering Research Council. (CONF-8905223–4: 12. Warsaw symposium on elementary particle physics, Kazimierz (Poland), 29 May - 2 jun 1989). Order Number DE90000521. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI.

We discuss supersymmetric models with a hierarchy of vacuum expectation values of Higgs fields. These models predict one of the physical neutral Higgs bosons to have its mass very close to the Z-boson mass. Properties of such a 90-GeV Higgs boson are discussed. 16 refs., 4 figs.

4025 **N=2 superconformal symmetry and SO(2,1) current algebra.** Dixon, L.J. (Stanford Linear Accelerator Center, CA (USA)); Peskin, M.E.; Lykken, J. *Nuclear Physics [Section] B (Netherlands)*, 325(2): 329-355 (16 Oct 1989). DOE Contract AC03-76SF00515;AM03-76SF00010.

We demonstrate that all unitary representations of the N=2 superconformal algebra (for $c>3$) may be obtained from representations of SO(2,1) current algebra by subtracting and then adding back a free boson. This construction gives insight into the unitarity domains for N=2 representations. It may also have a deeper structural significance. (orig.).

4026 **Fuchsian differential equations for characters on the torus: A classification.** Kiritsis, E.B. (California Univ., Berkeley (USA). Dept. of Physics). *Nuclear Physics [Section] B (Netherlands)*, 324(2): 475-494 (25 Sep 1989). DOE Contract AC03-76SF00098.

Fuchsian differential equations for characters of rational conformal field theories on the torus are classified by invoking the solution of the Riemann-Hilbert problem and modular geometry. As a first application, all rational conformal field theories with two characters are classified. (orig.).

4027 **Further study of global gauge anomalies of simple groups.** Okubo, S. (Department of Physics and Astronomy, University of Rochester, Rochester, New York 14627 (US)); Tosa, Y. *Physical Review [Section] D: Particles and Fields (USA)*, 40(6): 1925-1933 (15 Sep 1989).

We generalize results of our previous studies for global gauge anomalies of simple Lie groups in even-dimensional space $D=2n$. Assuming the absence of local anomalies, we first show that any real (or orthogonal) representation has no global anomaly in $D==2,4,6$ (mod 8), and that the pseudoreal (or symplectic) one is free of global anomalies in $D==0,2,6$ (mod 8). Second, we prove that the SU(3) group has no global anomalies in any even dimension and neither does SU(4) in $D==4$ (mod 8).

4028 **Possible test of *CPT* invariance in neutral-kaon regeneration.** Briere, R.A. (Enrico Fermi Institute and Department of Physics, University of Chicago, Chicago, Illinois 60637 (US)); Orr, L.H. *Physical Review [Section] D: Particles and Fields (USA)*, 40(7): 2269-2273 (1 Oct 1989).

The possibility of *CPT* violation in the K^0-$\bar{K}0$ mass matrix is considered. Limits on this type of *CPT* violation derivable from existing data are discussed. Following a suggestion by Sachs, it is shown that such a violation manifests itself in the regeneration phenomenon. An experimental scenario for obtaining a direct limit using regeneration is presented.

4029 **Screening of large supersymmetry breaking in low-energy physics.** Gunion, J.F. (Department of Physics, University of California, Davis, California 95616 (US)); Turski, A. *Physical Review [Section] D: Particles and Fields (USA)*, 40(7): 2325-2332 (1 Oct 1989).

We consider a supersymmetric theory in which there is a large difference of mass scales between the low-energy sector and the heavy supersymmetric sector that derives from bilinear soft-supersymmetry-breaking terms. We demonstrate that in such a theory "natural" relations, predicted by supersymmetry, between low-energy-physics parameters receive corrections from loops involving the heavy sector particles that grow logarithmically with the heavy-mass scale. Since *a priori*, such corrections might have grown quadratically with the heavy-mass scale, we see that low-energy physics is screened against large corrections. However, we also point out that natural low-energy relations will receive (large) quadratic corrections if there are large trilinear soft-supersymmetry-breaking terms.

4030 **Corrections to Higgs-boson-mass sum rules from the sfermion sector of a supersymmetric model.** Gunion, J.F. (Department of Physics, University of California, Davis, California 95616 (US)); Turski, A. *Physical Review [Section] D: Particles and Fields (USA)*, 40(7): 2333-2339 (1 Oct 1989).

We consider the minimal supersymmetric extension of the standard model, and compute the corrections to Higgs-boson-mass sum rules that are possibly sensitive to the large mass of the sfermion sector and/or to large trilinear Higgs-boson–sfermion–sfermion Yukawa couplings. We demonstrate that when the parameters are chosen so that corrections to the electroweak ρ are within experimental limits, large corrections to the mass sum rules arise only in certain extreme regions of parameter space, corresponding to very large ratios for squark masses.

4031 **Low-energy lepton violation from supersymmetric flipped SU(5).** Brahm, D.E. (Physics Department, University of California, Berkeley, California 94720 (US)); Hall, L.J. *Physical Review [Section] D: Particles and Fields (USA)*, 40(7): 2449-2456 (1 Oct 1989). DOE Contract AC03-76SF00098.

We construct a supersymmetric flipped SU(5)⊗U(1) model which violates *R* parity and electron number at low energies, through a superpotential term ($1/2C^{ijk}L_iL_jE_k^c$). Rotation of the electron and Higgs superfields makes this term also responsible for charged-lepton masses. The model employs a missing-partners mechanism for the Higgs fields and a seesaw mechanism for the neutrinos. It correctly predicts the approximate electron mass and several mass relations, as well as numerical values for the grand unification scale and the C^{ijk} coefficients. The electron-neutrino Majorana mass is close to experimental limits, and provides constraints. Interesting Z^0 decays are predicted: e.g., $Z^0 \rightarrow e^- \mu^+ e^+ \mu^-$ with invariant-mass peaks in the (e,μ) channels.

Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AC02-76CH03000. (CONF-8907140–3: 18. international conference on differential geometric methods in theoretical physics: physics and geometry, Tahoe City, CA (USA), 2-8 Jul 1989; ITP-SB–89-56). Order Number DE90002110. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We discuss a few results on quantum groups in the context of rational conformal field theory with underlying affine Lie algebras. A vertex-height correspondence - a well-known procedure in solvable lattice models - is introduced in the WZW theory. This leads to a new definition of chiral vertex operator in which the zero mode is given by the q-Clebsch Gordan coefficients. Braiding matrices of coset models are found to factorize into those of the WZW theories. We briefly discuss the construction of the generators of the universal enveloping algebra in Toda field theories. 21 refs., 2 figs.

4035 (IC–89/115) **Simultaneous creation of electron-positron pairs and photons in Robertson-Walker universes with statically bounded expansion.** Lotze, K.H. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 27p. Order Number DE90607091. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Based upon quantum electrodynamics in Robertson-Walker flat universes we present a thorough analysis of the creation of mutually interacting electron-positron pairs and photons from vacuum. Therefore we discuss at least qualitatively all processes contributing to the number densities of created particles up to the second order in the coupling constant. For two particular expansion laws with Winkowskian in resp. in and out regions we obtain exact solutions of the Dirac equation and investigate in detail the process of simultaneous creation of electron-positron pairs and photons and the related attenuation effect for fermionic particles. This is done for electrons and positrons which have non-relativistic momenta at Compton time in rapidly expanding universes. The results are compared with the zeroth-order creation of electron-positron pairs. Despite being smaller by a factor of roughly $e_0^2/4\pi$ approx. 1/137, the interacting-particle creation is important mainly as a source of photons even in conformally flat universes. (author). 16 refs, 7 figs, 1 tab.

4036 (IC–89/145) **Level-one SU(3) Wess-Zumino model on higher genus Riemann surfaces.** Kaul, R.K.; Malik, R.P.; Behra, N. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 13p. Order Number DE90607092. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Partition function and two-point correlator for level-one SU(3) Wess-Zumino model on an arbitrary genus Riemann surface have been obtained. (author). 12 refs, 3 figs.

4037 (IC–89/160) **Vortex-like and string-like solutions for the 2+1 dimensional SU(2) Yang-Mills theory with the Chern-Simons term.** Teh, R. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 11p. Order Number DE90607093. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Vortex-like and string-like solutions of 2+1 Dim. SU(2) YM theory with the Chern-Simons term are discussed. Two ansatze are constructed which yield respectively analytic Bessel function solutions and elliptic function solutions. The Bessel function solutions are vortex-like and tend to the same vacuum state as the Ginzburg-Landau vortex solution at large rho. The Jacobi elliptic function solutions are string-like, have finite energy and magnetic flux concentrated along a line in the x_1 - x_2 plane. (author). 18 refs.

4038 (IC–89/168) **Solution of a class of conformal quantum field theory models in D-dimensional space.** Fradkin, E.S.; Palchik, M.Ya. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 26p. Order Number DE90607094. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Proposed is a method of solving a class of conformal quantum field theory models in D-dimensional Euclidean space-time. Some of the models are determined by regularized field equations. The method allows us to obtain closed differential equations for each Green function of fundamental and composite fields, and also algebraic equations for scale dimensions of fields. Each D>2-model involves an analogue of the central charge, i.e. a special scalar field P of dimension d_P=D-2. When D=2 this field turns into a constant. We also obtain a new class of D=2 models with broken infinite parameter symmetry. Closed differential equation for Green functions of these models are found. As an illustration of how the method works, we derive in the Appendix solutions of the Thirring and Wess-Zumino-Witten models and the two-dimensional Ising model. (author). 13 refs.

4039 (IC–89/173) **Cubic interaction in conformal theory of integer higher-spin fields in four dimensional space-time.** Fradkin, E.S.; Linetsky, V.Ya. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 21p. Order Number DE90607095. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Based on the infinite-dimensional algebra $hsc^{\infty}(4)$ constructed by us, the cubic interaction in the conformal theory of higher-spin fields in four-dimensional space-time is obtained. The theory contains an infinite number of fields of all integer spins $s \geq 2$ and extends the conformal gravity. (author). 23 refs.

4040 (IC–89/179) **Pair production in an electric field in a time-dependent gauge.** Barut, A.O.; Duru, I.H. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 12p. Order Number DE90607096. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A new nonperturbative method of calculation of the pair production in a constant electric field is presented in which the propagator is evaluated entirely by path-integration in a time-dependent potential. This gauge and the path integration correctly define all the normalizations. As a by-product we get also the Unruh formula since the constant electric field provides an accelerated frame. (author). 11 refs.

4041 (IC–89/258) **Geometry and quantization of topological gauge theories.** Birmingham, D.; Blau, M.; Thompson, G. International Centre for Theoretical Physics, Trieste (Italy). Aug 1989. 39p. (PAR-LPTHE–89/26). Order Number DE90607097. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A general method for constructing interesting topological gauge theories in arbitrary dimensions is presented. The basic framework upon which these models are built is given by the geometrical data of the 'universal bundle with connection' of Atiyah and Singer. The models considered include theories which represent the moduli spaces of flat connections and solutions to the Yang-Mills equations. The former theories correspond to supersymmetric versions of the recently introduced BF systems. In all cases we show explicitly that the quantization can be carried out through the construction of an off-shell nilpotent BRST operator, thus guaranteeing the metric independence of these models. (author). 30 refs.

4042 (INFN-LNF–89/042(PT)) **Structure functions and initial-final state interference in QED.** Greco, M. Istituto Nazionale di Fisica Nucleare, Rome (Italy). 1989. 6p. Order Number DE90607098. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Interference effects from initial and final state radiation are explicity introduced within the formalism of structure functions in QED. The analytical results agree with those previously obtained in the approach of coherent states. The method is also suitable for Monte Carlo applications.

4043 (INS–750) **Extended local gauge invariance and the BRS symmetry in stochastic quantization of gauge fields.** Nakazawa, Naohito. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. May 1989. 28p. Order Number DE90719558. Available from NTIS (US Sales Only), PC A03/MF A01.

We investigate the BRS invariance of the first-class constrained systems in the context of the stochastic quantization. For the first-class constrained systems, we construct the nilpotent BRS transformation and the BRS invariant stochastic effective action based on the D+1 dimensional field theoretical formulation of stochastic quantization. By eliminating the multiplier field of the gauge fixing condition and an auxiliary field, it is shown that there exists a truncated BRS transformation which satisfies the nilpotency condition. The truncated BRS invariant stochastic action is also derived. As the examples of the general formulation, we investigate the BRS invariant structure in the massless and massive Yang-Mills fields in stochastic quantization. (author).

4044 (LA-UR–89-3537) **Physics with ultra-low energy antiprotons.** Holtkamp, D.B.; Holzscheiter, M.H.; Hughes, R.J. Los Alamos National Lab., NM (USA). 1989. 6p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-890872–2: Workshop on physics at Fermilab in the 1990's, Breckenridge, CO (USA), 15-24 Aug 1989). Order Number DE90002397. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The experimental observation that all forms of matter experience the same gravitational acceleration is embodied in the weak equivalence principle of gravitational physics. However no experiment has tested this principle for particles of antimatter such as the antiproton or the antihydrogen atom. Clearly the question of whether antimatter is in compliance with weak equivalence is a fundamental experimental issue, which can best be addressed at an ultra-low energy antiproton facility. This paper addresses the issue. 20 refs.

4045 (RAL–89-048) **Half-string oscillator approach to string field theory.** Bordes, J.; Chan Hongmo; Nellen, L.; Tsou Sheungtsun. Rutherford Appleton Lab., Chilton (UK). May 1989. 28p. Order Number DE90607100. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We give an operator formulation of the string field theory proposed by E. Witten using half-string oscillator modes. This formalism, identifying the physical string states as infinite matrices, is developed in such a way that interactions at the level of vertices can be calculated in terms of products and traces of these matrices without relying on ill-defined manipulations of functional integrals. (author).

4046 (RAL–89-052) **Towards a 'pointless' generalisation of Yang-Mills theory.** Chan Hongmo; Tsou Sheungtsun. Rutherford Appleton Lab., Chilton (UK). May 1989. 24p. Order Number DE90607101. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We examine some generalisations in physical concepts of gauge theories, leading towards a scenario corresponding to non-commutative geometry, where the concept of locality loses its usual meaning of being associated with points on a base manifold and becomes intertwined with the concept of internal symmetry, suggesting thereby a gauge theory of extended objects. Examples are given where such generalised gauge structures can be realised, in particular that of string theory. (author).

4047 **Low $_{mo}$perpendicular properties of the pomeron: Theoretical implications in QCD.** . White, A.R. (High Energy Physics Div., Argonne National Lab., Argonne, IL (US)). pp. 657 of Physics simulations at high energy. Barger, V. Gottschalk, T. Halzen, F. World Scientific Pub. Co., Teaneck, NJ (1987).

Experimentally established properties of the Pomeron which cannot be explained within perturbative QCD are reviewed and their theoretical significance elaborated on. The derivation from QCD of a semi-perturbative Pomeron, which has such properties, is described in terms of infra-red divergences of reggeon diagrams and in terms of an infinite momentum winding number condensate due to instanton interactions. The analogy with the known solution of the Schwinger model is emphasized. Asymptotic freedom saturation is needed to justify this picture of the Pomeron and this is satisfied at collider energies if electroweak symmetry breaking is due to color sextet quarks.

4048 **Thirring model on a Riemann surface.** Freedman, D.Z. (Department of Mathematics and Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139 (US)); Pilch, K. *Annals of Physics (New York) (USA),* 192(2): 331-351 (Jun 1989).

An earlier study of the Thirring model partition function is extended to incorporate twisted boundary conditions on the homology cycles of a genus *g* Riemann surface without boundaries. Two bosonized path integral representations of the Thirring partition function are studied and shown to be equivalent and to reproduce the fermi version including details of spin structures. For manifolds with boundaries, the example of the cylinder shows that the bosonized represenations are equivalent but associated with different de Rham cohomologies. © 1989 Academic Press, Inc.

4049 **String sources in 2+1-dimensional gravity.** Deser, S. (Physics Department, Brandeis University, Waltham, Massachusetts 02254 (US)); Jackiw, R. *Annals of Physics (New York) (USA),* 192(2): 352-367 (Jun 1989).

We exhibit the space-times generated by 1-dimensional open and closed distributions of energy and tension in (2+1)-dimensional gravity. The global structures of these geometries, which are locally flat outside the sources, are described. For tensionless strings, the solutions are just (continuous) superpositions of corresponding particle geometries. However, the conditions for the existence of static strings with tension are quite stringent: not only are closed strings required to have "maximal" mass, but they are in fact equivalent to the ostensibly open ones. © 1989 Academic Press, Inc.

4050 **The spectrum of topological quantum field theories on N-manifolds.** Brooks, R. (Stanford Linear Accelerator Center, CA (USA)). *Nuclear Physics [Section] B (Netherlands),* 325(2): 481-500 (16 Oct 1989). DOE Contract AC03-76SF00515.

The topological particle is first quantized and its spectrum is found to be given by the de Rham cohomology ring of the target manifold. Morse theoretic arguments are used to show how this topological spectrum depends on the gauge fixing. A supermanifold formalism is introduced which leads to the generalized Donaldson invariants. It is found that the topological symmetry cannot be spontaneously or dynamically broken by conventional methods. (orig.).

4051 **Variational calculations in gauge theories.** Kerman, A.K. (Center for Theoretical Physics, Laboratory for Nuclear Science, and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139 (US)); Vautherin, D. *Annals of Physics (New York) (USA),* 192(2): 408-420 (Jun 1989).

We investigate the possibility of using Gaussian trial wave functionals to describe some of the physics in gauge theories. We derive the variational equations and discuss their properties. In the case of

the vacuum state we consider a special Gaussian *ansatz* whose expectation value corresponds to a constant magnetic field and whose kernel is the second variation of the classical energy around this configuration. We discuss the divergences occurring in the quadratic and quartic terms and the conjecture that they can be absorbed by a renormalization of the coupling constant. This aspect will be examined in a future publication. © 1989 Academic Press, Inc.

4052 **Scattering amplitudes in hot gauge theories.** Pisarski, R.D. (Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60510 (US)). *Physical Review Letters (USA),* 63(11): 1129-1132 (11 Sep 1989).

A consistent method for the perturbative calculation of scattering amplitudes in hot gauge theories is developed. It involves the resummation of a subset of thermal fluctuations, termed hard thermal loops, into effective propagators and vertices. The damping rate of a heavy fermion is computed as an example.

4053 **Neutron electric dipole moment in lattice QCD.** Aoki, S. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973 (US)); Gocksch, A. *Physical Review Letters (USA),* 63(11): 1125-1128 (11 Sep 1989). DOE Contract AC02-76CH00016.

We present an exploratory computation of the electric dipole moment of the neutron induced by a *CP*-violating θ term in the QCD Lagrangian in the framework of quenched lattice QCD. We find $d_N \approx -4\times10^{-14}\theta e$ cm.

4054 **Two-point correlation function of cosmic-string loops.** Bennett, D.P. (Department of Physics and Department of Astrophysics, Princeton University, Princeton, New Jersey 08540 (US)); Bouchet, F.R. *Physical Review Letters (USA),* 63(13): 1334-1337 (25 Sep 1989).

We study the two-point correlations of cosmic-string loops with numerical simulations of the evolution of a cosmic-string network in an expanding universe. We find that the initial positions of loops that are chopped off the network have a correlation function that is quite similar to the highest estimates of the Abell-cluster correlation function, but these correlations are rapidly washed out by the motion of the loops. The implications for the cosmic-string galaxy-formation scenario are briefly discussed.

4055 **Global gauge anomalies for theories with the Green-Schwarz local-anomaly-cancellation mechanism.** Tosa, Y. (Department of Physics, University of Colorado, Campus Box 390, Boulder, Colorado 80309 (US)). *Physical Review [Section] D: Particles and Fields (USA),* 40(6): 1934-1937 (15 Sep 1989).

We show that theories with the Green-Schwarz mechanism of canceling local anomalies in even dimensions have the possibility of the worst type of global Yang-Mills chiral anomalies given by the homotopy group of the Yang-Mills gauge group. The examples are given for SU(3) gauge theories in six dimensions $[\Pi_6(SU(3))=Z_{31}]$ whose global anomalies are of types $\mathbf{Z}_1$, $\mathbf{Z}_2$, $\mathbf{Z}_3$, and $\mathbf{Z}_6$.

4056 **Momentum-space representation in curved space.** Carreau, M. (Center for Theoretical Physics, Laboratory for Nuclear Science dge, Massachusetts 02139 (US)). *Physical Review [Section] D: Particles and Fields (USA),* 40(6): 1956-1963 (15 Sep 1989).

A non-Hermitian momentum-space representation of functions of a manifold (curved space) isomorphic to R^n is constructed out of pure plane waves. We prove the covariance of the coordinate- and momentum-space representations. We give the momentum-space representation of the trace of operators. In interacting field theory this representation enables us to calculate the part of the effective action that encodes local properties of a general curved space. Thus the trace anomaly and the beta function can be evaluated. An explicit calculation is displayed at one loop for a scalar field coupled to gravity. In flat space the formalism applies to Cartesian and curvilinear coordinates. Application to the study of the stability of the vacuum of a field theory in curved space is possible.

4057 **Zamolodchikov's *c*-theorem reexamined.** Boyanovsky, D. (Department of Physics and Astronomy, University of Pittsburgh, Pittsburgh, Pennsylvania 15260 (US)); Holman, R. *Physical Review [Section] D: Particles and Fields (USA),* 40(6): 1964-1968 (15 Sep 1989).

We present an alternative proof of Zamolodchikov's *c*-theorem using finite-size field-theory methods. We find that although the existence of a *c* function which decreases along renormalization-group flows and coincides with the conformal anomaly at the fixed points is independent of the renormalization scheme, the relationship between the *c* function and the beta function is scheme dependent. We discuss some of the consequences of our proof.

4058 **Block-conjugate-gradient method.** McCarthy, J.F. (Department of Physics, Indiana University, Bloomington, Indiana 47405 (US)). *Physical Review [Section] D: Particles and Fields (USA),* 40(6): 2149-2152 (15 Sep 1989).

It is shown that by using the block-conjugate-gradient method several, say *s*, columns of the inverse Kogut-Susskind fermion matrix can be found simultaneously, in less time than it would take to run the standard conjugate-gradient algorithm *s* times. The method improves in efficiency relative to the standard conjugate-gradient algorithm as the fermion mass is decreased and as the value of the coupling is pushed to its limit before the finite-size effects become important. Thus it is potentially useful for measuring propagators in large lattice-gauge-theory calculations of the particle spectrum.

4059 **Using the hadronic multiplicity to distinguish real *W*'s from QCD jet backgrounds.** Gunion, J.F. (Department of Physics, University of California at Davis, Davis, California 95616 (US)); Kane, G.L.; Sadrozinski, H.F.; Seiden, A.; Weinstein, A.J. *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2223-2230 (1 Oct 1989).

In order to study *WW* scattering or the decay of a heavy standard-model Higgs boson in the TeV region, it is necessary to use the channel $W(\rightarrow l\nu)+W(\rightarrow$jets). However, techniques are required for suppressing the severe background from mixed electroweak-QCD production of $W+$jets. We demonstrate that the charged multiplicity of the events can provide an extremely useful tool for distinguishing a jet system originating via real *W* decay from a jet system produced by the mixed electroweak-QCD processes. Analogous techniques will be useful for any process involving Ws$\rightarrow$jets, whenever the *W* decaying to jets has $p_t \gg m_W$ and the primary background produces jets predominantly in a color-nonsinglet state; however the precise procedure must be optimized separately for each such process.

4060 **Four-flavor QCD with intermediate- and light-mass quarks.** Gottlieb, S. (Department of Physics, Indiana University, Bloomington, Indiana 47405 (US)); Liu, W.; Renken, R.L.; Sugar, R.L.; Toussaint, D. *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2389-2409 (1 Oct 1989).

We present extended simulations of high-temperature QCD for four flavors of staggered fermions with intermediate masses. We find no evidence for a first-order transition with a quark mass of 0.2 with four time slices. Thus, our results support the picture of separated transitions for the pure gauge theory ($m_q \rightarrow \infty$) and QCD with light quarks.

4061 **Electroweak interactions with gauged baryon and lepton numbers.** Rajpoot, S. (Department of Physics, University of California, Riverside, California 92521 (US)). *Physical Review [Section] D: Particles and Fields (USA),* 40(7): 2421-2424 (1 Oct 1989).

The possibility that gauge symmetries associated with baryon and lepton numbers are spontaneously broken symmetries of nature is entertained. In this endeavor, the gauge group of electroweak interactions is $SU(2)\times U(1)^3$. Consistent with neutral-current phenomenology, the spectrum of massive neutral gauge bosons consist of the Z^0 of the standard electroweak model and two additional neutral bosons with mass lower bounds of 120 and 210 GeV which makes these particles prospective candidates for production in the energy regimes of the CERN LEP, Fermilab Tevatron, and the Superconducting Super Collider.

4062 (BARC–1464) **Progress report on nuclear data activities in India for the period from July 1987 to December 1988.** Anand, R.P. Bhabha Atomic Research Centre, Bombay (India). 1989. 65p. Order Number DE90607770. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

The present progress report on nuclear data activities in India is the sixth in the current new series of progress reports, the first of which was brought out in the year 1981. This report covers the work carried on during the period from July 1987 to December 1988. It contains brief description of various activities such as measurements, evaluations, compilations and processing of nuclear data and other related works being carried out in India. Most of the write-ups in this report describe the work in progress and these are not to be regarded as publications or quoted without permission from the authors. (author).

4063 (CENBG–89-04) **Search for characteristic times governing the emission of two particles from an excited nucleus.** Quebert, J.; Lautridou, P.; Lebrun, C.; Guilbault, F.; Goujdami, D.; Durand, D.; Ardouin, D.; Peghaire, A.; Saint-Laurent, F. Bordeaux-1 Univ., 33 - Gradignan (France). Centre d'Etudes Nucleaires. 1989. 15p. (CONF-8901120–: 27. international winter meeting on nuclear physics, Bormio (Italy), 23-27 Jan 1989). Order Number DE90721241. Available from NTIS (US Sales Only), PC A03/MF A01.

The first instants of the evolution of highly excited systems, formed after the collision of two heavy nuclei, are studied. Questions about the average lifetime of the states involved in the excitation of the source, whether the particles emission is sequential and whether particle bursts can be due to possible system compression, are raised. Experimental results, performed at Ganil with two multidetectors of CsI scintillators, are discussed. Data concerning partial display of the six measured correlation functions, two coincidence plots at 57 degrees and a relative angle of 5 degrees for p-p and α - α, a view of the d-d correlation functions versus the average scattering angle and the correlation function values, considered as the projection of a two - dimensional plot. on the Q axis, is given.

4064 (DOE/ER/40405–T2) **Nuclear structure studies at intermediate energies: Interim progress report, 1988–89: September 1988–August 1989.** Hintz, N.M.; Gassaly, M.; Sethi, A.; Franey, M.A.; Mack, A.M.; Mihailidis, D. Minnesota Univ., Minneapolis, MN (USA). Dept. of Physics and Astronomy. Sep 1989. 148p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40405. Order Number DE90002875. Available from NTIS, PC A08/MF A01; OSTI; INIS; GPO Dep.

This report discusses the following topics: inelastic scattering of 650 MeV protons from ^{194,196}Pt; search for recoil free Δ-production in the (p,^{3}He) reaction at 650 MeV; search for low lying magnetic states in ^{48}Ti; E451 inelastic proton cross sections-low spin states in ^{28}Si; E601, collective form factor analysis of ^{208}Pb(π,π') at T_π = 180 MeV; E855, collective form factor analysis of ^{206,207,208}Pb(p,p') at T_p = 650 MeV; proton-nucleus scattering and swelling of nucleons in nuclei; strength of tensor force in medium and mixing of high spin stretched states; Fermilab E581, Coulomb-nuclear polarimeter; Fermilab E704, p + p and $\bar{p}$ + p spin parameters; and density dependent interaction applied to low multipole (p,p') and (p,n) transitions in light nuclei.

4065 (INIS-mf–12013) **Max-Planck-Institute for Nuclear Physics. Annual report 1987.** Klapdor, H.V. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). Abt. fuer Kernphysik); Jessberger, E.K. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). Abt. fuer Kosmophysik) (eds.). Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. 202p. (In German). Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

This annual report contains short communications and extended abstracts about the work performed at the named institute together with a list of publications and talks. The work concerns technical developments on accelerators and ion sources, developments of detectors and experimental setups, electronics, data processing, target developments, giant resonances, nuclear spectroscopy, nuclear reaction mechanisms, atomic physics, medium- and high-energy physics, statistical models of nuclei and nuclear reactions, nuclear reactions at high energies, many-particle theory, quantum chromodynamics, meteorites, comets, interstellar dust, planetary atmospheres, cosmic radiation, molecular collisions in the earth atmosphere, nuclear geology and geochemistry, as well as archaeology. See hints under the relevant topics. (HSI).

4066 (LBL–27833) **Search for the quark-gluon plasma (1989): The NA35 experiment at the CERN SPS.** Pugh, H.G. NA 35 Collaboration. Lawrence Berkeley Lab., CA (USA). Sep 1989. 37p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8908173–2: 6. Nordic meeting on nuclear physics, Kopervik (Norway), 10-15 Aug 1989). Order Number DE90002070. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Results from the NA35 experiment at the CERN SPS are described in the context of possible formation and identification of a quark-gluon plasma (QGP). Evidence is presented that the initial energy density and temperature are sufficient for the QGP to be produced, and that hydrodynamic flow occurs in the expansion stage. Evidence for an unexpectedly large pion source size and for enhanced strangeness production is presented, and discussed in terms of QGP formation. Plans for experiments in 1990–91 with an expanded set up are presented, and prospects for a program with Pb beams at the SPS are discussed. 39 refs., 12 figs.

4067 (LBL–27885) **Testing string dynamics in lepton nucleus reactions.** Gyulassy, M.; Pluemer, M. Lawrence Berkeley Lab., CA (USA). Oct 1989. 24p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8908148–2: International workshop on relativistic aspects of nuclear physics, Rio de Janeiro (Brazil), 28-31 Aug 1989). Order Number DE90003127. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The sensitivity of nuclear attenuation of 10-100 GeV lepton nucleus (ℓA) reactions to space-time aspects of hadronization is investigated within the context of the Lund string model. We consider two mechanisms for attenuation in a nucleus: final state cascading and string flip excitations. Implications for the evolution of the energy density in nuclear collisions are discussed. 16 refs., 10 figs.

4068 (PCCF-T–88-18) **Study of the energetic proton production in relativistic heavy ions Ne + nuclei collisions, using Diogene detector. Hadronic matter temperature.** Rahmani, A. Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire. Dec 1988. 165p. (In French). Order Number DE90721243. Available from NTIS (US Sales Only), PC A08/MF A01.

The study of the proton's production differential cross sections, in the collision of relativistic heavy ions, allows to obtain the nuclear-matter temperature and gives information about the nucleons large burst pulses in the nucleus. The chosen thermodynamic model is a generalized approach of the R. Hagedorn model, applied to heavy ions collisions: the nuclear matter is divided in volume elements δV assumed to be in thermal and chemical equilibrium and emitting particles and fragments isotropically, inside their own system. The applied nuclear-matter velocity distribution depended only on the impact parameter and on the relationship between the chemical potential and the temperature. The predictions of this thermodynamic model were compared to the Saturne experimental results, using Diogene detector. The obtained temperature values are similar to those given by D. Hahn and H. Stoker. The proton production cross sections were measured for backward emitting angles. A relationship between the cross sections and the burst pulse distribution in the nuclei was settled.

4069 (RCNP-P–102) **Workshop for cascade project, physics using large acceptance spectrograph and its technical considerations.** Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Mar 1989. 140p. (In Japanese). (CONF-8807195–: Workshop for cascade project, Ibaraki (Japan), 13 Jul 1988). Order Number DE90719707. Available from NTIS (US Sales Only), PC A07/MF A01.

The Workshop for Cascade, subtitled 'Physics Using Large Acceptance Spectrograph and Its Technical Considerations', was held on July 13, 1988 by the Nuclear Physics Research Center, Osaka University. The present proceedings carry a total of 18 reports, which are entitled 'RCNP Large Acceptance Spectrograph (plan)',

'Correlation Experiments with a System Consisting of a Small Number of Nucleons', 'Measurement of (d,d) and (d,^{2}He) Reactions with Large Solid Angle Spectrograph', 'The (p,2p) and (p,pn) Reactions', 'Correlation Experiments with Large Acceptance Spectrograph', 'Efforts at Determination of Various Correlations in Alpha Particles', 'Two-Nucleon Correlation in Nucleus', 'A Study on Particle Migration Reaction with Broad-Band Spectrograph', 'Measurement of Response in Highly Excited State during Nucleon Migration Reaction', 'A Study on Δ-Excitation within Nucleus', 'A Few Problems Related with Response in Highly Excited State', 'Spin-Isospin Modes in Continuum', '(p,π) and (p,xπ) Reactions', 'Formation of π^- in (p,2p) Reaction', 'Formation of π-Mesonic Atom with Consistent Momentum', 'Measurement of Excitation Functions by Means of 'Inconsistent' Dispersion in Magnetic Spectrograph', 'Deeply Bound π^- States by 'π^- Transfer' (n,p) Reactions', and 'On High Resolution (n,p) Facilities'. (N.K.).

4071 (CENBG–88-25) **Experimental and theoretical study of two center electron emission in 25-MeV/u Mo^{40+} + He collisions.** Stolterfoht, N.; Schneider, D.; Tanis, J.; Altevogt, H.; Scheurer, J.N.; Andriamonje, S.; Bertault, D.; Chemin, J.F.; Fainstein, P.D. Bordeaux-1 Univ., 33 - Gradignan (France). Centre d'Etudes Nucleaires. 1988. 4p. (CONF-880955–: International conference on the physics of multiply charged ions and international workshop on E.C.R. ion sources, Grenoble (France), 12-16 Sep 1988). Order Number DE90721240. Available from NTIS (US Sales Only), PC A02/MF A01.

The importance of two-center electron emission, for ions with energies in the GeV range, is shown. The experiments were carried out at the LISE beam line of the GANIL cyclotron, using the electron spectroscopy apparatus from the HMI (Berlin). The ratio of cross sections for electron production by 25 MeV/u Mo^{40+} and H^+ impact (for 20 and 150 degrees observation angles) are given. The increase of the two-center effect with the increasing electron energy is observed.

4072 (INIS-mf–12013, pp. 55-56) **^{4}He(e,e'c) coincidence experiments for investigation of charge symmetry in ^{4}He.** Khan, S. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Kihm, T.; Knoepfle, K.T.; Schulz, H.J.; Spahn, M.; Friedrich, J.; Voegler, N.; Schmitt, C.; Walther, V.H. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

^{4}He(e,e'c) coincidence electron scattering allows us to study simultaneously the p and n decays from the giant dipole resonance region in ^{4}He by detecting besides the protons in particular the ^{3}H and ^{3}He recoil nuclei in the same detector system. The data analysis aims at a precise determination of the ratio $R=\sigma[^4He(e,e',p)]/\sigma[^4He(e,e',n)]$ in the energy interval $22<E_x<35$ MeV. This ratio is of strong interest since it is supposedly around $E_x=25$ MeV close to 2 indicating thus a severe charge symmetry breaking in ^{4}He. (orig.).

4073 (LA-UR–89-3535) **Interpretation of recent LAMPF results on D T MU formation.** Leon, M. Los Alamos National Lab., NM (USA). [1989]. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8909262–1: Muon catalyzed fusion meeting, Oxford (UK), 10-13 Sep 1989). Order Number DE90002398. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

This paper discusses the results from muon-catalyzed fusion experiments at lampf. Cycling rates were measured and compared to calculated results. 8 refs., 5 figs. (LSP)

Available from NTIS (US Sales Only), PC A10/MF A01.

The claim for a tachyon signal produced by bombarding ^{12}C by 12 MeV protons could not be confirmed. (orig.).

4077 (INIS-mf–12013, pp. 92-93) **Effect of vacuum polarization on the sub-Coulomb ^{12}C-^{12}C scattering.** Baur, G. (Kernforschungsanlage Juelich GmbH (Germany, F.R.). Inst. fuer Kernphysik); Boeglin, W.; Egelhof, P.; Henneck, R.; Klein, A.; Muehry, H.; Plattner, G.R.; Sick, I.; Trautmann, D.; Vetterli, D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

In order to investigate the effect of vacuum polarization on the Coulomb interaction between hadrons, the differential cross section for elastic ^{12}C-^{12}C-scattering at $E_{lab}=4$ MeV was measured at angles near 45^0 with high precision. Special care was taken for various sources of systematic errors. The data are compared with theoretical calculations taking into account the contribution due to the Uehling potential. The contribution of various other effects such as relativistic effects, nuclear interaction, nuclear polarizability and electronic screening are discussed. The result provides a QED-test on the 9% level, the accuracy of the screening correction being the limiting factor for accuracy. (orig.).

4078 (INIS-mf-12013, pp. 93) **Thick-target ^{21}Ne yield of the reaction ^{18}O(α,n)^{21}Ne in the range 4.0-8.8 MeV.** Huenemohr, H. (Max-Planck-Institut fuer Chemie (Otto-Hahn-Institut), Mainz (Germany, F.R.)); Begemann, F.; Habs, D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The thick-target ^{21}Ne yield of the ^{18}O(α,n)^{21}Ne reaction has been measured with $^{18}O_2$ filled gas targets for α-particle energies between 4.0 and 8.8 MeV. The amounts of ^{21}Ne and ^{4}He have been determined by isotope dilution with a noble gas mass spectrometer. (orig.).

4079 (LA-11685-T) **Cross sections and analyzing powers of ^{15}N(p,n)^{15}O at 200 MeV and 494 MeV.** Ciskowski, D.E. Los Alamos National Lab., NM (USA). Nov 1989. 163p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. Order Number DE90002909. Available from NTIS, PC A08/MF A01; OSTI; INIS; GPO Dep.

Differential cross sections and analyzing powers have been measured for the ^{15}N(p,n)^{15} O(g.s.) reaction at bombarding energies of 200 MeV and 494 MeV. The 494 MeV data were obtained at the LAMPF Neutron Time-Of-Flight Facility on an 82 m flight path with a resolution of about 2.7 MeV. The 200 MeV data were obtained at IUCF on a 76m flight path with a resolution of about 1.1 MeV. At both energies, the measured analyzing power is small, the magnitude is less than .2 for momentum transfers of less than 1 fm^{-1}. In contrast, both Relativistic and standard DWIA calculations predict a maximum of A=-.7 near q=0.7 fm^{-1}. 53 refs., 44 figs.

4080 (RCNP-P-105, pp. 1-7) **Scatterings and reactions by means of polarized neutron beam.** Koori, N. (Kyushu Univ., Fukuoka (Japan). Faculty of Engineering). Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Jul 1989. (In Japanese). In *Proceedings of the workshop on neutron scattering and neutron reactions.* Order Number DE90705941. Available from NTIS (US Sales Only), PC A06/MF A01.

A high resolution polarized neutron beam should be prepared for nuclear physics, which will be planned with the new ring cyclotron at RCNP. Studies on scatterings and reactions by means of polarized neutron beams are reviewed briefly. Beam lines for polarized neutrons are summarized. An example of high resolution measurements of neutron induced reactions is described. (author).

4081 (ANL/PPRNT-89-196) **Fragmentation of high-spin particle-hole states in ^{26}Mg.** Segel, R.E.; Amusa, A.; Geesaman, D.F.; Lawson, R.D.; Zeidman, B.; Olmer, C.; Bacher, A.D.; Emery, G.T.; Glover, C.W.; Nann, H. Argonne National Lab., IL (USA). 1989. 35p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract W-31109-ENG-38. Order Number DE90003013. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The inelastic scattering of 134 MeV protons to seven 6$^-$ states in ^{26}Mg has been studied. By combining the results with those of a companion electron scattering study, and utilizing DWIA calculations, it has been possible to extract isoscalar and isovector excitation amplitudes. Shell model calculations using $(1d_{5/2})^{10-n-p}(2s_{1/2})^{n}(1f_{7/2})^{p}$, with p = 0 and 1, model spaces can reproduce the general features of the fragmentation, but not the structure of the yrast 6$^-$ state. 28 refs., 10 figs., 2 tabs.

4082 **Proton threshold states in ^{27}Si and the destruction of ^{26}Al at low stellar temperatures.** Wang, T.F. (Yale Univ., New Haven, CT (USA). Wright Nuclear Structure Lab.); Champagne, A.E.; Hadden, J.D.; Magnus, P.V.; Smith, M.S.; Howard, A.J.; Parker, P.D. *Nuclear Physics [Section] A (Netherlands),* 499(3): 546-564 (31 Jul 1989). DOE Contract AC02-76ER03074.

Using the ^{27}Al(^{3}He,t)^{27}Si reaction, we have located and measured accurate excitation energies for seven states in ^{27}Si between the ^{26}Al+p threshold and the lowest observed ^{26}Al(p,γ)^{27}Si resonance. By examining the mirror states in ^{27}Al via the ^{26}Mg(^{3}He, d)^{27}Al and ^{26}Mg(α,t)^{27}Al reactions, we find that in the ^{26}Al+p channel there can be at most only one s-wave resonance that lies below the lowest directly observed resonance; this possible l=0 resonance most probably corresponds to either the 7589, 7557 or 7533 keV state in ^{27}Si. The remaining six states are most probably formed via l$\geq$2 proton capture. Upper limits for the reduced proton widths of these states have been used to estimate an upper limit for the ^{26}Al(p,γ)^{27}Si thermonuclear reaction rate. (orig.).

4083 (DOE/ER/40389-56) **Muon capture at large y-energetic nucleon emission.** Martoff, C.J. Temple Univ., Philadelphia, PA (USA). Dept. of Physics. [1989]. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40389. (CONF-8906160-7: Yamada conference on nuclear weak processes and nuclear structure, Osaka (Japan), 12-15 Jun 1989). Order Number DE90002568. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Capture of a negative muon by a nucleus leads in some fraction of cases to emission of a nucleon carrying a substantial fraction of the entire available energy $Q = \Delta m + m_\mu - B_\mu$. Here Δm is the difference of initial and final (excited) nuclear masses, m_μ is the muon mass, and B_μ is the atomic binding energy of the muon before capture. This corresponds to emission of nucleons with 350-420 MeV/c of momentum, while the momentum transfer at the leptonic vertex is small and generally timelike ($| Q^2 |<100$MeV/c). Such high momentum emitted particles have very poor wave function overlap with bound nucleons in conventional nuclear models, making the observed rates much too large to account for in such models. In this report I will examine energetic nucleon data from muon capture in ^{40}Ca, to see how this reaction can be understood. I will show that in addition to the usual IA mechanism, the data requires an additional capture interaction between the muon and a pair of nucleons. The resulting nucleon and neutrino energy/momentum distribution in the rest system of the (pair + muon) is essentially given by phase space. The strength of the pair capture relative to the IA is several per cent. 21 refs., 3 figs.

4084 (INIS-BR-1764) **Decay of ^{57}Ni.** Santos Scardino, A.M. dos. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. 1987. 120p. (In Portuguese). Order Number DE90607783. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

The decay of ^{57}Ni to ^{57}Co was studied by gamma ray spectroscopy using both singles and coincidence spectra. The sources were obtained with the ^{58}Ni (Y,n) ^{57}Ni reaction. Natural metallic nickel was irradiated in the bremsstrahluhng beam of the linear accelerator of the Instituto de Fisica da Universidade de Sao Paulo with 30 MeV electrons. The singles espectra were taken with 104 cc HPGe detector and the coincidences espectra with 27 and 53cc Ge(Li) and 104 cc. HPGe detectors. The energies of transitions that follow the ^{57}Ni decay were measured using ^{56}Co as standard (which was obtained by (Y,np) reaction in ^{58}Ni) and taking into account the cascade cross-over relations. (author).

4085 (INIS-mf-12013, pp. 59-60) **Emission of fast protons in (e,e'p) coincidence experiments.** Reiner, K. (Tuebingen Univ. (Germany, F.R.). Physikalisches Inst.); Grabmayr, P.; Mauser, G.; Mertens, G.; Wagner, G.J.; Friedrich, J.; Voegler, N.; Pugatch, V. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The inelastic response of ^{58}Ni to 183 MeV electrons from MAMI A at Mainz has been investigated up to excitation energies of 41 MeV for four momentum transfers between 0.4 and 0.8 fm^{-1}, and of ^{28}Si for two momentum transfers up to E_x=39 MeV. We have detected fast protons with energies up to 33 MeV using plastic scintillator telescopes. The angular correlations for the prominent kinematical bands show strong forward-backward asymmetry with

shapes typical of the populated state in the residual nucleus. A comparison to RPA calculations is in progress. (orig.).

4086 (INIS-mf–12013, pp. 83-84) **Preequilibrium emission of neutrons in central heavy-ion collisions at 15-20 MeV/A bombarding energy.** Belim, D. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Gentner, R.; Keller, K.; Lassen, L.; Luecking, W.; Schreck, R.; Seibert, U.; Cassing, W.; Gemmeke, H.; Neumann-Cosel, P. von. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Preequilibrium neutron emission was investigated in centrl collisions of the mass symmetric system 15, 20 MeV/A $^{40}Ar+^{40}Ca$ and the asymmetric system 14.6 MeV/A $^{16}O+^{64}Ni$. For $^{40}Ar+^{40}Ca$ at 20 MeV/A bombarding energy, the preequilibrium component was properly determined from neutron energy spectra and angular distributions. The experimental data agree very well with predictions from a quantal phase-space model which takes into account mean-field dynamics as well as successive two-body collisions. From this comparison it follows that nuclear relaxation times are rather short in finite fermion systems at intermediate energies. The results stress the importance of nucleon-nucleon collisions in the dynamics of light particle emission during the early stages of the reaction already at these energies. (orig.).

4087 (RCNP-P–105, pp. 27-32) **(n,p) reactions and the nuclear structures.** Yabe, Masayuki (Shinshu Univ., Matsumoto, Nagano (Japan)). Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Jul 1989. In *Proceedings of the workshop on neutron scattering and neutron reactions.* Order Number DE90705941. Available from NTIS (US Sales Only), PC A06/MF A01.

The possibilities of (n,p) reactions are reported in relation to the investigation of nuclear structures. (n,p) charge-exchange reactions at intermediate incident energies are suitable tools to study the spin-isospin properties (β^+-excitation modes) of nuclei. Two examples of these possibilities are shown. One is available to the investigation of the Ikeda sum rule for Gamow-Teller (GT) transitions. We show that the sum rule can be tested by subtracting zero degree (n,p)-from (p,n)-spectra. Microscopic analyses of the (n,p) and (p,n) reactions on ^{48}Ca are presented for intermediate energy. Another possibility is related to the double-beta decay. For its precise analysis reliable matrix elements of β^+-transitions from the final state of the double-beta decay are required, which are available from the investigation of the (n,p) reaction on the same state. 4088 (CRN-PN–85-31) **Study of the structure of the transition nuclei ^{152}Dy, ^{154}Dy and ^{156}Er at high angular momentum.** Azgui, F. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires; Strasbourg-1 Univ., 67 (France). 1985. 154p. (In French). Order Number DE90721092. Available from NTIS (US Sales Only), PC A08/MF A01.

Measurements of feeding times of high spin yrast states in ^{152}Dy, ^{154}Dy and ^{156}Er were utilized to obtain information about possible spin dependent shape changes. Feeding times as well as lifetimes were determined with the recoil distance technique. In ^{152}Dy only long feeding times (> 10 ps) could be identified, indicating that the aligned-particle yrast states are fed through configuration of similar character, with little direct population from collective cascade in the continuum region. In ^{154}Dy discrete states with $I \leq 30$ have lifetimes which are characteristically collective, whereas the preyrast cascade exhibit both fast (< 1 ps) and long (> 10 ps) feeding components. The latter imply a change with increasing spin from collective to aligned-particle character, signalling a prolate to oblate shape transition. In ^{156}Er the yrast states up to spin 20 Planck constant were found to be collective. These levels are fed, however, from long-lived high spin states, causing time delay up to ~ 100 ps, the existence of which is interpreted as a signature for an oblate shape at high spin.

4089 (INIS-mf–12013, pp. 60-62) **Direct decay of giant resonances in medium-heavy nuclei.** Khan, S. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Kihm, T.; Knoepfle, K.T.; Schulz, H.J.; Spahn, M.; Friedrich, J.; Voegler, N.; Dolbilkin, B.; Kondratiev, R.; Lisin, V. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. A model independent multipole analysis of $^{64}Zn(e,e'c)$ coincidence data yields E1 and E2 (E0) form factors and the respective strength distributions for all charged decay channels and the indirectly accessible neutron channel. The angular correlation analysis of the α_0-channel yields a relative E1-E2 phase of $\simeq 90^0$. Sum rule arguments and decay properties indicate the presence of isovector giant E2(E0) strength. Strong direct decay contributions are found in the proton channels, where decay from E1 populates hole states clearly different from those populated from E2(E0) excitations, revealing their different 1p-1h-structure. (orig.).

4090 (INIS-mf–12013, pp. 65-66) **Results of the α-scattering on the even, stable Ge isotopes.** Gyufko, R.; Kruechten, B. v.; Madadakis, E.; Rech, M.; Rychel, D.; Schuermann, B.; Speer, J.; Wiedner, C.A. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The systematic high resolution studies of the (α, α') experiments on $^{70,72,74,76}Ge$ have been completed. For $E(\alpha)$=31.5 MeV and a Q3D-spectrograph resolution of 12-25 keV about 50 excited levels have been identified for each isotope up to an excitation energy of about 5 MeV. The data were compared to DWBA-calculations assuming collective form factors. Within the framework of the implicit folding model isoscalar transition strengths have been extracted. Their fragmentation with increasing neutron number has been determined for different multipolarities. (orig.).

4091 **Shapes of ^{59}Cu nuclei at moderate excitation energies and spin.** Viesti, G. (Istituto Nazionale di Fisica Nucleare and Dipartimento di Fisica dell'Universita di Bari, Bari (Italy)); Anghinolfi, M.; Corvisiero, P.; Djilavian, L.; Taiuti, M.; Bortignon, P.F.; Gramegna, F.; Prete, G.; Natowitz, J.B.; Nebbia, G.; Zucchiatti *Physical Review [Section] C: Nuclear Physics (USA),* 40(4): 1570-1573 (Oct 1989).

Continuum γ-ray spectra from the decay of ^{59}Cu formed at excitation energies of 54 and 74 MeV and angular momenta up to 40ħ have been measured and analyzed. The parameters of the giant dipole resonance have been extracted using the statistical model. The giant dipole resonance parameters for the lower excitation energy agree well with published data for spherical ^{63}Cu nuclei. At the higher excitation, the giant dipole resonance strength distribution is not described by a single Lorentzian fit in disagreement with the findings for ^{63}Cu at the same excitation energy. This seems to be correlated with the onset of spin driven deformations as recently evidenced from the shapes of evaporative particle spectra.

4092 (INIS-mf–12013, pp. 66) **α-scattering on ^{100}Mo.** Gyufko, R.; Kruechten, B. v.; Madadakis, E.; Rech, M.; Rychel, D.; Schuermann, B.; Speer, J.; Wiedner, C.A. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Scattering of 32.2 MeV α particles from ^{100}Mo has been studied with an energy resolution of 20 keV. Angular distributions were measured from 10 to 40 degrees for an E(x) range up to 3.7 MeV. Several new spin assignments have been made by comparison of the angular distributions to collective model DWBA calculations. An implicit folding procedure was used to derive isoscalar transition rates. (orig.).

4093 (INIS-mf–12013, pp. 66-67) **Systematics of the (^{18}O,^{20}Ne) reaction and the determination of the mass excess of ^{122}Cd.** Gyufko, R.; Kruechten, B. v.; Madadakis, E.; Rech, M.; Rychel, D.; Schuermann, B.; Speer, J.; Wiedner, C.A. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

While the first results of the (^{18}O,^{20}Ne) reaction have been described qualitatively in the last annual report, the investigations of the reaction mechanism of this two proton stripping reaction leading to the ground state have been concluded with a semiclassical description. Based on Coulomb trajectories a parametrisation in terms of incident energy, reaction Q-value, target mass and charge describe the angular distributions quite satisfactorily. In particular the angle for maximum cross section can be predicted to within 3 degrees. Based on this the ^{124}Sn(^{18}O,^{20}Ne)^{122}Cd reaction has been performed to establish the mass excess of ^{122}Cd. (orig.).

In an attempt to measure the 2-γ decay of the first excited 0_2^+ state in ^{98}Mo an upper limit of $W_{\gamma\gamma}/W_{tot} \leq 1.4 \times 10^{-5} (1\sigma)$ was obtained. (orig.).

4095 (INIS-mf–12013, pp. 84-85) **γ-multiplicity distributions for fusion reactions at and below the barrier.** Hennrich, H.J. (Giessen Univ. (Germany, F.R.). 2. Physikalisches Inst.); Breitbach, G.; Kuehn, W.; Metag, V.; Novotny, R.; Schwalm, D.; Habs, D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Investigations of angular momentum distributions in sub-barrier heavy ion fusion reaction have been continued. The systems ^{32}S+^{100}Mo and ^{36}S+^{96}Mo, both leading to the same compound nucleus ^{132}Ce, have been studied, using the Darmstadt-Heidelberg crystal ball. Evaporation residues of the S+Mo reaction have been identified by time-of-flight using a parallel plate counter positioned under forward angles. γ-multiplicity distributions for both systems are compared. With decreasing bombarding energy the fusion cross section and the average γ-multiplicity decrease more rapidly in the ^{36}S+^{96}Mo system compared to the ^{32}S+^{100}Mo system. (orig.).

4096 (INIS-mf–12013, pp. 89-90) **Study of multi-fragmentation in collisions of heavy ions.** Gnirs, M.; Pelte, D.; Trazska, M.; Winkler, U. Heidelberg-GSI-Giessen-Florence-GANIL Collaboration. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The multi-fragmentation of the heavy ion system Ar+Ar, Mo+Mo and Sn+Sn is studied at bombarding energies 15 MeV$<$E/A$<$25 MeV. Fragment multiplicities up to m_F=6 are measured; the fragment momenta are used to determine the fragmentation dynamics. It is concluded that the major part of the observed fragments comes from a fast break-up process. (orig.).

4097 (INIS-mf–12013, pp. 93-95) **Quasielastic scattering of polarized ^{23}Na.** Becker, K. (Marburg Univ. (Germany, F.R.). Fachbereich 13 - Physik); Blatt, K.; Fick, D.; Korsch, W.; Leucker, H.; Luck, W.; Reich, H.; Moroz, Z.; Butsch, R.; Jansch, H. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The (quasi-) elastic scattering of polarized ^{23}Na from ^{90}Zr and ^{206}Pb was measured. The (besides the 3rd ranks) complete set of analysing powers of the elastic and quasielastic scattering from ^{90}Zr was analysed within the framework of coupled-channel calculations and the recently developed concept of 'tidal-symmetry'. The measurements with ^{206}Pb were done to investigate the energy dependence of the optical potential and to study the influence of this energy dependence on the fusion cross section and analysing power T_{20} at energies around the barrier. (orig.).

4099 (LBL–27894) **Binary complex fragment emission and multifragmentation from very hot nuclei.** Moretto, L.G.; Wozniak, G.J. Lawrence Berkeley Lab., CA (USA). Oct 1989. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8910237–4: International school seminar on heavy ion physics, Dubna (USSR), 3-12 Oct 1989). Order Number DE90003082. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Complex fragments at low and intermediate energies originate mostly from the binary decay of a compound nucleus formed in either complete or incomplete fusion. With increasing bombarding energy incomplete fusion should terminate. Evidence of this occurrence is given. As the excitation energy increases, multifragment decay becomes prevalent. The sources of ternary and quaternary events, characterized in terms of their velocity and total charge, do not seem to differ from that of binary events. 9 refs., 13 figs.

4100 **Excitation energy equilibration in damped ^{139}La+^{40}Ar collisions at 15 MeV per nucleon.** Wile, J.L. (Departments of Chemistry and Physics and Nuclear Structure Research Laboratory, University of Rochester, Rochester, New York 14627 (US)); Datta, S.S.; Schroder, W.U.; Huizenga, J.R.; de Souza, R.T.; Pade, D. *Physical Review [Section] C: Nuclear Physics (USA),* 40(4): 1700-1710 (Oct 1989).

Energy and angular distributions of neutrons emitted in coincidence with projectile-like fragments from the damped reaction ^{139}La+^{40}Ar at a bombarding energy of 600 MeV have been measured. Components corresponding to sequential emission from two fully accelerated reaction fragments as well as preequilibrium neutron emission have been separated as a function of energy loss and fragment atomic number. The deduced division of total excitation energy between the reaction partners is very well described by the one-body nucleon-exchange model for all energy losses. The data provide no evidence for correlations between the excitation energy division and the measured projectile-like fragment atomic number.

4101 (CONF-890902–20) **The study of exotic N $\simeq$ 82 nuclei using the Daresbury recoil mass separator.** McNeill, J.H.; Chishti, A.A.; Gelletly, W.; Hotchkis, M.A.C.; Varley, B.J.; Blomqvist, J.; Daly, P.J.; Piiparinen, M.; Woods, P.J. Oak Ridge National Lab., TN (USA). [1989]. 34p. Sponsored by Academy of Finland; U.S. DOE Energy Research; U.K. Science and Engineering Research Council. DOE Contract AC05-84OR21400. From 198. American Chemical Society national meeting; Miami, FL (USA); 10-15 Sep

1989. Order Number DE90001079. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Experiments using the Daresbury Recoil Mass Separator have identified microsecond isomers in the exotic N = 82, 83 nuclei ^{153}Yb, ^{153}Lu, ^{154}Hf, and have established their decay schemes. The results for ^{153}Lu and ^{154}Hf, together with those for lighter N = 82 isotones, provide an outstanding illustration of the dependence of E2 transition rates between J^n states on the subshell occupation, and demonstrate that half-filling of the $\pi h_{11/2}$ subshell in the N = 82 series occurs just below Z = 71 ^{153}Lu. The result of the isomer in the even-odd N = 83 nucleus ^{153}Yb shows that the isomerism is due to a low-energy E2 transition rather than an E3 transition as in lighter N = 83 even-odd isotones, which is another consequence of the $\pi h_{11/2}$ subshell being about half-filled. Furthermore, the long-lived isomer observed in the odd-odd N = 83 nucleus ^{154}Lu also reflects that the $\pi h_{11/2}$ subshell is close to being half-filled. 23 refs., 12 figs., 4 tabs.

4102 (INIS-mf–12013, pp. 62-65) **Angular momentum dependence of the dipole giant resonance in hot nuclei.** Thirolf, P. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Habs, D.; Schwalm, D.; Fischer, R.D.; Metag, V. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). The analysis of high energy γ-rays from the decay of the electric giant dipole resonance (GDR) in the reaction ^{130}Te(^{34}S,xn) $^{164-xn}$Er at E_{lab}=156 MeV, measured as a function of the γ-ray multiplicity using the Darmstadt-Heidelberg crystal ball, was continued. New methods were employed to combine the information contained in the γ-ray angular distributions and the energy spectra in a consistent way. Exploiting the multiplicity information of the crystal ball, a model independent decomposition of the γ-ray energy spectra into the angular momentum components with ΔI=0 and ΔI=+-1 could be achieved as a function of the spin of the evaporation residues. A consistent description of both the angular distributions and energy spectra can only be obtained (i) by assuming the nuclei in the spin- and excitation energy region studied ($I \geq 30$ Planck constant, $E^* \simeq$ 50 MeV) to have an oblate nuclear deformation with the spin axis pointing in the direction of the symmetry axis (γ=-60^0) and (ii) by allowing the centroid energy E_R to decrease with increasing spin. (orig.).

The production of energetic photons in the reaction ^{16}O(15 MeV/u) on ^{nat}W has been measured with the Darmstadt-Heidelberg crystal ball. The photon spectra below 10 MeV and above 25 MeV show exponential shapes with slope parameters of 1.2 MeV and 4.7 MeV, respectively. For the giant dipole resonance region we find an experimental cross section, which is 1.2 mb above the sum of the 2 exponential fits. The angular distribution for photon energies above 25 MeV is forward peaked, and in relatively good agreement with isotropic emission from the nucleon-nucleon center of mass system. (orig.).

4106 (JYFL-RR–3/1988) **Transfer reactions with very heavy ions. Quarterly report 3. quarter 1987.** Juutinen, Sakari. Jyvaeskylae Univ. (Finland). Dept. of Physics. Mar 1988. 96p. Order Number DE90607797. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

This thesis deals with the reaction mechanism of the few-nucleon transfer reactions between the ^{58}Ni projectiles and the Dy targets. A series of transfer experiments utilizing the particle-γ coincidence technique was performed. Particle detection was used to give the scattering angles of two reaction products and the reaction channel was selected by the discrete γ-rays in the Ge detectors. Total γ-ray energy and multiplicity distributions were measured by the Spin Spectrometer. Total γ-ray energy and multiplicity distributions, γ-ray spectra obtained by the Ge and NaI detectors and angular distributions of the projectile-like ions are discussed. For one- and two-neutron transfer the experimental results provide direct evidence of a cold mechanism populating high-spin states near the yrast line. A schematic model for the transfer mechanism is proposed. This model accounts for the prominent features of one- and two-neutron pickup.

4107 (CONF-890686–3) **Observation of superdeformation in ^{191}Hg.** Moore, E.F.; Janssens, R.V.F.; Chasman, R.R.; Ahmad, I.; Khoo, T.L.; Wolfs, F.L.H.; Ye, D.; Beard, K.B.; Benet, Ph.; Grabowski, Z.W.; Cizewski, J.A.; Drigert, M.W. Argonne National Lab., IL (USA). [1989]. 10p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract W-31109-ENG-38;AC07-76ID01570;FG02-87ER40346. From International conference on new aspects of nuclear spectroscopy; Crete (Greece); 26-30 Jun 1989. Order Number DE90002208. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The first observation of superdeformation in the A $\simeq$ 190 mass region is reported. A rotational band of 12 transitions with an average energy spacing of 37 keV, an average moment of inertia of 110 $\hbar^2$ MeV^{-1}, and an average quadrupole moment of 18 $\pm$ 3 eb has been observed in ^{191}Hg. These results are in excellent agreement with a calculation that predicts an ellipsoidal axis ratio of 1.65:1 for the superdeformed shape in this nucleus. Evidence for another discrete superdeformed band and superdeformed structures in the quasi-continuum was also found in the data. 19 refs., 6 figs.

Participation in the E802 Experiment, which is the first major heavy-ion experiment at the BNL-AGS, is the main focus of this paper. The emphasis of the E802 experiment are on accurate particle identification and measurements of spectra over a wide kinematical domain ($5° < \theta < 55°$, $p < 20$ GeV/c) and measurements of small-angle two-particle correlations, with event characterization tools:

multiplicity array, forward and large-angle calorimeters. Data taking with the present device is almost completed and is expected to be finished in the fall of 1989.

4109 (INIS-mf–12013, pp. 99-101) **Coulomb breakup of ^{7}Li.** Brucker, A. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Trauth, M.G.; Wurm, J.P.; Lindl, B.; Muffler, R. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Resonant and direct breakup of ^{7}Li was investigated in the reaction 70 MeV ^{7}Li+^{208}Pb with regards to the influence of the Coulomb field of the target on the relative energy distribution of α and t, measured in coincidence in wide geometry. The differences between relative energy spectra measured in-plane and out-of-plane suggest a reduction of the lifetime of the 4.633 MeV resonance and large effects on the trajectories after direct breakup due to the close proximity of Pb. (orig.).

4110 (RCNP-P–105, pp. 110-116) **Studies of deeply bound π^- states by (n,p) and (d,^{2}He) pion transfer reactions.** Yamazaki, Toshimitsu (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Jul 1989. In *Proceedings of the workshop on neutron scattering and neutron reactions.* Order Number DE90705941. Available from NTIS (US Sales Only), PC A06/MF A01.

We propose to search for deeply bound π^- states in heavy nuclei by high resolution spectroscopy using (n,p) and (d,^{2}He) reactions on heavy targets. Recent calculation by Toki and Yamazaki shows that even in ^{208}Pb the deeply bound pionic states (1s, 2p, etc.) are expected to have narrow widths due to the repulsive nature of the pion-nucleus interaction. To populate those hitherto unknown deeply bound states they proposed to use 'pion transfer' reactions such as (n,pπ^-), etc. We describe the structure of deeply bound pionic atoms and the formation of those states. (author).

4111 (CONF-890982–5) **Intercomparison of U-238 deposits employed for neutron fluence determination in neutron activation cross section measurements.** Meadows, J.W.; Smith, D.L.; Winkler, G.; Vonach, H.; Wagner, M. Argonne National Lab., IL (USA). [1989]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From International meeting on neutron activation cross sections for fission and fusion energy applications; Argonne, IL (USA); 11-15 Sep 1989. Order Number DE90001919. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

An intercomparison is made between a collection of five uranium deposits used for neutron fluence determination in neutron activation experiments at Argonne National Laboratory (ANL), Illinois, USA, and a single corresponding deposit from the Institut fuer Radiumforschung und Kernphysik (IRK), Vienna, Austria. The predominant uranium isotope in each of these deposits is U-238. Two methods were used in the study: low-solid-angle alpha counting and the measurement of fast-neutron fission yield ratios. This investigation produced the following calibration values for the IRK deposit: (160.6 $\pm$ 1.7) micrograms from alpha counting and (163.3 $\pm$ 2.0) micrograms from fission ratio measurements. The latter value is a weighted average of twenty-four separate measurements. 13 refs., 2 figs., 4 tabs.

4113 (INIS-mf–12013, pp. 58-59) **(e,e'f) coincidence experiments for fission decay of giant resonances in ^{235,238}U.** Weber, T. (Giessen Univ. (Germany, F.R.). Inst. fuer Kernphysik); Heil, R.D.; Kneissl, U.; Pecho, W.; Wilke, W.; Emrich, H.J.; Kihm, T.; Knoepfle, K.T. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Extending previous work on ^{238}U, ^{235}U(e,e'f) coincidence data were taken at 4 momentum transfers yielding both E1, E2/E0 and E3 form factors and the respective multipole strength distributions in the giant resonance region of ^{238}U ($4<E_x<22$ MeV). From the analysis of time-of-flight difference spectra, the fission widths ratio Γ_x/Γ_a is obtained as a function of excitation energy for separated multipoles. The giant E2 resonance exhibits an increased symmetric fission contribution compared to E1 and E3 resonances. (orig.).

4114 (INIS-mf–12013, pp. 76-79) **Investigation of many-phonon excitations in ^{232}Th.** Korten, W. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Habs, D.; Heyng, H.W.; Gerl, J.; Ender, C.; Helmolt, U. v.; Schwalm, D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

A Coulomb excitation experiment was performed on ^{232}Th with 396 MeV ^{90}Zr-projectiles to investigate the structure of side bands in ^{232}Th. Thereby a new band with a bandhead at 1414 keV was discovered. The branching ratios and particle-γ angular correlations indicate a spin of $I^{\pi}=4^+$ and K=4 for this state. Since this band decays exclusively into the γ-band - no evidence for a direct decay to the ground state band was found - and due to the collectivity of these transitions we propose this band to be the two phonon $\gamma\gamma$-band. (orig.).

4115 (INIS-mf–12013, pp. 74-76) **Heavy ion induced transfer reactions with ^{232}Th by the Crystal Ball.** Gerl, J. (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.); Ender, C.; Helmolt, U. v.; Schwalm, D.; Wollersheim, H.J.; Korten, W.; Habs, D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Transfer reaction around the Coulomb barrier were studied in the system ^{90}Zr->^{232}Th. The analysis of γ-ray intensities revealed impact parameter dependent form factors for the 1n, 2n and 4n pick-up channel. The rather flat form factor slopes can be explained by reduced effective neutron binding energies. In case of ^{231}Th this reduction is reflected by the measured γ-sum energy, whereas in ^{230}Th and ^{228}Th sequential n-transfer via highly excited intermediate states must be assumed to explain the data. The system ^{18}O->^{232}Th was used to identify yrast levels of ^{234}Th populated in the 2n stripping reaction up to the 12^+ state. (orig.).

4116 (INIS-mf–12013, pp. 72-74) **Spectroscopic investigations of the neutron-deficient nuclei ^{220}Th and ^{222}Th.** Schwartz, B. (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.); Schwalm, D.; Dahlinger, M.; Kankeleit, E.; Simon, R.S.; Habs, D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

High spin states in ^{220}Th and ^{222}Th were populated in the reactions ^{208}Pb(^{16}O,4n) ^{220}Th and ^{208}Pb(^{18}O,4n)^{222}Th at 93 MeV and 94 MeV, respectively. In ^{222}Th the ground state band could be followed up to the 26^+ state showing a sequence of states of alternating parity connected by strong E1- and crossover E2-transitions up to the highest spins. Such a sequence is expected in the case of octupole deformed nuclei. In ^{220}Th, which shows a similar alternating parity structure as ^{222}Th, we observe a backbend at a rotational frequency of ω=0.22 MeV/Planck constant in agreement with theoretical predictions. (orig.).

4117 (INIS-mf–12013, pp. 85-89) **Search for a fission fragment anisotropy signal after optical spin exchange pumping on**

^{242m}Am. Achenbach, W. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Habs, D.; Ames, F.; Backe, H.; Lauth, W.; Scherrer, A.; Toelg, S.; Rimke, H.; Wilhelmy, J.B. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

With an improved experimental set-up we searched again for an anisotropy signal in the fission fragment angular distribution of the 14 ms ^{242m}Am fission isomer. The ^{242m}Am isomers were implanted in an optical cell filled with 25 mbar N_2 buffer gas and rubidium vapour with a density of about $4x10^{13}/cm^3$. The rubidium atoms were polarized by pumping the D_1-transition with circular-polarized light of a pulsed copper vapour dye laser combination. In this manner the fission isomers can be polarized by spin exchange collisions. Evidence for a small fission fragment anisotropy will be reported. (orig.).

4118 (INIS-mf–12013, pp. 95-98) **Detection of the γ branch for the shape isomer in ^{236}U.** Schirmer, J. (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.); Gerl, J.; Schwalm, D.; Habs, D. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Using the Heidelberg-Darmstadt Crystal Ball (CB) spectrometer and the ^{235}U(d, p) reaction at 11 MeV, first results on the γ-decay of the ^{236}U shape isomer have been obtained. The isomer could be identified by requiring that the prompt and delayed γ-sum-energy add up to the excitation energy measured in the (d, p) reaction with a surface barrier ring counter. Two dominant γ-cascades depopulating the shape isomer via two known 1^- levels (688 keV, 967 keV) have been observed, leading to an excitation energy of $E(O_{II}^+)$=2.77+-0.04 MeV. A preliminary branching ratio of the γ decay via two γ-rays to the delayed fission amounts to $\Gamma_{\gamma\gamma}/\Gamma_{fis}$=7+-4. γ-transitions preceding the decay of the shape isomer have been measured and are tentatively interpreted as deexcitation of collective states in the second minimum. (orig.).

4119 (JAERI-M–89-143) **Measurements of prompt fission neutron spectra and double-differential neutron inelastic-scattering cross sections for ^{238}U and ^{232}Th.** Baba, Mamoru; Wakabayashi, Hidetaka; Itoh, Nobuo; Maeda, Kazuto; Hirakawa, Naohiro. Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment; Tohoku Univ., Sendai (Japan). c 13 Sep 1989. 63p. (In Japanese). Sponsored by Japan Atomic Energy Research Institute. (NEANDC(J)–142/U;INDC(JPN)–129/L). Available from Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken, 319-11, Japan.

This report presents the summary of experimental studies of prompt fission neutron spectra and double-differential neutron inelastic-scattering cross sections of ^{238}U and ^{232}Th. The experiments were performed at Tohoku University Fast neutron Laboratory employing a time-of-flight technique and Dynamitron accelerator as the pulsed neutron generator. From the experiments, we obtained the following data for both nuclei; prompt fission neutron spectrum for 2 MeV neutrons, double-differential neutron inelastic-scattering cross sections for 1.2, 2.0, 4.2, 6.1 and 14.1 MeV incident neutrons. Both in experiments and data processing, cares were taken to obtain reliable data by avoiding systematic uncertainty. The experimental data were compared with those by other experiments, evaluations and model calculations. Through the data comparison, some fundamental problems were found in the experiments by previous authors and the evaluations. The present data will provide useful data base for refinement of the evaluated data and theoretical models. 29 refs., 32 figs., 4 tabs.

4120 (LBL–27878) **Delayed-fission properties of neutron-deficient americium nuclei.** Hall, H.L. Lawrence Berkeley Lab., CA (USA). 23 Oct 1989. 125p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AC03-76SF00098. Order Number DE90003274. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

Characteristics of the delayed-fission decay mode in light americium nuclei have been investigated. Measurements on the unknown isotopes ^{230}Am and ^{236}Am were attempted, and upper limits on the delayed-fission branches of these nuclei were determined. Evidence of the existence of ^{236}Am was observed in radiochemical separations. Total kinetic energy and mass-yield distributions of the electron-capture delayed-fission mode were measured for ^{232}Am ($t_{1/2}$ = 1.31 $\pm$ 0.04 min) and for ^{234}Am ($t_{1/2}$ = 2.32 $\pm$ 0.08 min), and delayed-fission probabilities of 6.9×10^{-4} and 6.6×10^{-5}, respectively, were determined. The total kinetic energy and the asymmetric mass-yield distributions are typical of fission of mid-range actinides. No discernible influence of the anomalous triple-peaked mass division characteristic of the thorium-radium region was detected. Measurements of the time correlation between the electron-capture x-rays and the subsequent fission conform that the observed fissions arise from the electron-capture delayed-fission mechanism. Delayed fission has provided a unique opportunity to extend the range of low-energy fission studies to previously inaccessible regions. 71 refs., 44 figs., 13 tabs.

4121 (NEACRP–302-L(Rev.)) **Data for decay Heat Predictions Proceedings of a specialists' meeting.** Nuclear Energy Agency, 75 - Paris (France). 1987. 386p. (CONF-8709122–: Specialists' meeting on data for decay heat predictions, Studsvik (Sweden), 7-10 Sep 1987; NEANDC–245-U). Order Number DE90721127. Available from NTIS (US Sales Only), PC A17/MF A01.

These proceedings of a specialists' meeting on data for decay heat predictions are based on fission products yields, on delayed neutrons and on comparative evaluations on evaluated and experimental data for thermal and fast fission. Fourteen conferences were analysed.

4122 (UCRL–100763) **Results from heavy-ion bombardments of ^{254}Es.** Hulet, E.K. Lawrence Livermore National Lab., CA (USA). 26 Sep 1989. 16p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8910237–3: International school seminar on heavy ion physics, Dubna (USSR), 3-12 Oct 1989). Order Number DE90002810. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We report our experimental work and offer our most recent data on the decay properties for five new isotopes of Md, No, Lr, and for ^{258m}Md. In addition to these successful experiments, we have also conducted searches for ^{263}[105], ^{264}[105], ^{272}[109], and superheavy elements. Finally, we summarize our conclusions based on what we have learned so far and what we believe are the most critical directions that should now be taken. 19 refs., 15 figs.

4123 (BNL–43385) **Deformed proximity potential for heavy ion reactions.** Baltz, A.J. Brookhaven National Lab., Upton, NY (USA). Sep 1989. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-8908173–1: 6. Nordic meeting on nuclear physics, Kopervik (Norway), 10-15 Aug 1989). Order Number DE90002295. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The proximity potential is discussed for the inelastic scattering of a spherical nucleus on a deformed nucleus or the mutual interaction of two deformed nuclei. It is shown that the proximity potential is, in general, geometrically more correct than the usual centerline prescription used in inelastic scattering analyses. For the cases where the proximity potential is inadequate a folding model approach is advocated. Techniques to facilitate the coupled channels analysis are presented. 11 refs., 6 figs.

In these lectures we will discuss attempts to solve the A = 3 to ∞ nuclear many-body problems with the variational method. We

choose the form of a variational wave function $X_\nu(1, 2 \cdots A)$ to describe the ground state. The X_ν and the ground-state energy E_ν are obtained by minimizing $E_\nu = \langle X_\nu|H|X_\nu\rangle/\langle X_\nu|X_\nu\rangle$ with respect to variations in X_ν. If the form of the variational wave function is chosen properly we can expect $X_\nu \approx X_0$ and $E_\nu \approx E_0$ where X_0 and E_0 are the exact ground-state wave function and energy. In general $E_\nu \geq E_0$ in variational calculations. 63 refs., 11 figs.

4125 (DOE/ER/40417–4) **Global trends and structural consequences of the proton-neutron interaction.** Zhang, J.-Y.; Brenner, D.S.; Casten, R.F.; Wesselborg, C.; Warner, D.D. Clark Univ., Worcester, MA (USA). [1989]. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40417;AC02-76CH00016. (CONF-8909247–1: ACS symposium on exotic nuclear spectroscopy, Miami Beach, FL (USA), 11-15 Sep 1989; BNL–43376). Order Number DE90002545. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

It has long been recognized that nuclei do not have deformed ground states or exhibit significant collective behavior unless they contain minimum numbers of both protons and neutrons beyond closed shell configurations. In medium mass and heavy nuclei, for example, it has been shown that each valence nucleon must have available 4-10 valence nucleons of the opposite type before deformation sets in. Empirically is is found that experimental observables such as $B(E2:2^+_1 \rightarrow 0^+_1)$ values and $E_4{}^+_1/E_2{}^+_1$ ratios, which are sensitive indicators of the degree of collectivity and deformation, correlate to a remarkable extent with the valence nucleon product, N_pN_n, which can be viewed as a rough first-order approximation to the integrated p-n interaction strength. Thus it has become clear that the p-n interaction among valence nucleons is largely responsible for deformation, configuration mixing and collectivity in nuclear matter. The success of the N_pN_n scheme has refocussed attention on the critical role played by the attractive p-n force in nuclear structure and we shall explore, here, several aspects of the interaction which have been highlighted by recent studies of empirical p-n interaction strengths. 23 refs., 8 figs.

4126 (DOE/ER/40427–09-N9) **The b_1 structure function and nuclear pions.** Miller, G.A. Washington Univ., Seattle, WA (USA). Dept. of Physics. [1989]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. (CONF-8901115–6: Topical conference on electronuclear physics with internal targets, Stanford, CA (USA), 9-12 Jan 1989). Order Number DE90003337. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The b_1 structure function is measurable in deep inelastic scattering from polarized nuclei with unpolarized beams. The contributions of nuclear pions are evaluated and found to be small, about 2%. 8 refs.

4127 (DOE/ER/40427–12-N9) **Space-time symmetries in nuclei.** Henley, E.M. Washington Univ., Seattle, WA (USA). Dept. of Physics. [1989]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. (CONF-8906160–8: Yamada conference on nuclear weak processes and nuclear structure, Osaka (Japan), 12-15 Jun 1989). Order Number DE90003335. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The theories or models of space-time symmetries are reviewed. The status of these theories and related experiments are assessed. 39 refs., 6 figs., 3 tabs.

4128 (DOE/ER/40427–20-N9) **[Nuclear theory]: Annual progress report.** Washington Univ., Seattle, WA (USA). Inst. for Nuclear Theory. Jun 1989. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. Order Number DE90003348. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This report discusses concepts in nuclear theory such as: neutrino nucleosynthesis; double beta decay; neutrino oscillations; chiral symmetry breaking; T invariance; quark propagator; cold fusion; and other related topics. (LSP)

4129 (IC–89/133) **Validity of the adiabatic rotational model in the case of the Hexadecupole operator.** Sharma, S.K.; Raina, P.K. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 14p. Order Number DE90607666. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The validity of the rotational model expressions relating the E4 transition probabilities and the intrinsic hexadecupole moments is examined in the light of the recent data on the inelastic electron-scattering form factors for the $0^+ \rightarrow 4^+$ transitions in some medium-mass nuclei. (author). 14 refs, 2 figs, 2 tabs.

4130 (IC–89/182) **Two-centre shell model description of quasi-molecular resonance states in heavy ion collisions.** Khosla, H.S.; Malik, S.S.; Gupta, R.K. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 16p. Order Number DE90607715. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The structural configurations of the quasi-molecular resonance states, at energies both below and above the Coulomb barrier, are studied within the orbiting cluster model approach. A generalized moment of inertia expression for the two-centre shell model nuclear shape, that applies also to dinuclear configurations, is used. Applications of the method are made to $^{12}C+^{12}C$, $^{16}O+^{12}C$, $^{16}O+^{16}O$, $^{24}Mg+^{24}Mg$ and $^{28}Si+^{28}Si$ systems. Further experimental investigations are needed. (author). 18 refs, 6 figs, 2 tabs.

4131 (IC–89/187) **Two-centre electron scattering phase shifts calculated to higher orders using the generalized JWKB method.** Chandel, S.S.; Gupta, R.K. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 9p. Order Number DE90607716. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The phase shifts with correction to order $(h/2\pi)^4$ for the scattering of high energy electrons from a two-centre Coulomb potential are obtained in the generalized JWKB method. Free particle and central Coulomb radial equations are used as the "model equations". Good convergence is obtained, except for one phase shift with $l = 0$, $m = 0$. (author). 9 refs, 2 tabs.

4132 (IC–89/202) **Positive energy bound states.** Awin, A.M. International Centre for Theoretical Physics, Trieste (Italy). Aug 1989. 41p. Order Number DE90607667. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Positive energy bound states (PEBS) are introduced through a brief historical background. Few examples, including cases with partial waves higher than the 0^{th} order, are then demonstrated. Related problems, such as the modification of Levinson's theorem, PEBS with perturbations and the interpretation of PEBS have been reviewed. The present status of the subject is then discussed. (author). 21 refs, 11 figs.

4133 (IC–89/209) **Double beta decay matrix elements in the Germanium region.** Sharma, S.K.; Mukherjee, G.; Rath, P.K. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 10p. Order Number DE90607755. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The matrix elements involved in the double beta decay process for the nuclei ^{76}Ge and ^{82}Se are calculated in terms of the variational wavefunctions resulting from realistic effective interactions operating in the unrestricted $(2p_{1/2}, 2p_{3/2}, 1f_{5/2}, 1g_{9/2})^{\pi,\nu}$ configuration space. (author). 10 refs, 2 tabs.

4134 (INDC(NDS)–220) **Physics of neutron emission in fission. Proceedings of a consultants meeting held in Mito City, Japan, 24-27 May 1988.** Lemmel, H.D. (ed.). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jun 1989. 339p. (CONF-8805174–: IAEA consultants' meeting on the physics of neutron emission in fission, Mito (Japan), 24-27 May 1988). Order Number DE90607759. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The document contains the proceedings of the IAEA Consultants' Meeting on the Physics of Neutron Emission in Fission, Mito City (Japan), 24-27 May 1988. Included are the conclusions and recommendations reached at the meeting and the papers presented by the meeting participants. These papers cover the following topics: Energy dependence of the number of fission neutrons ν-bar (3 papers), multiplicity distribution of fission neutrons (3 papers), competition between neutron and γ-ray emission (4 papers), the fission neutron yield in resonances (2 papers) and the energy spectrum of fission neutrons in experiment (9 papers), theory (4 papers) and

evaluation (1 paper). A separate abstract was prepared for each of these papers. Refs, figs and tabs.

4135 (INIS-mf–12013, pp. 67-68) **Systematics of neutron single particle energies for 16≤A≤50.** Khan, S.; Kihm, T.; Knoepfle, K.T.; Mairle, G.; Schulz, H.J.; Seeger, M.; Spahn, M.; Wen, S. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Neutron single particle energies were determined from neutron stripping and pickup experiments in the mass region 16≤A≤50. The data show simple relations in regions between nuclei with shell closure, which can be parametrized by linear functions of proton and neutron number of the respective nuclei. (orig.).

4136 (INIS-mf–12013, pp. 68-70) **Single neutron transfer reactions induced by polarized ^{7}Li ions.** Becker, K. (Marburg Univ. (Germany, F.R.). 4152 (INS–745) **Breaking of separability condition for dynamical collective subspace. Onset of quantum chaos in large-amplitude collective motion.** Sakata, Fumihiko; Yamamoto, Yoshifumi; Marumori, Toshio; Iida, Shinji; Tsukuma, Hidehiko. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1989. 45p. Order Number DE90719506. Available from NTIS (US Sales Only), PC A03/MF A01.

It is the purpose of the present paper to study 'global structure' of the state-space of an N-body interacting fermion system, which exhibits regular, transient and stochastic phases depending on strength of the interaction. An optimum representation called a dynamical representation plays an essential role in this investigation. The concept of the dynamical representation has been introduced in the quantum theory of dynamical collective subspace in our previous paper, in order to self-consistently determine an optimum collective subspace as well as an optimum collective Hamiltonian. In the theory, furthermore, dynamical conditions called separability and stability conditions have been provided in order to identify the optimum collective subspace as an approximate invariant subspace of the Hamiltonian. Physical meaning of these conditions are classified from a viewpoint to relate breaking of them with bifurcation of the collectivity and an onset of quantum chaos from the regular collective motion, by illustrating the general idea with numerical results obtained for a simple soluble model. It turns out that the onset of the stochastic phase is associated with dissolution of the quantum numbers to specify the collective subspace and this dissolution is induced by the breaking of the separability condition in the dynamical representation. (author).

4153 (INS–748) **Nuclear collective rotation in the SU_3 model, 2. Quantal rotation for a triaxial configuration.** Kinouchi, Shin-ichi; Kishimoto, Teruo; Kammuri, Tetsuo. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. May 1989. 36p. Order Number DE90719508. Available from NTIS (US Sales Only), PC A03/MF A01.

The collective rotation of a nuclear system with the SU_3 Hamiltonian is described by the quantal dynamical nuclear field theory. An angular frequency in the Coriolis interaction of the driving Hamiltonian is replaced by a total angular momentum operator divided by the corresponding moment of inertia. We consider here the low spin states for a triaxial intrinsic configuration. The rotational effect is taken into account by using the effective quadrupole and angular momentum operators, whose expressions are different depending on whether they refer to the laboratory frame or the body-fixed one. Effective forms of the total Hamiltonian and the particle angular momentum are compared with the exact SU_3 energy and the rotor's angular momentum, respectively. In order to dissolve the disagreement for the effective operators, the perturbing interaction should be supplemented by a residual part of the quadrupole-quadrupole interaction, which restores the rotational invariance of the intrinsic Hamiltonian. (author).

4154 (INS–749) **Nuclear collective rotation in the SU_3 model, 3. Quantal rotation for an axially symmetric configuration.** Kinouchi, Shin-ichi; Kishimoto, Teruo; Kammuri, Tetsuo. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. May 1989. 17p. Order Number DE90719509. Available from NTIS (US Sales Only), PC A03/MF A01.

Quantal form of the dynamical nuclear field theory is used for the description of the collective rotation of a nuclear system with the SU_3 Hamiltonian. Low spin states for an axially symmetric configuration with maximum alignment and $K = 0$ are treated. A residual part of the QQ force, which restores the rotational invariance of the intrinsic Hamiltonian, is employed together with the Coriolis coupling. The effective particle angular momentum is equal to that of the rotor up to second order. The effective Hamiltonian coincides with the exact SU_3 energy. The E2-matrix elements within the $K = 0$ band agree with the exact values given by Bohr and Mottelson. (author).

4155 (INS–751) **Dissipation mechanism of the large-amplitude collective motion. Dynamical evolution of a collective bundle of trajectories in the TDHF phase space for a simple soluble model.** Matsuo, Masayuki; Sakata, Fumihiko; Marumori, Toshio. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jun 1989. 43p. Order Number DE90719557. Available from NTIS (US Sales Only), PC A03/MF A01.

A new microscopic origin responsible for the dissipation process of the large-amplitude collective motion is discussed in terms of the dynamics of distribution function in the time-dependent Hartree Fock (TDHF) phase space. With the use of a simple soluble model, the origin is illustrated by numerically solving the master equation in the microscopic theory of nuclear collective dynamics which has been proposed by the present authors aiming at studying the order-to-chaos transitions of the large-amplitude nuclear collective motion. In this framework, collectivity of the system is expressed by a bundle of trajectories in the TDHF phase space and the dissipation process is related to the diffusive property of the bundle of trajectories. It is clarified that the microscopic dynamics responsible for the dissipation process originates from the dynamical fluctuation part of the coupling between the collective (relevant) and intrinsic (irrelevant) degrees of freedom. (author).

4156 (JAERI-M–89-093) **Fracto-fusion. Mechanism of cold fusion.** Takeda, Tatsuoki; Takizuka, Tomonori. Japan Atomic Energy Research Inst., Tokyo (Japan). Jul 1989. 19p. Order Number DE90719573. Available from NTIS (US Sales Only), PC A03/MF A01.

As a cold fusion mechanism we investigated a fracto-fusion by which reacting particles are accelerated by the electric field generated between the crack surfaces in a crystal and the beam fusion occurs. By assuming the possible magnitude of the potential difference we calculated the fusion rate and energy multiplication factor. These results are consistent with cold fusion experiments. On the basis of a simple model it is conjectured that necessary electric potential difference to accelerate particles can be generated even in a metal crystal with rather low resistivity, and we conclude that the fracto-fusion mechanism can explain the cold fusion phenomena successfully. (author).

4157 (JAERI-M–89-129) **Activation cross section data file.** Yamamuro, Nobuhiro; Iijima, Shungo. Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment. c 30 Aug 1989. 98p. (In Japanese). Sponsored by Japan Atomic Energy Research Institute. (NEANDC(J)–141/U;INDC(JPN)–128/L). Available from Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken, 319-11, Japan.

To evaluate the radioisotope productions due to the neutron irradiation in fission or fusion reactors, the data for the activation cross sections ought to be provided. It is planning to file more than 2000 activation cross sections at final. In the current year, the neutron cross sections for 14 elements from Ni to W have been calculated and evaluated in the energy range 10^{-5} to 20 MeV. The calculations with a simplified-input nuclear cross section calculation system SINCROS were described, and another method of evaluation which is consistent with JENDL-3 were also mentioned. The results of cross section calculation are in good agreement with experimental data and they were stored in the file 8, 9 and 10 of ENDF/B format.

4158 (JINR-E–6-89-411) **Second class currents and the β-particle asymmetry at the decay of oriented ^{24m}Na nuclei.** Cathat, C.L.; Solnyshkin, A.A.; Ousmane, M.A. Joint Inst. for Nuclear Research, Dubna (USSR). 1989. 11p. (CONF-8904280–2: International conference on electromagnetic transitions in atomic nuclei, Tashkent (USSR), 18-21 Apr 1989). Order Number DE90000717. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI.

The possible contribution of second class currents to the β-particle asymmetry coefficient (A_e) at the decay of oriented ^{24m}Na nuclei is theoretically investigated and estimated in the framework of the nuclear shell model. For $F_T \approx 10^{-3}$ MeV^{-1} the effect is shown to be $\approx 10^{-3}$. A possibility of an experiment to measure the energy dependence of the coefficient A_e using the laser method is discussed. A scheme of the experiment is proposed. 12 refs.

Research Reactor Inst. Feb 1989. 115p. (In Japanese). (CONF-8812116–: Specialists' meeting on physics and engineering of fission and spallation, Kumatori (Japan), 19 Dec 1988). Order Number DE90719706. Available from NTIS (US Sales Only), PC A06/MF A01.

The meeting was held on Aug. 10 and Dec. 19, 1988. The proceedings carry a total of 13 reports concerning the physics and engineerings of fission and spallation. The first and second reports, entitled 'IAEA Consultant's Meeting on the Physics of Neutron Emission in Fission (I) and (II)', respectively, give brief comments on major topics discussed in the meeting, recently obtained information, and issues of physical interest in the field of fission and spallation. The other 11 reports are entitled 'A Study on Mass Division in Low-Energy Nuclear Fission', 'Recent Topics on The Nuclear Fission Accompanied with High Spin', 'Nuclear Spallation Engineering and Strong Neutron Source', 'Nuclear Spallation by Gamma-Rays', 'Comment: Photopion Reaction and Photospallation', 'Report on the International Meeting on Physics and Chemistry of Nuclear Fission in Commemoration of the 50th Anniversary of the Discovery of Nuclear Fission', 'Charge Distribution and Neutron Systematics in Heavy-Ion Fission', 'High-Energy Gamma-Rays from Fission of ^{252}Cf', 'Behavior of FP in Chromatographic Separation', 'Formation of Neutron by Light Ion', and 'Annihilation Treatment and Annihilation Furnace Equipped with Proton Accelerator'. (N.K.).

4160 (LA-UR–89-3638) **Pion induced double-charge exchange above the resonance.** Oset, E.; Strottman, D. Los Alamos National Lab., NM (USA). 24 Oct 1989. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8908131–3: 2. LAMPF workshop on pion-nucleus double charge exchange, Los Alamos, NM (USA), 9-11 Aug 1989). Order Number DE90002656. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The zero degree excitation function for (π^+, π^-) is calculated for pion energies of 300 to 1400 MeV assuming a sequential mechanism. The cross section around 1225 MeV is 10^4 smaller than at 800 MeV. Experiments at this energy should be ideal for searches for effects due to exchange currents, and other non-conventional mechanisms. 15 refs.

4161 (LBL–27874) **Looking for precursors of neutron matter exotica.** Myers, W.D. Lawrence Berkeley Lab., CA (USA). Oct 1989. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-891030–2: AIAA computers in aerospace conference, Monterey, CA (USA), Oct 1989). Order Number DE90003109. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The question of the possible stability of neutron matter is investigated within the framework of a Thomas-Fermi model of nuclei. Some of the consequences of bound (or slightly unbound) neutron matter are discussed. A comparison is then made between the model predictions and the observed neutron drip line for light nuclei. The tentative conclusion arising from this comparison is that neutron matter is probably unbound, in approximate agreement with an earlier theoretical estimate. Quantum effects that could lead to extremely large neutron halos are also briefly discussed. 11 refs., 7 figs.

4162 (LBL–27881) **Theoretical issues in the search for the quark gluon plasma.** Gyulassy, M. Lawrence Berkeley Lab., CA (USA). Oct 1989. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890826–7: International nuclear physics conference, Sao Paulo (Brazil), 20-26 Aug 1989). Order Number DE90003272. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Issues connected with independent string fragmentation, initial conditions, and hadronic transport in light ion reactions at AGS and SPS are discussed. 19 refs., 2 figs.

4163 (N–89-27477) **Nuclear fragmentation energy and momentum transfer distributions in relativistic heavy-ion collisions. Progress report, period ended 30 June 1989.** Khandelwal, G.S.; Khan, F. Old Dominion Univ., Norfolk, VA (USA). Aug 1989. 152p. (NASA-CR–185501;NAS–1.26:185501). Available from NTIS, PC A08/MF A01.

An optical model description of energy and momentum transfer in relativistic heavy-ion collisions, based upon composite particle multiple scattering theory, is presented. Transverse and longitudinal momentum transfers to the projectile are shown to arise from the real and absorptive part of the optical potential, respectively. Comparisons of fragment momentum distribution observables with experiments are made and trends outlined based on our knowledge of the underlying nucleon-nucleon interaction. Corrections to the above calculations are discussed. Finally, use of the model as a tool for estimating collision impact parameters is indicated.

4164 (RCNP-P–105) **Proceedings of the workshop on neutron scattering and neutron reactions.** Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Jul 1989. 121p. Order Number DE90705941. Available from NTIS (US Sales Only), PC A06/MF A01.

Individual papers in these proceedings are indexed separately.

4165 (RCNP-P–105, pp. 80-89) **Semiclassical distorted wave theory of inclusive nucleon inelastic scattering to continuum.** Kawai, M. (Kyushu Univ., Fukuoka (Japan). Dept. of Physics); Luo, Y.L. Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Jul 1989. (In Japanese). In *Proceedings of the workshop on neutron scattering and neutron reactions.* Order Number DE90705941. Available from NTIS (US Sales Only), PC A06/MF A01.

A semiclassical model is presented for the one step process of the inclusive nucleon inelastic scattering to the continuum. In the model, we use distorted waves for describing the motion of the incident and the exit nucleon, and the Thomas-Fermi model for the initial and the final states of the target nucleus. The averaged two-body cross section inside the nucleus is given by Kikuchi-Kawai expression. The model gives a closed form formula for the double differential cross section. No free parameter is included. We apply the model to the inclusive nucleon inelastic scattering from Al, Sn and Bi at 62 MeV, and Ni at 164 MeV. The angular distribution experimental data are reproduced very well except for small and large angle regions. The calculated energy spectra agree with the experimental data very well in the middle angle region and at high exit energies. (author).

4166 Coulomb-nuclear interference in elastic heavy-ion scattering. Fricke, S.H. (Wisconsin Univ., Madison (USA). Dept. of Physics); Hatchell, P.J.; McVoy, K.W.; Satchler, G.R. *Nuclear Physics [Section] A (Netherlands)*, 500(2): 399-428 (21 Aug 1989). DOE Contract AC05-84OR21400.

Elastic heavy-ion angular distributions at small angles, forward of the quarter-point angle, have often been characterized as examples of either a Coulomb rainbow or of Fresnel diffraction. Using the modern high-quality data of Hostachy et al. as an example, we argue that the truth is intermediate between these two extremes, and indeed so far from them as to make both models quite inappropriate descriptions of nuclear reality. We suggest retreating to the more general label of 'Coulomb-nuclear interference', which includes both of these (inapplicable) extremes as special cases. A semiclassical analysis of optical-model fits is found to offer helpful insight into the nature of this interference. (orig.).

4167 Hadronization of the flux tubes in ultrarelativistic nucleus–nucleus collisions. Kataja, M. (Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139 (US)); Matsui, T. *Annals of Physics (New York) (USA)*, 192(2): 383-408 (Jun 1989).

The hadronization mechanism of flux tubes which may be created in relativistic heavy ion collisions is studied by introducing the concept of an intermediate mixed state in which fragmented flux tubes coexist with a dilute hadron gas. In the thermodynamic limit, this state can be considered a color dielectric medium characterized by a color dielectric constant which takes values between 0 and 1. The electrohydrodynamics formulated previously to describe plasma formation by the decay of a strong color electric field in the flux tube is extended to incorporate such a dielectric nature of transient hadronic matter using the bag model. It is shown that in the limit of the large bag constant our formalism is reduced to the hydrodynamics of the hadron gas produced by the fragmentation of multiple strings. We present a numerical simulation of one-dimensional longitudinal evolution of the system which demonstrates the characteristic reheating effect due to the hadronization transition. © 1989 Academic Press, Inc.

4168 Correlations between fragment mass and excitation energy in damped reactions. Toke, J. (Department of Chemistry, University of Rochester, Rochester, New York 14627 (US)); Schroder, W.U.; Huizenga, J.R. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1577-1580 (Oct 1989).

A recent claim of significant correlations between the fragment mass and excitation energy at a fixed total kinetic energy loss in a damped reaction is reexamined. It is shown that correlations of similar character and strength to those reported, result from incorrect assumptions made in the original analysis of kinematical coincidence data from the $^{165}Ho+^{56}Fe$ reaction at 504 MeV. Based on Monte Carlo simulations of the experiment, it is concluded, that within the uncertainties resulting from the experimental method, the data from the above reaction are consistent with a damped reaction mechanism, in which, for a fixed kinetic energy loss, the fragment excitation energy is uncorrelated with its mass.

4169 Cold nuclear fusion in metallic hydrogen and normal metals. Horowitz, C.J. (Physics Department and Nuclear Theory Center, Indiana University, Bloomington, Indiana 47405 (US)). *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1555-1558 (Oct 1989).

The rate of nuclear fusion from tunneling in very dense metallic hydrogen in the core of Jupiter is calculated to be 10^{-50} per hydrogen-deuterium pair per second. It is estimated that the width of the fusion barrier for deuterium in palladium or a similar metal must be reduced to, of order, 0.1 A for the fusion rate to be 10^{-25} per deuterium per second. If this scale is achieved, the ratios of various nuclear reaction rates will be very different for cold versus thermonuclear fusion.

4170 Dirac random-phase-approximation analysis of the inelastic scattering of 500 MeV protons from ^{40}Ca. Rost, E. (Department of Physics, University of Colorado, Boulder, Colorado 80309 (US)); Shepard, J.R. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1736-1740 (Oct 1989).

The random-phase-approximation description of nuclear excitations is applied to the calculation of inelastic scattering of 500 MeV protons from ^{40}Ca at 500 MeV. The calculations are based on a relativistic mean-field theory applied in a consistent manner for bound and continuum states in a distorted-wave impulse approximation. Differences in spin observables between our random-phase-approximation treatment and collective model treatments are traceable to ΔS=1 terms included in the random-phase approximation. Agreement with data is somewhat better using the random-phase-approximation approach.

4171 Boltzmann-Uehling-Uhlenbeck and relaxation time methods: A comparison. Kohler, H.S. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, Berkeley, California 94720 (US)); Bauer, W. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1711-1715 (Oct 1989). DOE Contract AC03-76SF00098.

The Boltzmann-Uehling-Uhlenbeck and relaxation time methods are compared numerically for collisions between two ^{16}O nuclei. Phase-space trajectories and double differential cross sections for nucleon emission are compared. Results are practically identical although the relaxation time method exhibits a slightly higher degree of stopping power.

4172 Saturation effects in gamma-band energies. Casten, R.F. (Brookhaven National Laboratory, Upton, New York 11973 (US)); Heyde, K.; Wolf, A.; von Brentano, P. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1806-1809 (Oct 1989). DOE Contract AC02-76CH00016.

It is shown that a recently proposed method that reproduces the saturation in $B(E2;0_1^+ \rightarrow 2_1^+)$ values in deformed nuclei also improves interacting boson model predictions for γ-band energy systematics near midshell. The method is based on an explicit recognition of the (Nilsson) orbit dependence of the valence p-n interaction and is, in effect, a refinement to the N_pN_n scheme which linearizes the behavior of certain observables.

4173 Role of mesonic resonances in antiproton annihilation on nuclei. Cugnon, J. (Physique Nucleaire Theorique, Institut de Physique au Sart Tilman, Universite de Liege, B-4000 Liege 1, Belgium (BE)); Deneye, P.; Vandermeulen, J. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1822-1825 (Oct 1989).

The implications of η and ω production in antiproton-nucleus annihilation are examined by means of a simplified cascade scheme. The intranuclear absorption of the pions "hidden" in the resonances is predicted smaller than the average pion absorption measured by experiment. It is also pointed out that the reaction $\omega N \rightarrow \Lambda K$ might be a significant source of Λ production in antiproton-nucleus interactions. The possibility of studying η-nucleus interactions is examined.

4174 Single-particle spectrum and ring-diagram nuclear matter calculations: A reply to a Comment. Jiang, M.F. (Department of Physics, University of Idaho, Moscow, ID (USA)); Kuo, T.T.S.; Muther, H. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(4): 1836-1838 (Oct 1989).

Ring-diagram nuclear matter calculations using different choices for the single-particle spectrum are performed and discussed.

4175 Fusion rates for hydrogen isotopic molecules of relevance for "cold fusion". Szalewicz, K. (Department of Physics and Astronomy, University of Delaware, Newark, Delaware 19716 (US)); Morgan, J.D. III; Monkhorst, H.J. *Physical Review [Section] A: General Physics (USA)*, 40(5): 2824-2827 (1 Sep 1989).

In response to the recent announcements of evidence for room-temperature fusion in the electrolysis of D_2O, we have analyzed how the fusion rate depends on the reduced mass of the fusing nuclei, the effective mass of a "heavy" electron, and the degree of vibrational excitation. Our results have been obtained both by accurately solving the Schroedinger equation for the hydrogen molecule and by using the WKB approximation. We find that in light of the reported *d-d* fusion rate, the excess heat in the experiment by Fleischmann, Pons, and Hawkins [J. Electroanal. Chem. 261, 301 (1989)] is difficult to explain in terms of conventional nuclear processes.

4176 **Feynman–Monte Carlo calculations of electron capture at relativistic collider energies.** Rhoades-Brown, M.J. (Accelerator Development Department, Brookhaven National Laboratory, Upton, New York 11973 (US)); Bottcher, C.; Strayer, M.R. *Physical Review [Section] A: General Physics (USA),* 40(5): 2831-2834 (1 Sep 1989). DOE Contract AC02-76CH00016;AC05-84OR21400.

Calculations are presented for electron capture associated with pair production in collisions of heavy ions at relativistic energies. We employ the recently introduced technique of evaluating Feynman perturbation integrals exactly by Monte Carlo methods. The results agree well with virtual-photon approximations if they are carefully formulated, but appear to disagree with some published results. The cross sections for symmetric collisions of uranium, gold, iodine, copper, and silicon are presented as a function of the beam energy. These results are discussed within the context of beam storage times of a relativistic heavy-ion collider.

4177 **Muon spectrum and convoy effects after muon-catalyzed fusion.** Muller, B. (Department of Physics, University of Arizona, Tucson, Arizona 85721 (US)); Rafelski, H.E.; Rafelski, J. *Physical Review [Section] A: General Physics (USA),* 40(5): 2839-2842 (1 Sep 1989).

We study final-state interactions of the muon after muon-catalyzed D-T fusion reaction with the α particle and with target matter. The yield of convoy muons, traveling with the α particle but remaining unbound is calculated. Energy loss in the dense target may lead to capture of a fraction of these muons into outer shells of the α particle. We show that the final capture probability can be strongly density dependent.

4178 (AD-A–210999/9/XAB) **Radiation-transport calculations of a simple structure using the vehicle code system with 69-group cross sections and the Monte Carlo neutron and photon code. Final report.** Caton, H. Army Armament Research and Development Command, Aberdeen Proving Ground, MD (USA). Ballistics Research Lab. Aug 1989. 17p. (BRL-TR–3025). Available from NTIS, PC A03/MF A01.

The 58-Group Cross Sections used in vehicle code system (VCS) calculations do not adequately describe secondary gamma production in steel. In response, Oak Ridge National Laboratory (ORNL) has compiled a set of cross sections with 69 energy groups. This report documents an escalation of the 69-group cross sections on a simple steel box with various radiation liners. Also evaluated is the Monte Carlo Neutron and Photon Transport Code (MPNP).

4179 (INDC(NDS)–224/GF) **Translation of reports from the first international conference on neutron physics, Kiev, USSR, 14-18 September 1987.** International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Aug 1989. 12p. (CONF-870959–: 1. international conference on neutron physics, Kiev (USSR), 14-18 Sep 1987). Order Number DE90607655. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Translated from Russian by the IAEA.

The document contains the English translation of the following two papers presented at the First International Conference on Neutron Physics, held in Kiev, USSR, between 14-18 September 1987: Neutron Leakages from Pb and Be Spherical Shells with a Central 14-MeV Neutron Source; Integral Experiments on Transmission of 14-Mev Neutrons in a FLiBe Assembly. A separate abstract was prepared for each of these papers. Refs and tabs.

4180 (INIS-BR–1683) **Determination of X-ray anomalous scattering in silicon.** Cusatis, C. Parana Univ., Curitiba, PR (Brazil). Dept. de Fisica. 1987. 78p. (In Portuguese). Order Number DE90607662. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

The linear attenuation coeficient for X-ray in silicon was measured with approximately 0,1% accuracy, for 6 diferent wavelenghts of caracteristic radiation. From these result the imaginary parts of the atomic scattering factors, for silicon and for those wavelenghts, were obtained with the same accuracy. The results are compared with the most recent published values. The proposed method to avoid Rayleigh scattering can be used for any type of "perfect" crystal. (author).

4181 **Symbolic implicit Monte Carlo.** Brooks, E.D. III (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550 (US)). *Journal of Computational Physics (USA),* 83(2): 433-446 (Aug 1989). DOE Contract W-7405-ENG-48.

We introduce a new implicit Monte Carlo technique for solving time dependent radiation transport problems involving spontaneous emission. In the usual implicit Monte Carlo procedure an effective scattering term in dictated by the requirement of self-consistency between the transport and implicitly differenced atomic populations equations. The effective scattering term, a source of inefficiency for optically thick problems, becomes an impasse for problems with gain where its sign is negative. In our new technique the effective scattering term does not occur and the excecution time for the Monte Carlo portion of the algorithm is independent of opacity. We compare the performance and accuracy of the new symbolic implicit Monte Carlo technique to the usual effective scattering technique for the time dependent description of a two-level system in slab geometry. We also examine the possibility of effectively exploiting multiprocessors on the algorithm, obtaining supercomputer performance using shared memory multiprocessors based on cheap commodity microprocessor technology. © 1989 Academic Press, Inc.

4182 **Intense microwave radiation from a repetitive backward-wave oscillator driven by a relativistic electron beam.** Bromborsky, A. (Harry Diamond Laboratories, 2800 Powder Mill Rd., Adelphi, Maryland 20783-1145 (US)); Still, G.W.; Kehs, R.A.; Clark, C.; Early, L.; Rohwein, G.; Poukey, J. *Journal of Applied Physics (USA),* 66(8): 3871-3876 (15 Oct 1989).

High-power microwaves (20–50 MW, 8.8 GHz) have been produced in repetitive pulses at a rate of 10 Hz in a joint experiment by Harry Diamond Laboratories and Sandia National Laboratories. These microwaves were produced with Harry Diamond Laboratories' backward-wave oscillator (BWO), driven by a 600 to 800-kV, 2-kA electron beam, which was guided by a magnetic field of variable strength from 0.75 to 1.05 T. The beam was produced with Sandia National Laboratories' repetitive high-voltage pulser, RAVEN. Microwave diagnostic instrumentation included a directional coupler, heterodyne receiver, dispersive waveguide delay line, and calorimeter. In a train of 10 pulses, the shape, duration, and amplitude of the injection voltage and beam current remained unchanged for each individual pulse. The intensity of the final microwave pulse was 40% of the first pulse, and the final pulse was 80% as long as the first. The basic pulse shape remained unchanged. More intense microwave radiation should be obtained with a higher magnetic field. Computer simulations using the code magic predicted the characteristic dip in the magnetic field strength versus microwave power output curve. Code predictions of microwave power output with a warm beam agree very well with experimental results. Finally, cyclotron resonance is presented in a descriptive fashion to account for the power output dip. This is the first experiment with a repetitively pulsed high-power BWO driven by a relativistic electron beam performed outside the USSR.

4183 (BARC–1453) **Environmental radiation levels in and around Kalpakkam during 1983-1987.** Nambi, K.S.V.; Mehta, N.K.; Kannan, V.; Sundaram, Meenakshi; Viswambharan, K.R.

Bhabha Atomic Research Centre, Bombay (India). 1989. 38p. Order Number DE90608340. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Results of the environmental radiation monitoring around the Kalpakkam Atomic Power Station carried out routinely on quarterly integrating cycles using thermoluminescent dosimeters, are presented and analysed, for the five year period 1983-87. As the first reactor attained criticality in July 1983 and the second unit in August 1985 the results are compared with the previously published values for the period 1980-82. Only at two locations viz. the Micromet laboratory situated at 800 meters from the station and the main gate located at the 1.6 km exclusion zone boundary, a possible indication of increases in the environmental radiation level associated with the power reactor operations could be discerned. However these were found to be statistically insignificant. The whole terrain is characterised by somewhat high levels of terrestrial radiations with quite wide temporal fluctuations which easily mask the small increases if any in the radiation levels, contributed by the reactors. Places located farther away from the power station and away from the monazite-bearing beaches, yielded an annual average background level of 117 +- 29 mR as against the value of 125 +- 24 mR obtained during the preoperational period of 1980-82. A declining general trend in the radiation levels is seen at many locations and this is thought to be associated with significant reduction in the ^{137}Cs fallout component of the environmental radiation. (author). 5 refs., 2 tabs., 11 figs.

4184 (CEA-R-5492) **Ionizing radiations dosimetry: new results in the megagray range.** Balian, P. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Div. de Metallurgie et d'Etude des Combustibles Nucleaires. 1989. 154p. (In French). Order Number DE90721224. Available from NTIS (US Sales Only), PC A08/MF A01.

Industrial irradiation for food preservation, medical sterilization and plastic processing is in great expansion and an accurate dosimetry in the megagray range is required. It is also required for safety purposes around nuclear reactors or waste storage sites. The study of photon-matter interaction leads us to consider high-dose dosimeters among the solids in which radiolysis occurs. Organic conductors are indeed good candidates for high-dose dosimetry. These materials show original properties due to the great anisotropy of their electronic system. Radiation effects, especially on the resistivity and on the (E.S.R.) Electron Spin Resonance linewidth, are very important. We show that a simple resistance measurement allows an accurate monitoring of the absorbed dose, in the range 0.01 - 50 MGy, for X-rays, gamma-rays and electron irradiations. The E.S.R. linewidth measurements permits the use of small dosimeters between 1 and 100 MGy. Finally, some organic conductors are proposed as high-temperature dosimeters for irradiation performed up to 120^{0}C. The irradiated pure silica contains a large variety of defects. Only the E' center seems helpful for dosimetry purposes, and its electron spin resonance (E.S.R.) signal is simply related to the absorbed dose in the range 0.1 - 3 MGy or even, 0.5 kGy - 5 MGy.

4185 (CONF-890619-9) **Light sensitivity of .13 mm thick LiF-teflon thermoluminesence dosimeters.** Adams, F.D.; Crawford-Brown, D.J.; Watson, J.E.; Symons, M.J.; Hamrick, P.E. Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA). [1989]. 3p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC08-89NV10630. From 34. annual meeting of the Health Physics Society; Albuquerque, NM (USA); 25-29 Jun 1989. Order Number DE90002509. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Based on the results of this study, it is recommended that before a dosimeter is put to use for radiation exposures it should be placed in a controlled environment. The environment should have the same type and duration of light exposure that is used in the laboratories and/or other setting where the dosimeter will be used, with no ionizing radiation source present. The dosimeter should be exposed to this environment for the same amount of time that the dosimeter will be used in dose assessment. The TLDs that were exposed to the fluorescent light should then be read and and the results compared to the light output of the TLDs that have been read for background. If the exposed TLD's response is higher than background readings then the covering of the TLDs should be checked for lighttightness. This is very important since doses can be overestimated if this aspect is not taken into account.

4186 (INIS-BR-1688) **Radiological survey of Goiania by a mobile monitoring unit.** Moreira, M.C.F. Instituto de Radioprotecao e Dosimetria, Rio de Janeiro, RJ (Brazil). [1989]. 12p. Order Number DE90608341. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

After the initial response to the radiological accident in Goiania, a radiological survey throughout the city was performed using a mobile unit. This unit was equipped with two Geiger Muller detectors outsise the vehicle and one 4' x 4' NaI(Tl) detector connected to a dual recorder. All three detectors were placed 1 m above the ground. The survey system covers a wide range of exposure rate, since environmental levels up to 10 R h^{-1}. Eighty percent of the Goiania urban area was covered by this survey and except for some specific locations the contamination was restricted to the main foci surroundings ocurring in a non homogenous pattern. The highest value observed in the city after the main foci decontamination was of 0.7 mR h^{-1} in the 57th street - where the source was opened. Results of the main foci and some other locations are apresented in the paper. The system designed to perform the survey in the city played a fundamental role during the decontamination process (author).

4187 (INIS-BR-1719) **Aspects of radiological protection in nuclear installations.** Hunt, J.G.; Oliveira Filho, D.S.; Rabello, P.N.P. Instituto Brasileiro do Petroleo, Rio de Janeiro, RJ (Brazil). 1987. 10p. (In Portuguese). (CONF-8705395-: 5. seminar on industrial safety, Fortaleza (Brazil), 26-29 May 1987). Order Number DE90608344. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Due to the short term, long term and genetic effects of radiation, the work with radioactive materials requires special protection measures. The objective of radiological protection is to assure the occupational health of the workers by maintaining the dose levels as low as reasonably achievable. The radiological protection measures implanted in the NUCLEBRAS fuel element factory are described. The philosophy and practical measures taken are explained, and a comparison between radiation protection and industrial safety norms is made. The result of this work shows that the radiological safety of the element factory is assured. (author).

4188 (INIS-BR-1720) **Radiological protection. Responsibility of the Safety Engineering Company.** Netto, A.L. Instituto Brasileiro do Petroleo, Rio de Janeiro, RJ (Brazil). 1987. 6p. (In Portuguese). (CONF-8705395-: 5. Seminar on Industrial Safety, Fortaleza (Brazil), 26-29 May 1987). Order Number DE90608334. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

This subject takes care of the Safety Engineering at the Radiologic Protection area on the X and Gama Rays Services. It mainly emphasis the case of that companies that, due do not have proper X and Gama Rays Services utilize partime task force on this area, but answer themselves for the safety of their employees in case of any accident occurence. (author).

4190 (INIS-mf-11558) **Natural background radiation and population dose distribution in India.** Nambi, K.S.V.; Bapat, V.N.; David, M.; Sundaram, V.K.; Sunta, C.M.; Soman, S.D. Bhabha Atomic Research Centre, Bombay (India). 1986. 30p. Order Number DE90608346. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A country-wide survey of the outdoor natural background gamma radiation levels has been made using mailed thermoluminescent

dosimeters (TLDs). The salient features of the results are: (1) The air-kerma levels and the population doses in various states follow log-normal and normal distributions respectively. (2) The national average value for the air dose (air-kerma) is 775 +- 370 (1σ)μGy/y. (3) The lowest air-kerma recorded is 0.23 mGy/y at Minicoy (Laccadive Islands) and the highest is 26.73 mGy/y at Chavra (monazite areas, Kerala). (4) There are significant temporal variation s (even as high as +- 40 per cent) of the background radiation level at many locations and at least in 10 locations where radon/thoron measurements are available, these could be associated with the seasonal variations in radon/thoron levels. (5) The mail control TLDs indicate a country-wide average value of 785 +- 225 μGy/y for the air-kerma which can be considered to provide a truly national average value for the natural background radiation level in India. (6) The mean natural radiation per caput for the country works out to be 690 +- 200 (1σ) Sv/y. (7) The natural radiation per caput seems to be maximum for Andhra Pradesh (1065 +- 325 μSv/y) and minimum for Maharashtra (370 +- 80 μSv/y). (8) The population dose from the external natural background radiation is estimated to be half a million person-Sievert. (9) Assuming 1 CRP risk factor, it can be estimated that just one out of the 43 cancer deaths occurring on an average per 100,000 population in India, can be attributed to the external natural background radiation. (author). 18 refs., 13 tabs., 9 figs.

4191 (INIS-mf–11562) **Abstracts of 14th radiation hygiene days.** Ceska Lekarska Spolecnost J.E. Purkyne, Prague (Czechoslovakia). Spolecnost Nuklearni Mediciny a Radiacni Hygieny; Institut Hygieny a Epidemiologie, Prague (Czechoslovakia). Ustav Hygieny Zareni; Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Dozimetrie Zareni; Vojenska Lekarska Akademie, Hradec Kralove (Czechoslovakia). Dec 1988. 93p. (In Czech, Slovak). (CONF-8812118–: 14. radiation hygiene days, Brno (Czechoslovakia), 8-9 Dec 1988). Order Number DE90608347. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

The proceedings contain 90 abstracts of submitted papers and posters. All have been inputted in INIS. They concern radiation hygiene and radiation protection, this both in general terms and in terms of occupational hazards; they inform on natural radioactivity measurement; on radon levels in buildings; the assessment and monitoring of escapes of radioisotopes into the environment (especially following the Chernobyl nuclear power plant accident). The questions are discussed of building monitoring networks in the environs of nuclear power plants and radioactive waste burial sites. Some presentations deal with dose measurement and spectrum evaluation; the organisation of the national personnel dosimetry service; tests of radiopharmaceuticals purity and activity; dosimetry work during dismantle of a shutdown reactor; medical radiology risks; and other problems. (M.D.).

4192 (LHRL-LIB/Trans–3) **Dose limits.** Fitoussi, L. Australian Nuclear Science and Technology Organisation, Lucas Heights (Australia). Dec 1987. 34p. Order Number DE89618065. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Translated from CEA Clefs (Jul 1987) no. 6 p. 22-33.

The dose limit is defined to be the level of harmfulness which must not be exceeded, so that an activity can be exercised in a regular manner without running a risk unacceptable to man and the society. The paper examines the effects of radiation categorised into stochastic and non-stochastic. Dose limits for workers and the public are discussed.

4193 (NEANDC-E–292-U-Vol.III-Euratom) **Annual progress report on nuclear data 1987.** Hansen, H.H. (ed.). Nuclear Energy Agency, 75 - Paris (France). Nuclear Data Committee. Oct 1988. 57p. (INDC-EUR–022-G). Order Number DE90721238. Available from NTIS (US Sales Only), PC A04/MF A01.

In 1987 the efforts for the improvement of the set of standard neutron cross-sections, the mass-distributions in the fission of U^{235} continued. In the field of nuclear data for fission technology, effort was concentrated on subthermal neutron energy, Cr isotopes and Ni isotopes. In the area of nuclear data for fusion technology, data for neutron transport calculations in the blanket were improved. The radionuclide metrology works determined decay-scheme data and preparation of standards. A cooperation was established between INDC and CBNM for neutron flux metrology.

4194 (NIRS-R–15) **Report of radioactivity survey research in fiscal year 1987.** National Inst. of Radiological Sciences, Chiba (Japan). Dec 1988. 107p. (In Japanese). Order Number DE90719709. Available from NTIS (US Sales Only), PC A06/MF A01.

National Institute of Radiological Sciences has carried out continuously since 1959 the survey and research on the environmental radioactivity level due to the radioactive fallouts accompanying nuclear explosion experiments and the radioactive substances released from atomic energy facilities, as a part of the radioactivity survey and research performed by Science and Technology Agency. Now, accompanying the remarkable development of the peaceful utilization of atomic energy, the interest of people in environmental radioactivity has become high. Accordingly, the safety research in atomic energy utilization is strongly demanded, and the survey and research on radioactivity that is the base of the effect to environment and people become more important. In fiscal year 1987, the budget of more than 147 million yen was appropriated, and the survey of radioactivity level and dose in environment, foods and human bodies, the survey of level around atomic energy facilities, the business of the radioactivity data center, the basic investigation concerning the evaluation of the results of radioactivity survey, the training of technicians of environmental radiation monitoring and the survey and research on the measurement of and countermeasures to emergency exposure were carried out. These results are reported. (K.I.).

4195 (PNL–7124) **The determination of the penetrating radiation dose at Hanford.** Rathbun, L.A. Pacific Northwest Lab., Richland, WA (USA). Sep 1989. 24p. Sponsored by U.S. DOE Environment Health & Safety. DOE Contract AC06-76RL01830. Order Number DE90001780. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Most of the thermoluminescent dosimeters (TLDs) and other devices that have been used to measure environmental radiation on the Hanford Site have measured natural background levels of radiation. Measurements of offsite environmental radiation near the boundary of the Hanford Site have often indicated higher doses than onsite measurements have. However, the converse has been found when radiation measurements from the cities and communities of southeastern Washington were compared with onsite measurements. The historical trends described for environmental TLD data have been better defined in this study by compiling the TLD data for selected locations over a 6-year period (1983 to 1988). The ongoing Hanford Environmental Surveillance Program also provides radionuclide concentrations in soil based on samples collected by technicians at Pacific Northwest Laboratory (PNL) and sent to a commercial laboratory for analyses. As part of the study described in this report, a portable gamma spectroscopy system was used in the field to identify concentrations of gamma-emitting radionuclides in the soil at various locations on the Hanford Site and in the surrounding area. This work began in 1986. Supplemental radiation measurements were made with a microprocessor-based survey meter and large NaI detector. 20 refs., 4 figs., 3 tabs.

4196 (SAAS–372) **State control in the GDR of the handling of unsealed radioactive materials in laboratories of type I to III.** Goergner, D.; Makedanz, A.; Ott, R.; Poulheim, K.F. Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic). 1989. 38p. (In German). Order Number DE90608331. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The legal requirements for the handling of unsealed radioactive materials have been explained in depth including such questions as how to get a State permission, build and equip Type-I, Type-II and Type-III laboratories, and monitor radiation workers at these working places. Finally, mention was made of the radionuclides most frequently handled as well as the overall activity processed per year in the different laboratories. (author).

4197 (SAAS–373) **Conduct of local dosimetry in X-ray diagnosis.** Anger, K. Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic). 1989. 26p. (In German). Order Number DE90608335. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Local dosimetry represents a fundamental method of controlling the observance of technical radiation protection requirements for the

use of X-ray equipment. First measurements are already taken at an early stage, that is, following the manufacturing of radiological equipment. Further measurements are performed after installation, before putting into operation, after maintenance and repair work as well as during in-service inspections. Details of, including responsibilities for, these measurements are explained. (author).

4198 (SAAS–374) **Radiation protection measurements at a UA-type teaching kit of sealed radioactive sources.** Glaeser, M.; Makedanz, A. Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic). 1989. 20p. (In German). Order Number DE90608336. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The radioactive teaching kit of type UA approved for use at secondary schools in the GDR contains Co-60, Cs-137, Na-22 and Kr-85. Dose rate measurements around the loaded source container as well as around the unshielded individual sources indicated that the radiation exposure to experimenters and audiences from this kit can be considered negligibly small, provided the sources are handled properly. (author).

4199 (SAAS–375) **Experience in the use of the UA-type teaching kit of sealed radioactive sources.** Makedanz, A.; Glaeser, M. Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic). 1989. 18p. (In German). Order Number DE90608337. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The radioactive teaching kit of type UA approved for use at secondary schools in the GDR contains Co-60, Cs-137, Na-22 and Kr-85. The experiences gained with this kit during more than 15 years are reported from the radiation protection point of view, covering such topics as technical and organizational radiation protection, radiation exposure to teachers and pupils while performing experiments as well as the dangers involved in unauthorized use of the radiation sources. (author).

4200 (AD-A–210741/5/XAB) **Dynamically compressed metals - theory. Final report, 1 February 1986-30 April 1989.** Ashcroft, N.W. Cornell Univ., Ithaca, NY (USA). Lab. for Atomic and Solid State Physics. 28 Jun 1989. 7p. Available from NTIS, PC A02/MF A01.

The major theme of this research concerns the physics of systems that are subjected to conditions typical of shock or explosive environments. The focus is mainly but not exclusively on metallic systems; under shock loading they usually acquire a very substantial increase in temperature. In fact, for nuclear driven shocks the temperatures can become significant compared even with the Fermi temperature, and the systems are then taken quite far from degeneracy. Central to the theory of any metallic system is the physics of the underlying electron gas; what is required is a theory capable to giving its thermodynamic functions over a range spanning the extreme quantum to classical limits. Such a theory has been developed and under the present grant has been applied to nearly free electron metallic systems. The major results of this research is the presentation of a unified theory that describes both the thermodynamic and dielectric properties of an interacting electron fluid throughout the full range of thermal degeneracy, that is, from the ground state (a degenerate Fermi plasma) to the classical domain where the system becomes a prototypical one-component plasma. In this work, were results obtained that are quite accurate up to significantly large values of the coupling strength characteristic of the system. Furthermore, closed-form parametrizations are provided, both of the thermodynamic functions and of the dielectric response function of the electron gas. These results, in parameterized forms, should be widely beneficial to a wide class of problems involving shocked metals.

4201 (AD-A–211119/3/XAB) **Nuclear magnetic resonance imaging as a tool to characterize defect densities in solids.** Suits, B.H.; Lutz, J.L. Michigan Technological Univ., Houghton, MI (USA). 1 May 1989. 4p. Available from NTIS, PC A02/MF A01.

Pub. in Jnl. of Applied Physics, Vol. 65, No. 9, 3728-3730(1 May 1989).

Nuclear Magnetic Resonance imaging methods demonstrate the spatial variation of ^{23}Na signal intensity in NaCl which results from an impact-induced inhomogeneous defect distribution.

4202 (AD-A–211124/3/XAB) **Nuclear magnetic resonance in molten salts.** Wilkes, J.S. Frank J. Seiler Research Lab., United States Air Force Academy, CO (USA). 1987. 21p. (FJSRL-JR–87-0012). Available from NTIS, PC A03/MF A01.

Pub. in Molten Salt Chemistry, 217-236(1987).

Nuclear magnetic resonance (NMR) spectroscopy provides information about the structure of molten salts and about interactions among molten-salt components. This contribution reviews the application of NMR spectroscopy to molten salts done in this laboratory and by others. The fundamentals of the NMR method are presented, with emphasis on aspects particularly useful to molten salt samples. The limitations to the method resulting from the nature of molten salts and nuclei encountered are discussed. Examples of the types of information about molten salts provided by NMR experiments that are useful to chemists are presented. Chloroaluminate molten salts are the primary melt system used to illustrate the usefulness of NMR spectroscopy. Experiments in organic melts and the use of Thallium 205 as a probe in nitrates and halides are also treated.

4203 (ANL/PPRNT–89-190) **Dislocation-hydrogen correlation in metals.** Summerfield, G.C.; King, J.S.; Heuser, B.; Epperson, J.E. Argonne National Lab., IL (USA). Nov 1987. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90003005. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We present a method using SANS experiments to measure correlation between dislocations and absorbed hydrogen in metals. The technique involves sequential measurements first on a metal with dislocation networks, then two further measurements on the same sample infused with deuterium and normal hydrogen. SANS experiments on metals with dislocations networks have been performed a number of times and some results have appeared in the literature. We have computer estimates of the contribution of absorbed hydrogen and deuterium to SANS cross sections. The results show that we can expect to see the hydrogen contribution in the SANS cross section and see any possible correlations of the hydrogen positions and the dislocations. 8 refs., 2 figs., 2 tabs.

4204 (BNL–43345) **The initial scientific program at the NSLS infrared beamline.** Williams, G.P. Brookhaven National Lab., Upton, NY (USA). [1989]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-890802–15: 7. synchrotron radiation instrumentation (SRI) national conference, Berkeley, CA (USA), 6-10 Aug 1989). Order Number DE90002299. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Unique extraction optics (90 x 90 mrads) at the NSLS U4IR line offer high brightness beams at up to mm wavelengths with a ~1ns pulse structure. Radiation from this port has now been carefully characterized and agrees well with calculations, making it 100–1000 times brighter than conventional sources in the middle and far infrared regions. Using rapid scan Michelson interferometers with liquid He cooled bolometer detectors we have been able for the first time to measure molecule substrate vibrations in surface science. We have also made the first measurements of the transmission of a film of the high Tc material YBaCuO in the BCS gap region. These initial experiments have demonstrated the advantages of the superior signal to noise available from this infrared beamline. 19 refs., 6 figs.

4205 (CONF-890821–6) **Stopping power and energy loss cross section of a point charge penetrating through a dense medium of bound electrons.** Belkacem, A.; Sigmund, P. Argonne National Lab., IL (USA). [1989]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 13. international conference on atomic collisions in solids; Aarhus (Denmark); 7-11 Aug 1989. Order Number DE90002841. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We have derived the dielectric function $\epsilon(k,\omega)$ in the Lindhard approximation for a medium consisting of electrons individually bound by harmonic forces. The dielectric function is expressible in terms of

a hypergeometric series and approaches well-known results in the limits of negligible binding, large momentum transfer, and long wavelength, respectively. The stopping power of a moving point charge scales very well with the shifted resonance frequency $\omega_0 = (\omega_O^2 + \omega_P^2)^{1/2}$ (ω_O = oscillator frequency; ω_P = plasma frequency) that follows from classical dispersion theory. The results differ noticeably from free-electron behavior even at rather high electron density. The discrete excitation levels of an isolated harmonic oscillator are increasingly shifted and broadened with increasing electron density. 15 refs., 2 figs.

4206 (CONF-8904290–2) **Characterization of nanophase materials by x-ray diffraction and computer simulation.** Eastman, J.A.; Thompson, L.J. Argonne National Lab., IL (USA). Jun 1989. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Symposium J: interfaces between polymers, metals and ceramics; San Diego, CA (USA); 24-29 Apr 1989. Order Number DE90002270. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

X-ray diffraction experiments on nanophase Pd have been performed with the primary goal of determining the nature of grain boundary structures in nanophase materials. A kinematical diffraction analysis has been developed to interpret x-ray θ–2θ data by comparing actual scans with scans produced by computer simulation. This simulation program has been used to explore the effects on diffracted intensity of a variety of microstructural and grain boundary structural parameters such as void concentration, grain size, grain boundary width, and changes in interplanar spacing and density in grain boundary regions. It has been found that a reasonable match to experimental data is produced by at least two model structures; in one, the material contains randomly positioned voids or vacancies, while in the other, the interplanar spacings in grain boundary regions are varied with respect to the spacings found in the grain interiors. 7 refs., 4 figs.

4207 (CONF-8904290–3) **Atomic matching across internal interfaces.** Merkle, K.L. Argonne National Lab., IL (USA). 1989. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Symposium J: interfaces between polymers, metals and ceramics; San Diego, CA (USA); 24-29 Apr 1989. Order Number DE90002266. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The atomic structure of internal interfaces in dense-packed systems has been investigated by high-resolution electron microscopy (HREM). Similarities between the atomic relaxations in heterophase interfaces and certain large-angle grain boundaries have been observed. In both types of interfaces localization of misfit leads to regions of good atomic matching within the interface separated by misfit dislocation-like defects. It appears that, whenever possible, the GB structures assume configurations in which the atomic coordination is not too much different from the ideal lattice. It is suggested that these kinds of relaxations primarily occur whenever the translational periods along the GB are large or when the interatomic distances are incommensurate. Incorporation of low index planes into the GB appears to lead to preferred, i.e. low energy structures, that can be quite dense with good atomic matching across a large fraction of the interface. 20 refs., 9 figs.

4208 (CONF-8908133–6) **Dynamic simulation of mixed quantum-classical systems.** Kalia, R.K.; Vashishta, P.; De Leeuw, S.W.; Harris, J. Argonne National Lab., IL (USA). Sep 1989. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 24. Yamada conference on strongly coupled plasma physics; Tokyo (Japan); 29 Aug - 2 sep 1989. Order Number DE90002172. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We discuss the simulation of mixed systems with quantum and classical particles based on the quantum molecular dynamics method. This technique is applied to the problem of an excess electron in a dense helium gas. The formation of an electron bubble and the results for the structure and dynamics of the bubble are discussed. 14 refs., 3 figs.

4209 (CONF-8910276–1) **Velocity distribution of laser photoionized neutrals ejected from methanol-dosed aluminium(111) by electron-stimulated desorption.** Young, C.E.; Whitten, J.E.; Pellin, M.J.; Gruen, D.M.; Jones, P.L. Argonne National Lab., IL (USA). 1989. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 4. international workshop on desorption induced by electronic transitions; Gloggnitz (Austria); 2-4 Oct 1989. Order Number DE90001938. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Nonresonant multiphoton ionization at 193 nm wavelength was employed for efficient detection of electron-stimulated neutral desorption from Al(111) dosed with methanol to produce monolayer methoxide coverage. Velocity spectra were measured by the flight time from the crystal surface to the focal region of the laser beam with a pulsed primary electron beam of 3 keV and the sample at 300 K. Either the C^+ or HCO^+ photofragment indicated the same non-Boltzmann velocity spectrum for the neutral parent precursor with a peak kinetic energy of ~0.1 eV. Identical distributions were obtained when the cleaned crystal was pre-oxidized with O_2 prior to methanol dosing. As the crystal temperature was raised, photoion signal from the HCO^+ fragment declined steadily, while C^+ increased until ~550 K. The total cross section for loss of parent signal with dose of 3 keV electrons was measured to be $2\pm1 \times 10^{-17}cm^{-2}$. 19 refs., 4 figs.

4210 (CONF-8911109–1) **Interactions of fast atomic and molecular ions with matter.** Belkacem, A.; Kanter, E.P.; Vager, Z. Argonne National Lab., IL (USA). [1989]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 10. DOE Atomic Physics Program workshop; Berkeley, CA (USA); 8-9 Nov 1989. Order Number DE90001906. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Argonne's 5-MV Dynamitron accelerator is used to study the interactions of fast (MeV) atomic and molecular ions with matter. A unique feature of the apparatus is the exceptionally high resolution, in angle and time-of-flight, obtained in detecting particles emerging from the target. New imaging detector systems have been developed which allow detection of multiparticle events consisting of up to 12 particles. The work has as its main objective a general study of the interactions of fast charged particles with matter, but with the emphasis on those aspects that take advantage of the unique features inherent in employing molecular-ion beams (e.g., the feature that each molecular ion incident upon a solid target forms a tight cluster of atomic ions that remain correlated in space and time as they penetrate the target). In particular, these techniques have allowed the direct determination of the geometrical structures of the molecular ions entering the target, providing the first direct measure of the fully correlated nuclear densities within small molecules.

4211 (DOE/ER/13632–3) **Molecular dynamics studies of aromatic hydrocarbon liquids: Progress report, March 1, 1989–February 28, 1990.** Louisiana State Univ., Baton Rouge, LA (USA). Dept. of Chemical Engineering. [1989]. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-86ER13632. Order Number DE90002705. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

This report discusses the equation of state for fluids of rigid molecules and modeling of molecular flexibility. (LSP)

4212 (DOE/ER/45199–T2) **[Gamma scattering in condensed matter with high intensity Moessbauer radiation]: Progress report.** Purdue Research Foundation, Lafayette, IN (USA). [1989]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER45199;FG02-85ER45200. Order Number DE90002524. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

There are four areas where major progress has occurred this year. We have applied the Fourier-transform method of describing and analyzing Moessbauer effect (ME) line shapes to make measurements of the temperature dependence of the recoilless fraction in tungsten. We have carried out quasi-elastic measurements of the gamma scattering from viscous liquids, learning about diffusive motion in polydimethylsiloxane, pentadecane, and glycerol. We have made major progress in fundamental physics, having shown for the first time how to determine precise quantum interference parameters, obtaining experimental results on the 46.5 keV line of ^{183}W and the 129 keV line of ^{191}Ir. Finally, we have continued our development of MICE detectors, with a theoretical analysis of the MICE lineshape and its relation to the lineshape of conventional transmission ME spectroscopy. 12 refs.

4213 (IC–89/101) **Irreversibility and self-organization in spin glasses. 1. Origin of irreversibility in spin glasses.** Kovrov, V.P.; Kurbatov, A.M. International Centre for Theoretical Physics, Trieste (Italy). May 1989. 20p. Order Number DE90607231. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The origin of irreversibility in spin glasses is found out on the basis of the analytical study of the well-known TAP equations. Connection between irreversible jumpwise transitions and a positive feedback in spin glasses is discussed. (author). 7 refs, 4 figs.

4214 (IC–89/102) **Irreversibility and self-organization in spin glasses. 2. Irreversibility and the problem of configuration averaging.** Kovrov, V.P.; Kurbatov, A.M. International Centre for Theoretical Physics, Trieste (Italy). May 1989. 27p. Order Number DE90607232. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The generalization of a configuration averaging to a system displaying irreversible effects is suggested. The properties of the "pathological" equilibrium state at low temperatures are determined and discussed. (author). 16 refs, 3 figs.

4215 (IC–89/121) **Strain induced amorphization of aluminium by manganese implantation.** Majid, C.A. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 31p. Order Number DE90607259. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The structural modifications of aluminium thin films implanted with manganese ions at room temperature, have been reported. These studies were performed using a two circle X-ray powder diffractometer. The method of X-ray line profile analysis was used to determine strain. As a consequence of ion bombardment, the aluminium lattice was found to undergo distortions. The maximum value of the atomic displacement U_{st} was found to be 0.14+-0.01 A, and the maximum value of the root mean square strain was noted to be 1.05+-0.15 x 10^{-3}. The lattice constant α_0 of Al was found to decrease. The decrease in α_0 was noted to be about 0.12 at %. (author). 23 refs, 10 figs.

4216 (IC–89/132) **Magnetoplasma oscillations of the wave-guided type in semiconductor superlattices.** Granada, J.C.; Kosevich, A.M.; Kosevich, Yu.A. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 16p. Order Number DE90607260. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

For electromagnetic wave-guided oscillations of two-dimensional (2D) electron layer periodic array in a transversal magnetic field, the dispersion relation is analyzed. Oscillation frequencies much lower than the electron cyclotron frequency exist under certain conditions. Additionally, the perpendicular propagation to the layers is investigated. It is demonstrated, that a strong magnetic field causes a frequency shift and splitting, which are in inverse relation to the external magnetic field and the period of the layered electron system. (author). 18 refs, 3 figs.

4217 (IC–89/156) **Statistical mechanical models for liquid and amorphous structure in covalently bonded systems.** Badirkhan, Z.; Ferrante, A.; Rovere, M.; Tosi, M.P. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 19p. Order Number DE90607233. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Considerable effort has been given for some years to developing models of interatomic forces aimed at accounting for bond directionality in liquid and amorphous state calculations. Models involving three-body potentials have been especially useful for computer simulation studies of liquid and amorphous states in elemental semiconductors and binary chalcogenides of group-IV elements, starting with the work of Stillinger and Weber on silicon. However, pair potential models that may still account for the main effects of angular dependences of the effective interatomic forces, though at a primitive level, are desirable from the viewpoint of liquid structure theory. Developments in this direction are briefly reviewed, with particular emphasis on bond particle models for the structure of liquid and amorphous germanium. We also discuss the relation between liquid structure in a bond particle model and crystallization accompanied by volume expansion, as observed in elemental and III-V polar semiconductors. (author). 34 refs, 1 tab., 3 figs.

4218 (IC–89/159) **Local coordination of polyvalent metal ions in molten halide mixtures.** Akdeniz, Z.; Tosi, M.P. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 6p. Order Number DE90607261. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Ample experimental evidence is available in the literature on the geometry and the stability of local coordination for polyvalent metal ions in molten mixtures of their halides with alkali halides. Recent schemes for classifying this evidence are discussed. Dissociation of tetrahedral halocomplexes in good ionic systems can be viewed as a classical Mott problem of bound-state stability in a conducting matrix. More generally, structural coordinates can be constructed from properties of the component elements, to separate out systems with long-lived fourfold or sixfold coordination and to distinguish between these. (author). 11 refs, 1 fig.

4219 (IC–89/197) **Electron correlations and dielectric screening in a layered electron gas.** Miesenboeck, H.M.; Tosi, M.P. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 10p. Order Number DE90607234. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

A simple pseudoclassical approach is proposed to evaluate the intraplane structural correlations due to Coulomb and exchange effects between degenerate electrons in a layered electron gas model. The in-plane electron structure factor is used to estimate the local field factor accounting for exchange and correlation in the static dielectric function of the model, within the STLS and SSTL approximations. The implications of the results in relation to effective pair potentials between external charges inserted in the system are discussed with reference to ions intercalated in graphite. (author). 18 refs, 2 figs.

4220 (IC–89/239) **Interface stress theorem and Hellmann-Feynman relations for Bijellic systems.** Ziesche, P.; Nafari, N.; Kaschner, R. International Centre for Theoretical Physics, Trieste (Italy). Aug 1989. 39p. Order Number DE90607235. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Starting with the general stress theorem as the dyadically generalized virial theorem for bijellic interfaces a theorem is derived relating the interface stress, i.e. the density derivatives of the interfacial energy, to an appropriate integral of the momentum flux density (local stress or stress field). This interface stress theorem together with other sum rules are tested/illustrated by calculations using the gradient expansion method. The results include the electron density, electric field, and stress field across the junction as well as the interfacial energy, interfacial stress (with its parallel and perpendicular components), the adhesive force and linear force constant for pairs of jellium densities corresponding to all alkaline interfaces. (author). 43 refs, 5 tabs, 2 figs.

4221 (INIS-BR–1702) **Study of α-monosubstituted methyl acetates by C-13 and H-1 Nuclear Magnetic resonance.** Silva, E.L. Universidade Estadual de Campinas, SP (Brazil). Inst. de Quimica. 1987. 202p. (In Portuguese). Order Number DE90607263. Available from NTIS (US Sales Only), PC A10/MF A01 - OSTI; INIS.

The substituents effects on the methylene and carbonyl carbons chemical shifts of some α-monosubstituted methyl acetates Z-CH_2-COOMe(Z=H,Cl,Br,I,OME,SMe,NMe_2 and Me) is studied. Some data of Carbon 13 NMr in the light of the substituents empirical and electronic effects are shown. Solvent and concentration effects on the hydrogen-1 chemical shifts of methyl acetate, bromoacetate and Iodoacetate were interpreted in the light of the Cα-C(O)-bond rotational isomerism. (M.J.C.).

4222 (INIS-BR–1717) **Analysis by X-ray diffraction of new esquiatosomicides.** Zukerman-Schpector, J.; Mascarenhas, Y.P.; Katz, N. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1983. 2p. (In Portuguese). Order Number DE90607264. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

4223 (INIS-BR–1755) **Spectroscopic analysis of orthonitrodiphenyl sulfide $C_{12}H_9NO_2S$.** Sakane, K.K. Centro Tecnico Aeroespacial, Sao Jose dos Campos, SP (Brazil). Inst. de Atividades Espaciais. 1988. 181p. (In Portuguese). Order Number

DE90607267. Available from NTIS (US Sales Only), PC A09/MF A01 - OSTI; INIS.

This work reports the synthesis of the first (stable) form a of orthonitrodiphenyl sulphide [1-Nitro, 2-(Phenylthio) Benzene], followed by the preparation of the metastable (β) form, obtained by the method of seeding, caracterization of this form and analysis of structural differences by means of infrared and Raman Spectra. A tentative assignment of frequencies has been made, in which some differences between the two forms are explained. This analysis was based mostly on the solid phase spectra which show striking characteristics of the polymorphic species. Spectra of the β-form are, until now, completely unpublished. The spectra of solutions and melt of the α an β forms are fairly similar to those of solid β. This feature leads to the conclusion that both forms have the same molecular structure in melt and solutions, differing only in the solid state. It is also remarkable that the β-form displays a different Infrared Spectrum in a short range interval of temperature soon after melting. In this transition phase the Spectrum is more like the solid α Spectrum. The phenomenon is credited to a transient liquid crystal character. (author).

4224 (INIS-BR–1762) **Scoria analysis by X-ray fluorescence with briquet.** Silva, G.R. da; Albert, P.E. Associacao Brasileira de Metais, Sao Paulo, SP (Brazil). 1987. 15p. (In Portuguese). (CONF-8705394–: 4. seminar of chemical control in metallurgy, Belo Horizonte (Brazil), 25-27 May 1987). Order Number DE90607268. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The sample of scoria is triturated, using boric acid as agglomerative. The briquets are analyzed by X-ray quantometry, establishing the proportions of SiO_2, P_2O_5, S, Cr_2O_3, V_2O_5, TiO_2, Al_2O_3, Mg O, Ca O, FeO and their basicity. The calibration curves are prepared with standard scoria samples, by chemical analysis. (C.G.C.).

4225 (INIS-BR–1767) **Thermoluminescent of induced calcite by gamma and ultraviolet radiation.** Lima, J.F. de. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. 1987. 108p. (In Portuguese). Order Number DE90607269. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

Samples of brazilian calcite, exposed to gamma radiation in laboratory and heated at constant rate of 2.7^0 C/s, showed three glow peaks at 150, 250 and 350 ^{0}C in their thermoluminescent emission curves. The analysis of these peaks, using different models, indicated that they follow a second order kinetics; it has been obtained, for the activation energy, 1.3, 1.5 and 1.7 eV, and, for the pre-exponential factors, 8.1 x 10 ^{14}, 6.8 x10 ^{13} and 2.4 x 10^{12} s^{-1}. Although the total thermoluminescent emission has stayed constant, the relative height of glow peaks has changed with the temperature of annealing in the range of 400 to 700 ^{0}C. Exposed samples were also illuminated with ultraviolet light and the resultant curves showed partial or total bleaching or some glow peaks and the growth of peaks at lower temperatures. Samples of virgin calcite, submited to increasing exposures of gamma rays, showed a corresponding enhancement of the optical absorption bands in the range of 25000 to 47000 cm^{-1} A subsequent illumination of these samples with ultraviolet light produced a decrease of the optical absorption bands at the same range. (author).

4226 (INIS-BR–1769) **Characterization of the emerald of Santa Terezinha de Goias by spectroscopy, fluorescence and X-ray difraction.** Lariucci, C. Sao Paulo Univ., Sao Carlos, SP (Brazil). Inst. de Fisica e Quimica. 1988. 182p. (In Portuguese). Order Number DE90607270. Available from NTIS (US Sales Only), PC A09/MF A01 - OSTI; INIS.

The purpose of this work is to characterize the emerald of Santa Terezinha de Goias-GO, according to their physical properties (refractive index and specific gravity); spectrographic (infrared, ultraviolet and visible absorption); electron paramagnetic resonance; chemical analysis; crystal structure and specially by the recognition of their mineral inclusions. The results of the refractive index measure for the emerald of Santa Terezinha de Goias-GO are n_e (1.575-1.585) and n_o (1.590-1.9600) and the birrefringence = 0.012; the specific gravity is between the highest of the world (2.745 (4) Mg. m^{-3}). The near infrared and infrared absorption, show the presence, in the structural channels of the emerald, of gas carbonic and free water interacting with an ion (Fe and/or Na) in these channels. The ultraviolet and visible absorption spectra accused the presence of Cr^{3+} replacing Al^{3+} and Fe^{3+} in the channels of the structure. The study of electron paramagnetic resonance confirmed these last results.

4227 (INIS-mf–12013, pp. 38-43) **Nuclear solid state physics and technology.** Behar, M. (Rio Grande do Sul Univ., Porto Alegre (Brazil)); Bhatia, K.; Biersack, J.P.; Fink, D.; Greaves, N.; Hunklinger, S.; Kemmer, J.; Mannsperger, H.; Mueller, G.; Zinke-Allmang, M. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Nuclear instruments and methods have been applied to solid state physics and technology problems. (orig.).

4228 (INIS-mf–12013, pp. 43-46) **Nuclear spin relaxation of ^{12}B implanted in various metallic single crystals.** Sulzer, G. (Marburg Univ. (Germany, F.R.). Fachbereich 13 - Physik); Buerkmann, K.; Dippel, R.; Fischer, B.; Frank, H.P.; Ittermann, B.; Jaeger, E.; Seelinger, W.; Ackermann, H.; Stoeckmann, H.J. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

The studies of the diffusion of ^{12}B implanted in a single crystalline Al sample have been finished. The stopping site of ^{12}B nuclei in Cu and V have been determined by cross-relaxation measurements at room temperature. For Cu at temperatures at 480 K a new cross-relaxation spectrum showed up proving the existence of another trapping site. (orig.).

4229 (INIS-mf–12013, pp. 145) **Laboratory charging of dust by electrons and ions.** Pinter, S. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Schumacher, S.; Gruen, E.; Svestka, J. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Dust particles of sizes between 1 and 120 μm from various materials have been contained by means of an electric quadrupole field in a vacuum chamber at pressures ranging from 10^{-4} to 10^{-6} mbar. The dust particles were charged by Ar^+ ions of energies up to 3 keV as well as by electrons of energies up to 20 keV. To damp the particle motion at low pressures a damping system with two photomultipliers and feedback circuits was developed. With an improved experimental setup investigation has been started on the influence of high electric fields in the suspension system and of the rest gas density on the charging process. (orig.).

4230 (JAERI-M–89-071) **Effect of electron-excitation on radiation damage in ion-irradiated FCC metals.** Iwase, Akihiro. Japan Atomic Energy Research Inst., Tokyo (Japan). Jun 1989. 90p. (In Japanese). Order Number DE90719537. Available from NTIS (US Sales Only), PC A05/MF A01.

FCC metals (Al, Cu, Ag, Ni) were irradiated with 0.5-1.8 MeV H, He, N and Ar ions, and 84-126 MeV C, F, Si, Cl, Br and I ions at liquid helium temperatures. After the irradiations, thermal annealing experiments were performed up to 300 K. Anomalous reduction of Stage-I recovery was observed in Al and Ni irradiated with high-energy (~100 MeV) heavy ions. Radiation annealing by 100 MeV I ions was studied in predoped Ni and Cu. The experimental results were analyzed by using a new model which describes the production and radiation annealing of two or more types of defects. The extraordinarily large cross sections for subthreshold recombination of Stage-I defects were obtained in Ni. These results show that in Al and Ni, the energies transferred from the excited electrons to lattice through the electron-lattice interaction contribute to the annihilations of defects during irradiation. (author).

4231 (LA-UR–89-3334) **Strongly correlated quasi-one-dimensional bands: Ground states, optical absorption, and phonons.** Campbell, D.K.; Gammel, J.T.; Loh, E.Y. Jr. Los Alamos National Lab., NM (USA). [1989]. 20p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36.

(CONF-8907163–1: Anniversary Adriatico research conference on strongly correlated electrons, Trieste (Italy), 18-21 Jul 1989). Order Number DE90002439. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Using the Lanczos method for exact diagonalization on systems up to 14 sites, combined with a novel "phase randomization" technique for extracting more information from these small systems, we investigate several aspects of the one-dimensional Peierls-Hubbard Hamiltonian, in the context of trans-polyacetylene: the dependence of the ground state dimerization on the strength of the electron-electron interactions, including the effects of "off-diagonal" Coulomb terms generally ignored in the Hubbard model; the phonon vibrational frequencies and dispersion relations, and the optical absorption properties, including the spectrum of absorptions as a function of photon energy. These three different observables provide considerable insight into the effects of electron-electron interactions on the properties of real materials and thus into the nature of strongly correlated electron systems. 29 refs., 11 figs.

4232 (LA-UR–89-3361) **Possible FERMI liquid behavior of 5f electrons in UPt_3 at $T \gg T_K$.** Arko, A.J.; Armstrong, P.; Wire, M. Los Alamos National Lab., NM (USA). 1989. 8p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-890953–9: International conference on the physics of highly correlated electron systems, Santa Fe, NM (USA), 11-15 Sep 1989). Order Number DE90002431. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The energy of localized electrons should be independent of crystal momentum. Thus the energy of 5f electrons in heavy Fermion systems far above T_K is expected to show no E vs. k dispersion. We have used angle-resolved photoemission spectroscopy on the [1010] surface of UP_{t3}, cleaned by repeated sputter and anneal, to study any possible dispersion of the 5f bands at $T = 300\ K \gg T_K \approx 50$ K. The measurements were performed at the Synchrotron Radiation Center in Stoughton, WI, at a photon energy $h\nu = 40$ eV. At this energy the 5f cross-section is already sufficiently large to yield a significant 5f spectral weight, but not yet large enough to lose all k-dependence. Data were taken at various angle settings of a VG ADES 400 spectrometer along the Γ-M direction in the hexagonal zone. The overall instrument resolution was 250 meV while the acceptance cone of the analyzer was $\pm 2°$, or about 20% of the Γ-M direction. Although no dispersion was observed at normal emission by varying the photon energy, substantial energy dispersion, primarily in the d-bands, was evident with k_{11}. From resonant photoemission experiments we established that the primary peak associated with 5f intensity is the peak within 200 meV of E_F. Although our resolution was insufficient to observe any energy shifts, the peak disappeared at several angles near the M-point in the zone. We interpret this as dispersion above E_F. While further measurements are necessary, this raises questions regarding the accepted models for the electronic structure. 10 refs., 1 fig.

4233 (LBL–25790) **Spatially resolved localized vibrational mode spectroscopy of carbon in liquid encapsulated Czochralski grown gallium arsenide wafers.** Yau, Waifan. Lawrence Berkeley Lab., CA (USA). Apr 1988. 56p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. Order Number DE90003121. Available from NTIS, PC A04/MF A01; OSTI; INIS; GPO Dep.

Substitutional carbon on an arsenic lattice site is the shallowest and one of the most dominant acceptors in semi-insulating Liquid Encapsulated Czochralski (LEC) GaAs. However, the role of this acceptor in determining the well known "W" shape spatial variation of neutral EL2 concentration along the diameter of a LEC wafer is not known. In this thesis, we attempt to clarify the issue of the carbon acceptor's effect on this "W" shaped variation by measuring spatial profiles of this acceptor along the radius of three different as-grown LEC GaAs wafers. With localized vibrational mode absorption spectroscopy, we find that the profile of the carbon acceptor is relatively constant along the radius of each wafer. Average values of concentration are $8 \times 10E15\ cm^{-3}$, $1.1 \times 10E15\ cm^{-3}$, and $2.2 \times 10E15\ cm^{-3}$, respectively. In addition, these carbon acceptor LVM measurements indicate that a residual donor with concentration comparable to carbon exists in these wafers and it is a good candidate for the observed neutral EL2 concentration variation. 22 refs., 39 figs.

4234 (LBL–26490) **Conformation, orientation and interaction in molecular monolayers: A surface second harmonic and sum frequency generation study.** Superfine, R.; Huang, J.Y.; Shen, Y.R. Lawrence Berkeley Lab., CA (USA). Dec 1988. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890618–5: NICOLS '89: 9th international conference on laser spectroscopy, Bretton Woods, NH (USA), 18-23 Jun 1989). Order Number DE90003108. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

We have used sum frequency generation (SFG) to study the order in a silane monolayer before and after the deposition of a coadsorbed liquid crystal monolayer. We observe an increase in the order of the chain of the silane molecule induced by the interpenetration of the liquid crystal molecules. By using second harmonic generation (SHG) and SFG, we have studied the orientation and conformation of the liquid crystal molecule on clean and silane coated glass surfaces. On both surfaces, the biphenyl group is tilted by 70° with the alkyl chain end pointing away from the surface. The shift in the C-H stretch frequencies in the coadsorbed system indicates a significant interaction between molecules. 9 refs., 3 figs.

4235 (LBL–27806) **Variational quantum Monte Carlo calculation of electronic and structural properties of crystals.** Louie, S.G. Lawrence Berkeley Lab., CA (USA). Sep 1989. 15p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AC03-76SF00098. (CONF-8908106–5: Los Alamos workshop on quantum simulations of condensed matter phenomena, Los Alamos, NM (USA), 8-11 Aug 1989). Order Number DE90003265. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Calculation of the electronic and structural properties of solids using a variational quantum Monte Carlo nonlocal pseudopotential approach is described. Ionization potentials and electron affinities for atoms, and binding energies and structural properties for crystals are found to be in very good agreement with experiment. The approach employs a correlated many-electron wavefunction of the Jastrow-Slater form and the exact Coulomb interaction between valence electrons. One- and two-body terms in the Jastrow factor are used and found necessary for an accurate description of the electron-electron energy for the systems considered. The method has further been applied to compute various single-particle properties for solids including the single-particle orbital occupancy, electron pair correlation functions, and quasiparticle excitation energies. 23 refs., 3 figs., 3 tabs.

4236 (UCRL–100752) **First-principles interatomic potentials in transition metals: Multi-ion interactions and their analytic representation.** Moriarty, J.A. Lawrence Livermore National Lab., CA (USA). Aug 1989. 11p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8906238–1: Conference on many-atom interactions in solids, Pajulahti (Finland), 5-9 Jun 1989). Order Number DE90001990. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The first-principles, density-functional version of the generalized pseudopotential theory, previously developed for empty- and filled-d-band metals, has now been extended to pure transition metals with partially-filled d bands. Within this formalism, a rigorous real-space expansion of the bulk total energy has been obtained in terms of widely transferable, structure-independent interatomic potentials, including both central-force pair interactions and angular-force triplet and quadruplet interactions. In the central transition metals, the three-ion and four-ion potentials are essential to a proper description of materials properties, but are necessarily multi-dimensional functions which cannot be easily tabulated. We have, therefore, also developed a simplified version of the theory in which these potentials can be expressed analytically while retaining the most important physics of the full first-principles treatment. The analytic potentials are suitable for wide-scaled applications, including molecular-dynamics and Monte-Carlo simulation. The first-principles and analytic theories are here reviewed together with selected applications to the prediction of high-pressure structural phase transitions; phonon anomalies and their close correlation with the present multi-ion potentials; and the vacancy-formation energy. 26 refs., 4 figs., 1 tab.

4237 (UCRL–101088) **Intra-stark relaxation of Nd^{3+} in silicate glass: Subpicosecond accumulated photon echo experiments.** Lee, H.W.H. Lawrence Livermore National Lab., CA (USA). [1989]. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-890813–1: 7. international conference on dynamical processes in excited states of solids, Athens, GA (USA), 28 Aug - 2 sep 1989). Order Number DE90002786. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We have directly measured in the time domain the rates of phonon-induced population relaxation within the $^4G_{5/2}$, $^2G_{7/2}$ Stark manifold of Nd^{3+} in a silicate glass. At 13 K, these processes occur in the picosecond to subpicosecond time regime. The populations relaxation time increases with excitation frequency within each inhomogeneously broadened Stark component. Finally, the location of the Stark components within the entire inhomogeneous profile can be inferred from the data. 13 refs., 1 fig.

4238 **Optical generation of coherent surface acoustic waves: A new probe of surface dynamics and structure.** Kasinski, J.J. (Dept. of Chemistry, University of Rochester, Rochester, NY 14627 (US)); Gomez-Jahn, L.; Miller, R.J.D. *AIP Conference Proceedings (American Institute of Physics) Conference Proceedings (USA),* 172(1): 201-203 (1 Oct 1988). (CONF-871147–: 3. international laser science conference: advances in laser science, Atlantic City, NJ (USA), 1-5 Nov 1987).

The optical generation of coherent surface acoustic waves (SAW) is shown up to frequencies as high as 2 GHz on semiconductor surfaces. The frequency response of the acoustic coherence is directly related to thermal relaxation processes within the surface layer. Propagation of the optically generated SAW is shown to be sensitive to phase restructuring that occurs at solid-liquid interfaces.

4239 **Angular distribution of the photoelectron yield excited by two coherently coupled photon beams.** Berman, L.E. (National Synchrotron Light Source, Brookhaven National Laboratory, Upton, New York 11973 and School of Applied and Engineering Physics and the Cornell High Energy Synchrotron Source, Cornell University, Ithaca, New York 18453 (US)); Bedzyk, M *Physical Review Letters (USA),* 63(11): 1172-1175 (11 Sep 1989). DOE Contract AC02-76CH00016.

The angular distribution of the photoelectron yield excited by two coherently related photon beams has been calculated and measured. Dynamical Bragg diffraction from a Ge(111) single crystal was used to generate the two beams, and *L*-shell photoelectron yields from an I overlayer were measured with a variable-angular-acceptance detector. The use of two-beam photoelectric excitation to understand final-state angular momentum symmetry is demonstrated.

4240 **Cluster-impact fusion.** Beuhler, R.J. (Chemistry Department, Brookhaven National Laboratory, Upton, New York 11973 (US)); Friedlander, G.; Friedman, L. *Physical Review Letters (USA),* 63(12): 1292-1295 (18 Sep 1989). DOE Contract AC02-76CH00016.

Deuteron-deuteron fusion, detected via the 3-MeV protons produced, is shown to occur when singly charged clusters of 25 to 1300 D_2O molecules, accelerated to 200 to 325 keV, impinge on TiD targets. The energy and cluster-size dependence of the fusion rate are discussed. The fusion events are shown to originate from the cluster-ion impacts rather than from D^+ or D_2O^+ ions in the beam. The observed rates may be correlated with the compressions and high energy densities created in collision spikes by cluster-ion impacts.

4241 **Comment on "Speckle in the diffraction patterns of Hendricks-Teller and icosahedral glass models".** Kan, X.B. (Department of Physics, University of Houston, Houston, Texas 77204-5504 (US)); Robertson, J.L. *Physical Review Letters (USA),* 63(13): 1438 (25 Sep 1989).

A Comment on the Letter by A. Garg and D. Levine, Phys. Rev. Lett. 60, 2160 (1988).

4242 **Temporal development of the plasma phase transition.** Bertsch, G. (Department of Physics and Cyclotron Laboratory, Michigan State University, East Lansing, Michigan 48824 (US)); Brown, G.E. *Physical Review [Section] C: Nuclear Physics (USA),* 40(4): 1830-1832 (Oct 1989).

We present a simple argument to show why a high entropy phase must exhibit an extended pion source lifetime. The plasmas that would be formed under the conditions of the recent heavy ion experiments would emit pions over a time of the order of 10 fm/*c* or longer, if the plasma has an entropy density larger than that of a pion gas by an order of magnitude.

4243 **A finite temperature theory of rotationally inelastic diffraction: H_2, HD, and D_2 on Cu(100).** Cruz, A.J. (Department of Chemistry, University of Massachusetts, Amherst, Massachusetts 01003 (US)); Jackson, B. *Journal of Chemical Physics (USA),* 91(8): 4985-4993 (15 Oct 1989).

The rotationally inelastic diffraction probabilities for H_2, HD, and D_2 from Cu(100) were computed as a function of surface temperature. The surface is treated in a quantum mechanical fashion using a recently developed formalism. The center of mass molecular translational motion is treated semiclassically, using Gaussian wave packets (GWPs), and the rotations are described quantum mechanically. Strong attenuation of the phonon elastic diffraction peaks with temperature is observed. This Debye–Waller-like attenuation increases with increasing molecular mass and kinetic energy, and decreases as the peaks become more off-specular. The phonon summed rotation–diffraction probabilities show a moderate temperature dependence for the most part. The $0 \rightarrow 2$ rotational excitation of D_2 appears to be strongly phonon assisted above 300 K. At low temperatures our method reproduces the selection rules predicted by previous studies. As the temperature is increased these selection rules become less restrictive. The probability distribution for a scattering molecule exchanging an amount of energy ΔE with the surface was also computed. Rayleigh phonons were found to dominate the energy transfer, with bulk vibrations becoming more important for larger molecular masses, beam energies, and surface temperatures.

4244 **Random-tiling quasicrystal.** Strandburg, K.J. (Materials Science Division, Argonne National Laboratory, Argonne, Illinois 60439-4843 (US)). *Physical Review [Section] B: Condensed Matter (USA),* 39(9): 6071-6084 (15 Sep 1989). DOE Contract W-31-109-ENG-38.

The quasicrystalline phase in the two-dimensional model explored by Widom, Strandburg, and Swendsen is shown by analysis of size dependence to be very well described by a random-tiling model in which a class of configurations corresponding to tilings of the plane with rhombuses are assumed to occur with equal weight. The existence of the quasicrystalline phase in this system is thus due to entropic effects. Despite the inherent phason disorder, the system is shown to possess quasi-long-range translational order. The phason elastic constant is obtained from the simulation and is temperature independent to within our statistical errors within the quasicrystalline phase. The value is in good agreement with transfer-matrix calculations for the appropriate random tilings and with Monte Carlo simulations for random tilings. The behavior of the system for temperatures above and below the random-tiling phase is briefly discussed.

4245 **Magnetoquantum oscillations of the phonon-drag thermoelectric power in heterojunctions.** Lyo, S.K. (Sandia National Laboratories, Albuquerque, New Mexico 87185 (US)). *Physical Review [Section] B: Condensed Matter (USA),* 39(9): 6458-6461 (15 Sep 1989). DOE Contract AC04-76DP00789.

A theory is presented for the low-temperature phonon-drag thermopower S_{xx} in a semiconductor heterojunction in a strong magnetic field. Gigantic quantum oscillations (much larger than electron-diffusion contributions) are obtained. The temperature and field dependences of S_{xx} agree well with recent data. Localized states yield flat valleys for the $|S_{xx}|$ minima in agreement with the data.

4246 **Brownian motion and finite-temperature effects in the discrete nonlinear Schroedinger equation: Analytic results for the nonadiabatic dimer.** Grigolini, P. (Department of Physics and Astronomy, University of New Mexico, Albuquerque, New Mexico 87131 (US)); Wu, H.; Kenkre, V.M. *Physical Review [Section] B: Condensed Matter (USA),* 40(10): 7045-7053 (1 Oct 1989).

The system under study is a moving quasiparticle interacting strongly with lattice vibrations. Our investigation uncovers the

effects of finite temperature through an analytical study of the quasiparticle evolution in a dimer. We display appropriate Fokker-Planck equations at several stages and, through a generalized Kramers analysis, show that localized stationary states, which are the signature of nonlinear evolution, (polaronic/solitonic behavior) are destroyed above a characteristic temperature. This result agrees with recent computer simulations in extended systems and lends analytical support to the numerical finding of the destruction of nonlinear structures above a critical temperature.

4247 First-principles molecular dynamics for metals. Fernando, G.W. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973 (US)); Qian, G.; Weinert, M.; Davenport, J.W. *Physical Review [Section] B: Condensed Matter (USA)*, 40(11): 7985-7988 (15 Oct 1989). DOE Contract AC02-76CH00016.

A Car-Parrinello-type first-principles molecular-dynamics approach capable of treating the partial occupancy of electronic states that occurs at the Fermi level in a metal is presented. The algorithms used to study metals are both simple and computationally efficient. We also discuss the connection between ordinary electronic-structure calculations and molecular-dynamics simulations as well as the role of Brillouin-zone sampling. This extension should be useful not only for metallic solids but also for solids that become metals in their liquid and/or amorphous phases.

4248 (ANL/PPRNT–89-184) **Fermi surface and effective masses for the heavy-electron superconductor UPt_3.** Norman, M.R.; Albers, R.C.; Boring, A.M.; Christensen, N.E. Argonne National Lab., IL (USA). Oct 1987. 15p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90003001. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Local-density-approximation (LDA) calculations for the Fermi-surface extremal cross-sectional areas of UPt_3 are presented and compared to deHaas-van Alphen experiments of Taillefer et al. The topology of the calculated surfaces is in excellent agreement with experiment and allows a determination of the directional dependence of the anisotropic mass-renormalization factor. The source of this renormalization is briefly discussed. 12 refs., 4 figs., 2 tabs.

4249 (ANL/PPRNT–89-185) **The possible occurrence of multi-phase behavior in the high T_c superconductor $YBa_2Cu_3O_x$.** Beno, M.A.; Soderholm, L.; Capone, D.W. II; Hinks, D.G.; Jorgensen, J.D.; Grace, J.D.; Schuller, I.K.; Veal, B.W.; Nowicki, L.J.; Paulikas, A.P. Argonne National Lab., IL (USA). 1989. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90002999. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We report here the results obtained for powder diffraction studies on four $YBa_2Cu_3O_x$ samples in which a model with two orthorhombic phases was used to obtain an improved agreement. The implications of this structural model on the systematic variation of T_c with oxygen content will be discussed. 28 refs., 3 figs., 2 tabs.

4250 (ANL/PPRNT–89-186) **Solubility and superconductivity in $RE(Ba_{2-x}RE_x)Cu_3O_{7+\delta}$ (RE = Nd, Sm, Eu, Gd, Dy).** Zhang, K.; Dabrowski, B.; Segre, C.U.; Hinks, D.G.; Schuller, I.K.; Jorgensen, J.D.; Slaski, M. Argonne National Lab., IL (USA). Oct 1987. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90002998. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Solid solutions of $RE(Ba_{2-x}RE_x)Cu_3O_{7-\delta}$ (RE=Nd,Sm,Eu,Gd,Dy) for x=0 to x=0.5 have been investigated. X-ray and resistivity measurements show that there exists a solid solution region, through which, the structure changes from orthorhombic to tetragonal and the superconducting properties are depressed. The solubility limits depend strongly on the size of the rare-earth ion, with the smallest (Dy) showing no appreciable solubility. The superconducting transition temperature versus x for all of the rare-earth ion substitutions falls on a universal curve, indicating that the Ba sites are extremely ionic and magnetically isolated. 20 refs., 4 figs.

4251 (ANL/PPRNT–89-197) **Linear electron-hole-electron pair model of high-temperature superconductivity in $La_{2-x}M_xCuO_4$ and $YBa_2Cu_3O_{7-y}$: 2, Dependence of the superconducting transition temperatures on pressure and on hole concentration.** Whangbo, Myung-Hwan; Evain, M.; Canadell, E.; Williams, J.M. Argonne National Lab., IL (USA). 1989. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38;FG05-86ER45259. Order Number DE90003012. Available from NTIS, PC A03/MF A01; OSTI; INIS.

On the basis of the linear electron-hole-electron (e-h-e) pair model, we discuss how the number of holes (i.e., formal Cu^{3+} sites), and an applied pressure, affect the superconducting transition temperatures T_c of $La_{2-x}M_xCuO_4$ and $LBa_2Cu_3O_{7-y}$ (L = Y, Sm, Eu, Gd, Dy, Ho, Yb). We also examine the origin of the plateaus in the T_c vs oxygen content pilot of $YBa_2Cu_3O_{7-y}$ within the framework of the linear e-h-e pair model. 17 refs.

4252 (ANL/PPRNT–89-199) **Synthesis conductivity, and X-ray photoelectron spectrum of $Bi_2Sr_2Cu_{7+x}$. A new ternary bismuth-oxide system exhibiting metallic conductivity.** Porter, L.C.; Appleman, E.; Beno, M.A.; Cariss, C.S.; Carlson, K.D.; Cohen, H.; Geiser, U.; Thorn, R.J.; Williams, J.M. Argonne National Lab., IL (USA). [1989]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90003010. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The preparation and some of the properties relating to the superconductive state of the newly discovered ternary bismuth oxides, $Bi_2Sr_2Cu_2O_{7+x}$, are described. Conductivity behavior ranging from semiconductive to metallic is observed when four-probe. AC resistivity measurements are carried out on pressed pellet specimens that have been annealed under different conditions. From a determination of the total oxygen present by an iodometric titration, it was found that metallic conductivity was associated with a higher oxygen content. An X-ray photoelectron experiment was carried out in order to determine whether bismuth or copper was present as the mixed-valent species. The XPS spectrum of the Bi 4f orbital electrons in the oxides was nearly identical to that observed in Bi_2O_3, with no evidence of any Bi^{5+}. 8 refs., 3 figs.

4253 (BNL–43372) **The formation of metal-oxygen species at low temperatures.** Qiu, S.L.; Lin, C.L.; Chen, Jie; Strongin, M. Brookhaven National Lab., Upton, NY (USA). 1989. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-891093–7: 36. American Vacuum Society national vacuum symposium, Boston, MA (USA), 23-27 Oct 1989). Order Number DE90002298. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The interaction of solid molecular oxygen Li, Cs, K, La, Ag, Cu, and Ba has been studied at 35 K or below using photoemission. A feature near 535 eV in the O ls core level spectra was observed when Li, Cs, K and La were deposited on solid oxygen. This feature was identified with one electron being donated to an oxygen molecule, i.e., the superoxide species, which as far as we know has not been previously reported for La and Li. A feature at about 531.5 to 533 eV was identified as a peroxide species where two electrons were donated to an oxygen molecule. Finally features at about 528 to 530.5 eV were identified as oxide phases where the molecular oxygen was dissociated into atomic oxygen with formal valence of −2. These identifications are crucial in the determinations of the exotic features in the XPS O ls spectra of the high T_c superconductors. 13 refs., 4 figs.

4254 (CONF-890939–2) **Tunneling spectroscopy and the electron-phonon interaction in $Ba_{1-x}K_xBiO_3$.** Zasadzinski, J.F.; Tralshawala, N.; Timpf, J.; Hinks, D.G.; Dabrowski, B.; Mitchell, A.W.; Richards, D.R. Argonne National Lab., IL (USA). [1989]. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From International conference on high T_c thin films and single crystals; Ustron (Poland); 30 Sep - 4 oct 1989. Order Number DE90002842. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Tunneling spectroscopy measurements have been performed on bulk samples of $Ba_{1-x}K_xBiO_3$ for the compositions, x=0.375, 0.4

and 0.5, using the natural, surface oxide as the tunnel barrier. The data show structures which are characteristic of phonon effects as seen in conventional superconductors and suggest that $\alpha^2F(\omega)$ is strongest for the high frequency optical modes. These results are consistent with other experiments and with recent microscopic calculations which indicate that phonon-mediated pairing is responsible for the superconductivity in this compound. 21 refs., 6 figs., 1 tab.

4255 (CONF-8910282–1) **Fermi surfaces by positron annihilation in $YBa_2Cu_3O_x$.** Smedskjaer, L.C. Argonne National Lab., IL (USA). [1989]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Workshop on momentum distributions; Argonne, IL (USA); 24-26 Oct 1989. Order Number DE90002776. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We discuss how Fermi-surface signatures may obtained from 2-D ACAR positron annihilation data. We report 2-D ACAR measurements in both c- and a-axis projections on single crystal $YBa_2Cu_3O_x$ with oxygen concentration $x \approx 7$ (Tc = 93.6 K) and a set of Fermi surfaces are proposed. 5 refs., 2 figs.

4256 (LA-UR–89-3380) **Magnetic ordering in $(Y_{1-x}Pr_x)Ba_2Cu_3O_7$ as evidenced by muon spin relaxation.** Cooke, D.W.; Kwok, R.S.; Jahan, M.S.; Lichti, R.L.; Adams, T.D.; Boekema, C.; Dawson, W.D.; Kebede, A.; Schwegler, J.; Crow, J.E. Los Alamos National Lab., NM (USA). [1989]. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891117–7: 34. conference on magnetism and magnetic materials, Boston, MA (USA), 28 Nov - 1 dec 1989). Order Number DE90002393. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Using the zero-field-muon-spin-relaxation (μSR) technique we have found clear evidence for antiferromagnetic ordering of Cu moments within the CuO planes of $(Y_{1-x}Pr_x)Ba_2Cu_3O_7$. The Neel temperatures are approximately 285 K, 220 K, 35 K, 30 K, and 20 K for x = 1, 0.8, 0.6, 0.58, and 0.54, respectively. For x = 0.50 we observe a fast-relaxing component of the muon polarization in addition to a long-time tail, reminiscent of spin-glass behavior. This region of the phase diagram ($0.5 \leq x \leq 0.54$) corresponds to the existence of both superconductivity and magnetism. The fully developed local magnetic field for $x > 0.54$ is found to be ~16 mT, but decreased to ~12 mT at T = 17 K for the x = 1 sample, presumably due to the onset of Pr-ion ordering. Magnetic ordering also occurs in $PrBa_2Cu_3O_6$; the Neel temperature is ~325 K. 7 refs., 4 figs.

4257 (ORNL/FTR–3446) **[Dynamics of magnetic fluctuations in high-T_c materials]: Foreign trip report, October 5–October 15, 1989.** Mook, H.A. Jr. Oak Ridge National Lab., TN (USA). 30 Oct 1989. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE90002661. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

The traveler attended the NATO Workshop on Dynamics of Magnetic Fluctuations in High-Temperature Superconductors and presented an invited paper on his neutron scattering work in this field. The workshop proceedings will discuss the latest developments in various types of techniques that are sensitive to the electronic and magnetic fluctuations in high-temperature superconductors. Fields of investigation such as neutron scattering, nuclear magnetic resonance, muon spin relaxation, light scattering, and theory will be covered.

4258 (UCRL–100596-Rev.1) **Electron-positron momentum distribution measurements of high-T superconductors and related systems.** Wachs, A.L.; Turchi, P.E.A.; Howell, R.J.; Jean, Y.C.; Fluss, M.J.; West, R.N.; Kaiser, J.H.; Rayner, S.; Hahgighi, H.; Merkle, K.L.; Revcolevschi, A.; Wang, Z.Z. Lawrence Livermore National Lab., CA (USA). Aug 1989. 3p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890718–Rev.1: International conference on materials and mechanisms of superconductivity - high-temperature superconductors, Stanford, CA (USA), 23-28 Jul 1989). Order Number DE90002974. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We discuss our measurements of the 2D-angular correlation of positron annihilation radiation (ACAR) in La_2CuO_4, $YBa_2Cu_3O_7$ (YBCO), and NiO. The measurements for NiO are the first such 2D-ACAR measurements; the YBCO results are of a higher statistical quality than previously reported in the literature. The data are compared with complementary theoretical calculations and with each other. We discuss the implication of our analysis for ACAR studies of similar and related systems. 5 refs., 1 fig.

4259 **Gap energy and long-range order in the boson-fermion model of superconductivity.** Friedberg, R. (Columbia University, New York, New York 10027 (US)); Lee, T.D. *Physical Review [Section] B: Condensed Matter (USA),* 40(10): 6745-6762 (1 Oct 1989).

From the observations of very small coherent lengths for all high-temperature superconductors, we conclude that the pair state is reasonably well localized in the coordinate space and therefore can be represented phenomenologically by a local boson field ϕ. The underlying mechanism for superconductivity is assumed to be through the "*s*-channel" reaction $2e \rightarrow \phi \rightarrow 2e$. This leads to a mixed boson-fermion model. We examine the long-range order, gap energy, and Meissner effect in such a theory.

4260 **Exchange-driven pairing of delocalized carriers in high-temperature superconductors.** Stechel, E.B. (Solid State Theory Division 1151, Sandia National Laboratories, Albuquerque, New Mexico 87185 (US)); Jennison, D.R. *Physical Review [Section] B: Condensed Matter (USA),* 40(10): 6919-6930 (1 Oct 1989). DOE Contract AC04-76DP00789.

A semiquantitative pairing model is derived from the properties of a realistic Hamiltonian for CuO_2 sheets. Due to large interactions between oxygen ions, to first-order *delocalized* carriers pair via localized spin-system holes on the Cu sublattice. The largest carrier-Cu couplings are dynamic exchange processes involving the $Cu(d^{10})$ and $Cu(d^8)$ configurations. Up to carrier concentrations of ~30–40 %, exchange-mediated attraction overcomes the large carrier Coulomb repulsion, present because of dielectric local screening. The same mechanism is shown to be capable of explaining high-temperature superconductivity in BiO_3. The pairing interaction is attractive for triplet and repulsive for singlet *s*-wave pairs.

4261 (CONF-8908179–1) **Compromise prior on the basis of maximum entropy.** River, N.; Englman, R.; Levine, R.D. Argonne National Lab., IL (USA). [1989]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Conference on maximum entropy and bayesian methods; Hanover, NH (USA); 14-18 Aug 1989. Order Number DE90002839. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We show how to construct the best prior for a Maximum Entropy procedure when two or more priors are conceivable or are proposed. The prior is a weighted sum of the conceivable priors with weights that depend exponentially on the overlap of the prior with the exponential part of the maximum entropy probability. With additional information, one can iteratively improve the prior and sharpen the choice between alternative priors. Our construction can be used to predict in some physical cases the probability distribution functions, and to make quantitative decisions in the presence of conflicting expert opinions. 20 refs.

4262 (DOE/ER/13897–10) **The behavior of matter under nonequilibrium conditions: Fundamental aspects and applications: Progress report, April 15, 1989–April 14, 1990.** Prigogine, I. Texas Univ., Austin, TX (USA). Center for Studies in Statistical Mechanics. Oct 1989. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-88ER13897. Order Number DE90002522. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

As in the previous period, our work has been concerned with the study of the properties of nonequilibrium systems and especially with the mechanism of self-organization. As is well-known, the study of self-organization began with the investigation of hydrodynamical or chemical instabilities studied from the point of view of macroscopic physics. The main outcome is that nonequilibrium generates spatial

correlations of macroscopic physics. The main outcome is that nonequilibrium generates spatial correlations of macroscopic range whose characteristics length is an intrinsic property and whose amplitude is determined by nonequilibrium constraints. A survey of the macroscopic approach to nonequilibrium states is given in the paper "Nonequilibrium States and Long Range Correlations in Chemical Dynamics," by G. Nicolis et al. However, over the last few years important progress has been made in the simulation of nonequilibrium situations using mainly molecular dynamics. It appears now that processes corresponding to self-organization as well as the appearance of long-range correlations can be obtained in this way starting from a program involving Newtonian dynamics (generally the laws of interaction correspond to hard spheres or hard disks). Examples of such types of studies leading to Benard instabilities, to chemical clocks, or to spatial structure formation are given in this report. As a result, we may now view self-organization as a direct expression of an appropriate microscopic dynamics. This is the reason why we have devoted much work to the study of large Poincare systems (LPS) involving continuous sets of resonances. These systems have been shown to lead, according to the constraints, either to equilibrium situations or to nonequilibrium states involving long range correlations. We discuss LPS in the frame of classical mechanics.

4263 (IC–89/80) **Construction of second constant of motion for two dimensional classical super systems.** Mishra, S.C.; Mishra, V. International Centre for Theoretical Physics, Trieste (Italy). May 1989. 13p. Order Number DE90607046. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The construction of the second constant of motion of second order (for $N \geq 2$ super-space) is carried out using Dirac's constrained Hamiltonian formalism. The invariants involving quadratic powers in velocities for a set of four representative potentials, namely (1) super harmonic oscillator, (ii) super Kepler potentials, (iii) the super potential $\lambda q^{2/3}$ and (iv) the super potential $\lambda q^2/1+gq^2$ have been derived. (author). 14 refs.

4264 (IC–89/110) **Bergman spaces, the Bloch space and the pluriharmonic conjugates in the unit ball of C^n.** Shi Jihuai. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 21p. Order Number DE90606947. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

It has been proved that if f is holomorphic in the unit ball B of C^m, then f is an element of L^p $(B,d\nu)$ if all the functions $(1 - |z|^2)^m(D^\alpha f)(z)$ with $|\alpha| = m$ are in $L^p(B,d\nu)$. This method can only deal with the case of $p \geq 1$. In this paper, we give a new approach to prove that the above result holds for all p is an element of $(0, \infty)$. A simple proof about the characterization of the Bloch space will be given. As a by-product of our approach, we generalize a theorem to the unit ball of C^m, and use this result to generalize some theorems about the pluriharmonic conjugates to the case $0 < p < 1$. 9 refs.

4265 (IC–89/111) **D^p spaces on bounded symmetric domains of C^n.** Shi Jihuai. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 11p. Order Number DE90606948. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In this paper, the space $D^p(\Omega)$ of functions holomorphic on bounded symmetric domain of C^m is defined. We prove that $H^p(\Omega)$ is contained in $D^p(\Omega)$ if $0 < p \leq 2$ and $D^p(\Omega)$ is contained in $H^p(\Omega)$ if $p \geq 2$, and both inclusions are proper. Further we find that some theorems on $H^p(\Omega)$ can be extended to the wider class $D^p(\Omega)$ for $0 < p \leq 2$. (author). 12 refs.

4266 (IC–89/126) **New spacetime superalgebras and their Kac-Moody extension.** Bergshoeff, E.; Sezgin, E. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 13p. Order Number DE90606949. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We present new spacetime algebras whose existence is due to special Γ-matrix identities which are also necessary for the existence of super p-branes. They contain a p-th rank antisymmetric tensor, and a (p-1) rank antisymmetric tensor-spinor generator. Furthermore the translations do not commute with the supercharge. In the case of supermembranes, we find a super-Kac-Moody extension of the new spacetime algebra. We give a realization of the algebra in terms of operators in d=11 superspace, and find a connection with the d=11 supermembrane action which leads to an elegant supergeometric formulation. By double dimensional reduction, we obtain a Kac-Moody algebra for the Type IIA Green-Schwarz superstring. We also discuss the generalization of these results, including the construction of generalized super-Virasoro algebras, for super p-branes. (author). 21 refs.

4267 (IC–89/130) **Iterative methods for nonlinear set-valued operators of the monotone type with applications to operator equations.** Chidume, C.E. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 14p. Order Number DE90606950. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The fixed points of set-valued operators satisfying a condition of monotonicity type in real Banach spaces with uniformly convex dual spaces are approximated by recursive averaging processes. Applications to important classes of linear and nonlinear operator equations are also presented. (author). 33 refs.

4268 (IC–89/140) **Solvability in $D^{1,2}(\Omega)$ of the equation $-\Delta u+c=Ke^u$.** Duong Minh Duc. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 24p. Order Number DE90606951. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We establish the Sobolev inequality for a limiting case. Using this result, the Ekeland variational principle and our generalized critical values results we get the existence, nonexistence and nonuniqueness of solutions in $D^{1,2}(\Omega)$ of the equation $-\Delta u+c=Ke^u$. (author). 18 refs.

4269 (IC–89/157) **Induction on a continuous variable.** Zhang Jingzhong. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 8p. Order Number DE90606952. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Mathematical induction is a useful tool. But it could be used to prove only the proposition with form P(n) for the natural number n. Could the natural number n be replaced by a continuous variable x? Yes, and then we have the continuous induction. The continuous induction is very easy to grasp by the students who have learned mathematical induction. And it can be used to prove many basic propositions in the elementary calculus. (author).

4270 (IC–89/158) **$U_q(sl(2))$ invariant operators and minimal theories fusion matrices.** Ganchev, A.Ch.; Petkova, V.B. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 15p. Order Number DE90607043. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The existence of $U_q(sl(2))$ invariant operators for $q^p=1$ leads to relations for the quantum Clebsch-Gordan kernels and for the quantum 6j-symbols (= fusion matrices). These relations effectively reduce some equalities, inherited from the generic q case, and imply, in particular, that the polynomial identities for the quantum 6j-symbols are consistent with the minimal theories chiral fusion rules. (author). 26 refs.

4271 (IC–89/162) **Quantum sl(2) enveloping algebra and representations of braid group.** Ma Zhongqi. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 17p. Order Number DE90607044. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In this note we review the relation between the Yang-Baxter equation and the braid group briefly. We discuss the quantum sl(2) enveloping algebra systematically, and present a general method to obtain a representation of the braid group from a solution of the classical Yang-Baxter equation based on a representation of a quantum simple Lie enveloping algebra. (author). 19 refs, 9 figs.

4272 (IC–89/167) **Generalized canonical quantization of dynamical systems with constraints and curved phase space.** Batalin, I.A.; Fradkin, E.S.; Fradkina, T.E. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 25p. Order Number DE90607045. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The operator version of generalized canonical quantization is formulated for dynamical systems with irreducible constraints and curved phase space. (author). 14 refs.

4273 (IC–89/171) **Self similar solutions of the second kind of nonlinear diffusion-type equations.** Diez, J.A.; Gratton, J.; Minotti, F. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 17p. Order Number DE90606953. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We study the self similar solutions of the problem of one-dimensional nonlinear diffusion of a passive scalar u (diffusivity D ~ u^m, m≥ 1) towards the centre of a cylindrical or spherical symmetry. It is shown that this problem has a self similar solution of the second kind. The self similarity exponent δ is found by solving a nonlinear eigenvalue problem arising from the requirement that the integral curve that represents the solution must join the appropriate singular points in the phase plane of the diffusion equation. In this way the integral curves that describe the solution before, and after the diffusive current arrives at the centre of symmetry can be determined. The eigenvalues for different values of the nonlinearity index m and for cylindrical and spherical geometry are computed. Numerical integration of the equations allows to determine the shape of the solution in terms of the physical variables. The application to the case m=3, corresponding (for cylindrical symmetry) to the creeping gravity currents of a very viscous liquid is worked out in detail. (author). 22 refs, 5 figs, 1 tab.

4274 (IC–89/177) **On pure radical in semigroups with zero.** Ahsan, J.; Thaheem, A.B. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 6p. Order Number DE90606954. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

We introduce pure radical of an ideal in a semigroup with zero. For this purpose we define pure, semipure and other related types of ideals, and establish some of their basic properties. 1 ref.

4275 (IC–89/183) **Note on p-semisimple BCI-algebras.** Aslam, M.; Thaheem, A.B. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 8p. Order Number DE90606955. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

In this note we prove some equivalent conditions for p-semisimple BCI-algebras. We also show that if X is a p-semisimple BCI-algebra then Hom(X), the set of all homomorphisms of X is a (p-semisimple) BCI-algebra, thus extending the class of BCI-algebras with this property as proposed. We also study some duality conditions. (author). 11 refs.

4276 (IC–89/185) **N=2 supergravity in superspace and the BRS symmetry.** Kachkachi, M.; Lhallabi, T. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 16p. Order Number DE90607062. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The quantum N = 2 Einstein supergravity action is constructed by requiring the BRS symmetry. This latter is derived by the use of the distorted horizontality conditions in the curved N = 2 harmonic superspace. (author). 16 refs.

4277 (IC–89/192) **Simple application of probability model for the mean age at marriage.** Shrestha, G. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 7p. Order Number DE90606956. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

An attempt has been made in this paper to examine the age pattern of marriage among Nepalese women. A lognormal distribution has been used and applied to the data from Nepal Fertility Survey (1986). The estimation procedure has been carried out by using method of moments and maximum likelihood method. (author). 6 refs, 1 tab.

4278 (IC–89/195) **Minimal prime ideals in semigroups without nilpotent elements.** Ahsan, J. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 8p. Order Number DE90606957. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The aim of this paper is to obtain a characterization of minimal prime ideals of (non-commutative) semigroups without nilpotent elements analogous to the one for the corresponding class of rings. We also define the notion of symmetric ideals of a semigroup and establish some of their basic properties. 5 refs.

4279 (IC–89/206) **Projective cohomology over a chain complex.** Abd El-Sattar, A. Dabbour; Salama, T.M. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 8p. Order Number DE90606958. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

In the present work we study some topics of spectrums with morphisms and then define a cohomology construction for compact Hausdorff spaces over a chain complex as the coefficient group. It is proved that this construction is δ-functor. (author). 16 refs.

4280 (IC–89/215) **On prime ideals and associated spectrum of BCK-algebras.** Ahsan, J.; Thaheem, A.B.; Deeba, E.Y. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 12p. Order Number DE90606959. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In this paper we study prime ideals and define the spectrum of a bounded commutative BCK-algebra. We also obtain a characterization of minimal prime (lattice) ideals of these algebras. (author). 8 refs, 4 tabs.

4281 (IC–89/216) **On the continuity of the Nemitsky operator induced by a Lipschitz continuous map.** Musina, R. International Centre for Theoretical Physics, Trieste (Italy). Aug 1989. 17p. Order Number DE90606960. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Let f: R^N -> R^k be a Lipschitz continuous function and let Ω be a bounded domain in the Euclidean space R^n. For every exponent p is an element of $(1,+\infty)$, the composite map $T_f = f \circ u$ maps the Sobolev space $W^{1,p}(\Omega, R^N)$ into $W^{1,p}(\Omega, R^k)$. In the scalar case, namely, when N=1, the operator T_f is continuous from $W^{1,p}(\Omega, R^N)$ into $W^{1,p}(\Omega, R^k)$. In this paper we illustrate a counter example to the continuity of the operator T_f in case N>1. In the last part of the paper we give some sufficient conditions for the continuity of T_f, and we conclude with some examples. (author). 10 refs.

4282 (IC–89/217) **Harmonic mappings into manifolds with boundary.** Chen Yunmei; Musina, R. International Centre for Theoretical Physics, Trieste (Italy). Aug 1989. 35p. Order Number DE90606961. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In this paper we deal with harmonic maps from a compact Riemannian manifold into a manifold with boundary. In this case, a weak harmonic map is by definition a solution to a differential inclusion. In the first part of the paper we investigate the general properties of weak harmonic maps, which can be seen as solutions to a system of elliptic differential equations. In the second part we concentrate our attention on the heat flow method for harmonic maps. The result we achieve in this context extends a result by Chen and Struwe. (author). 21 refs.

4284 (INIS-mf–12013, pp. 150) **Hydromagnetic space-time.** Carioli, S.M. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

This work is devoted to the study of the general properties of solutions of the coupled Einstein-Maxwell equations for a perfect magnetofluid (General Relativistic Magnetohydrodynamics, GRMHD). We point out that we are not merely considering fluid motion and electromagnetic field evolution in a given background space-time (for instance, Black Hole Electrodynamics) as astrophysicists have done so far. (orig.).

4285 (LA-UR–89-3337) **Hamiltonian chaos in a nonlinear polarized optical beam.** David, D.; Holm, D.D.; Tratnik, M.V. Los

Alamos National Lab., NM (USA). 1989. 21p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8906239–1: Santa Fe Institute summer school on complex systems, Santa Fe, NM (USA), 5-30 Jun 1989). Order Number DE90002437. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This lecture concerns the applications of ideas about temporal complexity in Hamiltonian systems to the dynamics of an optical laser beam with arbitrary polarization propagating as a traveling wave in a medium with cubically nonlinear polarizability. We use methods from the theory of Hamiltonian systems with symmetry to study the geometry of phase space for this optical problem, transforming from C^2 to $S^3 \times S^1$, first, and then to $S^2 \times (J, \theta)$, where (J, θ) is a symplectic action-angle pair. The bifurcations of the phase portraits of the Hamiltonian motion on S_2 are classified and displayed graphically. These bifurcations take place when either J (the beam intensity), or the optical parameters of the medium are varied. After this bifurcation analysis has shown the existence of various saddle connections on S^2, the Melnikov method is used to demonstrate analytically that the traveling-wave dynamics of a polarized optical laser pulse develops chaotic behavior in the form of Smale horseshoes when propagating through spatially periodic perturbations in the optical parameters of the medium. 20 refs., 7 figs.

4286 (LA-UR–89-3465) **Symplectic numerical integration of Hamiltonian systems.** Scovel, C. Los Alamos National Lab., NM (USA). 11 Sep 1989. 38p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-8906248–1: Mathematical Sciences Research Institute workshop on geometry of Hamiltonian Systems, Berkeley, CA (USA), 6-15 Jun 1989). Order Number DE90002380. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper describes some general techniques available for symplectic or Lie-Poisson integration and illustrate the results with some numerical computations. In this spirit, I also discuss reversible integration, equivariant integration, integration of volume preserving flows, and symplectic cellular automata. My intention is not to be exhaustive but to give a representative review. 76 refs., 5 figs.

4287 (RRK–89-16) **(2+1)-dimensional quantum gravity.** Hosoya, Akio; Nakao, Ken-ichi. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. May 1989. 21p. Order Number DE90719556. Available from NTIS (US Sales Only), PC A03/MF A01.

The (2+1)-dimensional pure Einstein gravity is studied in the canonical ADM formalism, assuming that the spatial surface is closed and compact. Owing to the constraints, the dynamical variables are reduced to the moduli parameters of the 2-surface. Upon quantization, the system becomes a quantum mechanics of moduli parameters in a curved space endowed with the Weil-Petersson metric. In the case of torus in particular, the superspace, on which the wave function of universe is defined, turns out to be the fundamental region is the moduli space. The solution of the Wheeler-DeWitt equation is explicitly given as the Maass form which is perfectly regular in the superspace. (author).

4288 (SAND–89-2525C) **Detection of a chirping electromagnetic signal.** Stearns, S.D. Sandia National Labs., Albuquerque, NM (USA). [1989]. 13p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8910264–1: Asilomar conference on signals, systems and computers, Monterey, CA (USA), 31 Oct 1989). Order Number DE90002105. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A matched chirp transform (MCT) method for detecting a dispersive electromagnetic pulse is described. The unique feature of this transform is that it gives a distribution of signal amplitude over time rather than frequency, and thereby simplifies signal detection and identification in the case described here. In the MCT method, the incoming signal is matched to a set of signal segments that chirp in accordance with an expected model of the dispersive medium. The performance of the MCT method is compared with that of a standard periodogram method of frequency measurement. 6 refs., 5 figs.

4289 **An energy-minimizing mesh for the Schroedinger equation.** Levine, Z.H. (Laboratory of Atomic and Solid State Physics, Cornell University, Ithaca, New York 14853-2501 (US)); Wilkins, J.W. *Journal of Computational Physics (USA),* 83(2): 361-372 (Aug 1989).

A formula is derived which gives the optimum placement of mesh points in the sense of minimizing the error in energy for a given number of degrees of freedom. The wave function is assumed to be given in a finite difference or finite element representation with polynomial completeness to an arbitrary but fixed degree. The result depends explicitly on the wave function, the kinetic energy operator, and the degree of polynomial completeness for the representation but does not depend explicitly on the potential, even in the presence of a Coulomb singularity. The optimum mesh predicted here for the hydrogen atom is compared to the widely used Herman–Skillman mesh. A 1-dimensional example is given in which the calculated error in energy displays a sharp minimum at the predicted optimal mesh density. The critical role of reproducing the analytic structure of the solution is illustrated with an additional example in one dimension. The hydrogen 1*s* wave function is considered as a 3-dimensional problem, and an optimal mesh density is calculated. A singular mesh density is required to account for the cusp while retaining the convergence properties of the basis set. A few percent of the available degrees of freedom are devoted to the description of the wave function cusp in the optimal mesh. © 1989 Academic Press, Inc.

4290 **Bound states of the Dirac equation outside a hard sphere.** Jaffe, R.L. (Center for Theoretical Physics, Laboratory for Nuclear Science, and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139 (US)); Manohar, A. *Annals of Physics (New York) (USA),* 192(2): 321-330 (Jun 1989).

We study and interpret the bound states of the Dirac equation outside a hard sphere in one, two, and three dimensions. © 1989 Academic Press, Inc.

4291 **How probability arises in quantum mechanics.** Farhi, E. (Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139 (US)); Goldstone, J.; Gutmann, S. *Annals of Physics (New York) (USA),* 192(2): 368-382 (Jun 1989).

A version of the postulates of quantum mechanics is presented in which no reference is made to probability. Instead we rely on a weaker postulate referring to eigenvalues and eigenstates. The modulus squared of the inner product of two state vectors is shown to be an eigenvalue of the operator representing a *frequency* measurement on the system of an infinite number of copies of the original system. The argument makes essential use of the Strong Law of Large numbers. © 1989 Academic Press, Inc.

4292 **Gravitational radiation from primordial solitons and soliton-star binaries.** Gleiser, M. (Institute for Theoretical Physics, University of California, Santa Barbara, Santa Barbara, California 93106 (US)). *Physical Review Letters (USA),* 63(12): 1199-1202 (18 Sep 1989).

The possibility that both the formation of nontopological solitons in a primordial second-order phase transition and binary systems of soliton stars could generate a stochastic gravitational-wave background is examined. The present contribution in gravitational radiation to the energy density of the Universe from these processes is estimated for a number of different models. The detectability of such contributions from the timing measurements of the milisecond pulsar and spaceborne laser interferometry is briefly discussed and compared to other cosmological and local sources of background gravitational waves.

4293 **The sense in which a "weak measurement" of a spin-(1/2 particle's spin component yields a value 100.** Duck, I.M. (T. W. Bonner Nuclear Laboratory, Physics Department, Rice University, Houston, Texas 77251-1892 (US)); Stevenson, P.M.; Sudarshan, E.C.G. *Physical Review [Section] D: Particles and Fields (USA),* 40(6): 2112-2117 (15 Sep 1989).

We give a critical discussion of a recent Letter of Aharonov, Albert, and Vaidman. Although their work contains several flaws, their main point is valid: namely, that there is a sense in which a certain "weak measurement" procedure yields values outside the eigenvalue spectrum. Our analysis requires no approximations and helps

to clarify the physics behind the effect. We describe an optical analog of the experiment and discuss the conditions necessary to realize the effect experimentally.

4294 Generalized relations among *N*-dimensional Coulomb Green's functions using fractional derivatives. Blinder, S.M. (Department of Chemistry, University of Michigan, Ann Arbor, Michigan 48109 (US)); Pollock, E.L. *Journal of Mathematical Physics (New York) (USA)*, 30(10): 2285-2287 (Oct 1989).

Hostler [J. Math. Phys. **11**, 2966 (1970)] has shown that Coulomb Green's functions of different dimensionality N are related by $G^{(N+2)}=OG^{(N)}$, where O is a first-order derivative operator in the variables x and y. Thus all the even-dimensional functions are connected, as are analogously the odd-dimensional functions. It is shown that the operations of functional differentiation and integration can further connect the even- to the odd-dimensional functions, so that Hostler's relation can be extended to give $G^{(N+1)}=O^{1/2}G^{(N)}$.

4295 Generalization of Nose's isothermal molecular dynamics: Non-Hamiltonian dynamics for the canonical ensemble. Hoover, W.G. (Department of Applied Science, University of California at Davis-Livermore (US)). *Physical Review [Section] A: General Physics (USA)*, 40(5): 2814-2815 (1 Sep 1989). DOE Contract W-7405-ENG-48.

There are many potentially useful generalizations of Nose's mechanics that are both deterministic and time reversible despite the lack of an underlying Hamiltonian. These generalizations are particularly useful in simulating systems far from equilibrium.

4296 Multithermodynamic phase lattice-gas automata incorporating interparticle potentials. Chen, H. (Center for Nonlinear Studies, Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)); Chen, S.; Doolen, G.D.; Lee, Y.C.; Rose, H.A. *Physical Review [Section] A: General Physics (USA)*, 40(5): 2850-2853 (1 Sep 1989).

An extension of the lattice-gas automaton model for fluid equations is presented which has nonideal-gas thermodynamic properties reminiscent of first-order phase transitions. The new idea in this model is an algorithm for including interparticle potentials.

4297 Generalization of Nose's isothermal molecular dynamics: Necessary and sufficient conditions of dynamical simulations of statistical ensembles. Jellinek, J. (Chemistry Division, Argonne National Laboratory, Argonne, Illinois 60439 (US)); Berry, R.S. *Physical Review [Section] A: General Physics (USA)*, 40(5): 2816-2818 (1 Sep 1989). DOE Contract W-31-109-ENG-38.

We examine the necessary and sufficient conditions that a dynamics is suited for mimicking a specified statistical ensemble. Some delicate points related to the Nose scheme and its generalizations are clarified.

4298 Characterization of an experimental strange attractor by periodic orbits. Lathrop, D.P. (Center for Nonlinear Dynamics and Department of Physics, University of Texas, Austin, Texas 78712 (US)); Kostelich, E.J. *Physical Review [Section] A: General Physics (USA)*, 40(7): 4028-4031 (1 Oct 1989).

We describe a general procedure to locate periodic saddle orbits in a chaotic attractor reconstructed from experimental data. The method is applied to data from a Belousov-Zhabotinskii chemical reaction. The eigenvalues associated with the saddle orbits are used to estimate the Lyapunov exponents. An analysis of the next amplitude map determines the allowable periodic orbits and yields an estimate of the topological entropy.

4299 Cumulant methods and short time propagators. Coalson, R.D. (Department of Chemistry, University of Pittsburgh, Pittsburgh, Pennsylvania 15260 (US)); Freeman, D.L.; Doll, J.D. *Journal of Chemical Physics (USA)*, 91(7): 4242-4248 (1 Oct 1989).

The present paper clarifies a number of issues concerning the general problem of constructing improved short time quantum mechanical propagators. Cumulant methods are shown to be a particularly convenient tool for this task. Numerical results comparing methods based on partial averaging and on gradient approaches are presented for simple model problems and for many particle quantum fluids.

4300 (CEA-CONF–9799) **Soft X-Ray amplification in laser plasmas.** Louis-Jacquet, M. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1988. 21p. (CONF-8809415–: International School of Plasma Physics, Varenna (Italy), 6-16 Sep 1988). Order Number DE90721235. Available from NTIS (US Sales Only), PC A03/MF A01.

The principles, experiments and theoretical models of soft x-ray, amplification, produced in laser plasmas, are studied. In the discussion of the principles, the laser plasma medium, the definition of the gain, the population inversions, saturation and superradiance are described. The results concerning recombination and collisional excitation experiments, as well as experimental devices are shown. A complete physical simulation to design and interpret x-ray laser experiments is given. Applications of x-ray lasers in grating production techniques, in contact microscopy and holography are considered.

4301 (CONF-891106–3) **ITER disruption modeling using TSC [Tokamak Simulation Code].** Sayer, R.O.; Peng, Y.K.M.; Wesley, J.C.; Jardin, S.C. Oak Ridge National Lab., TN (USA). 13 Nov 1989. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 31. annual meeting of the Division of Plasma Physics of the American Physical Society; Anaheim, CA (USA); 13-17 Nov 1989. Order Number DE90002934. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Design of the ITER vacuum vessel (VV) is driven strongly by disruption-induced forces. We use the Tokamak Simulation Code (TSC) to model disruptions for the ITER physics phase (I_p = 22 MA) and predict the time evolution of currents and forces on the VV. For a plasma vertically displaced to $Z_{axis} = -1.0$m before disruption and decaying at a rate of $< dI_p/dt > \simeq -1.0$MA/ms, the induced VV current peaks at 18 MA. The maximum radial VV force F_R is 56 MN/rad; the maximum vertical force F_Z is 5.4 MN/rad; and the maximum VV disruption pressure is 1.0 MPa. Variations in VV resistance (20 - 160 $\mu\Omega$) and $< dI_p/dt >$ (1 - 2.5 MA/ms) do not change F_R significantly. The dependence of the forces on the initial plasma displacement and $< dI_p/dt >$ behavior, and the responses of other conducting structures are discussed. 2 refs., 6 figs.

4302 (CONF-8901166–1) **Ash and burn control through fishbones.** Varadarajan, V.; Miley, G.H. Illinois Univ., Urbana, IL (USA). [1989]. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER52127. From ITER burn control meeting; Livermore, CA (USA); Jan 1989. Order Number DE90001564. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The thermal alphas will accumulate in the center of the ignited thermonuclear plasma in the long pulse experiments. This accumulation increases the Z_{eff} leading to increased synchrotron losses and decreases the effective fuel density which reduces the power output. Also the ignited plasma is burn-unstable and its temperature is expected to increase above the design point until a stable equilibrium is reached at a higher temperature. This higher operating temperature is not expected to be beneficial. Thus we are faced with the dual problem of ash accumulation and thermonuclear burn instability in the steadily burning tokamak plasma. So some means of controlling them is desirable. Several control schemes for both problems have been proposed. But it is felt that we need alternatives with more desirable characteristics. In this paper, we explore the use of 'fishbones' as possible scheme that will achieve the dual purpose of ash and burn control. 3 refs.

4303 (CONF-8909257–1) **Computation of electromagnetic effects in a tokamak due to a plasma disruption.** Turner, L.R. Argonne National Lab., IL (USA). [1989]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From International symposium and team workshop on 3-D electromagnetic field analysis (3DMAG); Okayama (Japan); 11-13 Sep 1989. Order Number DE90001764. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

To model the consequences of a plasma disruption in a tokamak one must combine a code that computes the detailed MHD behavior of the plasma with one that treats the three-dimensional features of the conducting toroidal components around the plasma. The NET (Next European Torus) Team have undertaken a treatment of electromagnetic effects from plasma disruptions using both open loop and closed loop integration of codes. In America, workers at Oak Ridge National Laboratory, Idaho National Engineering Laboratory, and Argonne National Laboratory have looked at plasma disruption effects on the ITER blanket using the codes TSC and EDDYNET. Results show how the forces on a blanket segment depend on the number and size of the segments and on the gap between them. 9 refs., 4 figs., 1 tab.

4304 (CONF-8910259–1-Vugraphs) **Alpha modification of Tokamak ballooning instabilities.** Spong, D.A.; Leboeuf, J-N.; Holmes, J.A.; Christenson, P.J. Oak Ridge National Lab., TN (USA). [1989]. 31p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From IAEA technical committee meeting on alpha particles/confinement and heating; Kiev (USSR); 23-26 Oct 1989. Order Number DE90001730. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This paper will discuss the high-n ballooning limit (drift resonant effects included in noncircular tokamak geometry) and the hybrid fluid-particle code (inhomogeneous, sheared slab geometry, full FLR alphas, linear and nonlinear).

4305 (DOE/ER/53223–118) **Uncertainties associated with extrapolating L mode energy confinement to ITER and CIT.** Riedel, K.S.; Kaye, S.M. New York Univ., NY (USA). Courant Inst. of Mathematical Sciences. Nov 1989. 31p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53223. (MF–119). Order Number DE90002955. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We apply a two-step tokamak regression procedure to L mode confinement data. The resulting scaling expression for τ_E is similar to other published scaling expressions. Using the random coefficient model, we include tokamak to tokamak variations in our estimate of the uncertainty. We calculate an uncertainty factor of 19% and 35% in predicted confinement times for ITER and CIT respectively. The confinement uncertainties are dominated by the propagation of uncertainties arising from the tokamak to tokamak variation in scalings with q and $\bar{n}$ to the second step regression and for CIT, the lack of high magnetic field, moderate size devices in the L mode database. 11 refs., 2 figs., 4 tabs.

4306 (DOE/ER/53223–T2) **Advanced toroidal theory: Progress report.** Garabedian, P.R. New York Univ., NY (USA). [1989]. 60p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53223. Order Number DE90003376. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This report briefly discusses the following topics: equilibrium and transport; including turbulent transport; stability; wave propagation; statistical data analysis; computational algorithms and computer simulations; and general plasma science.

4307 (DOE/ER/53263–7) **Fundamental studies of fusion plasmas: Annual performance report.** Aamodt, R.E.; Catto, P.J.; D'Ippolito, D.A.; Myra, J.R. Lodestar Research Corp., Boulder, CO (USA). 27 Jun 1989. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER53263. (LRC–89-7). Order Number DE90002343. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

In this paper, summary reports are given on significant new results for understanding and controlling tokamak performance under the application of high power ICH; new results on understanding the complicated interaction of plasma, atomic and surface physics in the tokamak edge plasma with intense rf fields; and new results on the neoclassical transport of energetic alpha particles.

4308 (DOE/ET/53088–370) **Stability of the Global Alfven Eigenmode in the presence of fusion alpha particles in an ignited tokamak plasma.** Fu, G.Y.; Van Dam, J.W. Texas Univ., Austin, TX (USA). Inst. for Fusion Studies. May 1989. 25p. Sponsored by U.S. DOE Energy Research; Texas Atomic Energy Research Foundation; Texas Advanced Technology Program. DOE Contract FG05-80ET53088. (IFSR–370). Order Number DE89016618. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The stability of the Global Alfven Eigenmodes is investigated in the presence of super-Alfvenic energetic particles, such as the fusion-product alpha particles in an ignited deuterium-tritium tokamak plasma. Alpha particles tend to destabilize these modes when $\omega_{*\alpha} > \omega_A$, where ω_A is the shear-Alfven modal frequency and $\omega_{*\alpha}$ is the alpha particle diamagnetic drift frequency. This destabilization due to alpha particles is found to be significantly enhanced when the alpha particles are modeled with a slowing-down distribution function rather than with a Maxwellian. However, previously neglected electron damping due to the magnetic curvature drift is found to be comparable in magnitude to the destabilizing alpha particle term. Furthermore, the effects of toroidicity are also found to be stabilizing, since the intrinsic toroidicity induces poloidal mode coupling, which enhances the parallel electron damping from the sideband shear-Alfven Landau resonance. In particular, for the parameters of the proposed Compact Ignition Tokamak, the Global Alfven Eigenmodes are found to be completely stabilized by either the electron damping that enters through the magnetic curvature drift or the damping introduced by finite toroidicity. 29 refs., 8 figs., 1 tab.

4309 (DOE/ET/53088–401) **The free energy of Maxwell-Vlasov equilibria.** Morrison, P.J.; Pfirsch, D. Texas Univ., Austin, TX (USA). Oct 1989. 25p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–401). Order Number DE90003318. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A previously derived expression for the energy of arbitrary perturbations about arbitrary Vlasov-Maxwell equilibria is transformed into a very compact form. The new form is also obtained by a canonical transformation method for solving Vlasov's equation, which is based on Lie group theory. This method is simpler than the one used before and provides better physical insight. Finally a procedure is presented for determining the existence of negative-energy modes. In this context the question of why there is an accessibility constraint for the particles, but not for the fields, is discussed. 16 refs.

4310 (DOE/ET/53088–407) **Introduction to bifurcation theory.** Crawford, J.D.; Kueny, C.; Saphir, B.; Shadwick, B. Texas Univ., Austin, TX (USA). Inst. for Fusion Studies. Nov 1989. 73p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–407-Review). Order Number DE90003319. Available from NTIS, PC A05/MF A01; OSTI; INIS; GPO Dep.

Bifurcation theory is a subject with classical mathematical origins. The modern development of the subject starts with Poincare and the qualitative theory of differential equations. In recent years, the theory has undergone a tremendous development with the infusion of new ideas and methods from dynamical systems theory, singularity theory, group theory, and computer-assisted studies of dynamics. As a result, it is difficult to draw the boundaries of the theory with any confidence. In this review, the objects in question will be parameterized families of dynamical systems (vector fields or maps). In the sciences these families commonly arise when one formulates equations of motion to model a physical system. We specifically analyze how the time evolution near an equilibrium can change as parameters are varied; for simplicity we consider the case of a single parameter only.

4311 (FRCEA-TH–189) **Magnetic microtearing coherence in tokamak plasmas.** Mourgues, F. Aix-Marseille-2 Univ., 13 - Marseille (France). 1988. 218p. (In French). Order Number DE90721234. Available from NTIS (US Sales Only), PC A10/MF A01.

The analyses of the microtearing-modes coherence is effected. The tokamak characteristics, concerning fusion, electromagnetic confinement and turbulence are reviewed. The nature of the tearing modes, the variational principle of linear mode studies, a linear study in collisional and non-collisional plasma conditions are summarized, before studying the microtearing-mode coherence. The flux line configuration in the presence of a magnetic turbulence, the plasma response to a microtearing perturbation and instability, in the presence of a radial-electrons diffusion, is described. The autocoherence of microtearing modes in non-linear conditions are analyzed.

4312 (GA-A–19860) **Effect of energetic particle absorption on fast wave current drive.** Chiu, S.C.; Chan, V.S. General Atomics, San Diego, CA (USA). Nov 1989. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER53277. (CONF-8910259–2: IAEA technical committee meeting on alpha particles/confinement and heating, Kiev (USSR), 23-26 Oct 1989). Order Number DE90002915. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Fast wave current drive presents a promising scheme for steady-state operation of reactor tokamaks. This scheme is being studied for application in ITER, JET, and DIII-D. There are two regimes which appear to be promising, the low frequency range $0 < \omega < 2\Omega_D$ and the lower-hybrid frequency range $\Omega_D << \omega < \omega_{LH}$. In the latter scheme, the wavelength of the fast wave becomes much shorter than the α-particle gyroradius and α-absorption can become significant. An analytic formula for α-absorption of fast waves for the standard slowing down distribution has been derived and compared with electron absorption at ITER parameters. It has been found that at $T_D > 30$ keV; and $n_e \sim 10^{14}$ cm^{-3}, the α-absorption is large and can greatly decrease the current drive efficiency. However, without sacrificing the fusion reactivity rate, by increasing the density and decreasing the temperature 15 keV $< T_D <$ 25 keV, the α-absorption can become small at a sufficiently high frequency. It is suggested that a simulation of the α-absorption effect on fast wave current drive can be made in DIII-D by using a lower frequency source (~30 MHz) to create a minority tail and a high frequency source (200 MHz) to drive current. Results of minority absorption will be presented. Effects which can improve current drive efficiency will be discussed. 11 refs., 6 figs.

4313 (IC–89/122) **Investigation of the non linear Buneman instability in a multi ion plasma.** Bulanov, S.V.; Shah, H.A.; Abdullah, T. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 18p. Order Number DE90607452. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In the present work the acceleration of ions in a multi ion species plasma is investigated in the non linear state of the Buneman instability. The method used is that of transforming Eulerian coordinates to Lagrangian ones. Firstly, minority species ions are treated as test ions and for this the differential energy spectrum is obtained which is shown to be a power law. It is also shown that the heavier ions have larger energies. Secondly, self similar solutions for the case of a two ion species plasma are obtained for certain limiting cases. (author). 12 refs.

4314 (IC–89/131) **On the quantum inverse problem for a new type of nonlinear Schroedinger equation for Alfven waves in plasma.** Sen, S.; Roy Chowdhury, A. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 12p. Order Number DE90607469. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The nonlinear Alfven waves are governed by the Vector Derivative nonlinear Schroedinger (VDNLS) equation, which for parallel or quasi parallel propagation reduces to the Derivative Nonlinear Schroedinger (DNLS) equation for the circularly polarized waves. We have formulated the Quantum Inverse problem for a new type of Nonlinear Schroedinger Equation which has many properties similar to the usual NLS problem but the structure of classical and quantum R matrix are distinctly different. The commutation rules of the scattering data are obtained and the Algebraic Bethe Ansatz is formulated to derive the eigenvalue equation for the energy of the excited states. 10 refs.

4315 (IC–89/152) **Generation of axial and lateral magnetic fields in laser produced plasmas.** Bhattacharyya, B.; Pant, H.C.; Sarkar, S. International Centre for Theoretical Physics, Trieste (Italy). Jun 1989. 7p. Order Number DE90607470. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The generation of both axial and lateral magnetic fields caused by the interaction of intense radiations with laser produced plasmas has been analytically studied. It is shown that the inverse bremsstrahlung absorption has an impact on the generation of the lateral magnetic field in laser produced plasmas, modifying the lateral thermal energy transport in the coronal region. However, the axial energy transport may remain unaffected. (author). 6 refs.

4316 (IC–89/172) **Ion-sound emission by Langmuir soliton reflected at density barrier.** El-Ashry, M.Y. International Centre for Theoretical Physics, Trieste (Italy). Jul 1989. 11p. Order Number DE90607471. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The emission of ion-sound waves by an accelerated Langmuir soliton is studied. The acceleration of the soliton is due to an inhomogeneous density barrier. On the assumption that the kinetic energy of the Langmuir soliton is smaller than the potential energy created by the barrier. The basic equations describing the dynamic behaviour of the soliton and the emission of the ion-sound waves are formulated. The qualitative spatial distributions of the perturbed concentration in the ion-sound waves are analyzed at different characteristic points of the soliton. The energy lost by the soliton, as a result of the emission, is estimated. (author). 6 refs, 4 figs.

4317 (INIS-mf–4754(no.39)) **International bulletin on atomic and molecular data for fusion. No. 39.** Smith, J.J. (ed.). International Atomic Energy Agency, Vienna (Austria). Atomic and Molecular Data Unit. Jul 1989. 99p. Order Number DE90607372. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

The Bulletin provides information on atomic and molecular data relevant for fusion research. In part I the indexed papers are listed separately for structure and spectra, atomic and molecular collisions, and surface interactions. Part II contains all the bibliographic data for both the indexed and non-indexed references (514 references). An author index is included.

4318 (IPPJ-DT–152) **Development of Fusion and Plasma Diagnostics Center - synchrotron radiation experiment, (2). Characterization of primary monochromator and construction of calibration apparatus and its application.** Sakurai, M.; Morita, S.; Yonezu, H. and others. Nagoya Univ. (Japan). Inst. of Plasma Physics. May 1989. 28p. (In Japanese). Order Number DE90719543. Available from NTIS (US Sales Only), PC A03/MF A01.

A beam line for radiometric calibration has been constructed at BL5B of UVSOR facility. The beam line was designed for the calibration of optical components, detectors, and spectrometers for plasma diagnostic devices in the VUV and soft X-ray spectral regions. It consists of a plane grating monochromator and a calibration chamber. The calibration chamber is equipped with a differential pumping system and a reflectometer. Spectral distribution, higher order contribution, and resolution of the monochromator were measured by experiments on photoemission and photo-ionization of rare gases and various solids. Some applications for the characterization of multilayer reflectors and channel electron multipliers are demonstrated. (author).

4319 (IPPJ-REV–4) **Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.** Tanaka, S.; Thomassen, K.I. (eds.). Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. 102p. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

Individual papers in these proceedings are indexed separately.

4320 (IPPJ-REV–4, pp. 7-10) **Particle simulation of Alfven/ion-cyclotron instabilities in a neutral-beam current-driven plasma.** Matsuda, Y. (Lawrence Livermore National Lab., CA (USA)); Tanaka, M.; Sato, T. Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

Low frequency, long wavelength instabilities may be excited in a tokamak plasma with current driven by a neutral beam injection. Specifically, when the beam parallel velocity is greater than the Alfven velocity of the background plasma, the Alfven waves are expected to become unstable for high enough beam density and may cause degradation of the beam current. Particle simulations were carried out to study these instabilities and their nonlinear effects on

the current. In addition, waves in the ion cyclotron frequency range are also investigated. (author).

4321 (IPPJ-REV–4, pp. 19-22) **High density current drive experiments on JFT-2M.** Uesugi, Y. (Japan Atomic Energy Research Inst., Naka, Ibaraki. Naka Fusion Research Establishment). Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

Current drive experiment by 200 MHz fast waves have been carried out to investigate a feasibility of the fast wave current drive (FWCD) in hot and dense plasmas. Four phased loop antenna array is employed to excite traveling fast waves. The wavenumber spectrum has a peak at $N_Z = 4$ with $\Delta N_Z = 4$ when Δ phi = $\pi/2$. Typical loading resistance of the antenna is about 1-1.5 Ω at n-bar$_e$ = 2 x $10^{19}m^{-3}$, and increases with the density as well as that of ICRF loop antenna. When the fast wave is applied to the ohmic plasma with T_{eo} = 1 keV and n-bar$_e$>1 x $10^{19}m^{-3}$, where the lower hybrid resonance layer locates at the plasma edge, remarkable increase of the electron temperature is observed at the plasma center. The increment of T_e depends on the antenna phasing. Effective heating is obtained at Δ phi = π where V_{ph}/V_{te} = 3-4. A noticeable loop voltage drop is observed only at Δ phi = π. When the 2nd harmonic ECH is applied to heat the plasma up to 1.5 keV, the region where the loop voltage drops is expanded into Δ phi = 2 π/3. This result indicates that the fast wave with higher phase velocity becomes to be absorbed effectively with increasing T_e. Linear theory predicts that sufficient absorption at Δ phi = $\pi/2$ requires the electron temperature of 3 keV at the plasma center and the plasma current of several tens kA will be generated by an rf power of 500 kW. (author).

4322 (IPPJ-REV–4, pp. 23-26) **Lower hybrid current drive and suppression of MHD instabilities on WT-3.** Maekawa, Takashi (Kyoto Univ. (Japan)). Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

Sawtooth oscillations (STO) appearing in lower hybrid current drive (LHCD) plasma (TOPIC 1) and bi-directional LHCD for production of a high βp plasma (TOPIC 2) are studied on the WT-3 tokamak. (author).

4323 (IPPJ-REV–4, pp. 27-30) **Production of high poloidal tokamak equilibria in Versator II by means of RF current drive.** Luckhardt, S.C. (Massachusetts Inst. of Tech., Cambridge, MA (USA). Plasma Fusion Center); Chen, K.-I.; Kesner, J.; Kirkwood, R.; Lane, B.; Porkolab, M.; Squire, J. Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

Experiments on the Versator II device have been carried out in a regime of low plasma current with the aim of reaching high poloidal beta, β_p. Lower-Hybrid RF current drive is used to produce an energetic electron population which carries the plasma current and pressure. In this mode of operation, plasmas with $\epsilon\beta_p$ approaching unity appear attainable. Data from equilibrium magnetic analysis, hard x-ray, and density profiles display an outward magnetic axis shift in agreement with equilibrium theory, and further indicate that q(O) is in the range of 4-6. PEST code modeling of these experiments suggests that some of these plasmas may be near or beyond the transition to the second stability region for ballooning modes. (author).

4324 (IPPJ-REV–4, pp. 31-34) **Effect of finite fast electron confinement on ECRH and LH current drive and heating.** Luckhardt, S.C. (Massachusetts Inst. of Tech., Cambridge, MA (USA). Plasma Fusion Center). Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

The Fisch-Boozer calculation of the efficiency of RF current drive is modified to include the effects of a finite confinement time of fast electrons, tau$_F$. The main results are: (1) The RF power absorbed, P_A is no longer equal to the power dissipated by collisions, P_D. (2) New formulas are derived for the current drive efficiency, J/P_A and the heating efficiency, P_D/P_A. These new formulas give criteria for the tau$_F$ needed to achieve best efficiency, and predict that in small tokamaks the efficiency of LHCD can be an order of magnitude larger than ECCD. This latter result provides an explanation of the low ECCD current drive efficiencies seen in small tokamaks. (author).

4325 (IPPJ-REV–4, pp. 35-38) **Coupling analysis and experiment on fast wave antenna and multijunction grill for current drive.** Ohkubo, Kunizo (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

4326 (IPPJ-REV–4, pp. 39-42) **Lower hybrid current drive model and its comparison with experiments.** Yoshioka, K. (Hitachi Ltd., Ibaraki (Japan). Energy Research Lab.); Okazaki, T.; Leuterer, F. Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

A simple analytical model for evaluating the lower hybrid current drive efficiency in the presence of a DC electric field is developed and its result are compared with the experimental data from the ASDEX tokamak. The model is on the basis of an analytical solution of the 'adjoint equation' to the Fokker Planck equation and considers the finite spread of the rf wave spectrum. The dependency of current drive efficiency on the DC electric field predicted by the model agrees well with that of the experiment within the experimental error. (author).

4327 (IPPJ-REV–4, pp. 43-47) **Effect of resonant-to-bulk electron momentum transfer on the efficiency of electron-cyclotron current-drive.** Matsuda, Y. (Lawrence Livermore National Lab., CA (USA)); Smith, G.R.; Cohen, R.H. Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

Efficiency of current drive by electron cyclotron waves is investigated numerically by a bounce-averaged Fokker-Planck code to ellucidate the effects of momentum transfer from resonant to bulk-electrons, finite bulk temperature relative to the energy of resonant electrons, and trapped electrons. Comparisons are made with existing theories to assess their validity and quantitative difference between theory and code results. Difference of nearly a factor of 2 was found in efficiency between some theory and code results. (author).

4328 (IPPJ-REV–4, pp. 48-51) **Current drive at General Atomics.** Politzer, P.A. (General Atomics, San Diego, CA (USA)).

56 GHz, 144 kW, 100 msec EC power is injected into a target OH plasma to sustain the plasma current with 2 Ω_e EC driven current. The current up to 57 kA can be sustained without OH power during the EC pulse. The safety factor q(a) is 6.1, the electron density $n_e = 2 \times 10^{12}$ cm^{-3} and the central electron temperature Te(0) about 200 eV. The efficiency of 2 Ω_e ECCD is 0.05 (10^{19} A/Wm^2). The electron velocity distribution function is evaluated with the angular dependence of the hard x-ray energy spectrum on the direction of the toroidal magnetic field B_T. The EC power deposit profile is calculated by using the induced distribution function and the ray tracing code. (author).

In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

Bootstrap current is estimated with the Hirshman-Sigmar theory and is compared with the various approximate formula. Measured resistive loop voltage is compared with the calculations using the neoclassical resistivity with and without the bootstrap current and the Spitzer resistivity for a wide range of the plasma current (I_p = 0.5-2MA) and the poloidal beta (β_P = 0.1-2.0). Recalculated resistive loop voltage is roughly consistent with the neoclassical prediction including the Bootstrap current. The inclusion of the Bootstrap current due to fast ion seems to improve the coincidence. (author).

4335 (IPPJ-REV–4, pp. 87-90) **Efficiency of current drive by pulsed injection of REB.** Michishita, Toshinori (Kyoto Univ. (Japan). School of Liberal Arts and Sciences). Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

A simple analysis based on a relativistic Fokker-Planck equation for relativistic electron beam (REB) dynamics combined with a set of circuit equations is performed for evaluating the efficiency of current drive by a pulsed REB. A more accurate numerical result is given for the efficiency as well as for the temporal evolutions of the REB momentum distribution function and the circuit quantities. A comparison of the numerical result with the analytical limit for the efficiency is given. Optimization for the REB current drive in a reactor-grade tokamak is discussed. (author).

The particle simulation on the ECH current drive is much tougher than the precedent simulations on the lower hybrid current drive. EM particle codes are required to simulate the ECRW propagation, the mode conversion, the associated heating, and the binary collision process at the same time in a system. The present report describes an EM code developed for these purposes. It is an advanced new code, PS2M, a particle simulation code in 2.5 dimensions (2 space-dimensions and three velocity dimensions) for electromagnetic plasmas with a pair of parallel conducting plates (a slab model). This code has some merits compared with the conventional EM codes. The spectral method is adopted for the field solver. The restriction for the grid spacing is relaxed by adopting high order spline spatial interpolation properly in accordance with the ratio of a grid spacing to a Debye length. The Courant condition is relaxed by adopting a modified partially-implicit method, which is a kind of the Crank-Nicolson scheme. Either conducting binary or absorbing boundary for the electromagnetic fields is possible. Major simulation results about the ECH current drive are also described. (N,K.).

4339 (JAERI-M–89-061) **1-dimensional single-mode nonlinear FEL amplification code. User's manual.** Kishimoto, Yasuaki; Oda, Hisako. Japan Atomic Energy Research Inst., Tokyo (Japan). May 1989. 63p. (In Japanese). Order Number DE90719544. Available from NTIS (US Sales Only), PC A04/MF A01.

The 1-dimensional single mode nonlinear FEL amplification code is developed which is useful for the basic design of Free Electron Laser. The wiggler field is given by the helical configuration, and the guide magnetic field for the stable beam propagation and the incident beam energy spread are taken into account. The tapered-wiggler with arbitrary configuration is also considered. The nonlinear FEL characteristics in the wide range from Compton to Raman regimes are analyzed since the electrostatic interaction between particles is included. The FEL code developed here is vectorized about 97%. Therefore, the large amount of parameter study for the optimization of machine design is possible. (author).

4340 (JAERI-M–89-086) **Ripple loss of alpha particles in ITER.** Tani, Keiji; Takizuka, Tomonori; Azumi, Masafumi. Japan Atomic Energy Research Inst., Tokyo (Japan). Jul 1989. 29p. Order Number DE90719528. Available from NTIS (US Sales Only), PC A03/MF A01.

Part I: A benchmark test for the ripple loss of alpha particles in ITER has been executed by using an orbit-following Monte-Carlo (OFMC) code. In ITER with a plasma current of the order of 10 MA and an edge ripple of the order of 3%, the total power-loss fraction derived by JAERI's OFMC code is 6.6%. Part II: Two dimensional heat load on the first wall due to ripple loss of alpha particles in ITER has been estimated by using an OFMC code. The peak heat load due to ripple-trapped loss is of the order of 0.1 MW/m^2. The peak heat load by ripple-untrapped loss averaged over the toroidal angle is about 0.07 MW/m^2. (author).

4341 (JAERI-M–89-088) **Energy conversion efficiency in high current Raman regime free electron laser (FEL), 1. Single mode analysis.** Kishimoto, Yasuaki; Shiho, Makoto; Odajima, Kazuo; Maeda, Hikosuke; Oda, Hisako. Japan Atomic Energy Research Inst., Tokyo (Japan). Jul 1989. 30p. Order Number DE90719527. Available from NTIS (US Sales Only), PC A03/MF A01.

The effect of the longitudinal electrostatic field on the energy conversion efficiency is investigated by use of a 1-dimensional FEL amplification code. It is found that the repulsive electrostatic interaction prevents the periodic bounce motion of trapped electrons in the ponderomotive potential especially in the high current Raman operation regime. The irregular rotation of the trapped electron increases the untrapped ones, which obtained the kinetic energy from the radiation field. Resultantly, the energy conversion efficiency averaged over a long wiggler distance stays in a lower level than that predicted by the trapping argument. It is also found that the finite beam energy spread reduces the electrostatic force in the nonlinear trapping stage. The reduction of the electrostatic force recovers the periodic electron bounce motion and the associated amplitude oscillation of the radiation field. (author).

4342 (LA-UR–89-3174) **Fusion burn dynamics in dense Z-pinches (DZP).** Krakowski, R.A.; Miller, R.L.; Bathke, C.G.; Werley, K.A.; Hagenson, R.L. Los Alamos National Lab., NM (USA). [1989]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–74: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002537. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The fusion burn dynamics and energy yield of the dense Z-pinch (DZP) are examined using a profile-averaged, zero-dimensional time-dependent model. A range of conditions (fuel, line density, voltage, fusion-product heating, enthalpy endless, density and temperature profiles, current rise rate, electrode impurities) are examined. Magneto-hydrodynamic stability is assumed, and initial conditions are based on those ideally existing after the melting and ionization of a solid fiber of fusion fuel. Plasma-conditions required of neutron sources for materials testing ($\dot{S}_n \geq 10^{19}$ n/s) and for possible commercial power production are examined. 25 refs., 9 figs.

4343 (PPLK-R–26) **Study on edge plasma physics and particle control in the Heliotron E device.** Mizuuchi, T. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Jul 1988. 43p. Order Number DE90719524. Available from NTIS (US Sales Only), PC A03/MF A01.

The edge plasma physics and the particle controls under the intrinsic magnetic limiter configuration of a helical system have been studied with the Heliotron E device, where currentless plasmas of $T_e \leq$ 1-2 keV, $T_i \leq$ 1 keV and n-bar$_e \leq 2 \times 10^{20}$ m^{-3} are produced by a combination of ECRH, NBI and/or ICRH. It is indicated that the separatrix region of the heliotron device is able to act as a divertor magnetic field. According to calculations of the magnetic field line in the edge region, the separatrix region has some different characteristics from the scrape-off layer in tokamak devices; the existence of a fine structure in the separatrix region and asymmetry of the region in toroidal and poloidal directions are observed. A localized pattern of the heat load on the first wall is experimentally observed. This agrees with the heat-load profile expected from the magnetic configuration and the distribution of the plasma in the edge region. A carbonization of the first wall is successfully applied to the Heliotron E device for reduction of metallic impurity contents. The heat load at the divertor trace decreases and that on the other part of the first wall increased in the high recycling conditions after the carbonization. (author).

4344 (PPLK-R–27) **Density clamping phenomena in electron cyclotron resonance heated plasmas on Heliotron E.** Zushi, H.; Noda, N.; Mizuuchi, T. and others. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Aug 1988. 46p. Order Number DE90719523. Available from NTIS (US Sales Only), PC A03/MF A01.

Particle transport and related phenomena are investigated in currentless electron cyclotron resonance heated plasmas. It is observed that during the initial phase the density stops rising and then starts to decay, in spite of continuous gas puffing. The delay time between the breakdown time and the time at which the density starts to decay depends inversely on rf power. The density profile changes drastically, becoming flat or hollow at this time. This density profile change becomes more significant as the rf power is increased. In order to sustain the density at some level the external particle source should be increased with increasing rf power. Here it is found that the particle confinement time decreases with increasing

power. The substantial increase in the particle outflux from the main plasma causes the scrape-off plasma to have a steep gradient. As a result, the amplitudes of density and magnetic fluctuations are enhanced with increasing rf power. When the cyclotron resonance layer is shifted outside the half radius, it is found that the density profile changes from hollow to centrally peaked. This result shows that the density profile is a function of the power deposition profile. It is also shown that the behavior of impurity ions (injected by the laser blow-off technique) is similar to that of the bulk particles. (author).

4345 (PPLK-R–29) **In situ measurement of neutral beam components using the Doppler-shifted H_α emissions in Heliotron E.** Kondo, Katsumi; Zushi, Hideki; Sano, Fumimichi and others. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Sep 1988. 11p. Order Number DE90719521. Available from NTIS (US Sales Only), PC A03/MF A01.

The density fraction of energy components (E,E/2,E/3,E/18) of the neutral beam was measured at the plasma center, using the Doppler-shifted H_α emissions, which were excited by electron and proton collisions in the plasma. This measurement will be useful in understanding the heating process by neutral beam injection. (author).

4346 (PPLK-R–31) **STEP code improvements and extensions.** Nakamura, Y.; Ichiguchi, K.; Wakatani, M.; Johnson, J.L. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Oct 1988. 26p. Order Number DE90719520. Available from NTIS (US Sales Only), PC A03/MF A01.

Several possible improvements and extensions of the two-dimensional stellarator expansion MHD equilibrium and stability code STEP are suggested and discussed. (author).

4347 (PPLK-R–33) **Second harmonic electron cyclotron heating in low and over density plasmas in Heliotron DR.** Morimoto, S.; Yanagi, N.; Sato, M. and others. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Dec 1988. 37p. Order Number DE90719519. Available from NTIS (US Sales Only), PC A03/MF A01.

The experiment of the second harmonic electron cyclotron heating has been carried out on Heliotron DR (R = 90cm, a-bar$_p$ $\simeq$ 7cm) by using a 28GHz, 200kW gyrotron. The plasmas are observed to be heated effectively in a wide range of electron density even above the Ordinary mode cut-off value (overdense plasma). When electron density is lower than the Extraordinary mode cut-off value, electrons are strongly heated and $T_{e\perp}$ of $\simeq$ 1.7keV has been achieved at n-bar$_e$ $\simeq$ 0.25 x 10^{13}/cm^3. The heating is found to be less sensitive to the magnetic field intensity than in larger devices such as Heliotron E and Wendelstein VII-A, and most efficient at B_0 (central magnetic field) lower than B_{res} (resonant magnetic field). These phenomena are discussed from a viewpoint of orbit of electrons accelerated in the RF field with dominant reflections at the vessel wall (cavity mode). The overdense plasmas (n-bar$_e$ > 1 x 10^{13}/cm^3), are strongly heated at B_0 higher than B_{res}. Their typical parameters are n-bar$_e$ $\simeq$ 2 x 10^{13}/cm^3, $T_{e\perp}$ $\simeq$ 330 eV and the averaged beta value, $\langle\beta\rangle$ $\simeq$ 0.4 %. The maximum $\langle\beta\rangle$ value is limited by onset of MHD instability to < or approx. 0.5 % which agrees well with a theoretical prediction for the pressure driven ideal interchange instability. A possibility of heating the overdense plasmas through mode conversion processes of injected RF waves into electron Bernstein waves is examined, and it is shown to be plausible in the present experimental condition with multiple wall reflections. (author).

4348 (PPLK-R–34) **Effect of loss cone on confinement in toroidal helical device.** Itoh, K.; Itoh, S.-I.; Fukuyama, A.; Hanatani, K. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Dec 1988. 42p. Order Number DE90719518. Available from NTIS (US Sales Only), PC A03/MF A01.

Analytical estimation is given on the loss cone in the toroidal helical devices in the presence of the radial electric field and the modulation of the helical ripple. The minimum energy of particles entering the loss cone is calculated. The modulation is not always effective in reducing the loss in the presence of the radial electric field. The plasma loss due to the loss cone is estimated in the collisionless limit. The radial electric field is estimated in the presence of the loss cone. It is found that the transition to the solution with positive radial electric field, which is necessary to achieve the high-ion-temperature mode, becomes difficult. This difficulty is large for the systems with the small helical ripple. (author).

4349 (PPLK-R–35) **Investigation of boundary for the negative ion extraction in the sheet-plasma negative ion source.** Jimbo, Kouichi; Uramoto, Joshin. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Sep 1988. 24p. Order Number DE90719532. Available from NTIS (US Sales Only), PC A03/MF A01.

The negative ion current obtained in the sheet-plasma negative ion source increases when the stainless chamber is biased negative under the same plasma condition. At the same time the electron saturation current of the probe measurement also increases. In the classical treatment of sheath, the plasma-sheath equation was solved in the high order charge neutrality in plasmas, and the concept of presheath was introduced to satisfy the Bohm sheath criterion. The plasma space potential was calculated from the equality of ion and electron fluxes. However, the ion-acoustic instability is excited in that case. We show that the plasma-sheath equation has another solution and the plasma space potential is obtained self-consistently. The effect of negative currents are discussed at the same time. We conclude that the plasma space potential relative to the ground level is the crucial parameter to extract negative ions efficiently from plasmas. (author).

4350 (PPPL–2651) **Energy confinement time and electron density profile shape in TFTR [Tokamak Fusion Test Reactor].** Park, H.K.; Bell, M.G.; Goldston, R.J.; Hawryluk, R.J.; Johnson, D.W.; Scott, S.D.; Wieland, R.M.; Zarnstorff, M.C.; Bitter, M.; Bretz, N.; Budny, R.; Dylla, H.F.; Grek, B.; Howell, R.B.; Hsuan , H.; Johnson, L.C.; Mansfield, D.K.; Ramsey, A.T.; Schivell, Princeton Univ., NJ (USA). Plasma Physics Lab. Nov 1989. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE90001819. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The electron density profiles of intense deuterium neutral-beam-heated plasmas (P_{tot}/P_{ohm} > 10) are characterized as a peakedness parameter (F_{ne} = $n_{eo}/\langle n_e\rangle$) in the Tokamak Fusion Test Reactor (TFTR). The gross energy confinement time (τ_E = E_{tot}/P_{tot}) at the time of maximum stored energy is found to be a weak function of the plasma current and total heating power but depends strongly on the peakedness parameter. A regression study showed τ_E = 2.4 x $10^{-3} F_{ne}^{0.76} I_p^{0.18} P_{tot}^{-0.12}$ for a data set of 561 discharges in the TFTR. Also τ_E can be represented as τ_E = $\tau_E^L f(F_{ne})$, where τ_E^L is the empirical L-mode scaling result. A similar scaling applies to an appropriately defined incremental energy confinement time (τ_{inc} = $dE_{tot}/dP_{tot}|_{F_{ne}=constant}$). 14 refs., 4 figs.

4351 (PPPL–2660) **Study of electron density and pressure profile behavior in a tokamak plasma.** Park, H.K.; Goldston, R.J.; Taylor, G. Princeton Univ., NJ (USA). Plasma Physics Lab. Nov 1989. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE90003295. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Simultaneous determinations of local electron density and magnetic flux surface in a tokamak plasma have been made feasible with multichannel interferometry using a new asymmetric Abel inversion method. This new method takes advantage of interferometry by measuring the electron density profile as a function of time. The derived electron density parameters, such as the total number of electrons, peak density, and the profile shape factor, have been extremely useful in tokamak plasma experiments. In addition, by suing measured time-dependent electron temperatures from electron cyclotron emission, similar parameters for the electron pressure can be studied. 16 refs., 3 figs.

4352 (UCID–21744) **MTX [Microwave Tokamak Experiment] diagnostic and auxiliary systems for confinement, transport, and plasma physics studies.** Hooper, E.B.; Allen, S.L.; Casper, T.A.; Thomassen, K.I. Lawrence Livermore National Lab., CA (USA). 28 Jul 1989. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. Order Number DE90002636. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This note describes the diagnostics and auxiliary systems on the Microwave Tokamak Experiment (MTX) for confinement, transport, and other plasma physics studies. It is intended as a reference on

the installed and planned hardware on the machine for those who need more familiarity with this equipment. Combined with the tokamak itself, these systems define the opportunities and capabilities for experiments in the MTX facility. We also illustrate how these instruments and equipment are to be used in carrying out the MTX Operations Plan. Near term goals for MTX are focussed on the absorption and heating by the microwave beam from the FEL, but the Plan also includes using the facility to study fundamental phenomena in the plasma, to control MHD activity, and to drive current noninductively.

4353 (UCRL–21248) **The coupling of stimulated Raman and Brillouin scattering in a plasma.** Umstadter, D.; Mori, W.B.; Joshi, C. Lawrence Livermore National Lab., CA (USA). 19 Sep 1988. 17p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AS03-83ER40120;W-7405-ENG-48. ECS-83-10972. Order Number DE90002825. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The observation of an anti-Stokes satellite in the spectrum of light backscattered from a CO_2 laser plasma is reported. Its origin is found to be Thomson scattering of the incident light from a counterpropagating mode-coupled plasma wave. The parent electron and ion waves in the mode-coupling process were driven by stimulated Raman and Brillouin backscattering. The parent and daughter plasma waves were detected by ruby laser Thomson scattering. A computer simulation modeling the experiment shows further cascading of the Stokes backscattered light to lower frequencies, apparently due to its rescattering by another, higher phase velocity, counterpropagating coupled mode. Comparisons with theoretical predictions are presented. 16 refs., 4 figs.

4354 (UCRL–21250) **Computer simulation of laser plasma interaction: Progress report for 1988.** Dawson, J.M. Lawrence Livermore National Lab., CA (USA). 1988. 7p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE90002828. Available from OSTI; GPO Dep.

During the past year, we have also been investigating some new ideas on laser plasma interactions. In particular we have been investigating the possibility of using plasmas to upshift the frequency of laser light in a tunable fashion. Two techniques are discussed in this paper.

4355 (UCRL–52000-89-10) **Energy and Technology Review, October 1989.** Burnham, A.K.; de Vore, L.; Gleason, K.; Kirvel, R.D.; Sanford, N.M.; Taft, S.O. (eds.). Lawrence Livermore National Lab., CA (USA). Oct 1989. 31p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE90002620. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This Energy and Technology Review contains reports on: A simple, Efficient Interprocess Communication System for Dissimilar Networked Computers; Low-Density Polymer Foams for Fusion-Fuel Capsules; and The Compact Torus as the basis for a new type of accelerator, which has potential applications in fusion energy generation and other fields.

4356 (UCRL–97265) **2.5D EM direct implicit PIC simulation using AVANTI.** Hewett, D.W.; Langdon, A.B. Lawrence Livermore National Lab., CA (USA). 18 Aug 1987. 4p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-870947–12: 12. conference on the numerical simulation of plasmas, San Francisco, CA (USA), 20-23 Sep 1987). Order Number DE90002886. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

An appealing feature of the well-known PIC algorithm for plasma simulations is the intuitive connection of the plasma representation with real plasmas. Working directly with macro "particles" provides intuition about plasma behavior but at greater computational expense for the extra detail that the method provides. Further, traditional explicit fully electromagnetic PIC algorithms still have stability and accuracy constraints that demand microscopic details be resolved in time and space. Recent progress in making the PIC algorithm implicit have been successful in allowing selective resolution in space and time of only those plasma phenomena of interest. We present here an overview of one of these procedures known as the direct implicit method as implemented in the LLNL code AVANTI. 6 refs.

4357 (UCRL–97266) **Relativistic extension of the electromagnetic direct implicit PIC algorithm.** Langdon, A.B.; Hewett, D.W. Lawrence Livermore National Lab., CA (USA). 18 Aug 1987. 4p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-870947–13: 12. conference on the numerical simulation of plasmas, San Francisco, CA (USA), 20-23 Sep 1987). Order Number DE90002888. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The PIC model provides a very complete representation of plasma behavior that is essential when investigating phenomena requiring velocity space information such as laser-plasma interactions. New implicit PIC algorithms have expanded considerably in both space and time the scope of problems that may be addressed with this model. Applications of the new code AVANTI, based on our version of the Direct Implicit PIC algorithm, frequently require a relativistic representation of the plasma. We present here a relativistic extension of the plasma representation of this method. 6 refs.

4358 (UCRL–101105) **The MTX [Microwave Tokamak Experiment] data acquisition system.** Butner, D.N.; Drlik, M.; Brown, M.D.; Casper, T.A.; Meyer, W.H.; Moller, J.M. Lawrence Livermore National Lab., CA (USA). 20 Sep 1989. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-891007–87: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002982. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The diagnostic data from the MTX experiment is acquired and processed by an expandable, distributed, multivendor computer network. The system blends a variety of software into a coordinated, unified, and highly flexible design. Using modular software design techniques, we created a system stressing distributed processing, portability, and transparent data access. In our approach to modularity, we standardized communication interfaces between modules and separated generic tasks from machine and application-specific implementations. For flexible distributed processing, we used modular, portable software and LLNL facility that provides an interprocess communication system (IPCS) in the multivendor network. With transparent data access, any program can access data stored anywhere in the network without knowing the specific location. The computer hardware includes a DEC VAX cluster, HP workstations and HP desktop computers. We are using commercial software in addition to packages from MIT, ORNL, and LLNL. 4 refs., 4 figs.

4359 **The theory of target compression by longwave laser emission.** Proceedings of the Lebedev Physics Institute. Academy of Sciences of the USSR. Volume 170. Sklizkov, G.V. 167p. Nova Science Publishers, Inc., Commack, NY (1987).

This book covers the proceedings of the Lebedev Physics Insititute Academy of Sciences of the USSR. The papers include: Energy transfer by fast electrons in spherical laser targets; Simple models of fast electron generation in laser plasma; and Numerical modeling of fast electron energy transfer.

4360 **Status of the design and construction of the CPRF and the ZTH reversed field pinch experiment.** Thullen, P. (Los Alamos National Lab., Los Alamos, NM (US)); Schoenberg, K.F.; DiMarco, J.N. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 2A3.

The Confinement Physics Research Facility (CPRF) and the first experimental device to be tested in it, the ZTH reversed field pinch, are being designed and constructed by the Los Alamos National Laboratory. The CPRF and ZTH will be completed in the last quarter of 1992, with a capability for operation of ZTH at 2 MA plasma current. The CPRF is designed to allow operation of ZTH at 4 MA plasma current following alteration of the ZTH structure and torus, and installation of additional power supplies. This paper presents an overview of the physics goals of the ZTH experiment and the state of the CPRF/ZTH Construction Program.

4361 Electron plasma interactions in crossed fields. Kaup, D.J. (Clarkson Univ. (US)); Pitale, L.A. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 1C6.

In this paper the interactions of a non-neutral electron plasma in the presence of non-uniform cross fields within a slow wave structure is investigated. A variational approach is applied to calculate modifications to both RF wave and plasma parameters. The RF wave is modeled with a modal solution of the boundary value problem, while a cold-fluid approximation is taken for the plasma. The specific case is non-relativistic ans assumes propagation of a single. The results of the analysis show frequency shifts obtained by taking appropriate variations of plasma parameters.

4362 Fields and flows in diffusing ionospheric plasmas. Kadish, A. (Atmospheric Sciences Group, Earth and Space Sciences Div., Los Alamos National Lab., Los Alamos, NM (US)). pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 1A6.

This paper describes the long-time behavior of ionospheric plasmas determined, in part, by self-magnetic fields that induce charged particle drifts and contribute to the Lorentz force on bulk ion and electron flows. Although short-time effects are small if the plasma-beta is low, the cumulative effects of the self-field cannot be ignored when predicting long-time behavior and location of plasma releases.

4363 Phase conjugate reflection of electromagnetic waves from a plasma. Tzach, D. (Univ. of California, Irvine, CA (US)); Fisher, A.; Rostoker, N.; Benford, G.; Garate, E.; Nebenzahl, I.; Ron, A. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 1C7.

In this paper the authors discuss the possibility of using a plasma, as the nonlinear medium, for generating phase conjugate reflection of electromagnetic waves in the microwave region, by almost degenerate four wave mixing. The reflected beam can be significantly amplified by the plasma. They show that the phase conjugate reflection is of significant magnitude if the frequency and the wave vector difference of the signal wave, with respect to the pump waves, resonate with the frequency and the wave vector of the ion acoustic mode of the plasma. The main results of the theory developed are described. Possible applications of the emergent technology are discussed, as well as results of preliminary experiment.

4364 Characteristics of plasma produced by an RF induction discharge. Cho, M.H. (Univ. of Wisconsin-Madison (US)); Kim, G.H.; Hershkowitz, N.; Nonn, P.; DeKock, J. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 2P18.

The authors have performed experimental studies on an electrodeless rf induction plasma generator using a multidipole device. This source uses a single turn loop antenna made out of an enamel coated copper strip, and operates at frequencies ranging from ~1MHz to ~20MHz depending on the tuned resonance frequency, and at the neutral gas pressure $\geq 5 \times 10^{-5}$ torr. It has been operated with several different type of gases and their mixtures (Ar, N_2, H_2, and CH_4). The detailed description of the plasma source is presented together with the characteristics of plasmas.

4365 Study of a plasma edge cathode scheme for electron beam extraction. Grothaus, M.G. (Dept. of Electrical Engineering, Texas Tech Univ., Lubbock, TX (US)); Cunningham, J.; Zieher, K.W. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 2P27.

High power cold electron cathodes are limited in their applications to extraction pulses shorter than about 1 microsecond. The plasma generated on the cold field enhanced emitter expands into the extraction gap with a velocity of several cm/microsecond. This leads to closure and shorting of the extraction gap for larger times. The closure of the extraction gap should be avoidable if one extracts electrons transversely off the flow of a plasma jet. In an experiment, the plasma jet is intercepted partially by an obstacle. This paper describes the flow of the plasma and the development of the transverse boundary of the plasma behind the obstacle investigated experimentally and simulated on a computer.

4366 Effect of electron prebunching on the radiation growth rate in a collective (Raman) free electron laser amplifier. Leibovitch, C. (Rafael Lab., Haifa 310201 (IL)); Xu, K.; Bekefi, G. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 2P35.

In this paper experiments are reported on the effects of electron prebunching in a mildly relativistic free electron laser amplifier operating in the collective (Raman) regime. Prebunching is established by injecting a monochromatic wave into a bifilar helical wiggler interaction region. The growth rates are deduced from observations of the radiation intensity as a function of interaction length. Results are presented both in the small signal (linear) and saturated (nonlinear) regimes.

4367 Extension of lower hybrid drift instability into the neutral sheet of the earth's magnetotail. Lui, A.T.Y. (Applied Physics Lab., Johns Hopkins Univ., Laurel, MD (US)); Mankofsky, A.; Papadopoulos, K.; Drobot, A. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 1A5.

Spacecraft measurements indicate the presence of broadband electrostatic turbulence in the earth's magnetotail, mostly in the region of the plasma sheet boundary layer, and occasionally in the neutral sheet region. The lower hybrid drift (LHD) instability has been investigated theoretically to account for the observed microturbulence. In this paper, the authors propose a mechanism for overcoming the electron resonance broadening stabilization by the presence of an electric field. The required electric field strength based on this idea is estimated and is found to be in agreement with space observations at times when the turbulence is present in the neutral sheet region.

4368 Reflection of accelerated plasma rings from conical electrodes in the RACE experiment. Hartman, C.W. (Lawrence Livermore National Lab. (US)); Hammer, J.H.; Eddleman, J.L.; McLean, H.S. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 3A5.

This paper describes the plasma ring acceleration Experiment, RACE, in which plasma rings confined magnetically in a compact torus are accelerated in a 4-meter long, straight coaxial rail-gun configuration. Rings, having initial magnetic energy $U_m \simeq 2$ kj, are accelerated to kinetic energies of $U_k \simeq 10$ - 20 kJ and injected into a 2-meter long coaxial cone section at the end of the accelerator. Magnetic field probes arrayed along the straight section and cone at the outer electrode show penetration of the ring into the cone, reflection, and in may shots, stagnation and slow decay (tau $\simeq$ 100 - 200μ s) of the reflected ring near the entrance of the cone.

4369 X and UV time resolving diagnostics for X-ray laser experiments. Naccach, D. (Centre d'Etudes de Limeil-Valenton (FR)); Bourgade, J.L.; Combis, P.; Louis-Jacquet, M.; Keane, C.; MacGowan, B.; Matthews, D. pp. 160 of Conference record of the

1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 2P56.

The authors describe their instruments which combine either transmission or reflection gratings in combination with x-ray streak cameras or microchannel plate intensifiers, respectively. They also review their diagnostics which use conventional x-ray diffraction crystals with x-ray streak cameras as detectors. They emphasize our measurements which embody high sensitivity, wavelength discrimination and time resolution in order to detect short time phenomena. These diagnostics provide us with measurements of x-ray lasing output and plasma ionization kinetics for long cylindrical plasmas under the conditions necessary to produce an x-ray amplifier. Typical data from many different targets are shown.

4370 **Broadband phase conversion of the frequency tripled Omega laser.** Kessler, T.J. (Rochester Univ., NY (USA). Lab. for Laser Energetics); Letzring, S.; Skupsky, S.; Skeldon, M.; Morse, S.; Jaanimagi, P. pp. 443 of OSA conference on lasers and electro-optics (1989 Technical Digest series). Optical Society of America, Washington, DC (1989). (CONF-890423–: CLEO '89: conference on lasers and electro optics, Baltimore, MD (USA), 24-28 Apr 1989).

Technical Paper WD5.

One year ago, implementation of distributed phase plates on the twenty-four frequency tripled beamlines of the Omega laser system had increased the overall irradiation uniformity to an ~10% (rms) level. Target performance increased as a result of reducing the irradiation hot spots due to normal beam focusing. However, target performance did not improve to the level of theoretical predictions. At the Laboratory for Laser Energetics, the authors spent the last year reviewing the various aspects of irradiation uniformity. Issues such as beam pointing and focusing, beam to beam timing, and energy balance and spatial uniformity are analyzed in this paper.

4371 **Structure of slow magnetosonic shocks in low beta plasmas.** Omidi, N. (Department of Electrical and Computer Engineering, University of California at San Diego (US)); Winske, D. *Geophysical Research Letters (USA)*, 16(8): 907-910 (Aug 1989).

Slow magnetosonic shocks are an efficient way in which magnetic energy in a collisionless plasma is converted into particle flow and thermal energy. Previous analytic and simulation studies of slow shocks have suggested that their structure consists of a damped wavetrain beginning at the shock transition and extending into the downstream region. Spacecraft observations in the solar wind and the Earth's magnetotail have found structures that resemble slow shocks except that most of them do not possess a trailing wavetrain. To resolve the conflict between theory and observations of slow shocks, we have performed new simulations which correct some of the previous results and show that depending on the sonic Mach number and the ratio of electron to ion temperature, slow shocks may or may not possess a wavetrain. © American Geophysical Union 1989

4372 **Second stability in the ATF torsatron.** Harris, J.H. (Oak Ridge National Laboratory, Oak Ridge, TN (US)); Murakami, M.; Carreras, B.A.; Bell, J.D.; Bell, G.L.; Bigelow, T.S.; Charlton, L.A.; Dominguez, N.; Dunlap, J.L.; Glowienka, J.C.; and others. *Physical Review Letters (USA)*, 63(12): 1249-1252 (18 Sep 1989).

Access to the MHD second stability regime has been achieved in the ATF torsatron. Experimental β values $\beta_0 \lesssim 3\%$, with fast ions contributing $\approx$(1/3 of the pressure at high β) are well above the theoretical transition value ($\beta_c \approx 1.3\%$ for ideal modes) required to reach this regime. The relatively low β_c results from operation with peaked pressure profiles. The measured magnetic fluctuations decrease with increasing β, and the pressure profile broadens. This behavior is consistent with theoretical predictions for β self-stabilization of resistive interchange modes.

4373 **Cyclotron emission asymmetry from Kirchhoff's law in a mode-conversion layer.** Swanson, D.G. (Department of Physics, Auburn University, Auburn, Alabama 36849 (US)); Cho, S. *Physical Review Letters (USA)*, 63(13): 1386-1389 (25 Sep 1989).

Cyclotron radiation of both fast (Alfven waves) and slow (Bernstein) waves from a mode-conversion layer is considered to find relations between cyclotron absorption and emission in an inhomogeneous plasma. The relative emission ratios among various modes are calculated and asymmetries of emission are discussed. From relations between emission and absorption, a form of Kirchhoff's law for a mode-conversion layer is proved from general thermodynamic arguments and from the mode-conversion tunneling equation.

4374 **Excitation of the toroidicity-induced shear Alfven eigenmode by fusion alpha particles in an ignited tokamak.** Fu, G.Y. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712 (US)); Van Dam, J.W. *Physics of Fluids B: Plasma Physics (USA)*, 1(10): 1949-1952 (Oct 1989).

The toroidicity-induced shear Alfven eigenmode is found to be destabilized by fusion alpha particles in an ignited tokamak plasma.

4375 **Theory of weak ion temperature gradient-driven turbulence near the threshold of instability.** Mattor, N. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712 (US)); Diamond, P.H. *Physics of Fluids B: Plasma Physics (USA)*, 1(10): 1980-1992 (Oct 1989).

In this paper a theory of weak ion temperature gradient-driven turbulence near the threshold of instability is presented. The model considers kinetic ions and adiabatic electrons in a sheared slab geometry. Linear theory shows that for $\eta_{th} < \eta_i \lesssim \eta_{th}+(1+T_i/T_e)\ L_n/L_s$ (where $\eta_{th}=0.95$ is the instability threshold and $L_n/L_s \ll 1$) then $\gamma \ll \omega$ and a weak turbulence theory applies. The nonlinear wave kinetic equation indicates that ion Compton scattering is the dominant nonlinear saturation process, and it is shown that the energy scatters to the linearly stable low k_y modes. The resulting fluctuation spectrum (peaked about $k_\perp \rho_i \cong 1$) is much lower than that suggested by naive extrapolation from the strong turbulence regime. The resulting ion thermal conductivity is also extremely low, so that strong ion heating can be expected to drive the ion temperature gradient to a level where this weakly turbulent threshold regime is surpassed. Thus the critical η_i relevant to magnetic confinement experiments is not the linear instability threshold but the point where the diminutions of the weak turbulence regime vanish, and the transport increases to the strong fluid turbulence level.

4376 **Ion temperature gradient-driven turbulence in tokamaks with flat density profiles.** Mattor, N. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712 (US)); Diamond, P.H. *Physics of Fluids B: Plasma Physics (USA)*, 1(10): 1993-1997 (Oct 1989).

The theory of ion temperature gradient-driven turbulence in tokamaks is extended to the flat density regime. The values of ion and electron thermal conductivities, χ_i and χ_e, momentum diffusivity χ_φ, and particle flux Γ_r are also calculated. These formulas extend previous calculations, which were restricted to the regime $L_n < (L_s L_T)^{1/2}$ [Phys. Fluids **29**, 3291 (1986); Phys. Fluids **31**, 1180 (1988)]. This allows an assessment of the role of ion temperature gradient turbulence in H modes, where the density gradient is often observed to be flattened in the plasma core.

4377 **Parametric instabilities of Langmuir waves in weak/moderate magnetic fields.** Akimoto, K. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545 (US)). *Physics of Fluids B: Plasma Physics (USA)*, 1(10): 1998-2009 (Oct 1989).

A general dispersion equation, which describes the parametric instabilities of some electrostatic waves in a weak/moderate magnetic field, is derived. The dispersion equation is solved numerically to study the effects of a moderately intense magnetic field on the parametric instabilities of relatively large amplitude Langmuir waves. A Langmuir pump wave can couple with various low-frequency branches such as lower-hybrid, electron-acoustic, ion-cyclotron, and ion-acoustic branches. The transverse modulational instability is most sensitive to a magnetic field. Even for a Langmuir wave with $\tilde{W} \sim 0.1$, where $\tilde{W}$ is the ratio of the time-averaged wave energy to the electron thermal energy, some portions of the transverse modulational instability in the direction exactly perpendicular to the external magnetic field are quite easily suppressed. However, some oblique instabilities may be enhanced by a magnetic field. In general, a moderate magnetic field suppresses most of the oblique instabilities, and the parametric instabilities become essentially one dimensional.

4378 Preferential electron-cyclotron heating of hot electrons and formation of overdense plasmas. Quon, B.H. (Applied Microwave Plasma Concepts, Inc., Carlsbad, California 92009 (US)); Dandl, R.A. *Physics of Fluids B: Plasma Physics (USA),* 1(10): 2010-2017 (Oct 1989).

Three electron-cyclotron-heating techniques, which preferentially couple microwave power to different energy segments of the electron distribution function, have been experimentally investigated in the AMPHED facility [C. Bodeldijk, Special Supplement, Nucl. Fusion **26**, 184 (1986)]. Whistler waves launched from the high-field mirror throat are strongly absorbed in a single pass across the resonant interaction layer, producing highly overdense cold background plasma but no relativistic hot particles. On the other hand, ordinary waves launched from the system side wall are only weakly damped, giving rise to local cylindrical cavity modes and preferential coupling to hot electrons in the 100 keV region. Low levels ($\lesssim$5%) of upper-off-resonance heating power were shown to be most effective for preferential hot-electron plasma formation, with ~100% of the injected power being absorbed by the energetic electrons.

4379 Temperature fluctuations and transport in a tokamak edge plasma. Lin, H. (Fusion Research Center, University of Texas, Austin, Texas 78712-1068 (US)); Bengtson, R.D.; Ritz, C.P. *Physics of Fluids B: Plasma Physics (USA),* 1(10): 2027-2030 (Oct 1989).

Using the technique first described by Robinson and Rusbridge [Plasma Phys. **11**, 73 (1969)] electron temperature fluctuations have been measured in the scrape-off layer of the TEXT tokamak [Nucl. Technol. Fusion **1**, 479 (1981)] to be $\tilde{T}_e/T_e \geq 0.4\tilde{n}_e/n_e$. Particle and energy transport were estimated from $\langle \tilde{n}_e \tilde{E}_\theta \rangle$ and $\langle \tilde{T}_e \tilde{E}_\theta \rangle$ correlations. The fluctuation-driven particle transport was consistent with earlier measurements and with measurements of global particle confinement. A high correlation of temperature and electric field fluctuations and a low but positive correlation between density and temperature fluctuations were observed.

4380 Self-consistent radial sheath. Hazeltine, R.D. (Institute for Fusion Studies and Department of Physics, University of Texas at Austin, Austin, Texas 78712 (US)). *Physics of Fluids B: Plasma Physics (USA),* 1(10): 2031-2039 (Oct 1989).

The boundary layer arising in the radial vicinity of a tokamak limiter is examined, with special reference to the TEXT tokamak [Nucl. Fusion **27**, 1125 (1987); Phys. Fluids **27**, 2956 (1984)]. It is shown that sheath structure depends upon the self-consistent effects of ion guiding-center orbit modification as well as the radial variation of $E \times B$-induced toroidal rotation. Reasonable agreement with experiment is obtained from an idealized model, which, however simplified, preserves such self-consistent effects. It is argued that the radial sheath, which occurs whenever confining magnetic field lines lie in the plasma boundary surface, is an object of some intrinsic interest. It differs from the more familiar axial sheath because magnetized charges respond very differently to parallel and perpendicular electric fields.

4381 Quasilinear diffusion modeling of the alpha-loss-cone instability in a tandem-mirror reactor. Ho, S.K. (Fusion Studies Laboratory, Department of Nuclear Engineering, University of Illinois, Urbana, Illinois 61801 (US)); Smith, G.R.; Miley, G.H. *Physics of Fluids B: Plasma Physics (USA),* 1(10): 2040-2049 (Oct 1989).

The anisotropic loss-cone distribution of fusion-born alpha particles in a mirror system is capable of destabilizing low-frequency plasma waves. A one-and-one-half-dimensional quasilinear diffusion model is developed to study the nonlinear evolution of the alpha distribution function resulting from enhanced diffusion in velocity space and radial position driven by the unstable Alfven wave. It is found that pitch-angle scattering of the resonant alphas into the loss cone causes significant losses while radial losses are negligible for a reactor-size plasma. For a typical tandem-mirror reactor, the alpha plasma heating is greatly reduced and ignition in the central cell cannot be achieved.

4382 Observation of a stable high-beta axisymmetric plasma equilibrium. Kuthi, A. (Department of Physics, University of California, Los Angeles, California 90024 (US)); Zwi, H.; Schmitz, L.; Wong, A.Y. *Physics of Fluids B: Plasma Physics (USA),* 1(10): 2054-2057 (Oct 1989).

Stable, steady-state plasma equilibrium is generated in an axisymmetric configuration. The diamagnetic current is maintained by electromagnetic fields rotating in the electron diamagnetic sense. The stable, free-standing equilibrium exists for all values of beta up to 0.98, limited only by the available rf power. The plasma is centered on the axis well removed from the metal chamber walls, the limiters, and the rf antenna. The equilibrium pressure balance, $\mathbf{J} \times \mathbf{B} = \text{grad } p$, is quantitatively verified. Radial profiles of pressure and magnetic field show that the equilibrium is that of a rigid rotor.

4383 Visible imaging of edge fluctuations in the TFTR tokamak. Zweben, S.J. (Princeton University, Plasma Physics Laboratory, Princeton, New Jersey 08543 (US)); Medley, S.S. *Physics of Fluids B: Plasma Physics (USA),* 1(10): 2058-2065 (Oct 1989).

Images of the visible light emission from the inner wall region of the TFTR tokamak [M. G. Bell *et al.*, in *Plasma Physics and Controlled Nuclear Fusion Research 1988*, Proceedings of the 12th International Conference, Nice, France (IAEA, Vienna, in press)] have been made using a rapidly gated, intensified TV camera. Strong "filamentation" of the neutral deuterium D_α light is observed when the camera gating time is <100 μsec during neutral-beam-heated discharges. These turbulent filaments vary in position randomly versus time and have a poloidal wavelength of $\approx$3–5 cm, which is much shorter than their parallel wavelength of $\approx$100 cm. A second and new type of edge fluctuation phenomenon, which is called a "merfe," is also described. Merfes are a regular poloidal pattern of toroidally symmetric, small-scale marfes that move away from the inner midplane during the current decay after neutral beam injection. Some tentative interpretations of these two phenomena are presented.

4384 Relativistic dynamics of electrons in intense laser fields. Bardsley, J.N. (Lawrence Livermore National Laboratory, Livermore, California 94550 (US)); Penetrante, B.M.; Mittleman, M.H. *Physical Review [Section] A: General Physics (USA),* 40(7): 3823-3835 (1 Oct 1989). DOE Contract W-7405-ENG-48.

Following a brief review of the analytic solution for the relativistic motion of a single electron in a pulse of very strong plane-wave radiation, numerical simulations are presented that probe the effects of space-charge forces and spatial inhomogeneity of the radiation upon the one-electron dynamics. The nonlinearities introduced by relativistic effects can lead to irregular dynamics. For pulses with a smoothly varying temporal envelope the behavior of electrons that are ionized during the pulse can be very different from that of ambient electrons. The calculations support the use of short-pulsed lasers to produce high-energy electrons and incoherent x rays, but reveal possible difficulties in the formation of cold overionized plasmas suitable for recombination lasers.

4385 Free-energy expressions for Vlasov equilibria. Morrison, P.J. (Department of Physics, The University of Texas at Austin, Austin, Texas 78712 (US)); Pfirsch, D. *Physical Review [Section] A: General Physics (USA),* 40(7): 3898-3910 (1 Oct 1989).

Hamiltonian or variational formulations of the Maxwell-Vlasov equation naturally yield expressions for the free energy available upon perturbation of an equilibrium. The noncanonical Hamiltonian, Hamilton-Jacobi, and Lagrangian formulations are used to obtain such expressions. It is concluded that all interesting equilibria are either linearly unstable or possess negative-energy modes.

4386 (CEA-CONF–9800) **Implosion symmetry and stability.** Holstein, P.A.; Meyer, B. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1988. 55p. (CONF-8809415–: International School of Plasma Physics, Varenna (Italy), 6-16 Sep 1988). Order Number DE90721239. Available from NTIS (US Sales Only), PC A04/MF A01.

Theoretical models and experimental results on the supression of non-uniformities sources and the control of the Rayleigh-Taylor instabilities growth, in laser-driven thermonuclear fusion, are shown. The experiments made with imposed laser non-uniformities have demonstrated that the smoothing is improved with increasing laser

irradiance and with long laser wavelengths. The irradiation configuration of a sphere by N beam, the smoothing of the laser focal spots and the smoothing by thermal conduction and x radiation are discussed. The experimental results made with imposed laser nonuniformities show that with increasing laser irradiance and long laser wavelengths the smoothing is improved. In the implosion stability study, the basic picture of fluid instabilities, simulations, the growth rate determination with corrugated targets and mixing measurements with bilayer targets are analyzed.

4387 (CONF-891007–31) **The International Thermonuclear Experimental Reactor configuration evolution.** Lousteau, D.C.; Nelson, B.E.; Lee, V.D.; Thomson, S.L.; Miller, J.M.; Lindquist, W.B. Oak Ridge National Lab., TN (USA). [1989]. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002150. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The International Thermonuclear Experimental Reactor (ITER) conceptual design activities consist of two phases: a definition phase, completed in September 1988, and a design phase, now in progress. The definition phase was successful in identifying a consistent set of technical characteristics and the broad definition of the required reactor configuration and hardware. Scheduled for completion in November 1990, the design phase is producing a more detailed definition of the required components, a first cost estimate, and a description of site requirements. A major activity in the ITER design phase is the period of joint work conducted at the Max Planck Institute for Plasma Physics, Garching, Federal Republic of Germany, from June through October 1989. An official report of the findings and conclusions of this activity will be submitted to and published by the International Atomic Energy Agency (IAEA). This paper highlights the evolution of the reactor mechanical configuration since the conclusion of the definition phase. 8 figs., 2 tabs.

4388 (CONF-891007–72) **The ORNL plasma fueling program.** Gouge, M.J.; Milora, S.L.; Foster, C.A.; Combs, S.K.; Fisher, P.W.; Tsai, C.C.; Argo, B.E.; Barber, G.C.; Baylor, L.R.; Fehling, D.T.; Foust, C.R.; Jernigan, T.C.; Qualls, A.L.; Schechter, D.E.; Simmons, D.W.; Sohns, C.W.; Sparks, D.O. Oak Ridge National Lab., TN (USA). [1989]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002470. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The Oak Ridge National Laboratory (ORNL) has been developing pellet injectors for over ten years. These devices produce frozen hydrogen isotope pellets and then accelerate the projectiles to speeds in the km/s range by either pneumatic or mechanical techniques. A variety of designs have been developed, including single-shot guns, multiple-shot guns, machine guns, and centrifugal accelerators. These injectors have been used to inject hydrogen and deuterium pellets into plasmas on numerous tokamak experiments resulting in improved plasma performance. ORNL has recently provided pellet fueling systems for the Tokamak Fusion Test Reactor (TFTR), the Joint European Torus (JET), and the Tore Supra tokamak. This paper discusses developments on these injector designs. 10 refs.

4389 (CONF-891007–75) **Graphite as a plasma-facing material in fusion experiments.** Langley, R.A. Oak Ridge National Lab., TN (USA). 1989. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002464. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Graphite is now used extensively in most of the major fusion experiments in the world and will be used more extensively in future devices. In addition to its excellent tolerance of high heat fluxes, graphite has many unusual characteristics that pertain to its use as a plasma-facing material; these are its propensity for releasing gases when heated and when exposed to ion fluxes, its ability to absorb copious quantities of hydrogen during hydrogen bombardment, and its ability to pump hydrogen after noble gas bombardment. The graphite used in existing machines and considered for use in future machines is isotropic on a macroscopic scale and anisotropic on a microscopic scale; it has a large open porosity, up to 20%. This leads to enormous internal surface areas for adsorption and desorption of gases. Most early hydrogen-graphite interaction experiments were incorrectly analyzed because of this property. In addition, interaction of energetic hydrogen ions with graphite can lead to erosion, with concomitant deposition of carbon films with high hydrogen content on chamber surfaces. These effects are observed experimentally and have been modeled with some success. This paper presents experimental data dealing with these topics and their influences on present-day plasma operations and on graphite use in future machines. 34 refs., 8 figs., 1 tab.

4390 (CONF-891007–77) **Location and repair of air leaks in the ATF [Advanced Toroidal Facility] vacuum vessel.** Schwenterly, S.W.; Gabbard, W.A.; Schaich, C.R.; Yarber, J.L. Oak Ridge National Lab., TN (USA). 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002488. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

On the basis of partial pressure rate-of-rise and base pressure measurements, it was determined that the Advanced Toroidal Facility (ATF) vacuum vessel had an air leak in the low 10^{-4} mbar-ℓ/s range. Pinpointing this leak by conventional helium leak-checking procedures was not possible, because large portions of the outside of the vessel are covered by the helcial field coils and a structural shell. Various alternative leak-detection schemes that were considered are summarized and their advantages and disadvantages noted. In the method ultimately employed, gun-rubber patches of various sizes ranging from 12.7 by 12.7 cm to 20.3 by 30.5 cm were positioned on the inside surfaces of the vessel and evacuated by the leak detector (LD). After roughly 5% of the surface was inspected in this way, a leak of $> 10^{-5}$ mbar-ℓ/s was discovered and localized to an area of 5 by 5 cm. Dye penetrant applied to this area disclosed three pinholes. Two small slag pockets were discovered while these points were being ground out. After these were rewelded, no furthered leakage could be found in the repaired area. Global leak rates measured after the machine was reevacuated indicated that this leak was about 30% of the overall leak rate. 1 ref., 5 figs., 1 tab.

4391 (CONF-891007–78) **Equilibrium shape control in CIT [Compact Ignition Tokamak] PF [poloidal field] design.** Strickler, D.J.; Pomphrey, N.; Jardin, S.C. Oak Ridge National Lab., TN (USA). 1989. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002487. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The free-boundary equilibrium code VEQ provides equilibrium data that are used by the Tokamak Simulation Code (TSC) in design and analysis of the poloidal field (PF) system for the Compact Ignition Tokamak (CIT). VEQ serves as an important design tool for locating the PF coils and defining coil current trajectories and control systems for TSC. In this paper, VEQ and its role in the TSC analysis of the CIT PF system are described. 7 refs., 5 figs., 6 tabs.

4392 (CONF-891007–83) **An assessment of the lifetime of Faraday shield elements.** Caughman, J.B.O. II; Ruzic, D.N.; Hoffman, D.J.; Langley, R.A.; Lewis, M.B.; Ryan, P.M. Oak Ridge National Lab., TN (USA). 1989. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. 19X-SB359V. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002714. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The interaction of plasma with rf fields from an ion cyclotron range of frequencies (ICRF) antenna has been studied to estimate the amount of Faraday shield erosion expected in normal ICRF heating operation. Plasma parameters and ion energies have been measured in the near field of an antenna and used in a model to estimate the erosion rate of the Faraday shield surface. Experiments were conducted on the RF Test Facility, a magnetic mirror device at Oak Ridge National Laboratory, using a single-strap resonant loop antenna with a two-tier Faraday shield. The outer tier, facing the plasma, was layered with graphite tiles. The antenna was operated at currents and voltages within 50% of those expected in tokamaks. The time-varying floating potential was measured with a

capacitively coupled probe, and the time-averaged floating potential, electron temperature, and electron density were measured with Langmuir probe. Both probes were scanned in front of the antenna. Ion energies were measured with a gridded energy analyzer located below the antenna, and samples of silicon were placed on the Faraday shield surface to estimate the incident ion energy. The capacitive probe measurement show that the rf floating potential follows the magnetic field pattern of the antenna, indicating that the electromagnetic fields are responsible for the potential formation. Electron temperatures increase with rf power and can reach values $\geq$60 eV for an rf power of ~25 kW. Incident ion energies $\geq$300 eV have been measured for the same power level. Predictions of light ion sputtering of candidate Faraday shield materials are presented. 19 refs., 6 figs., 1 tab.

4393 (CONF-891007–84) **The Breeding Blanket Interface (BBI) and the Tritium Systems Test Assembly (TSTA).** Sze, D.K.; Finn, P.A.; Clemmer, R.G.; Anderson, J.L.; Bartlit, J.R.; Sherman, R.; Naruse, Y.; Yoshida, H.; Okuno, K.; Enoeda, M. Argonne National Lab., IL (USA). Oct 1989. 5p. Sponsored by U.S. DOE Energy Research; Japan Atomic Energy Research Institute. DOE Contract W-31109-ENG-38. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002848. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The Tritium System Test Assembly (TSTA) project at Los Alamos National Laboratory is charged with developing and demonstrating the fusion fuel processing requirement for the magnetic fusion energy program. The key fusion fuel streams are the plasma exhaust and the blanket stream. At present, the technology under development at TSTA includes only the plasma exhaust. The blanket is a logical upgrade to TSTA. This possible upgrade is the subject of an ongoing study among LANL, JAERI, and Argonne National Laboratory (ANL). This program, called The Breeding Blanket Interface (BBI), is being investigated with the intention of installing such a processing system at TSTA in the 1992–1993 time frame. The BBI program was initiated in July 1987. The conditions of the tritium product streams of various blankets were determined. Preconceptual designs of the BBI systems were developed for two blanket concepts: Aqueous Lithium Salt Solution Blanket and Solid Breeder Blanket. Preliminary estimates of costing and the schedule of the TSTA/BBI program have been developed. This paper covers the schedule and planning of the TSTA/BBI program. The goal of the program is to establish the engineering data basis of the fuel cycle for an ITER type machine. The operation of the TSTA/BBI hardware is expected to cover the period of 1993 to 1996. 9 refs., 2 figs., 3 tabs.

4394 (CONF-891007–85) **Preliminary design of the CIT [Compact Ignition Tokamak] cryostat.** Goins, M.L. Oak Ridge National Lab., TN (USA). [1989]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90002710. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

For the Compact Ignition Tokamak (CIT) to achieve the performance goals set forth, the toroidal field (TF) and poloidal field (PF) coil systems must operate in a cryogenic temperature regime. The cryostat has been designed to provide and maintain this environment. The preliminary design activity is addressing the design issues and interfaces necessary to provide a cryogenic vessel that will maintain a maximum temperature differential of 8°C between the outer vessel wall and the ambient test cell conditions; operate in a pressure range of +5 psig to −2 psig; accommodate numerous penetrations, including cooling, diagnostic, and gravity support items; and maintain a maximum leak rate of gaseous nitrogen at 1 l/s at 1 atm. Conceptually, the cryostat consists of thermal insulation sandwiched between an inner primary stainless steel pressure vessel and a thin outer stainless steel wall. Design activities have concentrated on determining the size and shape of the primary vessel wall and selecting the best candidate thermal insulation materials for future irradiation testing. The following shapes of the upper and lower cryostat structure were analyzed: a standard ASME torispherical domed top and bottom; a nonstandard domed top and bottom; and a 2° sloped conical top and bottom contour. Screening of candidate insulation materials was based on lowest thermal conductivity over the range of temperatures anticipated in the CIT environment; low material cost and apparent ease of assembly; and survivability of material in the CIT irradiation environment. This paper presents the configuration development of the cryostat used to maintain the cryogenic temperature environment for CIT. 3 refs., 3 figs., 3 tabs.

4395 (CONF-891007–88) **Potential minimum cost of electricity of superconducting coil tokamak power reactors.** Reid, R.L.; Peng, Y-K. M. Oak Ridge National Lab., TN (USA). [1989]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 13. international symposium on fusion engineering; Knoxville, TN (USA); 2-6 Oct 1989. Order Number DE90003077. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The potential minimum cost of electricity (COE) for superconducting tokamak power reactors is estimated by increasing the physics (confinement, beta limit, bootstrap current fraction) and technology [neutral beam energy, toroidal field (TF) coil allowable stresses, divertor heat flux, superconducting coil critical field, critical temperature, and quench temperature rise] constraints far beyond those assumed for ITER until the point of diminishing returns is reached. A version of the TETRA systems code, calibrated with the ITER design and modified for power reactors, is used for this analysis, limiting this study to reactors with the same basic device configuration and costing algorithms as ITER. A minimum COE is reduced from >200 to about 80 mill/kWh when the allowable design constraints are raised to 2 times those of ITER. At 4 times the ITER allowables, a minimum COE of about 60 mill/kWh is obtained. The corresponding tokamak has a major radius of approximately 4 m, a plasma current close to 10 MA, an aspect ratio of 4, a confinement H- factor $\leq$3, a beta limit of approximately 2 times the first stability regime, a divertor heat flux of about 20 MW/m^2, a $B_{max} \leq 18$ T, and a TF coil average current density about 3 times that of ITER. The design constraints that bound the minimum COE are the allowable stresses in the TF coil, the neutral beam energy, and the 99% bootstrap current (essentially free current drive). 14 refs., 4 figs., 2 tabs.

4396 (CONF-891093–9) **Acceleration of small, light projectiles (including hydrogen isotopes) to high speeds using a two-stage light gas gun.** Combs, S.K.; Foust, C.R.; Gouge, M.J.; Milora, S.L. Oak Ridge National Lab., TN (USA). 1989. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 36. American Vacuum Society national vacuum symposium; Boston, MA (USA); 23-27 Oct 1989. Order Number DE90002479. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Small, light projectiles have been accelerated to high speeds using a two-stage light gas gun at Oak Ridge National Laboratory. With 35-mg plastic projectiles (4 mm in diameter), speeds of up to 4.5 km/s have been recorded. The "pipe gun" technique for freezing hydrogen isotopes in situ in the gun barrel has been used to accelerate deuterium pellets (nominal diameter of 4 mm) to velocities of up to 2.85 km/s. The primary application of this technology is for plasma fueling of fusion devices via pellet injection of hydrogen isotopes. Conventional pellet injectors are limited to pellet speeds in the range 1-2 km/s. Higher velocities are desirable for plasma fueling applications, and the two-stage pneumatic technique offers performance in a higher velocity regime. However, experimental results indicate that the use of sabots to encase the cryogenic pellets and protect them for the high peak pressures will be required to reliably attain intact pellets at speeds of $\approx$3 km/s or greater. In some limited tests, lithium hydride pellets were accelerated to speeds of up to 4.2 km/s. Also, repetitive operation of the two-stage gun (four plastic pellets fired at $\approx$0.5 Hz) was demonstrated for the first time in preliminary tests. The equipment and operation are described, and experimental results and some comparisons with a theoretical model are presented. 17 refs., 6 figs., 2 tabs.

4397 (CONF-8905112–2) **A semiautomated computer-interactive dynamic impact testing system.** Alexander, D.J.; Nanstad, R.K.; Corwin, W.R.; Hutton, J.T. Oak Ridge National Lab., TN (USA). [1989]. 27p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From ASTM symposium on the applications of automation technology to fatigue and fracture testing; Kansas City, MO (USA); 22-23 May 1989. Order Number

DE90002721. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A computer-assisted semiautomated system has been developed for testing a variety of specimen types under dynamic impact conditions. The primary use of this system is for the testing of Charpy specimens. Full-, half-, and third-size specimens have been tested, both in the lab and remotely in a hot cell for irradiated specimens. Specimens are loaded into a transfer device which moves the specimen into a chamber, where a hot air gun is used to heat the specimen, or cold nitrogen gas is used for cooling, as required. The specimen is then quickly transferred from the furnace to the anvils and then broken. This system incorporates an instrumented tup to determine the change in voltage during the fracture process. These data are analyzed by the computer system after the test is complete. The voltage-time trace is recorded with a digital oscilloscope, transferred to the computer, and analyzed. The analysis program incorporates several unique features. It interacts with the operator and identifies the maximum voltage during the test, the amount of rapid fracture during the test (if any), and the end of the fracture process. The program then calculates the area to maximum voltage and the total area under the voltage-time curve. The data acquisition and analysis part of the system can also be used to conduct other dynamic testing. Dynamic tear and precracked specimens can be tested with an instrumented tup and analyzed in a similar manner. 3 refs., 7 figs.

4398 (CONF-8906236–1) **Control of ash accumulation by induced-fishbones.** Varadarajan, V.; Miley, G.H. Illinois Univ., Urbana, IL (USA). [1989]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER52127. From ARIES meeting; Boston, MA (USA); Jun 1989. Order Number DE90001565. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Thermal alphas will accumulate in the ignited long pulse tokamak. Ash accumulation results in fuel dilution, reduced power output, increase in Z_{eff}, and increased synchrotron losses. Recent 'Baldur' simulations of the ITER show that the ash accumulation is a distinct possibility for high ash recycling case, inevitably leading to burn quench. So, some means of ash is highly desirable. To this end, several control schemes have been looked at. Given the uncertainty in transport information especially for the ash and other impurity transport, it is desirable to incorporate some explicit ash control features in the tokamak design. Continuing the search for more desirable schemes, in this paper we explore the effectiveness of 'fishbones' towards controlling the alpha accumulation.

4399 (DOE/ER/53192–40) **Design of the Compact Auburn Torsatron: [Annual performance report].** Gandy, R.F.; Henderson, M.A.; Hanson, J.D.; Schneider, T.; Swanson, D.G.; Cary, J.R. Auburn Univ., AL (USA). Aug 1989. 25p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-85ER53192. Order Number DE90002543. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This paper describes the design and optimization procedure for the Compact Auburn Torsatron. Included in this is a description of the Cary-Hanson Optimization technique. In this paper the properties of the magnetic fields are presented and a description of the machine and the construction procedure. The experimental setup for the surface mapping is described and conclusions are presented. 10 refs., 9 figs., 1 tab.

4400 (DOE-tr–89-5) **Basic research results on controlled thermonuclear fusion and plasma physics in the USSR between July 1987 and July 1988.** USDOE, Washington, DC (USA). 1988. 49p. Translation source information not available. Sponsored by U.S. DOE Management & Administration. Order Number DE90002743. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This paper discusses research being done on tokamaks and stellarators in the USSR. Plasma heating, magnetic field configuration, ion traps, and design are some of the area discussed. (LSP)

4401 (DOE-tr–89-7) **Status of work on TSP, T-15 and other OTR units.** Glukhikh, V.A. USDOE, Washington, DC (USA). 1988. 34p. Translation source information not available. Sponsored by U.S. DOE Management & Administration. Order Number DE90002744. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This paper discusses the work done on the TSP, T-15, and OTR tokamak. The strong fields and adiabatic plasma compression is discussed on TSP. The work done on components like the cryogenic system and power system are discussed on T-15. The parameters and designs are discussed on the OTR. (LSP)

4402 (DOE-tr–89-39) **The status of work on the ITER project in the USSR.** Sokolov, Y.A. USDOE, Washington, DC (USA). [1989]. 23p. Translation source information not available. Sponsored by U.S. DOE Management & Administration. Order Number DE90002749. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The report discusses the progress on the ITER tokamak by the USSR and the cooperation by the USA and the USSR on other fusion research. (LSP)

4403 (DOE-tr–89-46) **Agreement between the USSR State Committee on the Use of Nuclear Power and the Department of Energy of the USA regarding joint studies in the field of controlled thermonuclear fusion and plasma physics.** USDOE, Washington, DC (USA). 1989. 17p. Translation source information not available. Sponsored by U.S. DOE Management & Administration. Order Number DE90002751. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This report discusses the agreement between the USSR State Committee on the Use of Nuclear Power and the Department of Energy of the USA regarding joint studies in the field of controlled thermonuclear fusion and plasma physics. The purpose of this cooperation is to perform research aimed at developing fusion energy as an inexpensive, ecologically pure and practically inexhaustible source of energy for the benefit of all mankind. The cooperation may include theoretical, computational and experimental research, as well as studies on joint coordination and the corresponding measures.

4404 (EGG-M–36587) **Heat transfer in condensation of lithium vapors.** Oh, C.H.; Wadkins, R.P. EG and G Idaho, Inc., Idaho Falls, ID (USA). 1988. 5p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC07-76ID01570. (CONF-880139–5: 26. AIAA aerospace conference, Reno, NV (USA), 10-14 Jan 1988). Order Number DE90002081. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper presents the results of an experimental investigation into lithium condensation. The objective of the investigation is to find the condensing side heat transfer coefficients of lithium on the vertical flow configuration and to explain the discrepancy between the Nusselt's theory and experimental results. The heat fluxed in these experiments varied from about 1.3×10^4 W/m^2 at 833 k to 1.3×10^5 W/m^2 at 898 k, giving heat transfer coefficients of 4078 W/m^2 k to 37805 W/m^2 k. These values appear 0.3% to 3% of those predicted by the Nusselt theory. Condensate film thickness was calculated by the Nusselt theory. Boiling and condensing of lithium at low, less than atmospheric pressure, appears to be an efficient energy transport mechanism that may find use in space applications or cooling of the first wall in fusion reactors. 19 refs., 5 figs.

4405 (EGG-M–88260) **Critical safety function guidelines for experimental fusion facilities.** Cadwallader, L.C. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1989]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC07-76ID01570. (CONF-881031–77: 8. topical meeting on technology of fusion energy, Salt Lake City, UT (USA), 9-13 Oct 1988). Order Number DE90002094. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

As fusion experiments proceed toward deuterium-tritium operation, more attention is being given to public safety. This paper presents the four classes of functions that fusion experiments must provide to assure safe, stable shutdown and retention of radionuclides. These functions are referred to as critical safety functions (CSFs). Selecting CSFs is an important step in probabilistic risk assessment (PRA). An example of CSF selection and usage for the Compact Ignition Tokamak (CIT) is also presented. 10 refs., 6 figs.

4406 (EGG-M–88268) **Atmospheric detritiation system performance.** Longhurst, G.R.; Jalbert, R.A.; Rossmassler, R.L. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1988]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC07-76ID01570.

(CONF-881031–74: 8. topical meeting on technology of fusion energy, Salt Lake City, UT (USA), 9-13 Oct 1988). Order Number DE90002053. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

An investigation of the performance of atmospheric detritiation systems and of possible ways for improving their performance was undertaken. Small-scale experiments demonstrated that system performance is strongly dependent on catalyst bed temperature. That may be helped by addition of protium to the process gas stream, but added protium at constant temperature does not increase conversion to HTO. Collection of the HTO on dry sieve with residual HTO fraction of less than one part in 10^7 was observed. Ways suggested for improvement in collection of HTO on molecular sieve beds include adding H_2O to the stream entering the molecular sieve and premoistening of the sieve with H_2O. While these improvement schemes may reduce HTO emissions they increase the amount of tritiated waste that must be handled. 13 refs., 4 figs.

4407 (GA-A–19739) **Mechanical design of the Inside Launch system for electron cyclotron heating in DIII-D.** Hoffmann, E.H.; Moeller, C.P.; Prater, R. General Atomics, San Diego, CA (USA). Nov 1989. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–94: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003292. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

A description is presented of the elements which form a transmission and launching system for the 2 MW ECH Inside Launch experiment on the DIII-D tokamak. The design of various system components, such as mode converters, waveguide bends, couplings, split waveguides, and launching mirrors are described. The DIII-D ECH system has ten gyrotrons which each produce 200 kW of power at 60 GHz. Each gyrotron has its own run of waveguide, about 46 m in length, to connect it to a vacuum window at the tokamak. A taper after the window reduces the diameter of the waveguide to the size that meets the requirements of the vacuum vessel port. A split waveguide which is electrostatically biased carries the microwave power across the location of the magnetic field resonance. The launch point is at the centerpost at midplane. The launching mirrors are adjustable to different angles of injection. 3 refs., 3 figs.

4408 (GA-A–19740) **An interior vessel viewing system for DIII-D.** Senior, R. General Atomics, San Diego, CA (USA). Nov 1989. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–96: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003364. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

It was anticipated that there could be damage to the interior walls of the vacuum vessel during operations of the DIII-D tokamak. A method of viewing the inside of the vessel from the outside was required, that would allow the interior walls to be inspected visually for damage and to locate any debris resulting from operations. A miniature closed circuit television color camera system was developed which could be inserted into one of several ports of the vessel during a 'clean' vent, i.e., vented to inert gas. The system has pan, tilt and zoom capability and carries its own lighting. The use of this system allows a quick assessment of the condition of the vessel to be made under 'clean' vent conditions. This precludes the need for the permit process and manned entry into the vessel which would allow air inside the vessel. A permanent record of the inspection can then be made on video tape. The design and configuration of this camera system is presented and its use as a diagnostic tool discussed. 2 refs., 5 figs.

4409 (GA-A–19741) **Upgrade plans to handle 30 to 40 Mbytes of data for DIII-D.** Henline, P. General Atomics Co., San Diego, CA (USA). Nov 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–93: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003291. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The Department of Energy funds the DIII-D tokamak program which carries out plasma physics and fusion energy research experiments. The machine began operations in February 1986; at that time, approximately 7 Mbytes of data was collected for each shot. Since that time, the shot size has steadily increased to a maximum of over 30 Mbytes. The average shot size is now about 25 Mbytes and over 1 Gigabyte of data has been collected during some operation day. The computer systems were designed to handle a maximum shot size of 25 Mbytes. In order to meet the increased demands, changes to hardware and software are being made and each experiment reviewed before being added to a shot. The area of data transfer now increasing the most is data transferred from small diagnostic DEC VAX systems to the main VAX cluster. Plans in this area include upgrading the VAX which receives data (possibly to a VAX 6310) to have both more CPU power and a faster interface to the Network Systems Hyperchannel which transfers data to the VAX. The new machine will be more easily upgraded with additional CPU's, communication devices and storage devices. Software changes are being incorporated on diagnostic VAXes so that subsets of data, or calculated results are included with the shot data file, rather than the often large (6 to 20 Mbytes) amount of data collected locally. More careful examination is being given to all experiments added to the tokamak, and only necessary and useful data is being added to the system for permanent storage. 4 refs.

4410 (GA-A–19742) **Design of DIII-D Advanced Divertor.** Smith, J.P.; Baxi, C.B.; Reis, E.; Schaffer, M.; Thurston, G. General Atomics, San Diego, CA (USA). Nov 1989. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–95: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003343. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The Advanced Divertor is a modification being designed for the plasma chamber of the DIII-D tokamak in order to optimize the divertor configuration and allow a broader range of experiments to be carried out. The Advanced Divertor will enable two classes of physics experiments to be run in DIII-D: Divertor biasing and Divertor baffling. The Advanced Divertor has two principal components: a toroidally symmetric baffle; and a continuous ring electrode. The tokamak can be run in baffle, bias, or standard DIII-D divertor modes by accurate positioning of the outer divertor strike point through the use of the DIII-D plasma control system. The baffle will contain approximately 50,000 l/s pumping for particle removal in the outer bottom corner of the vacuum vessel. The strike point will be positioned at the entrance aperture for the baffle mode. The aperture geometry is designed to facilitate a large particle influx plus a high probability that backstreaming particles will be reionized and redirected to the aperture. Where the baffling plates meet, gas sealing is required to prevent recycling of neutrals back into the plasma. The electrode is a continuous water-cooled ring, armored with graphite. The ring is electrically isolated from the vessel wall and is biasable to 1 kV and 20 kA. The outer leg of the divertor will be positioned on the graphite covered ring during biasing experiments. The supports for the ring are radially flexible to handle the differential thermal growth between the ring and the vessel wall but stiff in the vertical direction to restrain the ring against large disruption forces. The coolant and electrical feeds are designed in a similar manner. All the feeds are supported from and maintain a 5 kV isolation to the vessel wall. 2 refs., 4 figs.

4411 (GA-A–19747) **DIII-D cryogenic control system upgrade.** Campbell, G.L.; Gilgallon, J.J. General Atomics, San Diego, CA (USA). Nov 1989. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–92: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003290. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The helium liquefier and distribution system at the DIII-D tokamak facility has been upgraded with the addition of a programmable logic controller, color graphic operator interfaces and analog data acquisition system. This new system provides extended monitoring, control capability as well as centralized datalogging, trending and alarm reporting. Other objectives included offsite (remote) monitoring and control via phone modem and a hardware basis for automation of liquefier operation and maintenance. It is now also possible to accomplish connection and coordination with other DIII-D control systems. It was required that most of the installation and

checkout of the new control system be done during operating periods. For this reason, and reliability concerns, the upgrade hardware was designed and installed as an additional independent system rather than a replacement control system. 5 figs.

4412 (GA-A–19748) **Data file management in the DIII-D data acquisition and analysis computer systems.** McHarg, B.B. Jr. General Atomics, San Diego, CA (USA). Nov 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–91: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003289. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

DIII-D is a large tokamak plasma physics and fusion energy research experiment funded by the Department of Energy. Each shot of the experiment results in data files containing between 20 and 30 Mbytes of data. These shots occur about once every 10 minutes with 40 to 50 shots per operating day. Over 1.2 gigabytes have been acquired in one daily session. Most of this data is acquired by MODCOMP Classic computers and is transferred via a Network Systems Hyperchannel to the DIII-D DEC VAX cluster system which is connected via Ether-net to the User Service Center DEC VAX cluster system. Some other data is acquired by local MicroVAX based plasma diagnostic systems and is transferred via DECnet to the DIII-D cluster. A substantial part of these VAX cluster systems is devoted to handling the large data files so as to maintain availability of the data for users, provide for shot archiving and shot restoration capabilities, and at the same time allow for new data to be received into the systems. Many of these tasks are carried out in near real time in sequence with a tokamak shot while other tasks are performed periodically throughout operations or during off hours. These tasks include disk space management, data archiving to 6250 and/or 8 mm tape drives, data file migration from the DIII-D cluster to the User Service Center cluster, data file compression, and network wide data file access. 11 refs., 2 figs.

4413 (GA-A–19751) **DIII-D F-coil chopper selection, control and fault recognition system.** Burley, B.L.; Smith, T.L. General Atomics, San Diego, CA (USA). Nov 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–90: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003288. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The DIII-D fusion experiment uses 18 field-shaping coils (F-coils) to control position and shape of a plasma discharge. The DIII-D F-coils are powered and controlled by configuring single or parallel operation of up to 50 modular, 3 kAmp, 3 kHz, 2 quadrant switching switching power supplies (choppers) and 9 dc power supplies. The dc power supplies provide the raw power for the choppers while the choppers control the current in the F-coils. Through the use of a special high current patch panel, any similar (600 V or 1200 V) chopper can be connected to any of the 18 F-coils. This allows efficient reassignment of power supplies for a variety of fusion experiments. The control system for such a flexible system must also allow the quick reassignment of chopper controls and incorporate a fault detection system to protect power supplies and the fusion experiment. The Chopper Selection, Control, and Fault Recognition system meets this need through the use of state-of-the-art computer bus switching networks and programmable array logic (PAL) circuitry. The chopper selection and control system uses computer bus switching networks to select individual chopper controls for a specific F-coil. Thumbwheel switches identified for specific DIII-D F-coils are used to program the selection of each chopper power supply. A single coil and the controls for that coil can be connected to 1 or all of the chopper power supplies. In practice no more than 6 chopper power supplies are assigned to any single F-coil. 3 refs., 2 figs.

4414 (GA-A–19752) **Mechanical design of an infrared imaging system for DIII-D.** Tabor, M.A.; Petrie, T.W. General Atomics, San Diego, CA (USA). Nov 1989. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-891007–89: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90003287. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Two infrared imaging units have been designed to monitor temperature changes on the protective armor tile inside the DIII-D vacuum vessel. Each imaging unit includes an optical system (lenses, mirrors, and infrared camera), a support structure, and a magnetic shield enclosure. Each optical system requires a 45° field-of-view to monitor a large area within the vacuum vessel. The quality of the image produced by the infrared camera is very sensitive to mechanical vibrations. A rigid support structure has been designed to minimize the motion of the optical system and camera image during a plasma experiment. First, the vibration characteristics of an existing DIII-D imaging unit support structure were measured. The structural properties of the proposed imaging unit supports were then determined using CAD/CAM modeling and finite element analysis and were modified until their stiffnesses matched or exceeded the stiffness of the existing structure. This method eliminated a detailed static and dynamic analysis of all the forces acting on the proposed structures. 5 refs., 6 figs., 2 tabs.

4415 (GA-A–19756) **Beam current regulation of DIII-D neutral beam long pulse ion sources.** Hong, R.; Kellman, D.; Santamaria, G.; Colleraine, A.; Kim, J.; Lee, R.; Phillips, J.; Wight, J. General Atomics, San Diego, CA (USA). Nov 1989. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. /CONF-891007–86: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002914. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

An intrinsic characteristic of the neutral beam long pulse ion source installed on the DIII-D tokamak is the slow increase of arc and beam currents during the beam pulse. This ramping is attributed to the heating of the filaments by energetic electrons backstreaming from the accelerator into the arc chamber. The corresponding change in beam perveance causes the beam optics to vary during a beam pulse, often resulting in an overdense condition. A technique which employs the idea of compensating the filament temperature rise by stepping down the voltage applied to the filaments at beam turn-on has proved to be somewhat effective and successful in regulating the beam current. The disadvantage of this technique is that the amount of filament voltage step-down varies from source to source and is dependent on beam energy. A new technique uses a Langmuir probe signal for feedback regulation in the arc power supply. Plasma density within the arc chamber is maintained at a constant value, as is beam current. This arc regulation method also features "arc notching" at beam turn-on to provide perveance matching during initial beam formation, which is crucial to obtaining smooth initial beam extraction, a high perveance beam, and thus higher power beam operation. The beam power achieved with this arc notching and regulation technique is about 10% higher than that obtained previously with the filament voltage step-down method. 2 refs., 12 figs., 1 tab.

Inst. of Plasma Physics. Mar 1989. (CONF-881266–: US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts, Kyoto (Japan), 6-8 Dec 1988). In *Proceedings of US-Japan fusion cooperation program exchange P148 workshop on advanced current drive concepts.* Order Number DE90705940. Available from NTIS (US Sales Only), PC A06/MF A01.

It is experimentally comfirmed that current drive efficiency eta_CD ($n\text{-}bar_e R_p I_{RF}/P_{LH}$ ($10^{19}m^{-2}A/W$)) proportional to $<T_e>/(Z_{eff}+5)$. High current drive efficiencies of $eta_CD \simeq 2.9$ and 2.6 are obtained with and without NB heating. The improvement of the eta_CD by the optimization of Nparallel-spectrum is also found experimentally. (author).

4419 (IPPJ-T–38) **Proceedings of the Japan-U.S. workshop P-118 on vacuum technologies for fusion devices.** Miyahara, A. (ed.). Nagoya Univ. (Japan). Inst. of Plasma Physics. 1989. 317p. (CONF-8808275–: Japan-U.S. workshop P-118 on vacuum technologies for fusion devices, Nagoya (Japan), 1-5 Aug 1988). Order Number DE90719705. Available from NTIS (US Sales Only), PC A14/MF A01.

Fusion community does not appreciate vacuum technologies to the same extent as accelerator community does. This is because, in the case of accelerators, in particular storage ring systems, the requirement of attaining ultrahigh vacuum in order to avoid collisional loss is well defined, on the other hand, it is not possible to define the requirement so precisely in the case of fusion devices. One of the reasons is that core plasma interacts with vessel wall so strongly and unpredictably that it becomes difficult to identify the role played by individual components. However, in the next step and the next generation machines like CIT, LHS, ITER, FER and NET, vacuum technologies would play more significant roles, because the CIT will introduce tritium in a vacuum vessel, and the aim of the ITER project is to demonstrate particle balance, namely, to achieve steady state operation with D-T fuel. The Japan-U.S. workshop P-118 was held at the Institute of Plasma Physics, Nagoya University, from August 1 to 5, 1988. 33 participants including 4 from the U.S. took part in the workshop. In the plenary session, 12 lectures were given, and also the topics-oriented session on pumping, gauging, remote maintenance, first wall, pump limiter, divertor and others was held. (K.I.).

4420 (JAERI-M–89-018) **Low energy neutral particle energy analyser by time of flight method.** Miura, Yukitoshi; Okano, Fuminori; Matsuzaki, Yoshimi. Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1989. 19p. (In Japanese). Order Number DE90719529. Available from NTIS (US Sales Only), PC A03/MF A01.

The design study of a low energy neutral particle analyser by using the time of flight method is performed. The chopper system can be made by a modified turbo molecular pump. A modified photoelectron-multiplier with a gate assembly may be suitable for the detector of this system. If a turbo molecular pump can rotate with a speed of about 40000 rpm, then the energy resolution ($\delta E/E$) of 1 keV hydrogen particles is less than 20% with the flight length of 2 m (It is assumed that the chopper radius is 50 mm and the width of a slit is 0.15 mm). (author).

4421 (JAERI-M–89-074) **Development and application of an on-line tritium production rate measuring method.** Yamaguchi, Seiya. Japan Atomic Energy Research Inst., Tokyo (Japan). Jun 1989. 123p. Order Number DE90719536. Available from NTIS (US Sales Only), PC A06/MF A01.

A sensitive on-line method for measuring the tritium production rate (TPR) of ^6Li was developed using the response difference of ^6Li and ^7Li-glass scintillators in a mixed neutron-gamma radiation field. A fitting method for subtracting the pulse height spectrum of ^7Li-glass from that of ^6Li-glass was introduced. The contribution of competing reactions such as ^6Li (n, n 'd) ^4He was estimated kinematically. An absolute value of the ^6Li content was determined by chemical analysis. The thermal flux perturbation due to ^6Li-glass of various thickness and ^6Li contents was evaluated by measurement in a thermal neutron field and calculation by the modified Skyrme theory. A Monte Carlo calculation of the self-shielding effect was made. The dependence of the self-shielding on neutron energy was examined by this Monte Carlo code. The edge effect, i.e., distortion of the pulse height spectrum due to partial energy deposition of the alpha and/or the triton, was investigated by measurement in a thermal neutron field and by a Monte Carlo simulation that was based on the scintillation mechanism and considered Bragg absorption and the ratio of contributions to luminescence by the alpha and the triton. The dependence of the edge effect on neutron energy was examined by this Monte Carlo code. This method was applied to the measurement of TPR distributions in simulated fusion blanket assemblies bombarded by D-T neutrons. Absolute values of the TPR were obtained with an experimental error of 3-6%. The measured results were compared with those of conventional β-counting methods and good agreement was obtained. An optical fiber system, using miniature lithium-glass scintillators, was fabricated for purpose of microminiaturization of detector size and adaption to strong electromagnetic field. Applicability of this system to a D-T neutron field was demonstrated. (author).

4422 (JAERI-M–89-075) **Estimation method of reionization loss in the drift ducts for JT-60 NBI.** Matsuoka, Mamoru; Akiba, Masato; Usui, Katsutomi; Oohara, Hiroshi; Ohara, Yoshihiro; Kuriyama, Masaaki; Horiike, Hiroshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Jun 1989. 24p. (In Japanese). Order Number DE90719526. Available from NTIS (US Sales Only), PC A03/MF A01.

In JT-60 the reionzation loss of neutral beams in the drift ducts is estimated using the information of ambient pressure and gas flow rate into the beam-lines. The reionzation loss was more than 50% of the injection power at the start of the injection experiments, due to the outgas from the surface of the drift ducts. However, it was found that the drift ducts were well conditioned after about 30 beam shots and the reionization loss was reduced to about 5%. (author).

4423 (JAERI-M–89-081) **Upgrade of JT-60 pellet injector for higher velocity.** Hiratsuka, Hajime; Miyo, Yasuhiko; Yoshioka, Yuji; Ohta, Kazuya; Shimizu, Masatsugu; Kawasaki, Kouzo. Japan Atomic Energy Research Inst., Tokyo (Japan). Jun 1989. 38p. (In Japanese). Order Number DE90719548. Available from NTIS (US Sales Only), PC A03/MF A01.

Pellet injection experiments have been performed to improve the plasma performance by the JT-60 tokamak from June, 1988. From the results of the experiments, it was found that the plasma confinement time increased up to 40% with pellet injection (velocity over 1.5 km/s), in which was obtained with 10 MW neutral beam injection highly peaked electron density profile. The experimental results suggested that improvement of the plasma confinement time depends on the penetration depth of the pellet into the plasma column, especially into 'q<1' region. This fact require the higher pellet velocity to achieve the inproved plasma continement time. The pellet injector was upgraded to obtain the injection velocity over 1.9 km/s in the end of 1988. In this upgrade, some major components such as a pellet gun assembly, fast -opening magnetically driven values (FMV) and a part of piping line for propellent gas were replaced. The 2.3 km/s of pellet velocity has been attained by the combination of the shorter response time of the newly developed FMV from 1.1 ms to 0.5 ms, increased working pressure and temperature from 50 kg/cm^2 to 100 kg/cm^2 and from 80degC to 200degC respectively. The upgraded pellet injector can inject, independently, four pellets, two of which are 3.0 mm in diameter x 3.0 mm in length and the other two of which are 4.0 mm in diameter x 4.0 mm in length. (author).

4424 (JAERI-M–89-084) **Quick installation/removal technology for first wall.** Tachikawa, Katsuhiro; Horie, Tomoyoshi; Seki, Yasushi; Fujisawa, Noboru; Kondoh, Mitsunori; Uchida, Takao. Japan Atomic Energy Research Inst., Tokyo (Japan). Jul 1989. 75p. (In Japanese). Order Number DE90719545. Available from NTIS (US Sales Only), PC A04/MF A01.

Fusion Next Step Device (FER) plans to experiment Deutrium-Tritium (D-T) reaction, remote handling and other fusion engineering issues. The fast neutron of 14 MeV caused by D-T reaction does not only activate the structural components inside the vacuum vessel, but also damages some first walls. The technique to remove the armour tiles of first walls by simple and quick operation is a key technology for the D-T burning Next Step Device. To establish the rational remote tile handling technology, consideration of consistency between the reactor structure and remote equipments should be made. The report comprises mainly the joint structures of armour tiles, design conditions (electro-magnetic force, cooling systems and so forth) and remote equipments. In addition, it is referred in shape memory alloy (SMA) applications, transportation of damaged tiles from the vacuum vessel and inspection systems for the first wall integrity. Hereafter, furthermore study in depth for the tile handling must be made in parallel with verification of remote systems and tile attachment structures using partial mockups. (author).

4425 (JAERI-M–89-087) **ERATO-code analysis of vacuum magnetic field oscillations in JT-60 divertor configuration.** Ozeki, Takahisa; Tokuda, Shinji; Tsunematsu, Toshihide; Ishida, Shinichi; Neyatani, Yuzuru; Itami, Kiyoshi; Azumi, Masafumi. Japan Atomic Energy Research Inst., Tokyo (Japan). Jul 1989. 27p. (In Japanese). Order Number DE90719607. Available from NTIS (US Sales Only), PC A03/MF A01.

Magnetic field oscillations caused by external kink instabilities are numerically studied by using the ideal MHD stability code ERATO-J. Dependence of a spatial distribution of their amplitude and phase on aspect-ratio, beta-poloidal, shaping of conducting shell and divertor/limiter configurations is examined in detail. In the low aspect ratio plasma, the amplitude of magnetic oscillations in the inner side of the torus is larger than that in the outer. On the contrary, as the poloidal beta increases, the amplitude in the outer side of the torus becomes larger than that in the inner. In the divertor configuration, the amplitude of oscillations reduces near the X-point and the phase is locally modulated. The coherent magnetic oscillations observed in JT-60 agree well with the theoretical results, where the vacuum vessel is assumed to be an ideal conducting shell. The non-uniformity of the poloidal distribution observed in JT-60 can be explained by the combined effects of the finite beta, the X-point and the shape of shell. (author).

4426 (JAERI-M–89-090) **Measurement of impurities in a volume produced H^- ion beam.** Okumura, Yoshikazu; Hanada, Masaya; Kojima, Hiroaki; Matsuda, Yasuhiro; Oohara, Hiroshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Jul 1989. 17p. (In Japanese). Order Number DE90719572. Available from NTIS (US Sales Only), PC A03/MF A01.

Impurity content in a negative ion beam was measured by a momentum mass analysis and a doppler shifted spectroscopy. The ion beam produced in a volume H^- source contains O^-, OH^-, and O_2^- ions, whose contents are less than 1%. The O^- impurity increases with plasma density because of an enhancement of dissociation of OH^-. Although the momentum mass analyzer was scanned up to M=200, no metal impurity was found. (author).

4427 (JAERI-M–89-167) **Polarized proton scattering on lithium isotopes at 14 MeV.** Koori, Norihiko; Kumabe, Isao; Hyakutake, Mikio; Orito, Kouichi; Akagi, Katsumi; Iida, Akihide; Watanabe, Yukinobu; Sagara, Kenshi; Nakamura, Hiroyuki; Maeda, Kazuhide; Nakashima, Takao; Kamimura, Masayasu; Sakuragi, Yukinori. Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment. c Nov 1989. 38p. Sponsored by Japan Atomic Energy Research Institute. (NEANDC(J)–143/U;INDC(JPN)–130/L). Available from Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan.

Differential cross sections, analyzing powers, and double differential cross sections for the ^{6,7}Li (p,p′) scattering have been measured at an incident energy of 14 MeV. Experimental procedures and results are briefly described. The experimental data of the elastic scattering have excellently been reproduced by calculations based on the spherical optical model (SOM) and the coupled channel (CC) method. The DWBA and CC calculations have not correctly predicted the analyzing powers in the inelastic channels leading to the 1st and 2nd excited states of ^{6,7}Li. The three-body breakup process observed in the (p,p′) continuum spectra has been qualitatively explained by DWBA calculations with the discretized-continuum states. The experimental and theoretical results are compared with neutron scattering data. Studies on proton scattering are valuable for modelling of nuclear reactions and for evaluation of neutron scatterings. 17 refs., 10 figs., 3 tabs.

4428 (LA-UR–89-1909) **Performance of the 10kV, 100-kA pulsed-power modules for the FRX-C magnetic compression experiment.** Rej, D.J.; Waganaar, W.J. Los Alamos National Lab., NM (USA). 1989. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890665–31: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89014027. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this paper, we present detailed performance data collected from over a year's operation of the 25 and 50-kJoule pulsed-power capacitor-bank modules developed for the Los Alamos magnetic fusion facility FRX-C. These modules supply the 5-MA magnet current needed for the compressional heating of compact toroid plasmoids. To date, 54 modules have been built and successfully tested at their full design rating: 100-kA peak output current at 10-kV charge, $\tau_{1/4}$ = 60 μs (25-kJ module), or 110 μs (50-kJ module), crowbar L/R $\leq$ 1 ms. Modules are compact, cost about $5000 each, and though designed for 25 or 50 kJ, they can be easily modified for other pulsed-power applications. Energy is stored in 25-kJ capacitors. Start and crowbar switching is performed with a pair of water-cooled, size-D ignitrons. As an alternative to an ignitron, crowbar switching by solid-state rectifiers has been successfully demonstrated. Current is conducted between components and to the load by parallel-plate transmission lines and by a parallel array of commercially-available coaxial cable. 4 refs., 8 figs.

4429 (LA-UR–89-3068) **Calculation of the production cross sections of high-spin isomeric states in hafnium.** Chadwick, M.B.; Young, P.G. Los Alamos National Lab., NM (USA). [1989]. 14p. Sponsored by U.S. DOE Energy Research; U.K. Atomic Energy Authority. DOE Contract W-7405-ENG-36. (CONF-890982–6: International meeting on neutron activation cross sections for fission and fusion energy applications, Argonne, IL (USA), 11-15 Sep 1989). Order Number DE90001836. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The $J^\pi = 16^+$ isomeric state in ^{178}Hf(E_x = 2.447 MeV), which has a halflife of 31 years, poses a threat for serious radioactive activation problems in some fusion reactor designs if its production in 14-MeV neutron reactions is significant. The relatively high excitation energy (2.447 MeV) of this state results in it lying in the continuum region, so it is necessary in a calculation to reconstruct the salient nuclear structure around the state, particularly rotational band levels that might be populated and would feed into it. Using preequilibrium and Hauser-Feshbach statistical theories, the cross sections for this and other hafnium isomeric states are calculated and compared with experimental measurements, where available. 13 refs., 6 figs., 3 tabs.

4430 (LA-UR–89-3268) **A high-speed beam of lithium droplets for collecting diverted energy and particles in ITER [International Thermonuclear Experimental Reactor].** Werley, K.A. Los Alamos National Lab., NM (USA). [1989]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–53: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002354. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

A high-speed (160m/s) beam (0.14 x 0.86m) of liquid-lithium droplets passing through the divertor region(s) below (and above) the main plasma has the potential to replace and out-perform "conventional" solid divertor plates in both heat and particle removal. In addition to superior heat-collection properties, the lithium beam would: remove impurities; require low power to circulate the lithium; exhibit low-recycle divertor operation compatible with lower-hybrid current drive, H-mode plasma confinement, and no flow reversal in the edge plasma; be insensitive to plasma shifts; and finally protect solid structures from the plasma thermal energy for those disruptions that deposit energy preferentially into the divertor while simultaneously being rapidly re-established after a major disruption. Scoping

calculations identifying the beam configuration and the droplet dynamics, including formation, MHD effects, gravitational effects, thermal response and hydrodynamics, are presented. Limitations and uncertainties are also discussed. 20 refs., 6 figs., 3 tabs.

4431 (LA-UR–89-3275) **Quality assurance and quality control for the compact physics research facility (CPRF) and ZTH experiment.** Kewish, R.W. Jr. Los Alamos National Lab., NM (USA). [1989]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–56: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002352. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In compliance with DOE Order 5700.6B, which establishes policies to assure quality achievement in DOE programs, we instituted a quality assurance and quality control program whose primary goal is to assure that reliable components are available with which to assemble the CPRF/ZTH experiment. The Code of Federal Regulations 10 CFR 50, appendix B, and the ANSI standard N45.2 were used as a primary source of guidance in establishing a plan for our QA program. Accepted codes, such as the National Electric Code (NEC), and standards adopted by organizations such as ANSI, IEEE, ASME, and NEMA were used in the design and production of components in keeping with the primary goal of the CPRF program. In setting up the CPRF/ZTH quality assurance program it was our intention to have these standards apply to all suppliers, both within and outside the Laboratory. 5 refs., 6 figs.

4432 (LA-UR–89-3277) **A cost effective battery bank for I^2t testing and evaluation of electrical switchgear.** Reass, W.A. Los Alamos National Lab., NM (USA). [1989]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–58: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002350. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

This paper describes the electrical design and mechanical construction of a 50 kA "step switched" battery bank. Individual fuses protect each of the forty parallel isolated strings of three series (12 V) batteries. Step current waveforms of 12.5 kA, 25 kA, 37.5 kA, and 50 kA are produced by 8 sets of pneumatically driven 20 pole step switches and current limiting stainless steel "trombone" resistors. Inexpensive, yet conservatively designed, Group 65 Motorcraft car batteries are used to give an I^2t capability of better than 5×10^9. The battery bank has well over 1500 shots, with testing of commercial switchgear continuing. In addition to the battery bank engineering data, results of repetitive testing of vacuum interrupters at their I^2t limit will be provided. 8 figs.

4433 (LA-UR–89-3289) **Fiber optic control and diagnostic family of hardwares for the Confinement Physics Research Facility (CPRF) toroidal field and dc interrupter systems.** Reass, W.A.; Schrank, L.S. Los Alamos National Lab., NM (USA). [1989]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–48: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002345. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

A versatile fiber optic system of outstanding performance has been designed and utilized in the development of the CPRF pulsed power equipment. These fiber optic systems consist of a family of interchangeable, but application oriented, mother and daughter PC boards. Furthermore, a self contained, chassis, or "CAMAC" format of links are available. The transmitter family may be described as having a true instrumentation amplifier front end (of unique design), a temperature compensated V/F converter, and fiber optic and differential current loop outputs. The receiver family consists of various mother and daughter boards which can easily be interchanged to optimize overall system requirements. The receivers are temperature compensated and capable of driving 50Ω loads to full output. Receivers boast a better than 67 dB S+N/N ratio without any noticeable overshoot or ringing. A no input "shutdown" and a "remote flag" feature is used to protect sensitive or control hardware. The overall link performance can be typified by having a bipolar "pick & mix" accuracy of better than .5% from all causes; offset, drift, nonlinearity, and thd. Hand-picked pairs easily achieve better than .2% bipolar accuracy. A unipolar circuit can easily be set to "0" error, with less than .5 mV/°C offset. Presented will be the detailed design information along with examples of application specific hardware. 11 figs., 1 tab.

4434 (LA-UR–89-3292) **Transportation of a 451 ton generator stator and a 234 ton generator rotor from Hartsville, TN, to Los Alamos, NM.** Boenig, H.J.; Rogers, J.D.; McLelland, G.R.; Pelts, C.T. Los Alamos National Lab., NM (USA). [1989]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–71: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002447. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

A 1430 MVA steam turbine generator was acquired from a cancelled nuclear power plant in Tennessee to be used as the pulsed power and energy storage unit for the Confinement Physics Research Facility being built at Los Alamos, NM. The transportation from Hartsville, near Nashville, TN, to Los Alamos, NM, of the two largest single pieces of the generator, a 451 t stator and a 234 t rotor presented a special challenge. Details of the move, by barge from Hartsville to Catoosa, near Tulsa, OK, by rail from Catoosa to Lamy, near Santa Fe, NM, and by road from Lamy to Los Alamos are described. The greatest difficulty of the successful move was the crossing of the Rio Grande river on an existing reinforced concrete bridge. The two-lane wide road transporters for the stator and rotor were fitted with outriggers to provide a four-lane wide vehicle, thus spreading the load over the entire bridge width and meeting acceptable load distribution and bridge safety factors. 2 refs., 6 figs.

4435 (LA-UR–89-3297) **Optimization of the testing volumes with respect to neutron flux levels in the two-target high flux D-Li neutron source for the international fusion materials irradiation facility.** Kelleher, W.P.; Varsamis, G.L. Los Alamos National Lab., NM (USA). [1989]. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–69: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002445. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

An economic and fusion-relevant source of high-energy neutrons is an essential element in the fusion nuclear technology and development program. This source can be generated by directing a high energy deuteron beam onto a flowing liquid lithium target, producing neutrons via the D-Lithium stripping reaction. Previous work on this type of source concentrated on a design employing one deuteron beam of modest amperage. This design was shown to have a relatively small testing volume with high flux gradients and was therefor considered somewhat unattractive from a materials testing standpoint. A design using two lithium targets and two high-amperage beams has recently been proposed. This two beam design has been examined in an effort to maximize the test volume while minimizing the flux gradients and minimizing the effect of radiation damage on one target due to the other. A spatial, energy and angle dependent neutron source modeling the D-Lithium source was developed. Using this source, a 3-dimensional map of uncollided flux within the test volume was calculated. The results showed that the target separation has little effect on the available experimental volume and that a testing volume of ~35 liters is available with a volume averaged flux above 10^{14} n/cm^2/s. The collided flux within the test volume was then determined by coupling the source model with a Monte Carlo code. The spectral effects of the high-energy tail in the flux were examined and evaluated as to possible effects on materials response. Calculations comparing the radiation damage to materials from the D-Lithium source to that cause by a standard DT fusion first-wall neutron flux spectrum showed that the number of appm and dpa, as well as the ratio appm/dpa and dpa/MW/m^2 are within 30% for the two sources. 8 refs., 8 figs.

4436 (LA-UR–89-3342) **Testing of a 50 kA, 50 kV current interrupter with I^2t preheating and long recovery voltage.** Reass, W.A.; Boenig, H.J.; Melton, J.G. Los Alamos National Lab., NM (USA). [1989]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-891007–76: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002436. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The Confinement Physics Research Facility (CPRF) presently being constructed at Los Alamos in a next generation Reversed Field Pinch (RFP) plasma experiment. An inductive energy transfer system, employing a 50 kA, 50 kV dc current interrupter, is being utilized for initiating the plasma current. These performance requirements (50 kA, 50 kV) had yet to be realized in a reliable switching system, development of this current interrupter system was initiated. A switch test bay with a 50 kA battery bank has been built at Los Alamos to test the interrupter in conditions which will exist in the CPRF experiment. Many switch parameters were measured to provide information on the current interrupting characteristics and reliability. Some of these diagnostics include voltage, current, pre and post I^2t contact resistance, opening speed and position, arc voltage, and stem temperature. To determine any long term changes, all shots and data channels are computer indexed, and may be easily recalled for review. Extensive testing was performed on Siemens D-10 vacuum interrupter. Test parameter space included 55 kA, 40 kV (per bottle); di/dt of 2250 A/μs, I^2t of 5 x 10^9 amp^2 sec; and 20 kV-200 msec RC recovery decay. Circuit parameters effect opening reliability. Circuit data and the associated testing results will be presented along with long term trends of switch performance under "normal" conditions. 12 figs.

4437 (LA-UR–89-3407) **Design and performance of future KrF laser-fusion facilities.** Harris, D.B.; Sullivan, J.A.; Coggeshall, S.V. Los Alamos National Lab., NM (USA). [1989]. 35p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-891007–64: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002385. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The US inertial confinement fusion program is investigating the feasibility of constructing a high-gain Laboratory Microfusion Facility (LMF). Considerable uncertainties and risks exist for all of the driver candidates in proceeding directly to this facility without an intermediate step. These risks fall into the categories of driver performance and cost, target physics, and target chamber performance. Los Alamos has developed a plan to resolve these issues before construction of the LMF. The plan calls for the construction of an LMF prototype beamline at the 100-kJ energy level and the parallel development of a large (240 kJ) KrF amplifier module. The prototype facility, called the Laser Target Facility (LTTF), will address target physics issues at the 100-kJ level and will demonstrate the performance and cost scaling of KrF lasers. In parallel with this construction, a 240-kJ LMF amplifier module will also be developed. After successful operation of the LTTF for a period of about two years and construction and operation of the LMF amplifier module, all driver issues will be satisfactorily resolved. If sufficient understanding of target physics extrapolations is realized from this facility, the LMF can then be constructed with acceptable risk. If an additional step is needed for understanding target physics and capsule ignition, the LTTF can be upgraded to an energy level on target of 1-3 MJ. This upgrade would provide a direct test of LMF scale laser and optic hardware and would provide much information on the function of the LMF target chamber. The construction of a 3-MJ KrF facility could be an LMF if high target gains are achieved with shaped, broadband KrF laser pulses. 3 figs.

4438 (LBL–27230) **Heavy Ion Fusion Accelerator Research (HIFAR) half-year report, October 1, 1988–March 31, 1989.** Lawrence Berkeley Lab., CA (USA). Jun 1989. 46p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (HIFAN–431). Order Number DE90003296. Available from NTIS, PC A03/MF A01; OSTI; INIS.

The basic objective of the Heavy Ion Fusion Accelerator Research (HIFAR) program is to assess the suitability of heavy ion accelerators as igniters for Inertial Confinement Fusion (ICF). A specific accelerator technology, the induction linac, has been studied at the Lawrence Berkeley Laboratory and has reached the point at which its viability for ICF applications can be assessed over the next few years. The HIFAR program addresses the generation of high-power, high-brightness beams of heavy ions, the understanding of the scaling laws in this novel physics regime, and the validation of new accelerator strategies, to cut costs. Key elements to be addressed include: beam quality limits set by transverse and longitudinal beam physics; development of induction accelerating modules, and multiple-beam hardware, at affordable costs; acceleration of multiple beams with current amplification –both new features in a linac – without significant dilution of the optical quality of the beams; and final bunching, transport, and accurate focusing on a small target.

4439 (LBL–27743) **Comparison of H^{minus} and D^{minus} production in a magnetically filtered multicusp source.** Inoue, T.; Ackerman, G.D.; Cooper, W.S.; Hanada, M.; Kwan, J.W.; Ohara, Y.; Okumura, Y.; Seki, M. Lawrence Berkeley Lab., CA (USA). Apr 1989. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890703–22: International conference on ion sources, Berkeley, CA (USA), 10-14 Jul 1989). Order Number DE90002450. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A JAERI negative ion source was tested at LBL as part of the US-Japan Fusion Cooperation Program. By varying the strength of magnetic filter from 450 to 930 Gauss-cm, we compared production, transport, and extraction of the negative ions. The maximum current densities, which obtained at the corresponding optimum filter strength for each gas species, were 10.4 mA/cm^2 for H^- and 8.4 mA/cm^2 for D^- at arc discharges of 40 kW. The ratio of the ion current densities (J_{D^-}/J_{H^-}) is about 0.8, which is higher than $1/\sqrt{2}$. The electron to negative ion ration was 13 for hydrogen and 38 for deuterium at the corresponding optimum filter strength. The higher ratio in deuterium is probably due to higher space potential of deuterium plasma by a few volts. 9 refs., 7 figs.

4440 (PPLK–10) **Proceedings of US-Japan workshop on new generation experiments and reactors (joined by EC).** Kyoto Univ., Uji (Japan). Plasma Physics Lab. Jul 1988. 250p. (CONF-880794–: U.S.-Japan/IEA workshop on next-generation experiments and reactors, Kyoto (Japan), 25-28 Jul 1988). Order Number DE90719713. Available from NTIS (US Sales Only), PC A11/MF A01.

The workshop, titled 'New Generation Experiments and Reactors', was held at Plasma Physics Laboratory, Kyoto University from 25 to 28 July 1988. The purpose of the meeting was to review the latest achievements and status of stellarator/heliotron new generation experiments as well as the prospects for stellarator/heliotron fusion reactors on the occasion when the New Large Helical System of MOE in Japan is being realized. The reports on the New Large Helical System of MOE cover an overview, physics issues, design, MHD studies, transport code results and bootstrap current, particle orbit studies, divertor studies, NBI heating, analysis of wave heating, heating system, diagnostics, and SC coil technology. The reports on ATF II cover an overview, physics studies strategy, status of physics studies, engineering issues, perspective of helical systems, issues for next-generation experiments and relationship to the Univ. of Wisconsin Program, and issues for next-generation experiments and relation to Auburn Program. Other reports address recent studies of present devices, studies related with WVIIX, and reactor studies. (N.K.).

4441 (PPLK-R–28) **Biased limiter experiment in the Heliotron E device.** Motojima, O.; Harada, M.; Takeiri, Y. and others. Kyoto Univ., Uji (Japan). Plasma Physics Lab. Aug 1988. 21p. Order Number DE90719522. Available from NTIS (US Sales Only), PC A03/MF A01.

The first biased limiter experiment has been done in Heliotron E, which is a typical stellarator/heliotron type device. This experiment investigates the boundary physics of the currentless plasmas, which are produced in the magnetic limiter (divertor) configuration. We analyze the experimental results related to the surface potential, recycling process, and plasma parameters using a material limiter which was biased from the vacuum chamber. The boundary density profile was measured by a thermal Li beam probe to investigate the effect of the biased limiter. (author).

4442 (UCID–21810) **NTES [Nuclear Test and Experimental Sciences Program] laser facility for physics experiments Building 391 High Bay Option.** Christie, D.J.; Foley, R.J.; Frank, D.N.; Henesian, M.A.; Hermes, G.L.; Hunt, J.T.; Labiak, W.G.; Larson, D.W.; Lawson, J.K.; Mayo, S.E.; Patton, H.G.; Perry, M.D.; Richards, J.B.; Swain, J.E.; Swift, D.C.; Tietbohl, G.L.; Van Arsdall, P.J.; Wallerstein, ELawrence Livermore National Lab., CA (USA).

31 Aug 1989. 47p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE90001795. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

This report discusses the following topics: high-energy laser driver; NTES laser and experiment facilities; system control and data acquisition; and auxiliary lasers.

4443 (UCLA/PPG–1135) **The TITAN Reversed-Field Pinch fusion reactor study: Collection of papers.** California Univ., Los Angeles, CA (USA); GA Technologies, Inc., San Diego, CA (USA); Los Alamos National Lab., NM (USA); Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Nuclear Engineering and Engineering Physics. Mar 1988. 174p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-86ER52126. (CONF-880417–Pt.2: 1. international symposium on nuclear fusion technology (ISFNT), Tokyo (Japan), 10-19 Apr 1988). Order Number DE90001808. Available from NTIS, PC A08/MF A01; OSTI; INIS; GPO Dep.

The TITAN Reversed-Field Pinch (RFP) fusion reactor study is a multi-institutional research effort to determine the technical feasibility and key developmental issues of an RFP fusion reactor, especially at high power density, and to determine the potential economics, operations, safety, and environmental features of high-mass-power-density fusion systems. The TITAN conceptual designs are DT burning, 1000 MWe power reactors based on the RFP confinement concept. The designs are compact, have a high neutron wall loading of 18 MW/m^2 and a mass power density of 700 kWe/tonne. The inherent characteristics of the RFP confinement concept make fusion reactors with such a high mass power density possible. Two different detailed designs have emerged: the TITAN-I lithium-vanadium design, incorporating the integrated-blanket-coil concept; and the TITAN-II aqueous loop-in-pool design with ferritic steel structure. This report contains a collection of 16 papers on the results of the TITAN study which were presented at the International Symposium on Fusion Nuclear Technology. This collection describes the TITAN research effort, and specifically the TITAN-I and TITAN-II designs, summarizing the major results, the key technical issues, and the central conclusions and recommendations. Overall, the basic conclusions are that high-mass power-density fusion reactors appear to be technically feasible even with neutron wall loadings up to 20 MW/m^2; that single-piece maintenance of the FPC is possible and advantageous; that the economics of the reactor is enhanced by its compactness; and the safety and environmental features need not to be sacrificed in high-power-density designs. The fact that two design approaches have emerged, and others may also be possible, in some sense indicates the robustness of the general findings.

4444 (UCRL–98191) **Advanced fusion MHD power conversion using the CFAR [compact fusion advanced Rankine] cycle concept.** Hoffman, M.A.; Campbell, R.; Logan, B.G. Lawrence Livermore National Lab., CA (USA). Oct 1988. 15p. Sponsored by U.S. DOE Energy Research. (CONF-881031–76: 8. topical meeting on technology of fusion energy, Salt Lake City, UT (USA), 9-13 Oct 1988). Order Number DE90003014. Available from NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The CFAR (compact fusion advanced Rankine) cycle concept for a tokamak reactor involves the use of a high-temperature Rankine cycle in combination with microwave superheaters and nonequilibrium MHD disk generators to obtain a compact, low-capital-cost power conversion system which fits almost entirely within the reactor vault. The significant savings in the balance-of-plant costs are expected to result in much lower costs of electricity than previous concepts. This paper describes the unique features of the CFAR cycle and a high- temperature blanket designed to take advantage of it as well as the predicted performance of the MHD disk generators using mercury seeded with cesium. 40 refs., 8 figs., 3 tabs.

4445 (UCRL–100432) **Design of a high-gain flux-compression generator.** Pincosy, P.A.; Abe, D.K.; Chase, J.B. Lawrence Livermore National Lab., CA (USA). 1 Sep 1989. 10p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890710–22: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk (USSR), 3-7 Jul 1989). Order Number DE90002795. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The current gain of a high-gain, high-explosive helical magnetic-flux-compression generator (HEG) is limited both by nonuniformities in stator expansion and by armature-stator misalignment. We set out to achieve three goals: first, an output current of at least 2 MA with a current gain greater than 1000 to drive a 150- to 300-nH load; second, a generator with an acceptably small volume and length; and finally, generator output of a reliable magnitude. 5 refs., 6 figs.

4446 (UCRL–100533) **Design and fabrication of the CPQ [Conductor Performance Qualification] coil.** Shen, S.S.; Patrick, R.E.; Miller, J.R.; Chaplin, M.R.; Heim, J.R.; Kerns, J.A.; Slack, D.S.; Summers, L.T. Lawrence Livermore National Lab., CA (USA). 24 Aug 1989. 6p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890850–4: 11. international conference on magnet technology, Tsukuba (Japan), 28 Aug - 1 sep 1989). Order Number DE90002821. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The design and fabrication process of a 15-T, 4000-A, Nb_3Sn test coil are described. In the Conductor Performance Qualification (CPQ) coil, it is intended to demonstrate the reliable performance of cable-in-conduit conductors (CICC) produced in large quantities from internal-tin process, multifilamentary, Nb_3Sn composites. In addition, techniques appropriate for the insulate-wind-react-impregnate method of coil construction using CICCs, such as joints and insulations are developed and demonstrated. The coil is designed to operate at a maximum field of 15 T as an insert to the High-Field Test Facility Solenoid at LLNL. It consists of four grades of CICCs, each made of the same number, but a different size, of composite wires. Operating current density over the first-grade conductor winding is 40 $A{\cdot}mm^{-2}$ at 15 T. Also presented is a novel ripple heating scheme to inject heat at specific levels appropriate for a close simulation of ac and nuclear heat loads in a fusion reactor. Up to 100 W of heating power can be simulated within the coil winding, allowing the effects of such heating on the coil performance to be investigated. 5 refs., 7 figs., 2 tabs.

4447 (UCRL–101113) **Neutronics issues for starlight: An inertial confinement fusion reactor concept.** Tobin, M.T. Lawrence Livermore National Lab., CA (USA). 30 Sep 1989. 7p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-891007–79: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002790. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Features of the STARLIGHT reactor concept may represent significant improvements in ICF reactor design. The reactor will allow an arbitrary illumination geometry for the reactor driver, the reactor will have few moving parts, and the use of a shield integrated with the ICF target assembly will extend the bare first wall lifetime otherwise limited by the wall ablation caused by x rays and target debris. Here we discuss an evolving design by reporting results of 1- and 2-D calculations involving tritium breeding, neutron damage, and the beam port neutron leakage. We conclude that an ICF reactor using a solid breeder is feasible. A "low-temperature" option is the use of a steel first wall and Li_2O as the breeding material. This first wall has an expected lifetime of more than six years. Further, up to 10 cm thickness can be tolerated before the tritium breeding ratio falls below unity. We are unaware of a suitable high temperature first wall material for a "high-temperature" option. This option would use a ceramic first wall and breed tritium in $LiAlO_2$, allowing all the reactor components to operate a high temperatures that allow efficient use of He as a coolant. Of the ceramics examined, SiC appears to be the best choice for considering both tritium breeding and wall lifetime. However, He production will limit that lifetime to five months, clearly not an economical lifetime. Further, Li_2O is necessary rather than $LiAlO_2$ (at 7 cm wall thickness) to achieve a favorable tritium breeding ratio with SiC. Here, the benefits of using ceramics are lost as Li_2O has a much lower melting point than $LiAlO_2$. 12 refs., 3 figs., 1 tab.

4448 (UCRL–101145) **Wall ablation, gas dynamics, and the history of wall stresses in ICF target chambers.** Orth, C.D. Lawrence Livermore National Lab., CA (USA). 30 Sep 1989. 5p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-891007–80: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002789. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We calculate the history of wall stresses for spherical aluminum LMF-type ICF target chambers 10 cm thick with 1400-MJ pellets using a simple computer program called CHAMBER that incorporates the physics of first-wall ablation and chamber gas dynamics, including dissociation, ionization, and gas reverberations. By considering the time dependence of the wall stresses, we calculate peak stresses that are higher or lower than previous estimates based on the dynamic formula $\sigma_{dyn} \approx Pr/\Delta R$, depending on the radius of the chamber. Here P is the interior pressure, R is the chamber radius, and ΔR is the wall thickness. In particular, the previous estimates are too small for chambers with radii $R > 4$ m or $R < 0.5$ m, because the ablation impulse dominates the stress for $R > 4$ m, and the post-ablation pressure impulse dominates for $R < 0.5$ cm. CHAMER also shows that considerably more wall mass can be ablated after the x-ray-vaporized mass fills the chamber if the thermalized vapor radiates more energy to the wall than the wall can conduct away by heat condition, as in small chambers. Venting of a chamber can reduce the wall stress only to that caused by the ablation impulse, and only for vents with radii comparable to the radius of the chamber. 1 ref., 2 figs.

4449 (UCRL–101148) **Laboratory microfusion facility – Neutronics and radiological safety analysis.** Tobin, M.T.; Singh, M.S.; Meier, W.R. Lawrence Livermore National Lab., CA (USA). 30 Sep 1989. 7p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-891007–81: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002787. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The primary goal of the Laboratory Microfusion Facility (LMF) is to conduct some 1400 target experiments over a five-year period to demonstrate high gain in the laboratory. Projected yields for these experiments range from < 10 MJ to 1000 MJ. High gain experiments are expected to be conducted once per week. After high gain has been achieved, target yields above 100 MJ will be used to conduct weapons physics and weapons effects experiments. In addition, experiments will be conducted to assess the viability of inertial fusion of electric power production space propulsion and space power. This will extend the facility lifetime to as much as 30 years. We have set two design goals that minimize effect of radiation hazards on the operation of the facility. The first is that LMF workers will have access to the diagnostic platforms outside the target chamber within 24 hours after a high-yield shot. This is necessary for retrieving data and preparing for the next experiment. Although it is plausible that routine interior chamber operations may be done remotely, workers may occasionally require access to the inside of the chamber for special tasks. Therefore, the second design goal is that workers can safely enter the chamber for a short time 7 days after a high-yield experiment. We have previously reported many aspects of radiological safety concerning the LME. Here we report further work covering beam tube activation, final optics activation, neutron heating of a diagnostic, electromagnetic pulse (EMP) generation, radiation shielding and tritium recovery/disposal issues. 13 refs., 3 figs., 2 tabs.

4450 (UCRL–101481) **Practical aspects of a 2-D edge-plasma model.** Rensink, M.E.; Hill, D.N.; Porter, G.D.; Braams, B.J. Lawrence Livermore National Lab., CA (USA). Jul 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-890931–9: 13. conference on the numerical simulation of plasmas, Santa Fe, NM (USA), 17-20 Sep 1989). Order Number DE90002995. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The poloidal divertor configuration is considered the most promising solution to the particle and energy exhaust problem for a tokamak reactor. The scrape-off layer plasma surrounding the core and the high-recycling plasma near the divertor plates can be modelled by fluid equations for particle, momentum and energy transport. A numerical code (B2) based on a two-dimensional multifluid model has been developed for the study of edge plasmas in tokamaks. In this report we identify some key features of this model as applied to the DIII-D tokamak. 2 refs., 1 fig.

4451 (UCRL–101649) **SBS [stimulated Brillouin scattering] pulse distortion in multimode optical fibers: Preliminary results.** Smith, J.R.; Hawkins, R.J.; Laumann, C.W.; Hatch, J. Lawrence Livermore National Lab., CA (USA). [1989]. 8p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890836–18: 33. SPIE annual international technical symposium on optical and optoelectronic applied science and engineering, San Diego, CA (USA), 6-11 Aug 1989). Order Number DE90003023. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

We have observed sever temporal-pulse-shape distortion due to stimulated Brillouin scattering (SBS) in multimode optical fibers used to diagnose 351 m laser pulses on the Nova laser system. Our measurements can be fit by a basic model of SBS and provide a clear indication of the intensity and temporal regimes where significant SBS-induced temporal-pulse-shape distortion can be avoided. 15 refs., 3 figs., 1 tab.

4452 (UCRL–101756) **ITER [International Thermonuclear Experimental Reactor] in perspective.** Henning, C.D. Lawrence Livermore National Lab., CA (USA). 20 Oct 1989. 7p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract W-7405-ENG-48. (CONF-891007–82: 13. international symposium on fusion engineering, Knoxville, TN (USA), 2-6 Oct 1989). Order Number DE90002819. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The International Thermonuclear Experimental Reactor (ITER) team is completing the second year of a three-year conceptual design phase. The purpose of ITER is to demonstrate the scientific and technological feasibility of fusion power. It is to demonstrate plasma ignition and extended burn with steady state as the ultimate goal. In so doing, it is to provide the physics data base needed for a demonstration tokamak power reactor and to demonstrate reactor-relevant technologies, such as high-heat-flux and nuclear components for fusion power. To meet these objectives, many design compromises had to be reached by the participants following a careful review of the physics and technology base for fusion. The current ITER design features a 6-m major radius, a 2.15-m minor radius and a 22-MA plasma current. About 330 volt-seconds in the poloidal field system inductively drive the current for hundreds of seconds. Moreover, about 125 MW of neutral-beam, lower-hybrid, and electron-cyclotron power are provided for steady-state current drive and heating all these systems are discussed in this paper. 3 refs., 6 figs., 7 tabs.

4453 **Kilojoule operation of the Aurora KrF ICF laser system at Los Alamos.** Rosocha, L.A. (Los Alamos National Lab., NM (USA)); Anderson, R.G.; Czuchlewski, S.J.; Hanlon, J.A.; Jones, J.E.; Jones, R.G.; Kang, M.; Kristal, R.; Mansfield, C.R.; Thomas, S.J. pp. 443 of OSA conference on lasers and electro-optics (1989 Technical Digest series). Optical Society of America, Washington, DC (1989). (CONF-890423–: CLEO '89: conference on lasers and electro optics, Baltimore, MD (USA), 24-28 Apr 1989).

Technical Paper MG2.

The Los Alamos Aurora laser system, which is a prototype for developing high power short wavelength drivers for inertial confinement fusion (ICF), has passed through the final phases of construction and system integration. The Aurora system is layout is shown in this paper. The authors discuss the completion of the system integration process (including the final laser power amplifier) and progress in the delivery of near-kilojoule energy level pulses to the demultiplexer and target chamber. Integrated amplifier chain performance, measurement of the extracted beam energy, and issues related to beam transport to the target are emphasized.

4454 **Effects of laser beam smoothing on laser-plasma interaction.** Obenschain, S.P. (U.S. Naval Research Lab., Washington, DC (US)). pp. 443 of OSA conference on lasers and electro-optics (1989 Technical Digest series). Optical Society of America, Washington, DC (1989). (CONF-890423–: CLEO '89: conference on lasers and electro optics, Baltimore, MD (USA), 24-28 Apr 1989).

Technical Paper MG1.

The gain inertial fusion requires highly uniform pellet implosions. For directly illuminated pellets the individual beams that illuminate the pellet must have highly uniform and controlled focal profiles. The authors discuss the technology, advantages, and limitations of adding controlled amounts of spatial incoherence in the laser to obtain this uniform illumination. The main portion of this paper deals with improvements in high intensity laser-plasma interaction physics

observed when using beams smoothed by spatial incoherence. Two means for beam smoothing have been developed and are discussed here. The mechanisms by which spatial incoherence is suppressing deleterious instabilities and the implications this has on the beam smoothing technolgy for laser fusion is discussed.

4455 **Crossed-field amplifiers as RF drivers for particle beam accelerators.** Dionne, N. (Raytheon Co., Microwave and Power Tube Div., Waltham, MA (US)); Edwards, R.; Mallavarpu, R. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 2C3.

A class of crossed-field amplifier in which the microwave signal is injected onto a circuit integral with the cathode of the tube offers several advantages as an rf driver for particle-beam accelerators. An investigation is in progress to determine the basic capability of an existing S-band, cathode-driven CFA for operating into a resonant cavity load as would be found in a LINAC. In this paper stability issues such as device operation into high VSWR loads are discussed. Relevant tube characteristics (amplitude, phase and frequency stability) are treated with regard to optimization. Features of the CFA driver such as quick turn-on startability are given detailed attention.

4456 **Radiation of a finite electron-beam pulse in a free-electron laser amplifier.** Hafizi, B. (Plasma Theory Branch, Plasma Physics Div., Naval Research Lab., Washington, DC (US)); Ting, A.; Sprangle, P.; Tang, C.M. pp. 160 of Conference record of the 1988 IEEE international conference on plasma science (abstracts). IEEE Service Center, Piscataway, NJ (1988). (CONF-880651–: IEEE international conference on plasma science, Seattle, WA (USA), 6-8 Jun 1988).

Technical Paper 2P41.

The development of an electron beam propagating through a wiggler is of interest in a number of applications. The authors have developed a time-dependent code to study the motion of an electron beam of finite axial extent through a planar wiggler. It is discussed here. This paper presents results for both tapered and untapered wigglers, and examines, in detail, the distortion of the electron-beam pulse as it propagates through the wiggler.

4457 **OHMIC ignition in a single-turn-coil Tokamak (IGNITEX).** Montalvo, E. (The Univ. of Texas, Austin, TX (USA)); Carrera, R.; Ordonez, C.; Rosenbluth, M.N. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

A study of the basic plasma physics characteristics of the recently proposed fusion ignition experiment (IGNITEX) is presented in this paper. During the early stages of the discharge a D-T plasma is heated up chemically; anomalous transport losses are well described by the neoalcator scaling. Later in the discharge when alpha heating becomes significant, confinement is assumed to be degraded by the total power produced in the plasma (ohmic plus alpha heating). Bremsstrahlung is the initially dominant radiation loss. However, once ignition conditions are reached, cyclotron radiation emission becomes dominant. The IGNITEX design proposes an optimum compromise between plasma physics and engineering considerations and then it provides a high ignition margin in the L mode of operation. Control of the thermal instability during the ignited phase of the discharge is possible. In the IGNITEX concept uncertainties are minimized by maintaining the plasma discharge far from marginal stability and by maximizing alpha confinement predictions. In addition, IGNITEX is designed to produce ignition without need for neither auxiliary heating nor H mode of operation.

4458 **Operating large controlled thermonuclear fusion research facilities.** Gaudreau, M.P.J. (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, MA (USA)); Tarrh, J.M.; Post, R.S.; Thomas, P. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The MIT Tara Tandem Mirror is a large, state of the art controlled thermonuclear fusion research facility. Over the six years of its design, implementation, and operation, every effort was made to minimize cost and maximize performance by using the best and latest hardware, software, and scientific and operational techniques. After reviewing all major DOE fusion facilities, an independent DOE review committee concluded that the Tara operation was the most automated and efficient of all DOE facilities. This paper includes a review of the key elements of the Tara design, construction, operation, management, physics milestones, and funding that led to this success. The authors emphasize a chronological description of how the system evolved from the proposal stage to a mature device with an emphasis on the basic philosophies behind the implementation process. This description can serve both as a qualitative and quantitative database for future large experiment planning. It includes actual final costs and manpower spent as well as actual run and maintenance schedules, number of data shots, major system failures, etc. The paper concludes with recommendations for the next generation of facilities.

4459 **Architecture of the ETR systems code.** Reid, R.L. (Fusion Engineering Design Center, Oak Ridge National Lab., PO Box Y, Oak Ridge, TN 37831 (USA)); Galambos, J.D. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

TETRA, a tokamak systems code capable of modeling experimental test reactors (ETRs), was developed in a joint effort by participants of the fusion community. The first version of this code was constructed to model devices similar to the Tokamak Ignition/Burn Engineering Reactor (TIBER) in configuration and design. A major feature of this code is its ability to perform optimization studies. Future work will include broadening the scope of the code, particularly in the area of materials selection, to more accurately simulate tokamak configurations such as the Next European Torus (NET) and the Fusion Engineering Reactor (FER).

4460 **CPRF/ZTH shell poloidal gap design and fabrication.** Yavornik, E.J. (Los Alamos National Lab., PO Box 1663, Los Alamos, NM 87545 (USA)); Moses, R.W.; Dransfield, G.D.; Custer, D.M. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

Design is in progress on a new generation Reversed Field Pinch (RFP) machine, designated as ZTH, to be assembled at Los Alamos National Laboratory during FY 86-92. The front end of the machine will consist of an external electrically conducting shell that supports an internal vacuum liner containing the plasma. The external shell will contain insulated toroidal and poloidal gaps to permit penetration of magnetic fields and voltage to the plasma. Many perturbations of the magnetic field induce toroidal shell currents with poloidal Fourier components having mode numbers $m \geq 1$. A typical butt-joint poloidal gap will convert these image currents into potentially damaging magnetic field errors with a large spectrum of toroidal-mode numbers. The ZTH shell poloidal gap will use concentric overlapping tapered shells in its construction, which will serve to minimize these errors.

4461 **Design studies of the APEX light ion fusion experiment.** Moses, G.A. (Univ. of Wisconsin-Madison, 1500 Johnson Drive, Madison, WI 53706 (USA)); Engelstad, R.L.; Lovell, E.G.; Peterson, R.R.; Whitley, R.; Connelly, M.; Glasgow, B.; Patel, A.; Yamamoto, R.; Callen, J. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The APEX project is an upgrade of the PBFA-II light ion fusion accelerator at Sandia Laboratories, Albuquerque to allow pulse shaping for driving high gain ICF targets. This upgrade includes: modification of the pulsed power, replacement of the barrel diode with an extraction diode, addition of a z-pinch plasma channel, and addition of a shielded target chamber. In this paper the authors emphasize the structural response of the target chamber to a 100 MJ light ion driven target microexplosion, shielding and containment of

the induced radioactivity, and modification of the PBFA-II facility to accommodate the APEX chamber.

4462 Economic comparison of fusion fuel cycles. Brereton, S.J. (Massachusetts Institute of Technology, Cambridge, MA 02139 (USA)); Kazimi, M.S. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The economics of the DT, DD, and DHe fusion fuel cycles are evaluated by comparison on a consistent basis. The designs for the comparison employ HT-9 structure and helium coolant; liquid lithium is used as the tritium breeding material for the DT fuel cycle. The reactors are pulsed, superconducting tokamaks, producing 1200 MW of electric power. The DT and DD designs scan a range of values of plasma beta, assuming first stability scaling laws. The results indicate that on a purely economic basis, the DT fuel cycle is superior to both of the advanced fuel cycles. Geometric factor, materials limitations, and plasma beta were seen to have an impact on the Cost of Electricity (COE). The economics for the DD fuel cycle are more strongly affected by these parameters than is the DT fuel cycle. Fuel costs are a major factor in determining the COE for the DHe fuel cycle. Based on costs directly attributable to the fuel cycle, the DT fuel cycle appears most attractive. Technological advances, improved understanding of physics, or strides in advanced energy conversion schemes may result in altering the economic ranking of the fuel cycles indicated here.

4463 The TITAN oscillating-field current-drive system. Bathke, C.G. (Los Alamos National Lab., Los Alamos, NM 87545 (USA)). vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The TITAN study uses oscillating-field current drive (OFCD) for steady-state operation in a reversed-field-pinch (RFP) fusion reactor. A circuit model which simulates the plasma, first wall, blanket, and coils has been developed and applied to two TITAN reactor designs to assess OFCD efficiency and power-supply requirements. Methods for optimizing current-drive efficiency and minimizing power-supply requirements are identified.

4464 Microwave superheaters for fusion. Campbell, R.B. (Lawrence Livermore National Lab., Livermore CA 94550 (USA)); Hoffman, M.A.; Logan, B.G. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). DOE Contract W-7405-ENG-48. (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The microwave superheater uses the synchrotron radiation from a thermonuclear plasma to heat gas seeded with an alkali metal to temperatures far above the temperature of material walls. It can improve the efficiency of the Compact Fusion Advanced Rankine (CFAR) cycle. For a proof-of-principle experiment using helium, calculations show that a gas superheat ΔT of 2000^0K is possible when the wall temperature is maintained at 1000^0K. The concept can be scaled to reactor grade systems. Because of the need for synchrotron radiation, the microwave superheater is best suited for use with plasmas burning an advanced fuel such as D-^{3}He.

4465 The lithium blanket program at the LOTUS facility. File, J. (Princeton Plasma Physics Lab., Princeton Univ., PO Box 451, Princeton, NJ 08544 (USA)); Haldy, P.A.; Quanci, J. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

An experimental program of neutron transport studies of the lithium Blanket Module (LBM) carried out with the LOTUS point-neutron source at the Ecole Polytechnique Federale de Lausanne (EPTL), Switzerland has been concluded. The major objectives of this program are to perform a series of neutron transport and tritium breeding experiments to qualify the LBM for future experiments on toroidal fusion devices such as TFTR to perform neutron multiplier experiments on the LBM employing various materials in a removable slab geometry; and, to compare the experimental results of radiation dosimetry and tritium breeding with the calculations of two and three dimensional neutron transport codes. An overview of the results from the radiation dosimetry and tritium assay are presented and compared to the two and three dimensional neutron transport codes.

4466 Neutronics design of self-cooled lithium blanket and shield for the high wall loading TITAN RFP reactor. Cheng, E.T. (GA Technologies Inc., PO Box 85608, San Diego, CA 92138 (USA)). vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

As part of the high-power density TITAN RFP reactor study, a vanadium alloy-structured, self-cooled lithium blanket and shield concept was selected for detailed conceptual design study. The TITAN RFP reactor allows a high neutron wall loading of 18 MW/m^2. Tritium breeding, waste disposal, nuclear heating (both during operation and after shutdown), annual blanket replacement mass and protection of magnets are among the important issues taken into account in the neutronics design optimization. An important finding is that some nuclear performance characteristics such as decay heat, waste disposal rating, and atomic displacement in structural alloys are drastically reduced if the lithium is enriched with ^{6}Li. The ^{6}Li enrichment in lithium was chosen to be 30% in the Li/V design. The Li/V TITAN neutronic system consists of a 10 mm tube bank first wall, a 0.28 m blanket region, a 0.3 m reflector, a 0.15 m hot shield, and copper ohmic heating coils. The first wall and blanket components have a lifetime of one full power year. The reflector and shield are replaced every five full power years assuming the maximum atomic displacement limit in the vanadium alloy structure is 200 dpa. The ohmic heating coils are expected to last for the entire 30 full power years plant lifetime. The limiting factor is radiation damage to the spinel insulator. The tritium breeding ratio is 1.18 tritons per D-T neutron from a three-dimensional calculation, including the effect of the divertors. The nuclear performance of the above reference system satisfies all lifetime criteria in each reactor component.

4467 Blanket and shield design options for ASRA6C: A stellarator power reactor. . ElGuebaly, L.A. (Fusion Power Associates, 6515 Grand Teton Plaza, Madison, WI 53719 (USA)); Sviatoslavsky, I.N.; Sawan, M.E.; Wittenberg, L.J.; Kulcinski, G.L. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

A major task of the ASRA6C study was to reduce the dimensions of the reactor by using a thin blanket and efficient shield. Four blanket options have been considered for ASRA6C. The main differences between the different options lie in the blanket geometry and in the way the blanket inner surface tracks the plasma contour. All blankets utilize liquid $Li_{17}Pb_{83}$ as the breeder, Be as the multiplier/moderator (except one option requires no Be), He gas as the coolant, and HT-9 as the structure. A comparison study between the four options was carried out on the basis of neutronics performance, configuration, maintainability, mass utilization, and economics. One option was selected on overall merits and is considered as the reference blanket design for ASRA6C. This blanket has a constant elliptical cross section and uniform thickness.

4468 Thermal-hydraulic design for the lithium-cooled TITAN reversed-field-pinch reactor. Hasan, M.Z. (Univ. of California at Los Angeles, Los Angeles, CA 90024-1597 (USA)); Blanchard, J.P.; Conn, R.W.; Cooke, P.I.H.; Ghoniem, N.M.; Grotz, S.P.; Najmabadi, F.; Orient, G.; Sharafat, S.; Wong, C. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

A thermal-hydraulic design of the first wall and blanket of the 18 MW/m^2 neutron wall loading TITAN reversed-field-pinch (RFP) fusion reactor using liquid-lithium as coolant and V-3Ti-1Si as structural material is described. The first wall is made of tubes and the blanket coolant channels are a combination of tubular, square and rectangular channels. The coolant channels are aligned with the larger poloidal magnetic field. The first-wall and blanket coolant circuits are separate. Magnetohydrodynamic (MHD) turbulent-flow heat transfer is utilized when the heat flux on the first wall is high, allowing an extension of the design window up to about 5 MW/,m^2 heat

flux. The coolant velocities are 21 m/s in the first-wall and about 0-.5 m/s in the blanket coolant channels. The corresponding pressure drops are 10 MPa and 3.0 MPa, respectively. The coolant pumping power is about 53 MW which is less than 5% of the electric output. The coolant inlet temperature is 320^{0}C and the exit temperatures are 440^{0}C and 700^{0}C for the first-wall and blanket circuits, respectively. The maximum structure temperature is less than 75^{0}C and the material stresses are below the allowable design limits.

4469 Divertor design for the TITAN reversed-field-pinch reactor. Cooke, P.I.H. (Univ. of California at Los Angeles, Los Angeles, CA 90024-1597 (USA)); Bathke, C.G.; Blanchard, J.P.; Creedon, R.L.; Grotz, S.P.; Hasan, M.Z.; Orient, G.; Sharafat, S.; Werley, K.A. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The design of the toroidal-field divertor for the TITAN high-power-density reversed-field-pinch reactor is described. The heat flux on the divertor target is limited to acceptable levels ($\leq$ 10 MW/m^2) for liquid-lithium cooling by use of an open divertor geometry, strong radiation from the core and edge plasma, and careful shaping of the target surface. The divertor coils are based on the Integrated-Blanket-Coil approach to minimize the loss in breeding-blanket coverage due to the divertor. A tungsten-rhenium armour plate, chosen for reasons of sputtering resistance, and good thermal and mechanical properties, protects the vanadium-alloy coolant tubes.

4470 Structure and insulator material choices for the TITAN reversed-field-pinch reactor study. Sharafat, S. (Univ. of California at Los Angeles, Los Angeles, CA 90024-1597 (USA)); Ghoniem, N.M.; Cheng, E.; Cooke, P.I.H.; Grotz, S.; Martin, R.; Najmabadi, F.; Wong, C.P. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The structural material choice can significantly effect operating conditions, component lifetime, safety, and waste management issues of a fusion power reactor. A vanadium-base alloy (V-3Ti-1Si) was selected as structural material for the TITAN liquid lithium cooled reactor design. The choice was mainly based on the alloy's resistance to radiation damage and helium embrittlement. The behaviour of insulating materials can also have a significant effect on the overall reactor design, configuration and component lifetime. $MgAl_2O_4$ was taken as the choice insulating material based on its response to neutron irradiation. Lack of data in many areas such as creep-rupture and irradiation hardening, for structural materials; swelling and radiation induced conductivity for insulating materials prompted the authors to develop phenomenological design equations in order to estimate long term material behaviour.

4471 Ring coil optimization with respect to stress, temperature, and system energy over a range of physics requirements. Pillsbury, R.D. Jr (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, MA 02139 (USA)); Thome, R.J. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The poloidal field coil system for a tokamak can be divided into the central solenoid and the ring coils. A ring coil is defined as one that has a small cross-section compared to its diameter. The size of the central solenoid is usually fixed very early in the design process since its size is directly related to the tokamak size. The sizes of the other (ring) coils are not as critical to determining the basic machine size. It is necessary to know their locations and currents in order to verify the shaping and position control of the plasma. Attention is usually focused only on the baseline plasma of the design point. However, the PF set must also be able to shape and maintain other plasmas. This paper describes a program which evaluates PF coil current scenarios over a range of physics requirements and determines the sizes of the coils necessary to satisfy constraints on the temperature rise and stress levels for the worst case scenario. In addition, the system energy requirements can be assessed and trade-offs between system energy and coil sizes (cost) can be made. Examples are given based on studies performed of CIT (Compact Ignition Tokamak).

4472 High-field superconducting solenoids for the TIBER II PF system. Kerns, J.A. (Lawrence Livermore National Lab., Univ. of California, PO Box 5511, L-643, Livermore, CA 94550 (USA)); Miller, J.R.; Summers, L.T. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). DOE Contract W-7405-ENG-48. (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The poloidal-field (PF) coil set for the Tokamak Ignition/Burn Engineering Reactor (TIBER-II) consists of 24 Colenoid modules, 16 of which are stacked inside the toroidal-field (TF) system at the center of the machine. These central solenoid modules operate at windings approach 14 T. Although TIBER II is designed for steady-state operation with noninductive current drive, other operating scenarios are also considered. The central solenoid modules can easily support the centering load of the PF system, reducing the overall radial build of the machine and greatly increasing the limit on the number of pulse cycles imposed by fatigue considerations in the central solenoid.

4473 Cryogenic magnet case and distributed structural materials for high-field superconducting magnets. Summers, L.T. (Lawrence Livermore National Lab., Livermore, CA 94550 (USA)); Miller, J.R.; Kerns, J.A.; Myall, J.O. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). DOE Contract W-7405-ENG-48. (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The superconducting magnets of the Tokamak Ignition/Burn Experimental Reactor (TIBER II) will generate high magnetic fields over large bores. The resulting electromagnetic forces require the use of large volumes of distributed steel and thick magnet case for structural support. Reviews the design allowables, calculated loads and forces, and structural materials selection for TIBER II.

4474 Design process for the CIT (compact ignition tokamak) poloidal field coil system. Pillsbury, R.D. Jr. (MIT/Plasma Fusion Center, Cambridge, MA 02139 (USA)); Jardin, S.C.; Pomphery, D.N.; Thome, R.J. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

The PF coil system for the CIT consists of a central solenoid and ten ring coils which are external to the bore of the toroidal field coil, together with six ring coils which are located within the bore of the TF coils. The baseline plasma carries 9 MA in a double null divertor configuration at an elongation of 2.0 and a triangularity of 0.3 (both at the 95% surface). This paper outlines the process used in selecting a PF coil set for CIT and gives an example of its capability. In particular, the plasma evolution for a case of interest is given together with system requirements in terms of coil size, power and energy. The ability of the coil system to dynamically control the flux surface position on the divertor plates is also illustrated.

4475 The VISTA spacecraft: Advantages of ICF for interplanetary fusion propulsion applications. . Orth, C.D. (Lawrence Livermore National Lab., L-481, PO Box 5508, Livermore, CA (USA)); Klein, G.; Sercel, J.; Hoffman, N.; Murray, K. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

Inertial Confinement Fusion (ICF) is an attractive engine power source for interplanetary manned spacecraft, especially for near-term missions requiring minium flight duration, because ICF has inherently high power-to-mass ratios and high specific impulses. The authors have developed a new vehicle concept called VISTA that uses ICF and is capable of round-trip manned missions to Mars in 100 days using A.D. 2020 technology. They describe VISTA's engine operation, discuss associated plasma issues, and describe the advantages of DT fuel for near-term applications.

4476 Conceptual design of a 10-MJ driver for a high gain target development facility. Olson, R.E. (Target Experiments, Div.

1263, Sandia National Labs., Albuquerque, NM 87185 (USA)). vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

Commercial application of inertial confinement fusion (ICF) will require inexpensive, high gain (>80) fusion targets. It is thought that the development of such targets will require a 5 to 10 year search effort utilizing a dedicated nuclear research facility with a driver capable of providing a 10 MJ, 300 to 1000 TW pulse of on-target energy. The Terget Development Facility (TDF) is a light ion driven concept for such a facility. A TDF driver based upon extrapolations from present-day pulsed power technology is described in the present paper.

4477 Conceptual design of a high gain target development facility. Olson, R.E. (Sandia National Labs., Albuquerque, NM 87185 (USA)); Cook, D.L.; Moses, G.A.; Bruggink, D.; Engelstad, R.L.; Henderson, D.L.; Lovell, E.G.; Peterson, R.R.; Sawan, M.E.; Yasar, O. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

Critical design issues associated with a light ion driven high gain Target Development Facility (TDF) have been explored in a preliminary conceptual design study. Calculational methods and key conclusions related to the TDF target chamber concept are described in the present paper.

4478 Measurements of electromagnetic properties of LCT coils in IFSMTF. Shen, S.S. (Oak Ridge National Lab., PO Box Y, Oak Ridge, TN 37831 (USA)); Baylor, L.R.; Dresner, L.; Fehling, D.T.; Lubell, M.S.; Lue, J.W.; Luton, J.N.; McManamy, T.J.; Wilson, C.T.; Wintenberg, R.E. vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). DOE Contract AC05-84OR21400. (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

Participants in the international Large Coil Task (LCT) have designed, built, and tested six different toroidal field coils. Each coil has a 2.5- by 3.5-m, D-shaped bore and a current between 10 and 18 kA and is designed to demonstrate stable operation at 8 T, with a superimposed averaged pulsed field of 0.14 T in 1.0 s and simulated nuclear heating. Testing of the full six-coil toroidal array began early in 1986 and was successfully completed on September 3, 1987, in the International Fusion Superconducting Magnet Test Facility (IFSMTF) at Oak Ridge National Laboratory (ORNL). This paper summarizes electromagnetic properties of LCT coils measured in different modes of energization and fast dump. Effects of mutual coupling and induced eddy currents are analyzed and discussed. Measurements of the ac loss caused by the superimposed pulsed fields are summarized. Finally, the interpretation of the test results and their relevance to practical fusion are presented.

4479 Neutronics issues for a laboratory microfusion facility. Tobin, M.J. (Lawrence Livermore National Lab., PO Box 5508, Livermore, CA 94550 (USA)). vp of Proceedings of the 12th symposium on fusion engineering. IEEE Service Center, Piscataway, NJ (1987). DOE Contract W-7405-ENG-48. (CONF-871007–: 12. symposium on fusion engineering, Monterey, CA (USA), 12-16 Oct 1987).

Discussion concerning goals or design of the Laboratory Microfusion Facility (LMF) should include an understanding of the neutronics issues involved. The authors consider such aspects as first wall shielding requirements, safety standards as they will apply to such an ICF facility, and the interior chamber environment. The selection of materials for the first wall, neutron moderator and absorber, and gamma ray shielding is discussed. They conclude that water or carbon are the choices for bulk neutron moderation and boron placed just in front of the first wall the choice for neutron absorber. Selection of the in-chamber materials and diagnostic design will greatly affect the relative hazards after a shot. Lead is the high-Z material of choice and plastic expendables for the diagnostics. Although a poor gamma ray attenuator, carbon is the choice for this function since it also compensates for the direct neutron shine effects and does not itself activate. Electronics may need to be hardened to the prompt gamma and neutron dose.

4480 Recent experiments with the Nova laser. Coleman, L.W. (Lawrence Livermore National Lab., CA (USA)). *Journal of Fusion Energy (USA),* 6(4): 319-327 (Dec 1987). (CONF-870457–: Annual meeting of Fusion Power Associates: applications of laser, particle beam, and RF power technologies, Pleasanton, CA (USA), 8-9 Apr 1987).

Experiments conducted at the Nova facility in laser fusion under the auspices of the inertial confinement fusion program are discussed. Research in the production of fusion conditions in the laboratory and in the development of high-power neodymium lasers is assessed. Target and plasma developments are evaluated along with neutron diagnostics using time-of-flight spectrometers and x-ray framing cameras. An inertial confinement fusion power plant using the Cascade reactor is described from the standpoint of cost and efficiency.

4481 Applications of free-electron laser technology to magnetic fusion. Thomassen, K. (Lawrence Livermore National Lab., CA (USA)). *Journal of Fusion Energy (USA),* 6(4): 361-363 (Dec 1987). DOE Contract W-7405-ENG-48. (CONF-870457–: Annual meeting of Fusion Power Associates: applications of laser, particle beam, and RF power technologies, Pleasanton, CA (USA), 8-9 Apr 1987).

The use of free electron laser technology in a program at Lawrence Livermore for the electron cyclotron heating of a takamak plasma is discussed. The program will use the ETA-II facility now being constructed for accelerator and laser research and will involve moving the former Alcator C tokamak from MIT and housing it in the building now containing the MFTF-B mirror machine. The ETA-II facility butts into the MFTF-B building. Microwaves will be transmitted to the tokamak from this area via a quasi-optical system with large mirrors to steer and focus the microwaves into the plasma. The program proposes to generate up to 2 MW of power at 250 GHz. The laser will amplify signals generated by a 10-kW gyrotron operating in a second harmonic whispering gallery mode. The program is called the microwave tokamak experiment.

4482 Cusp-stabilized mirror-based neutron source. Kesner, J. (Massachusetts Institute of Technology, Cambridge (USA)); Horne, S.F.; Pastukhov, V.P. *Journal of Fusion Energy (USA),* 6(4): 401-411 (Dec 1987). DOE Contract AC02-78ET51013. (CONF-870457–: Annual meeting of Fusion Power Associates: applications of laser, particle beam, and RF power technologies, Pleasanton, CA (USA), 8-9 Apr 1987).

An optimally sized Fusion Engineering Test Facility should produce 10-20 MW of power at 2 MW/m^2 steady-state wall loading. Because mirror cells do not scale with size, one can choose the fusion power and wall loading free from minimum size constraints. A cusp stabilized axisymmetric mirror is seen to be ideally suited for this purpose due to excellent access, a simple coil set, and good MHD properties. The authors present parameters for a proof of principle experiment as well as for a neutron source facility.

4483 Neutral beam injection current drive sensitivity study for the tokamak ignition/burn experimental reactor II, the U.S.: Option for International Thermonuclear Reactor, and the International Tokamak Reactor. . Pautasso, G.R. (Georgia Inst. of Tech., Atlanta, GA (USA). Fusion Research Center); Mandrekas, J.; Stacey, W.M. Jr. *Fusion Technology (USA),* 15(3): 1395-1400 (May 1989).

In this paper the current driven by neutral beam injection is calculated for three different reactor designs: the Tokamak Ignition/Burn Experimental Reactor II (TIBER-II), the U.S. option for the International Thermonuclear Experimental Reactor (ITER-US), and the International Tokamak Reactor (INTOR). The sensitivity of the current drive efficiency to plasma and beam parameters is studied, and general conclusions are drawn.

4484 Cryogenic-laser-fusion target implosion studies performed with the OMEGA uv-laser system. Marshall, F.J.; Letzring, S.A.; Verdon, C.P.; Skupsky, S.; Keck, R.L.; Knauer, J.P.; Kremens, R.L.; Bradley, D.K.; Kessler, T.; Delettrez, J.; and others. *Physical Review [Section] A: General Physics (USA),* 40(5): 2547-2557 (1 Sep 1989).

A series of direct-drive laser-fusion implosion experiments was performed on cryogenically cooled, DT-filled glass microballoons

with the OMEGA 24-beam uv (351-nm) laser system. The targets consisted of glass microballoons having radii of 100 to 150 μm, wall thicknesses of 3 to 7 μm, filled with DT gas at pressures of 75 to 100 atm. The targets were cooled to below the freezing point of DT, *in situ*, by a cryogenic target system. The targets were irradiated by approximately 1 to 1.2 kJ of uv light in 650-ps Gaussian pulses. The on-target irradiation uniformity was enhanced for these experiments by the use of distributed phase plates, which brought the estimated irradiation nonuniformities to ~12% (σ_{rms}). Target performance was diagnosed by an array of x-ray, plasma, and nuclear instruments. The measured target performance showed ~70% absorption, thermonuclear yields of 10^6 to 10^8 neutrons, and final fuel areal densities of 20 to 40 mg/cm^2 for the optimum targets examined in these experiments. Fuel densities at the time of thermonuclear neutron production, inferred from direct measurements of the fuel areal density, were in the range of 20 to 50 g/cm^3 (100 to 200 times the density of liquid DT) for the optimum targets.

99 GENERAL AND MISCELLANEOUS

Inst. for Atomic Energy. Mar 1989. 140p. (CONF-8806441–: 4. IAERU seminar, Tokyo (Japan), 18 Jun 1988). Order Number DE90705939. Available from NTIS (US Sales Only), PC A07/MF A01.

Individual items in scope for the data base are processed separately. (DLC)

4487 (LA–11634-MS) **Analysis of physical training of security inspectors at Los Alamos National Laboratory: A preliminary report.** Burkhalter, H.E.; Tietjen, G.L.; Sessions, J.C.; Hook, T.R. Los Alamos National Lab., NM (USA). Nov 1989. 29p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. Order Number DE90002337. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

One-half and one-mile runs and 40-yard dash times were analyzed for security inspectors (SIs) at Los Alamos National Laboratory. The effectiveness of grip-strength conditioning was also determined. Both males and females met running sprint standards well within the limits established by the Department of Energy, and there were no adverse effects among any age decades or either gender. Reducing training from three to two days per week resulted in a statistically significant decrease in qualification performance. Increase in grip strength was noted in the left hand only when SIs trained two days per week for nine weeks. Further analysis should determine the appropriate training frequency for this population. These results suggest that no significant improvement is derived from aerobic training occurring less than three days per week. 7 refs., 19 figs.

4488 (UCID–21674) **Kestrel 3 Program: Final report.** Chocol, C.; Massey, W.; Hoard, R.; Hendricks, J.; Newman, M. Lawrence Livermore National Lab., CA (USA). 17 Apr 1989. 123p. Sponsored by U.S. Department of Defense. DOE Contract W-7405-ENG-48. Order Number DE90001796. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

This report contains information on the major subsystems of the Kestrel balloon system. Detailed data are provided in areas where major design and subsystem testing have taken place. Data are also provided on test support equipment, data acquisition, test conditions, assembly, and procedures within the Pacific Missile Test Center (PMTC) range, where testing occurred. 22 figs.

9901 Management

4489 (DOE/MA–0384) **Technical skills training program: Program management, project management, procurement and assistance.** USDOE Assistant Secretary for Management and Administration, Washington, DC (USA). Employee Development and Training Div. Oct 1989. 55p. Sponsored by U.S. DOE Management & Administration. Order Number DE90002690. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

The departmentally administered Technical Skills Training Program encompasses three functional areas: Program Management Skills, Project Management Skills and Procurement and Assistance Skills Training. Primary emphasis is directed at providing DOE employees the specific work related skills necessary to perform effectively and efficiently. This directory contains descriptions of the courses available in the three program areas and general information for participation in the training programs. Separate sections have been reserved for the Current Year Schedule and listings of the Headquarters and Field Training Office Coordinators.

4490 (DOE/MA/19117–T1) **The effective supervision seminar the management development seminar: Final project report.** Delaurenti (Jordan), Inc., Dallas, TX (USA). Sep 1989. 184p. Sponsored by U.S. DOE Management & Administration. DOE Contract AC01-86MA19117. Order Number DE90003092. Available from NTIS, PC A09/MF A01 - OSTI; GPO Dep.

The Department of Energy (DOE) has been providing the Effective Supervision Seminar (ESS) on a regular basis since 1978. The course is primarily targeted for new, probationary DOE supervisors. Incumbent supervisors who have not had equivalent training or haven't had supervisory training for the past five years are also eligible to participate in ESS as are non-supervisory employees whose need for the training can be justified under special circumstances. The ESS program fulfills 40 hours of the 80 hours of supervisory training that is required for DOE supervisors. The course is intended to enable the participants to understand supervisory methods and techniques and to apply interpersonal skills and supervisory principles in carrying out their duties as DOE supervisors. The mandatory nature of the ESS program, when coupled with the extremely broad diversity of technical and professional occupational fields that are represented in DOE headquarters and field operations, makes the achievement of these objectives particularly challenging and rewarding.

4491 (FNAL/C–89/194) **New directions for QA in basic research: The Fermilab/DOE-CH experience.** Bodnarczuk, M. Fermi National Accelerator Lab., Batavia, IL (USA). Sep 1989. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8910228–1: DOE quality assurance workshop, Idaho Falls, ID (USA), 3-4 Oct 1989). Order Number DE90001574. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper addresses the underlying problems involved in developing institution-wide QA programs at DOE funded basic research facilities, and suggests concrete ways in which QA professionals and basic researchers can find common ground in describing and analyzing those activities to the satisfaction of both communities.

The paper is designed to be a springboard into workshop discussions which can define a path for developing institution-wide QA programs based on the experience gained with DOE-CH and Fermilab.

4492 (IAEA-INFCIRC–2(Rev.37)) **Members of the Agency. List of 1 September 1989.** International Atomic Energy Agency, Vienna (Austria). Sep 1989. 1p. Order Number DE90608889. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The Revision of INFCIRC/2 has been issued in order to inform Member States of a change of name, from "Burma" to "Myanmar" among 113 Members of the Agency on 1 September 1989.

4493 (INIS-BR–1745) **Description of the objectives and activities of Radioprotection and Dosimetry Institute - IRD.** Almeida, C.E. de. Instituto de Radioprotecao e Dosimetria, Rio de Janeiro, RJ (Brazil). [1989]. 32p. (In Portuguese). Order Number DE90608891. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The organizational structure and the research programs developed by Dosimetry and Radioprotection Institute - IRD from Brazilian Nuclear Energy Commission are presented.

4494 (IPEN-PUB–219) **Activities of the neutron activation analysis laboratory of the radiochemistry division of IPEN - CNEN/SP.** Vasconcellos, M.B.A. Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo, SP (Brazil). Oct 1988. 17p. (In Portuguese). Order Number DE90608892. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Neutron activation analysis (NAA) is one of the relevant applications of nuclear research reactors. Due to the high neutron fluxes available in these reactors, an excellent sensitivity of analysis is attained for many elements. NAA is one of the most sensitive, precise and accurate analytical methods for trace element determination. NAA has been one of the main activities of the Radiochemistry Division of IPEN, since the beginning of the operation of the nuclear reactor IEA-R1. Most of the effort was devoted to research work, aimed to improvements in the method as well as to its applications to several kinds of matrixes (geological, biological, metallic, environmental, forensic). Besides, analytical services were also offered, to the CNEN, to industries, universities, mining companies and research institutes. In the present paper, a review is made of the research work being developed presently at the Radiochesmitry Division of IPEN. A discussion is also made of the planned expansion of the analytical services offered.

4495 (PNL-SA–17004) **Quality oversight in research and development.** Christensen, J.A. Pacific Northwest Lab., Richland, WA (USA). Sep 1989. 9p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC06-76RL01830. (CONF-8909110–8: 16. annual conference of the American Society for Quality Control, Fort Lauderdale, FL (USA), 17-20 Sep 1989). Order Number DE90002675. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In our work for the NRC in developing regulatory approaches for controlling licensee quality assurance programs and for DOE-RL and the US Army in developing quality programs, we have learned much about the character and content of functional approaches to quality improvement. We have verified the importance of experience, commitment, management involvement, organizational structure, contracting practices, substance versus form, training, documentation/verification, audit programs, corrective action, trending, independent review, design and procurement control, etc., and have generated hundreds (perhaps thousands) of pages of prose documenting and analyzing these observations. During this process, it has become clear that there are some very basic, almost simplistic, attributes of quality programs that signal their likely success or failure. 4 figs.

4497 (AD-A–207609/9/XAB) **Implementation indices (1975-1979). Volume 1. Technical report.** Papadopoulos, G.M. Massachusetts Inst. of Tech., Cambridge, MA (USA). Lab. for Computer Science. Dec 1988. 158p. (MIT/CS/TR–432). Available from NTIS, PC A08/MF A01.

General-purpose multiprocessors have largely failed to meet expectations for programmability and performance. We blame the lack of usable parallel programming languages and systems on the underlying processor architecture. Machines built out of conventional sequential processors simply do not support the synchronization demands of parallel execution, so the programmer focuses upon the dangerous and arduous task of discovering a minimum set of synchronization points without introducing nondeterminism. The authors argues that processors must be fundamentally changed to execute a parallel machine language, in which parallel activities are coordinated as efficiently as instructions are scheduled.

4498 (AD-A–210330/7/XAB) **Northeast Artificial Intelligence Consortium annual report for 1987. Volume 5. Building an intelligent assistant: The acquisition, integration, and maintenance of complex distributed tasks. Interim report, December 1986-December 1987.** Lesser, V.; Croft, W.B.; Woolf, B. Syracuse Univ., NY (USA). Mar 1989. 591p. Available from NTIS, PC A25/MF A01.

The Northeast Artificial Intelligence Consortium (NAIC) was created to conduct pertinent research in artificial intelligence and to perform activities ancillary to this research. The topics covered in general are: versatile expert system for equipment maintenance, distributed AI for communications system control, automatic photo interpretation, time-oriented problem solving, speech understanding systems, knowledge base maintenance, hardware architectures for very large systems, knowledge-based reasoning and planning, and a knowledge acquisition, assistance, and explanation system. The specific topic for this volume is the development of intelligent interfaces to support cooperating computer users in their interactions with a computer.

4499 (AD-A–210331/5/XAB) **Northeast Artificial Intelligence Consortium annual report for 1987. Volume 7. Part A. Time oriented problem solving. Interim report, December 1986-December 1987.** Allen, J.F. Syracuse Univ., NY (USA). Mar 1989. 342p. Available from NTIS, PC A15/MF A01.

The Northeast Artificial Intelligence Consortium (NAIC) was created to conduct pertinent research in artificial intelligence. The topics covered in general are: versatile expert system for equipment maintenance, distributed AI for communications-system control, automatic photo interpretation, time-oriented problem solving, speech-understanding systems, knowledge-base maintenance, hardware architectures for very large systems, knowledge-based reasoning and planning, and a knowledge-acquisition, assistance, and explanation system. The specific topic for this volume is a model theory and axiomatization of a logic for reasoning about planning in domains of concurrent actions.

4500 (AD-A–210528/6/XAB) **Rewrite Rule Machine project. Final report.** Goguen, J.A.; Meseguer, J.; Leinwand, S.; Winkler, T.; Aida, H. SRI International, Menlo Park, CA (USA). 1 May 1989. 24p. (SRI-ECU–1243). Available from NTIS, PC A03/MF A01.

Current-generation parallel machines are typically either coarse-grain or fine-grain. Each design has certain limits, either in the amount of parallelism that it can effectively exploit, or else in the

types of problem for which it is suitable. For example, only very homogeneous computations can make efficient use of today's fine-grained machines. However, many complex computations are locally homogeneous, but not globally homogeneous. The Rewrite Rule Machine (RRM) resolves this dilemma through its hierarchical architecture, which has several levels of organization. The lowest level is the cell, which stores a token and pointers to other cells; this organization avoids the von Neumann memory access bottleneck. Next, an ensemble contains many cells, representing a complex data structure to which rewrite rules are applied under the direction of a common controller. A cluster consists of many ensembles which cooperate in larger computations. Ensembles support fine-grained homogeneous parallelism, while clusters support coarse-grained inhomogeneous parallelism. This multi-grained parallelism allows the RRM to exploit the local homogeneity that is typical of many complex computations. The RRM can support the efficient execution of many different programming paradigms by compiling them into its concurrent rewriting model of computation.

4501 (AD-A–210722/5/XAB) **Optimization algorithms for new computer architectures with applications to personnel-assignment models. Annual report (Final), 1 May 1988-30 April 1989.** Kennington, J.L.; Helgason, R.V. Southern Methodist Univ., Dallas, TX (USA). Dept. of Computer Science and Engineering. 29 Jun 1989. 97p. (SMU–5-25105). Available from NTIS, PC A05/MF A01.

One of the most important computer architecture innovations to appear in the marketplace during the last ten years is parallel processing on a shared memory multicomputer. This report presents empirical results on a Sequent Symmetry S81 on four optimization models used in the area of personnel assignment. Both the detailed algorithms and computational results are presented. Contents: Minimal Spanning Trees - An Empirical Investigation of Parallel Algorithms; Dijkstra's Two-tree Shortest Path Algorithm; An Empirical Analysis of the Dense Assignment Problem; and Solving Generalized Network Problems on a Shared Memory Multiprocessor.

4502 (AD-A–210743/1/XAB) **Computational and statistical issues in discrete-event simulation. Technical report.** Glynn, P.W.; Iglehart, D.L. Stanford Univ., CA (USA). Dept. of Operations Research. Mar 1989. 18p. (TR–33). Available from NTIS, PC A03/MF A01.

Discrete-event simulation is one of the most important techniques available for studying complex stochastic systems. This paper first reviews the principal methods available for analyzing both the transient and steady-state simulation problems in sequential and parallel-computing environments. Next, several of the variance reduction methods designed to make simulations run more efficiently are discussed. Finally, a short discussion is given of the methods available to study optimization using simulation.

4503 (AD-A–210760/5/XAB) **Research, development, training, and education using the Ada programming language. Final report, 1 September 1987-31 May 1989.** Harrison, G.C. Norfolk State Univ., VA (USA). 16 Jul 1989. 18p. Available from NTIS, PC A03/MF A01.

The primary goal of this activity was to conduct research in the application and development of Ada, and in broader terms the objectives were as follows: (1) To develop numerical algorithms for parallel processing using the Ada language; (2) To develop new methodologies in reusing Ada software; (3) To solve select problems in applied mathematics using MACSYMA and Ada; (4) Simulate the interactions of nodes in a network using Ada; (5) To increase the cadre of educations available to provide Ada training by conducting Ada workshops for Norfolk State University faculty and staff; (6) To develop a series of in-class and individualized modules addressing Ada programming using computer-assisted instruction; and (7) To disseminate research and computer-aided instruction modules to other minority institutions through computer networking, workshops, and lecture series.

4504 (ANL–89/2-Rev.1) **Rationale for the proposed standard for a generic package of elementary functions for Ada: Revision 1.** Dritz, K.W. Argonne National Lab., IL (USA). Oct 1989. 15p. Sponsored by U.S. Department of Defense. DOE Contract W-31109-ENG-38. Order Number DE90002925. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper supplements the "Proposed Standard for a Generic Package of Elementary Functions for Ada," written by the ISO-IEC/JTC1/SC22/WG9 (Ada) Numerics Rapporteur Group. Based on recommendations made jointly by the ACM SIGAda Numerics Working Group and the Ada-Europe Numerics Working Group, the proposed elementary functions standard is the first of several anticipated collateral standards to address the interrelated issues of portability, efficiency, and robustness of numerical software written in Ada. Organized as a series of questions and answers, this supplement outlines the reasoning by which the proposed standard came to acquire certain features and exclude others. 22 refs.

4505 (ANL/EES-TM–378) **IDEA—Interactive Decision Analysis: Users' guide and tutorial.** Whitfield, R.G.; Swietlik, C.E.; Warren, M.F.; Fuja, R.; Jusko, M.J.; Peerenboom, J.P.; Johnson, E.C. Argonne National Lab., IL (USA). Sep 1989. 95p. Sponsored by U.S. Department of Defense. DOE Contract W-31109-ENG-38. Order Number DE90001782. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

The IDEA (Interactive DEcision Analysis) software package comprises IBM PC (and compatible) procedures for evaluating decision problems characterized by alternative courses of action, uncertainty, and multiple conflicting objectives. Multiattribute decision analysis provides the theoretical underpinnings for IDEA. In IDEA, the attributes (measures of effectiveness of the objectives) are assumed to be probabilistically independent. This assumption enables evaluation of decision problems having large numbers of alternatives and attributes. IDEA is a file-based system. Data entry is facilitated by the FORMS package, a set of special-purpose procedures that provides for data entry via customized forms (spread sheets), cues and prompts for every input field in the form, detection of invalid entries, on-line help documentation, and control of screen attributes. If assistance is needed to complete the input forms, the following on-line "consultants" are available: the probability consultant, the single-attribute utility function consultant, and the multiattribute utility function consultant. These modules – accessible by pressing function keys – simulate probability and utility encoding sessions with a decision analyst. Computational results are written to the screen and files. A variety of sensitivity analyses are available, the results of which are displayed in both tabular and graphical form. A CGA (or higher) card and DOS 2.0 (or higher) are required. 16 refs.

4506 (ANL/PPRNT–89-195) **The problem of finding a strategy in control binary paramodulation.** Wos, L. Argonne National Lab., IL (USA). [1989]. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90003007. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This article is the fifth of a series of articles discussing various open research problems in automated reasoning. Here we focus on the equality relation which is so vital to many applications of automated reasoning. The problem proposed for research asks one to find a strategy for controlling the application of binary paramodulation. For evaluating a proposed solution to this research problem, we include suggestions concerning possible test problems. 13 refs.

4507 (CEA-N—2606) **Dirac-Fock calculations in multi-harmonic-oscillator basis.** Chaix, P.; Decharge, J.; Iracane, D. CEA Centre d'Etudes de Bruyeres-le-Chatel, 91 (France). 1989. 66p. (In French). Order Number DE90721138. Available from NTIS (US Sales Only), PC A04/MF A01.

Atomic relativistic calculations in a basis composed of eigenvectors of several harmonic oscillators are presented. Variational collapse and related problems that arise when using finite basis sets, are discussed. The examination of the non relativistic limit leads to a prescription on the basis. This prescription seems to allow safe calculations even in the relativistic domain. A code has been developed using this prescription and some specific properties of harmonic oscillator wave functions. We were able to calculate many electron systems. Present predictions are compared with those of the DF of Desclaux in which finite difference methods are used for solving DF equations in r space.

4508 (CONF-8903169–2) **The parallel performance of Schwarz splitting.** Ribbens, C.J.; Watson, L.T. Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (USA). 23 Oct 1989. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-88ER25068. (CONF-8907164–1: 3. SIAM conference on domain decomposition methods; Society for Industrial and Applied Mathematics (SIAM) national meeting, Houston, TX (USA); San Diego, CA (USA), 20-22 Mar 1989; 16-21 jul 1989). Order Number DE90002695. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We describe several experiments with implementations of Schwarz splitting algorithms for the numerical solution of elliptic partial differential equations. Results from experiments comparing several variations of the basic scheme in the context of real parallel implementations are presented. Both shared-memory and distributed-memory architectures are represented. Various possibilities for accelerating the Schwarz iteration and for solving the subdomain problems are considered, with particular emphasis on the resulting parallel performance. 21 refs., 3 figs., 7 tabs.

4509 (CONF-8904288–1) **The interesting future of supercomputing.** Stevens, R.L. Argonne National Lab., IL (USA). May 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Computer and geophysical research conference; Houston, TX (USA); 24-26 Apr 1989. Order Number DE90002263. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper discusses the likely future direction of supercomputing. (LSP)

4510 (CONF-8908178–1) **A comparison result and elliptic equations involving subcritical exponents.** Kwong, Man Kam. Argonne National Lab., IL (USA). [1989]. 20p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From International conference on nonlinear diffusion equations and their equilibrium states; Newton (UK); 20-29 Aug 1989. Order Number DE90001772. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

It is well known that good bounds for solutions of nonlinear differential equations are difficult to obtain. In this paper, we establish a theorem comparing non-negative solutions (having identical initial values) of the equations $u''(t) + q(t)u^p(t) + r(t)u(t) = 0$ and $v''(t) + k(t)q(t)v^p(t) + r(t)u(t) = 0$, respectively. If $q(t)$, $r(t) \geq 0$, $k(t) \geq 1$, $k(t)$ is nondecreasing, and the first equation satisfies a certain uniqueness criterion, our result asserts that $u(t) \geq v(t)$. Both the uniqueness assumption on the equation and the monotonicity requirement on $k(t)$ are necessary. A particular case of this theorem plays a central role in a recent paper of Atkinson and Peletier in the study of asymptotic behavior of nonlinear elliptic equations involving a critical exponent. A simple corollary of our result provides information on the same type of equations with subcritical exponents. 13 refs.

4511 (CONF-8910284–1) **How would you know an intelligent system if you saw one?.** Glover, C.W. Oak Ridge National Lab., TN (USA). 1989. 9p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research. DOE Contract AC05-84OR21400. 1579-1579-A1. From Aerospace applications of artificial intelligence conference; Dayton, OH (USA); 24-27 Oct 1989. Order Number DE90002472. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper advocates that the study of intelligent systems is a science in its infancy, and there is an urgent need to reduce the ambiguity in definitions of the terms used throughout intelligent systems science. For example, researchers do not agree on what an "intelligent system" is, or how to measure the intelligence within a system. This paper, as an exercise, presents a strawman definition and measure of a system's intelligence, and discusses some of the problems that can arise when measuring intelligence. Not everyone is expected to agree with the strawman definition of intelligence. The primary purpose for presenting it is to stimulate thought, and to challenge the readers to continue the exercise and develop their own measure of intelligence. Maybe, at some point we as researchers can converge on a working quantitative measure of intelligence. 1 ref., 3 figs.

4512 (CONF-8910288–1) **Strand: A practical parallel programming language.** Foster, I.; Taylor, S. Argonne National Lab., IL (USA). [1989]. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From North American conference on logic programming; Cleveland, OH (USA); 16-20 Oct 1989. Order Number DE90002861. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Effective parallel programming requires tools that facilitate the design and implementation of parallel algorithms and provide portability across parallel computers. Strand is the first such tool to be available on a broad range of multiprocessor architectures, including hypercubes, meshes, computing surfaces, banyan networks, shared-memory machines and local area networks. Strand is a new concurrent logic programming language. Its design is motivated by extensive experience with previous languages of this type. This experience indicated that for most practical parallel programming requirements, these research languages were too complex, inefficient and difficult to implement. Strand applies a broad variety of simplifications to achieve a practical parallel programming tool. This paper describes the issues surrounding the Strand design and reports on initial experiences with the language. 24 refs., 3 figs.

4513 (DOE/ER/25068–1) **Parallel mathematical software: Technical progress report, September 16, 1988–February 14, 1990.** Ribbens, C.J.; Watson, L.T. Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (USA). Dept. of Computer Science. Oct 1989. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-88ER25068. Order Number DE90002694. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The purpose of this report is to summarize work done during the first 18 months on the project "Parallel Mathematical Software," supported by the US Department of Energy. Since the two major problem domains for this research are elliptic partial differential equations (and the software package ELLPACK) and systems of nonlinear equations (and the software package HOMPACK), we organize this report into two major sections. This paper details aspects of our work that relate to ELLPACK; and discusses progress in connection with HOMPACK.

4514 (EGG-M–88277) **Solution bias in complex systems modeling.** Kaplan, B.; Mecherikoff, M.; Blackman, H. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1988]. 6p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC07-76ID01570. (CONF-881058–6: Human Factors Society annual meeting, Anaheim, CA (USA), 24-28 Oct 1988). Order Number DE90002001. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Each discipline tends to use analytic tools that lead them to solutions within their own discipline, and steer them away from others. Within a discipline, we tend to pose solutions that align with our areas of interest or expertise. Clients can be guided into work which may not be the best solution to their particular set of problems or needs.

4515 (EGG-M–89380) **INEL [Idaho National Engineering Laboratory] support to modernization efforts at the Aberdeen Proving Ground.** Larson, T.K.; Fink, R.K.; Powell, R.H.; Cordes, G.A.; Brown, C.B.; Francis, C.L.; Murter, J.S.; Shrader, T.G. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1989]. 17p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC07-76ID01570. (CONF-8910294–1: Conference on AI in the DOE complex, Los Alamos, NM (USA), 17-19 Oct 1989). Order Number DE90002045. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The US Army Combat Systems Test Activity (USACSTA) at Aberdeen Proving Ground (APG), MD supports the test and evaluation of Army material. The Instrumentation Development Division of USACSTA is currently effecting a thorough modernization of hardware, software, and operating procedures that support testing in order to standardize testing operations and to increase efficiency and cost effectiveness. Part of the modernization effort includes examination of new software techniques to see if such methods contribute to the modernization effort. The Idaho National Engineering Laboratory (INEL) has been supporting the USACSTA in the examination of artificial intelligence (AI) techniques in the modernization efforts. Two USACSTA specified task areas are being approached using AI methods. Preliminary results suggest that AI approaches can contribute to the modernization efforts by helping to capture and

preserve expert "know-how" in specific problem domains and application of this expertise in an automated fashion. 3 refs., 4 figs.

4516 (FNAL/C–89/172) **Weighted fit of parametric functions to distributions: The new interface of HOBOOK with MINUIT.** Lessner, E.S. Fermi National Accelerator Lab., Batavia, IL (USA). Aug 1989. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-890415–11: Computing in high energy physics, Oxford (UK), 10-14 Apr 1989). Order Number DE90002916. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The fitting routines of the HBOOK package allow weighted fit of parametric functions to the contents of a one, two or N-dimensional distribution, and analysis of the function in the neighborhood of its minimum, through an interface with the MINUIT package. These routines have been rewritten so as to interface the new version of MINUIT and to allow for smooth transitions to future versions of both packages. We discuss the interface and its capabilities: it is more stable than the previous version and presents a more accurate error analysis. The fitting algorithm is based on the Fletcher method, known for its reliability. Exponential, Gaussian and polynomial fitting are provided, as well as arbitrary user-defined fitting, to one, two and N-dimensional distributions. For the latter, the user is required to provide a smooth parametric function and is given the ability to guide the algorithm in finding the desired minimum. Examples are given. 6 refs., 1 fig.

4517 (INIS-mf–12013, pp. 46) **Electronics for online and data acquisition.** Nouvel, P.; Heck, U.; Menzer, R.; Thiel, P. Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.). 1988. (In German). In *Max-Planck-Institute for Nuclear Physics. Annual report 1987.* Order Number DE90722124. Available from NTIS (US Sales Only), PC A10/MF A01.

Published in summary form only. DATA ACQUISITION SYSTEMS/logic circuits; DEC COMPUTERS; PDP COMPUTERS; PROCESS COMPUTERS; MAGNETIC DISKS; ON-LINE SYSTEMS; INTERACTIVE DISPLAY DEVICES; ANALOG-TO-DIGITAL CONVERTERS; CAMAC SYSTEM; TIME-TO-AMPLITUDE CONVERTERS; DATA ACQUISITION

4518 (JINR-E–11-89-174) **Iterative methods of domain decomposition with cross-points for the solution of discrete elliptic problems.** Zhidkov, E.P.; Mazurkevich, G.E.; Khoromsky, B.N. Joint Inst. for Nuclear Research, Dubna (USSR). 1989. 23p. Order Number DE90000719. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI.

A method of domain decomposition with cross-points (box decomposition) is used for the solution of finite-difference elliptic boundary value problems in rectangle and in parallelepiped. Capacitance matrix and preconditioners for iterative solution of arising algebraic problem are constructed by means of Poincare-Steklov operators. The convergence properties of iterative algorithms depend on local characteristics of subdomains on the number "N" of unknowns in one direction in subdomains, and are independent of the number of subdomains and of jumps of elliptic operator coefficients as long as these jumps only occur across the subdomain boundaries. The dependence of convergence on discretization of the problem is defined by "ln N" for two-dimensional problems, by "$\sqrt{N}$ ln N" for three-dimensional problems. The results of numerical experiments illustrating convergence properties are presented. 18 refs., 3 figs., 4 tabs.

4519 (KFK–4527) **Algorithms and programs for evaluating fault trees with multi-state components.** Wickenhaeuser, A. Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorentwicklung. Jul 1989. 82p. (In German). Order Number DE90722072. Available from NTIS (US Sales Only), PC A05/MF A01.

Part 1 and 2 of the report contain a summary overview of methods and algorithms for the solution of fault tree analysis problems. The following points are treated in detail: Treatment of fault tree components with more than two states. Acceleration of the solution algorithms. Decomposition and modularization of extensive systems. Calculation of the structural function and the exact occurrence probability. Treatment of statistical dependencies. A flexible tool to be employed in solving these problems is the method of forming Boolean variables with restrictions. In this way, components with more than two states can be treated, the possibilities of forming modules expanded, and statistical dependencies treated. Part 3 contains descriptions of the MUSTAFA, MUSTAMO, PASPI, and SIMUST computer programs based on these methods. (orig./HP).

4520 (LBL–26796) **Scry: A distributed image handling system: Version 1.1.** Robertson, D.W.; Johnston, W.E.; Chua, Teck-Joo; Huang, J.; Renema, F.; Rible, M.; Texier, N.; Wishinsky, B.J. Lawrence Berkeley Lab., CA (USA). Apr 1989. 60p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. Order Number DE90003105. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

Scry is a distributed image handling system that provides both image compression and transport on local and wide area networks, and a collection of higher level graphics and scientific visualization functions. The system can be distributed among workstations, between supercomputers and workstations, and between supercomputers, workstations and video animation controllers. The system is most commonly used to produce video based movie displays of time dependent data and complex 3D data sets, and to handle the images resulting from certain image processing operations. In the scientific visualization process, the system is typically used in one of two configurations. In the first, the supercomputer application generates data (e.g. flow field vectors) that are compressed and sent to a graphics workstation over a wide area network. The graphics workstation environment is used to design and debug the graphics visualization for a movie. Finally, the raster images that represent the frames of the movie are compressed and sent over a local area network to the video animation controller. This report discusses the use of this program.

4521 (LBL–27680) **Effect of media properties on side erase bands.** Lin, K.C.; Thomas, G.; Gau, G.J.S. Lawrence Berkeley Lab., CA (USA). Sep 1989. 12p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AC03-76SF00098. DMR-8707241E. (CONF-8909246–1: Magnetic recording media conference, Rimini (Italy), 4-6 Sep 1989). Order Number DE90001570. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The erase bands on CoNiCr/Cr longitudinal media with coercivities ranging from 176 to 1390 Oe have been studied using a two-frequency, triple-track profile method. In this method, the two side tracks are recorded at 10 kFCI and the central track ranges from 0 to 40 kFCI. The write and the erase widths are measured by the Bitter method. Media properties such as coercivity, coercivity squareness and remanence-thickness product are correlated with the total write width. It is shown that media with high coercivity squareness contribute to a reduction in the width of a side erase band. In addition, the magnetic structure of the triple-track profile has been characterized by high resolution Bitter patterns using scanning electron microscopy, which show domain structures within bit cells and along track edges. Finally, the relationship of the erase band to the magnetic structure is discussed. 7 refs., 4 figs.

4522 (NUREG–1378) **PLOTnFIT: A BASIC program for data plotting and curve fitting.** Schiffgens, J.O. Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering and Systems Technology. Oct 1989. 131p. Sponsored by Nuclear Regulatory Commission. Available from NTIS, PC A07/MF A01 - GPO - OSTI.

PLOTnFIT is a BASIC program to be used with an IBM or IBM-compatible personal computer (PC) for plotting and fitting curves to measured or observed data for both extrapolation and interpolation. It uses the Least Squares method to calculate the coefficients of nth degree polynomials (e.g., up to 10th degree) of Basis Functions so that each polynomial fits the data in a Least Squares sense, then plots the data and the polynomial that a user decides best represents them. PLOTnFIT is very versatile. It can be used to generate linear, semilog, and log-log graphs and can automatically scale the coordinate axes to suit the data. It can plot more than one data set on a graph (e.g., up to 8 data sets) and more data points than a user is likely to put on one graph (e.g., up to 225 points). 3 refs.

4523 (PB–89-871115/XAB) **Computer systems protection: Uninterruptible power supplies. January 1983-September 1989 (Citations from the Computer data base). Report for January**

1983-September 1989. National Technical Information Service, Springfield, VA (USA). Sep 1989. 147p. Available from NTISPC N01/MF N01.

Supersedes PB–88-851316.

This bibliography contains citations concerning equipment used to protect computer systems from electrical-power fluctuations and outages. Voltage regulators and back-up power supplies are evaluated. Surge suppressors as part of the uninterruptible power-supply system (UPS) are briefly mentioned; they are covered in depth in another bibliography. IEEE test results and general performance evaluations are included. UPS for large data centers and for minicomputers are discussed. Market forecasts are presented. (This updated bibliography contains 361 citations, 105 of which are new entries to the previous edition.)

4524 (RFP–4368) **Abstract for Zeiss editor presentation.** Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant. [1989]. 24p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP03533. (CONF-8910271–1-Vugraphs: North American Zeiss User's Group conference, Newport Beach, CA (USA), 14 Oct 1989). Order Number DE90002285. Available from NTIS, PC A03/MF A01 - OSTI.

This presentation is on editor enhancements to the Zeiss COMET software. Zeiss' present editor was determined to be inadequate to fulfill the programming needs at Rocky Flats. These enhancements have increased programmer productivity and have decreased part program run time by up to 10%.

4525 (RISO-M–2800) **HERMES-model for Denmark.** Moeller Andersen, F. Risoe National Lab., Roskilde (Denmark). Jun 1989. 159p. Order Number DE90718926. Available from NTIS (US Sales Only), PC A08/MF A01.

This report presents the first version of the Danish HERMES model which is a macro-economic model developed for the Commission of the European Communities to be used by the Commission for economic analyses and forecasts. Similar models are developed for the other EEC countries and in order to perform multinational studies the national models are interlinked into a multinational model. The model is a medium-term econometric model where special attention is given to analysing structural changes, capacity effects of investments and the energy-economy interactions. In the Danish model production is determined for 9 branches and the total private consumption is divided into 15 categories of consumer goods. Capacity effects of investments are attempted described by the introduction of a putty-clay production funtion and the energy-economy interactions are analysed by treating energy as a separate factor of production and as specific categories of consumer goods. Besides presenting the overall structure and the specific equations chosen for the first version of the Danish model the report gives an overview over the alternative specifications tested but rejected for the present version of the model. The report is concluded with an analysis of the model's ability to describe the past development and a few multiplicator analyses for central variables of the model. (author) 23 tabs., 3 ills., 55 refs.

4526 (SAIC–90003103) **System software for Soviet computers.** Wegner, P.; Nestor, J.; Schonberg, E.; Smoliar, S.; Weinberger, P.J.; Wiederhold, G.; Wolcott, P. Science Applications International Corp., McLean, VA (USA). Aug 1989. 212p. Available from OSTI; Science Applications International Corporation, 1710 Goodridge Drive, P.O. Box 1303, McLean, VA 22102.

This report examines the range and capability of system software available for use on Soviet computers, described in translated technical literature published primarily in the period 1984 to 1987. Seven subtopics were selected for study: programming languages, operating systems, networks, software engineering, software tools, database management systems, and artificial intelligence tools. The baseline for this study was the 1984 FASAC report Soviet Computer Science Research (here called the Hammer study) which documented a considerable gap between US and Soviet computer capabilities. This study is narrower than the Hammer study, excluding hardware and theory and focusing on software systems capability rather than conceptual research. The panel intended to evaluate not only system software of Soviet origin, but also system software developed in Eastern Europe for use with Soviet hardware, but found little or no evidence for this expected cooperative activity.

4527 (SAND–89-2533C) **Position of Sandia National Laboratories with respect to product definition standards.** Sandia National Labs., Albuquerque, NM (USA). 12 Oct 1989. 3p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8910283–1: Forum on electronic product definition standards, Gaithersburg, MD (USA), 26 Oct 1989). Order Number DE90002832. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Sandia National Laboratories, in conjunction with the Department of Energy Computer Integrated Manufacturing Program, supports the use of the Department of Energy Data Exchange Format (DOEDEF) subset of IGES (the Initial Graphics Exchange Specification) for exchanges of mechanical product definition data between dissimilar computer aided systems of various types. The background for this position is described here.

4528 (SOL–89-15) **Generalized quasi-variational inequality and implicit complementarity problems.** Yao, Jen-Chih. Stanford Univ., CA (USA). Systems Optimization Lab. Oct 1989. 51p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research; National Science Foundation. DOE Contract FG03-87ER25028. DMS-8913089;N00014-89-J-1659. Order Number DE90003101. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

A new problem called the generalized quasi-variational inequality problem is introduced. This new formulation extends all kinds of variational inequality problem formulations that have been introduced and enlarges the class of problems that can be approached by the variational inequality problem formulation. Existence results without convexity assumptions are established and topological properties of the solution set are investigated. A new problem called the generalized implicit complementarity problem is also introduced which generalizes all the complementarity problem formulations that have been introduced. Applications of generalized quasi-variational inequality and implicit complementarity problems are given. 43 refs.

4529 (SOL–89-16) **A basic theorem of complementarity for the generalized variational-like inequality problem: Technical report.** Yao, Jen-Chih. Stanford Univ., CA (USA). Dept. of Operations Research. Nov 1989. 21p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research; National Science Foundation. DOE Contract FG03-87ER25028. DMS-8913089;N00014-89-J-1659. Order Number DE90003102. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In this report, a basic theorem of complementarity is established for the generalized variational-like inequality problem introduced by Parida and Sen. Some existence results for both generalized variational inequality and complementarity problems are established by employing this basic theorem of complementarity. In particular, some sets of conditions that are normally satisfied by a nonsolvable generalized complementarity problem are investigated. 16 refs.

4530 (UCID–21796) **Interactive multidimensional data analysis and understanding.** Azevedo, S.G.; Grant, C.; Brase, J.; Fitch, J.P.; Miller, M. Lawrence Livermore National Lab., CA (USA). Aug 1989. 7p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE90001794. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Our goal in FY 88 was to assemble and coordinate the software and hardware required to accurately and quickly process, display, and interpret multidimensional data. These capabilities are of fundamental scientific importance and can directly impact Laboratory and national defense programs. In this report, we describe our progress to these ends using new interactive display algorithms and novel computer architectures. We have demonstrated a significant impact on a variety of Laboratory programs and will be continuing this project under the name of Scientific Visualization in FY 89. 5 figs.

4531 (UCRL–99673-Rev.1) **PCP [Parallel C Preprocessor]: A parallel extension of C that is 99% fat free: Revision 1.** Brooks, E.D. III. Lawrence Livermore National Lab., CA (USA). 27 Sep 1989. 15p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-891149–10-Rev.1: Supercomputing '89 conference, Reno, NV (USA), 13-17 Nov 1989). Order Number DE90002813. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The fork-join model for parallel computation requires efficient compiler and hardware support if it is to be used for tightly coupled applications. Because of deficiencies in compiler and hardware support, most existing implementations of the fork-join model require relatively large grain parallelism if good efficiency is to be obtained. We present an alternative parallel programming paradigm called the split-join model. When nested concurrency is encountered in the split-join model the team of processors is disassociated into subteams which independently handle the separate sections of parallel code. The key advantage of the split-join model is that it can be efficiently implemented with a machine independent preprocessor and a small amount of machine dependent run time support. Extensive compiler and hardware support is not required. We describe the language constructs implemented in PCP and their efficient implementation. 11 refs.

4532 (WHC-SA–0726) **Computerized Adaptive Testing.** Bickerstaff, D.D.; Gardner, P.R. Westinghouse Hanford Co., Richland, WA (USA). Oct 1989. 13p. Sponsored by U.S. DOE Environment Health & Safety. DOE Contract AC06-87RL10930. (CONF-8910239–6: 13. annual TRADE conference, Baltimore, MD (USA), 22-25 Oct 1989). Order Number DE90001478. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Using exceedingly easy or difficult test items on a conventional fixed-length mastery test can result in a less-than-optimal measurement of achievement. Studies suggest that the use of variable-length adaptive tests may decrease the average test length, while improving the accuracy of the estimate of achievement. This paper presents an overview of criterion-referenced computerized adaptive testing and described an exploratory study at Westinghouse Hanford Company. 5 refs., 4 figs.

4533 **Variable loading roller.** Williams, D.M. To Dept. of Energy, Washington, DC. USA Patent 4,841,792. 27 Jun 1989. Filed date 21 Jan 1988. Int. Cl. F16H 13/14. 10p. Available from Patent and Trademark Office, Box 9, Washington, DC 20232.

This patent describes an automatic loading roller for transmitting torque in traction drive devices in manipulator arm joints includes a two-part camming device having a first cam portion rotatable in place on a shaft by an input torque and a second cam portion coaxially rotatable and translatable having a rotating drive surface thereon for engaging the driven surface of an output roller with a resultant force proportional to the torque transmitted. Complementary helical grooves on the respective cam portions interconnected through ball bearings interacting with those grooves effect the rotation and translation of the second cam portion in response to rotation of the first.

4534 **Universal null DTE.** George, M.; Pierson, L.G.; Wilkins, M.E. To Dept. of Energy, Washington, DC. USA Patent 4,841,550. 20 Jun 1989. Filed date 9 Nov 1987. Int. Cl. H04L 7/00. 16p. Available from Patent and Trademark Office, Box 9, Washington, DC 20232.

This patent describes a communication device in the form of data terminal equipment which permits two data communication equipments, each having its own master clock and operating at substantially the same nominal clock rate, to communicate with each other as a multi-segment circuit configuration of a general communication network even when phase or frequency errors exist between the two clocks. Data transmitted between communication equipments of two segments of the communication network is buffered. A variable buffer fill circuit is provided to fill the buffer to a selectable extent prior to initiation of data output clocking. Selection switches are provided to select the degree of buffer preload. A dynamic buffer fill circuit may be incorporated for automatically selecting the buffer fill level as a function of the difference in clock frequencies of the two equipments. Controllable alarm circuitry is provided for selectively generating an underflow or an overflow alarm to one or both of the communicating equipments.

4535 (ANL/TM–474) **A plan for administrative computing at ANL, FY 1990 through FY 1992.** Caruthers, L.E. (ed.); Hale, D.O.; Bretscher, M.E.; Hischier, R.C.; Moore, N.J.; Slade, R.G. Argonne National Lab., IL (USA). Oct 1989. 139p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90002596. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

In July of 1988, Argonne National Laboratory management approved the restructuring of Computing Services into the Computing and Telecommunications Division, part of the Physical Research area of the Laboratory. One major responsibility of the Computing and Telecommunications Division is Management Information Systems. The Management Information Systems staff serve as consultants for administrative computing users Laboratory-wide. A significant aspect of Management Information Systems' work is the development of proposals for new and enhanced administrative computing systems based on an analysis of informational needs. This document represents the outcome of the planning process for FY 1990 through FY 1992. This document discusses the strategy and goals which are an important part of administrative data processing plans for the Laboratory. This paper also describes the management guidelines established by the Administrative Data Processing Oversight Committee for the proposal and implementation of administrative computing systems. The guidelines are a valuable tool for management in determining what applications would be appropriate to their needs and in formulating the proposals for those applications. Summaries of the proposals for new or enhanced administrative computing systems presented by individual divisions or departments with the assistance of Management Information Systems, to the Administrative Data Processing Oversight Committee is given. The summaries indicate some of the possibilities for the development of administrative computing systems at ANL. Detailed tables give information on how much the resources to develop and implement a given system will cost its users. The tables include development costs, computing/operations costs, software and hardware costs, and effort costs.

4536 (CONF-8911113–1) **Business communications.** Bratten, W.A.; Emrich, M.L. Oak Ridge National Lab., TN (USA). 1989. 5p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research. 1651-1567-A1. From Institute of Industrial Engineers conference; Atlanta, GA (USA); 14 Nov 1989. Order Number DE90002717. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Over the last few years, the need to communicate worldwide has produced positive results among standards bodies. This enabled differing factions to resolve conflicts among higher layer protocols. The European communities regulatory bodies will gain considerable flexibility with a uniform standard. At present X.400 stands ready to provide global business communication. 9 refs., 1 fig.

4537 (DOE/IG–0273) **Implementation of the land-based national telecommunications networks.** USDOE Office of Inspector General, Washington, DC (USA). Capital Regional Office. 10 Oct 1989. 7p. Sponsored by U.S. DOE Management & Administration. Available from OSTI.

Report to The Secretary.

The Department of Energy (DOE) is implementing a Nationwide Telecommunications Service called DOENTS. It is composed of both satellite and land-based networks. The satellite network was the subject of a previous report. This report addresses the land-based networks.

4538 **Database in Japan 1989.** 109p. Database Promotion Center, Tokoyo, Japan (1989).

This paper discusses the following topics: present situation of database services in Japan; trends of database in foreign countries; international development of databases; current state of in-house databases in Japan; utilization of database; local databases; new trends related to database; activities for promotion of database; and chronological table of database.

4539 (DPC–90003258) **Directory of Japanese databases in 1989.** Database Promotion Center, Tokyo (Japan). c 1989. 235p. Available from Database Promotion Center, Japan, 7th fl. World Trade Center Bldg. 2-4-1, Hamamatsu-cho Minato-ku, Tokyo, 105 Japan.

Commercial database services in Japan has been growing rapidly in recent years. This fact gives rise to demands for a guide to commercial databases usable in Japan for the users. To satisfy such demands, DATABASE PROMOTION CENTER, JAPAN has compiled and published the "Directory of Databases usable in Japan (in Japanese)" so that the user can easily find the information on the databases he or she requires, such as the name of the database, producer name, outline of the database, and service conditions. The "Directory of Databases usable in Japan" introduces databases not only made in Japan but also in other countries as long as they can be used in Japan. The 1989 edition of the Directory introduced 1964 databases of which 1436 were produced in foreign countries. In contrast, only about 100 of 528 databases of Japanese origin are serviced to the users abroad. It is important that what Japanese databases are available and how they should be used is introduced to the users abroad, apart from whether how to service Japanese databases to foreign countries. In response to this problem, we made an attempt to compile and publish the "Directory of Japanese Databases in 1989 (in English)" which is a translated version of Japanese databases out of the "Directory of Databases usable in Japan (in Japanese)". Lastly, we would like to hope this Directory will be a help for the foreign businessmen.

4540 (EGG-M–89437) **Environmental data qualification system.** Hester, O.V.; Groh, M.R. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1989]. 10p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC07-76ID01570. (CONF-891072–2: 27. Hanford symposium on health and the environment: multilevel research–molecules to man, Richland, WA (USA), 18-20 Oct 1989). Order Number DE90002030. Available from NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The Integrated Environmental Data Management System (IEDMS) is a PC-based system that can support environmental investigations from their design stage and throughout the duration of the study. The system integrates data originating from the Sampling and Analysis Plan, field data and analytical findings. The IEDMS automated features include sampling guidance forms, barcoded sample labels and tags, field and analytical forms reproduction, sample tracking, analytical data qualification, completeness reports, and results and QC data reporting. The IEDMS has extensive automated capabilities that support a systematic and comprehensive process for performing quality assessment of EPA-CLP chemical analyses data. One product of this process is a unique and extremely useful tabular presentation of the data. One table contains the complete set of results and QC data included on the CLP data forms while presenting the information consistent with the chronology in which the analysis was performed. 3 refs., 1 fig.

4541 (LBL–24121) **Optimizing voting-type algorithms for replicated data.** Kumar, A.; Segev, A. Lawrence Berkeley Lab., CA (USA). Mar 1988. 21p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8803245–1: International conference on extending database technology, Venice (Italy), 14-18 Mar 1988). Order Number DE90003118. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The main objectives of data replication are improved availability and reduced communications cost for queries. Maintaining the various copies consistent, however, increases the communications cost incurred by updates. For a given degree of replication, the choice of a specific concurrency control algorithm can have a significant impact on the total communications cost. In this paper we present various models for analyzing and understanding the trade-offs between the potentially opposing objectives of maximum resiliency and minimum communications cost in the context of the quorum consensus class of algorithms. It is argued that an optional vote assignment is one which meets given resiliency goals and yet incurs the least communications cost compared with all other alternative assignments. A mathematical model for vote assignment is developed, and optimal algorithms are presented. It is demonstrated that significant cost savings can be realized from these approaches. 14 refs., 1 fig., 2 tabs.

4542 (LBL–25337) **Abbreviated query interpretation in extended entity-relationship oriented databases.** Markowitz, V.M.; Shoshani, A. Lawrence Berkeley Lab., CA (USA). Aug 1989. 29p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8910295–1: 8. international conference on entity-relationship approach, Toronto (Canada), 18-20 Oct 1989). Order Number DE90003114. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In order to express database queries, users are often required to understand large, complex database structures. It is important to relax this requirement by allowing users to express concise (abbreviated) queries, so that they can manage with partial, or even no knowledge of the database structure. Abbreviated queries involve only the specification of the objects that are relevant to the users. The main problem with abbreviated queries is to derive the corresponding full queries. In this paper we present a methodology to support the expression of abbreviated queries in Extended Entity-Relationship (EER) oriented relational databases, that is, relational databases whose schemas are translations of EER schemas. In EER-oriented databases, abbreviated queries can be represented by disconnected subgraphs of the corresponding EER diagrams. We propose a criterion for determining the connected subgraphs corresponding to such abbreviated queries. Our criterion is based on the robustness of the relational view corresponding to a connected subgraph of an EER diagram. View robustness expresses the capability of performing side-effect free updates via the view. We also investigate techniques that take advantage of specific properties of EER diagrams in order to reduce the complexity of finding the subgraphs that correspond to a given abbreviated query. 22 refs., 7 figs.

4543 (LBL–26600) **Event-join optimization in temporal relational databases.** Segev, A.; Gunadhi, H. Lawrence Berkeley Lab., CA (USA). Jan 1989. 32p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8908116–2: 15. international conference on very large data bases, Amsterdam (Netherlands), 22-25 Aug 1989). Order Number DE90003117. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

An Event-Join is mostly used to group several temporal attributes of an entity into a single relation. It combines temporal equi-join components into one operation. The temporal outerjoin component is different than a non-temporal outer-join operations. In this paper, we motivate the need to support the efficient processing of event-joins, and introduce several optimization algorithms, both for a general data organization and for specialized organizations (sorted and append-only databases). For the append-only database we introduce a new data structure, that can improve the performance of event-joins as well as other queries. Finally, we evaluate the performance of the proposed algorithms. 24 refs., 7 figs., 5 tabs.

4544 (NUKEM-FuE–88041) **Corrosion database for the nuclear fuel cycle. Sub-project no. 1. Final report.** Schoenfeld, R.; Wegner, K. Nuklear-Chemie und -Metallurgie G.m.b.H. (NUKEM), Hanau (Germany, F.R.); Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.). Mar 1989. 98p. (In German). Grant BMFT KWA 16128. Order Number DE90722011. Available from NTIS (US Sales Only), PC A05/MF A01.

The aim of the project was to prepare and process data on corrosion in fuel recycling systems of fast breeder reactors and to store them in a test data base designed as an information system. Based on examinations on the nitric acid corrosion of austenitic steels (typical material/corrosive agent combination used in the reprocessing of burned fuel elements of nuclear power plants) and, in coordination with scientist specialized on materials, the most important characteristics were determined and summarized in a catalogue. This catalogue was realized with the help of a relational data base management system as a scientific data base where the adequate information from the original literature is recorded. (orig./MM).

4545 (SOL–89-7) **Sequential quadratic programming algorithms for optimization.** Prieto, F.J. Stanford Univ., CA (USA). Systems Optimization Lab. Aug 1989. 158p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research; National Science Foundation; Spain. DOE Contract FG03-87ER25030. N00014-87-K-0142;ECS-8715153. Order Number DE90000022. Available from NTIS, PC A08/MF A01 - OSTI; GPO Dep.

The problem considered is that of finding local minimizers for a function subject to general nonlinear inequality constraints, when first and perhaps second derivatives are available. The methods studied belong to the class of sequential quadratic programming

(SQP) algorithms. In particular, the methods are based on the SQP algorithm embodied in the code NPSOL, which was developed at the Systems Optimization Laboratory, Stanford University. The goal of this paper is to develop SQP algorithms that allow some flexibility in their design. Specifically, we are interested in introducing modifications that enable the algorithms to solve large-scale problems efficiently. The following issues are considered in detail: instead of trying to obtain the search direction as a minimizer for the QP, the solution process is terminated after a limited number of iterations. Suitable termination criteria are defined that ensure convergence for an algorithm that uses a quasi-Newton approximation for the full Hessian. For many problems the reduced Hessian is considerably smaller than the full Hessian. Consequently, there are considerable practical benefits to be gained by only requiring an approximation to the reduced Hessian. Theorems are proved concerning the convergence and rate of convergence for an algorithm that uses a quasi-Newton approximation for the reduced Hessian when early termination of the QP subproblem is enforced. The use of second derivatives, while having significant practical advantages, introduces new difficulties; for example, the QP subproblems may be nonconvex, and even a minimizer for the subproblem is no longer guaranteed to yield a suitable search direction. Also, theorems are proved for the convergence and rate of convergence of these algorithms. Finally, some numerical results, obtained from a modification of the code NPSOL, are presented. 43 refs., 4 tabs.

4546 (SOL–89-11) **On the identification of local minimizers in inertia-controlling methods for quadratic programming.** Forsgren, A.L.; Gill, P.E.; Murray, W. Stanford Univ., CA (USA). Systems Optimization Lab. Jul 1989. 24p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research; Goeran Gustafsson Foundation; National Science Foundation. DOE Contract FG03-87ER25030. CCR-8413211;N00014-87-K-0142. Order Number DE89017330. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The verification of a local minimizer of a general (i.e., nonconvex) quadratic program is in general an NP-hard problem. The difficulty concerns the optimality of certain points (which we call dead points) at which the first-order necessary conditions for optimality are satisfied, but strict complementarity does not hold. One important class of methods for solving general quadratic programming problems are called inertia-controlling quadratic programming (ICQP) methods. We derive a computational scheme for proceeding at a dead point that is appropriate for a general ICQP method. 13 refs.

4547 (SOL–89-12) **A modified Newton method for unconstrained minimization.** Forsgren, A.L.; Gill, P.E.; Murray, W. Stanford Univ., CA (USA). Systems Optimization Lab. Jul 1989. 37p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research; Goeran Gustafsson Foundation; National Science Foundation; Swedish National Board for Technical Development. DOE Contract FG03-87ER25030. ECS-8715153;N00014-87-K-0142. Order Number DE89017331. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Newton's method has proved to be a very efficient method for solving strictly convex unconstrained minimization problems. For the nonconvex case, various modified Newton methods have been proposed. In this paper, a new modified Newton method is presented. The method is a linesearch method, utilizing the Cholesky factorization of a positive-definite portion of the Hessian matrix. The search direction is defined as a linear combination of a descent direction and a direction of negative curvature. Theoretical properties of the method are established and its behaviour is studied when applied to a set of test problems. 27 refs., 6 figs., 4 tabs.

4548 (SOL–89-14) **A class of "onto" multifunctions.** Eaves, B.C.; Rothblum, U.G. Stanford Univ., CA (USA). Systems Optimization Lab. Sep 1989. 19p. Sponsored by U.S. DOE Energy Research; National Science Foundation; United States-Israel Binational Science Foundation. DOE Contract FG03-87ER25028. Order Number DE90002651. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A convex valued, upper continuous multifunction with a pointed closed convex domain is proved to be onto, if there is a selection with certain coercive properties and if the selection for each point lies in the affine hull of the smallest face of the domain containing the point. The proof uses a piecewise affine homotopy construction. 9 refs., 2 figs.

4549 **One-way transformation of information.** Cooper, J.A. To Dept. of Energy, Washington, DC. USA Patent 4,841,570. 27 Jun 1989. Filed date 11 May 1987. Int. Cl. H04K 1/00. 18p. Available from Patent and Trademark Office, Box 9, Washington, DC 20232.

This patent describes a method and apparatus are provided for one-way transformation of data according to multiplication and/or exponentiation modulo a prime number. An implementation of the invention permits the one way residue transformation, useful in encryption and similar applications, to be implemented by n-bit computers substantially with no increase in difficulty or complexity over a natural transformation thereby, using a modulus which is a power of two.

4550 (AD-A–210462/8/XAB) **Volunteering for emergency preparedness. Final report, March 1988-March 1989.** Nehnevajsa, J. Pittsburgh Univ., PA (USA). Univ. Center for Social and Urban Research. May 1989. 104p. Available from NTIS, PC A06/MF A01.

This nation-wide quantitative telephone survey predicts levels of voluntary activity for emergency and disaster preparedness. The study involved a random national phone sample of 1,595 respondents in the 48 contiguous states. Actual voluntary activity performed during or immediately following an emergency or disaster is not explicitly considered in the research. Rather, this study attempts to measure willingness to volunteer and willingness to participate in training programs. Training programs are conceptualized to mean both education and practice. The study also includes rating schedules - poor to excellent - for attitudes toward the self-help concept and perceived effectiveness of local and Federal government emergency and disaster programs. While the self-help concept rating is considered as a variable in its own right, evaluation consists of its relation to the following variables: prior volunteer experience, the expressed willingness to volunteer, and the perceived effectiveness of each local and Federal government programs. Indices are computed for the perceived effectiveness of government programs, and compared with percentages that reflect respondents ratings of the self-help concept, as well as prior and expressed willingness for volunteering and training activities. Patterns of participation in training and volunteering are also examined.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in *DOE Energy Data Base: Corporate Author Entries* (DOE/TIC-4585). Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;US;In French). Author affiliations are not listed in this index.

Effect of gamma radiation on DNA methylation, 15:3690 (R;US)
Effects of iron particles on behavior and brain function: Initial studies, 15:3756 (R;US)
Enhanced acoustic startle responding in rats with radiation-induced hippocampal granule cell hypoplasia, 15:3692 (R;US)
Gamma-radiation affects active electrolyte transport by rabbit ileum. 2. Correlation of alanine and theophylline response with morphology, 15:3689 (R;US)
Radiation quality and rat motor performance, 15:3691 (R;US)

Army Armament Research and Development Command, Aberdeen Proving Ground, MD (USA). Ballistics Research Lab.
Electrothermal guns – a theoretical investigation of factors for optimal performance. Technical report, 15:2660 (R;US)
Modeling casualties in nuclear warfare. Final report, 15:3385 (R;US)
Radiation-transport calculations of a simple structure using the vehicle code system with 69-group cross sections and the Monte Carlo neutron and photon code. Final report, 15:4178 (R;US)

Army Command and General Staff Coll., Fort Leavenworth, KS (USA). School of Advanced Military Studies
Battlefield nuclear weapons and tactical gridlock in Europe, 15:3387 (R;US)

Army Construction Engineering Research Lab., Champaign, IL (USA)
Review of facility-technology options and their development status. Final report, 15:2604 (R;US)
Three-dimensional modeling of heat transfer from slab floors. Final report, 15:2661 (R;US)

Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Coastal Ecology Group
Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (South Atlantic): Alewife and blueback herring, 15:3536 (R;US)

Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (Pacific Southwest): Brown rockfish, copper rockfish, and black rockfish, 15:3537 (R;US)

Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Environmental Lab.
Formulation of water-quality models for streams, lakes, and reservoirs: Modeler's perspective. Final report, 15:3544 (R;US)
Sediment-water interactions and contaminants in Corps of Engineers reservoir projects. Final report, 15:3543 (R;US)

Army Materials Research Agency, Watertown, MA (USA). Materials Technology Lab.
Fracture-toughness testing of metal-matrix composites, 15:2966 (R;US)
Neutron-radiography system for field use. Final report, 15:3212 (R;US)
Strain aging in tungsten-heavy alloys. Final report, 15:2810 (R;US)
Y-Si-Al-O-N glass fibers. Final report, 15:2967 (R;US)

Associacao Brasileira de Fisicos em Medicina, Sao Paulo, SP (Brazil)
Angular dependence of parallels plates ionization chambers for x radiation, 15:3337 (R;BR;In Portuguese)
Conection factors for clinical dosemeters used in dosimetry of large fields radiation, 15:3336 (R;BR;In Portuguese)
Development of a mathematical phantom for a child with 10 years age for internal dosimetry, 15:4189 (R;BR;In Portuguese)
Performance of special extremity dosemeters of BeO in fields of x and gamma radiation, 15:3335 (R;BR;In Portuguese)

Associacao Brasileira de Metais, Sao Paulo, SP (Brazil)
Scoria analysis by X-ray fluorescence with briquet, 15:4224 (R;BR;In Portuguese)

Associates in Rural Development, Inc., Burlington, VT (USA)
Jubba Environmental and Socio-economic Studies (JESS). Final report, 15:2282 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 1. Executive report. Final report, 15:2283 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 2. Environmental studies. Final report, 15:2284 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 3. Socio-economic studies. Final report, 15:2285 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 4. Bibliography. Final report, 15:2286 (R;US)

Astrosystems, Inc., Newark, DE (USA). Astropower Div.
High-efficiency silicon concentrator solar cells for use with prismatic covers, 15:2302 (R;US)

Atomic Energy of Canada Ltd., Chalk River, ON (Canada). Chalk River Nuclear Labs.
Deposition of cobalt on surface-treated stainless steel under PWR conditions, 15:2445 (R;US)

Auburn Univ., AL (USA)
Design of the Compact Auburn Torsatron: [Annual performance report], 15:4399 (R;US)

Australian Nuclear Science and Technology Organisation, Lucas Heights (Australia)
Dose limits, 15:4192 (R;AU)

B

Babcock and Wilcox Co., Alliance, OH (USA). Research and Development Div.
In-situ measurements of coal ash deposit optical properties: Final report, September 11, 1987–September 30, 1989, 15:2096 (R;US)
Multiloop integral system test (MIST): Test Group 32, SBLOCA [small-break loss-of-coolant accidents] with altered leak and HPI [high-pressure injection] configurations: Final report: Volume 4, 15:2547 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)
Multiloop integral system test (MIST): Test Group 35, Noncondensibles and venting: Final report: Volume 7, 15:2549 (R;US)
Multiloop integral system test (MIST): Test Group 36, Pump operation: Final report: Volume 8, 15:2550 (R;US)

Babcock and Wilcox Co., Lynchburg, VA (USA). Nuclear Power Div.
Multiloop integral system test (MIST): Test Group 32, SBLOCA [small-break loss-of-coolant accidents] with altered leak and HPI [high-pressure injection] configurations: Final report: Volume 4, 15:2547 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)
Multiloop integral system test (MIST): Test Group 35, Noncondensibles and venting: Final report: Volume 7, 15:2549 (R;US)
Multiloop integral system test (MIST): Test Group 36, Pump operation: Final report: Volume 8, 15:2550 (R;US)

Babcock and Wilcox Owners Group, Lynchburg, VA (USA)
Multiloop integral system test (MIST): Test Group 32, SBLOCA [small-break loss-of-coolant accidents] with altered leak and HPI [high-pressure injection] configurations: Final report: Volume 4, 15:2547 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)
Multiloop integral system test (MIST): Test Group 35, Noncondensibles and venting: Final report: Volume 7, 15:2549 (R;US)
Multiloop integral system test (MIST): Test Group 36, Pump operation: Final report: Volume 8, 15:2550 (R;US)

BASF A.G., Ludwigshafen am Rhein (Germany, F.R.)
Analysis, development and investigations into phase behaviour of surfactant systems for de-oiling high-salinitiy reservoirs with reference to the Bockstedt field of Wintershall AG. Final report, 15:2110 (R;DE;In German)

Battelle Columbus Div., Mount Pleasant, PA (USA)
1988 survey of residential-sector demand-side management programs: Final report, 15:2645 (R;US)

Battelle Columbus Div., OH (USA)
Development of short-term tests for evaluating plastic gas-piping materials. Annual report, January-December 1984, 15:2150 (R;US)
The TVA moving-manifold targeted-chlorination system: Second field demonstration: Final report, 15:2413 (R;US)

Battelle New England Marine Research Lab., Duxbury, MA (USA)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 1. Final executive summary, 15:2129 (R;US)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 2, 15:2130 (R;US)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 3. Appendices, 15:2131 (R;US)

Battelle Pacific Northwest Lab., Richland, WA (USA)
The reaction of gaseous iodoethane with silver nitrate, 15:2166 (R;US)

Bayerische Landesanstalt fuer Wasserforschung, Muenchen (Germany, F.R.)
Accumulation of radionuclides in fish during specified normal operation of nuclear installations and after incidents. Annual report 1987, 15:3567 (R;DE;In German)

Baylor Univ., Houston, TX (USA). Inst. of Molecular Genetics
Mapping and ordered cloning of the human X chromosome: Progress report, November 1988–October 1989, 15:3603 (R;US)

Bell Telephone Labs., Inc., New York, NY (USA)
Silicon chemistry in interstellar clouds, 15:3866 (R;US)

Benjamin (J.R.) and Associates, Inc., Mountain View, CA (USA)
Lower-bound magnitude for probabilistic seismic hazard assessment: Final report, 15:2526 (R;US)

Berkeley Research Associates, Inc., CA (USA)
Theory for high gain, high power free electron lasers: Final report, 15:3166 (R;US)

Bhabha Atomic Research Centre, Bombay (India)
Environmental radiation levels in and around Kalpakkam during 1983-1987, 15:4183 (R;IN)
Evaluated phase diagrams of binary metal-tellurium systems of the D-block transition elements, 15:2811 (R;IN)
Fuel Chemistry Division annual progress report for 1986, 15:2163 (R;IN)
Natural background radiation and population dose distribution in India, 15:4190 (R;IN)

Progress report on nuclear data activities in India for the period from July 1987 to December 1988, 15:4062 (R;IN)
U, Th and K distributions inferred from regional geology and the terrestrial radiation profiles in India, 15:3505 (R;IN)

Black and Veatch, Kansas City, MO (USA)
FGD damper guidelines: Volume 2, Guidelines: Final report, 15:2071 (R;US)
FGD [flue gas desulfurization] damper guidelines: Volume 1, Fundamentals and survey results: Final report, 15:2070 (R;US)

Bochum Univ. (Germany, F.R.)
Biological materials residues from pressurized decomposition with nitric acid. Identification of reaction products and their impact on inverse voltammetric element analysis, 15:3062 (R;DE;In German)

Boeing Advanced Systems Co., Seattle, WA (USA)
Compatibility of fuel-system components with high density fuel. Final report, April 1987-January 1989, 15:2781 (R;US)

Boeing Military Airplane Co., Seattle, WA (USA)
Engineering Assignment 5, E-4B surveillance methodology. Final report, 15:3386 (R;US)

Bonneville Power Administration, Portland, OR (USA)
Fan pressurization test results from the residential construction demonstration project: Cycle 1, 15:2666 (R;US)

Bordeaux-1 Univ., 33 - Gradignan (France). Centre d'Etudes Nucleaires
Experimental and theoretical study of two center electron emission in 25-MeV/u Mo^{40+} + He collisions, 15:4071 (R;FR)
Search for characteristic times governing the emission of two particles from an excited nucleus, 15:4063 (R;FR)

Brigham Young Univ., Provo, UT (USA)
Determination of thermodynamic data for modeling corrosion: Volume 1, Sulfates (Revision 1): Final report, 15:2443 (R;US)
Determination of thermodynamic data for modeling corrosion: Final report, Volume 2: Chlorides and acetates, 15:2444 (R;US)

British Steel Corp., Rotherham (UK). Swinden Labs.
Flux degassing of aluminium swarf and dross. A demonstration [at Birmal Components Ltd (Warley), Sarginson Bros Ltd (Coventry) and Cookson Precision Castings Ltd (London)], 15:2726 (R;GB)

Brookhaven National Lab., Upton, NY (USA)
Amperometric biosensors for glucose, lactate, and glycolate based on oxidases and redox-modified siloxane polymers, 15:3600 (R;US)
Atomic mass measurements with radioactive beams and/or targets: Where to start, 15:3070 (R;US)
Comparison of photodesorption yields from aluminum stainless and Cu-plated beam tubes, 15:3285 (R;US)
Cyclotron targetry for production of short-lived positron emitters, 15:3102 (R;US)
Deformed proximity potential for heavy ion reactions, 15:4123 (R;US)
Development and Testing of a RETRAN/MINET composite code and application to the J.A. Fitzpatrick plant, 15:2496 (R;US)
Direct insertion of metal ions into tetrasulfonated phthalocyanine, 15:3071 (R;US)
FACE: A free-air facility for fumigation with gaseous air pollutants: Revision, 15:3405 (R;US)
Glancing angle x-ray studies of oxide films: Revision, 15:2903 (R;US)
High energy heavy ion collisions and the RHIC [Relativistic Heavy Ion Collider] project at Brookhaven, 15:3261 (R;US)
Infra-red synchrotron radiation measurements at Brookhaven, 15:3283 (R;US)
Interaction between thermophilic microorganisms and crude oils: Recent developments, 15:2107 (R;US)
Magnetic viscosity in Ni/Cu compositionally-modulated alloys, 15:2812 (R;US)
Mechanical design of SXLS [Superconducting X-ray Lithography Source] radio-frequency cavity, 15:3284 (R;US)
Neutron capture therapy for melanoma, 15:3615 (R;US)
Neutron-antineutron oscillations in nuclei, 15:4070 (R;US)
Phase separation of holes in antiferromagnets, 15:2904 (R;US)
Pretreatment and conditioning of storage ring vacuum systems, 15:3315 (R;US)
Radioactive materials released from nuclear power plants: Annual report, 1987, 15:2540 (R;US)
Summary of advanced LMR [Liquid Metal Reactor] evaluations: PRISM [Power Reactor Inherently Safe Module] and SAFR [Sodium Advanced Fast Reactor], 15:2546 (R;US)
Tensile and impact testing of an HFBR [High Flux Beam Reactor] control rod follower, 15:2457 (R;US)
The evolution of high energy accelerators, 15:3258 (R;US)
The formation of metal-oxygen species at low temperatures, 15:4253 (R;US)
The initial scientific program at the NSLS infrared beamline, 15:4204 (R;US)
Vacuum system design for a superconducting x-ray lithography light source, 15:3314 (R;US)
Vertical distribution of pollutants in the presence of convective storms, 15:3406 (R;US)

Brown Univ., Providence, RI (USA). Dept. of Community Health
Case-control study of bladder cancer in Massachusetts among populations receiving chlorinated and chloraminated drinking water, 15:3771 (R;US)

Building Research Establishment, Watford (UK)
Building management systems: user experiences, 15:2662 (R;GB)
Space and hot water heating: energy-efficiency in large gas-fired systems, 15:2663 (R;GB)

Bundesanstalt fuer Geowissenschaften und Rohstoffe, Hannover (Germany, F.R.)
Hydrogeological, geohydraulic and geothermal studies in projected final storage sites for radioactive waste. Pt. 3. Geothermal studies. Final Report, 15:2200 (R;DE;In German)

Bundesanstalt fuer Materialforschung und -pruefung, Berlin (Germany, F.R.)
Elastic-plastic fracture mechanics analysis of a pressure vessel with an axial outer surface flaw. Technical report, 15:2531 (R;DE;In German)

Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene
Ingestion of radiocesium and strontium-90 by self-suppliers and non-self-suppliers in the first year following the Chernobyl reactor accident. Data taken as a basis for derivation of secondary intervention reference levels, 15:3502 (R;DE;In German)

Bundesministerium des Innern, Bonn (Germany, F.R.)
Investigation of the transfer of ^{90}Sr, ^{137}Cs, ^{60}Co, and ^{54}Mn from soil to plant, and of the main soil parameters that have influence on the transfer process. Final report, 15:3506 (R;DE;In German)

Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)
Analysis, development and investigations into phase behaviour of surfactant systems for de-oiling high-salinitiy reservoirs with reference to the Bockstedt field of Wintershall AG. Final report, 15:2110 (R;DE;In German)
Corrosion database for the nuclear fuel cycle. Sub-project no. 1. Final report, 15:4544 (R;DE;In German)
Critical investigations and model development on countercurrent flow of gas and liquid in horizontal and vertical channels. Final report, 15:2530 (R;DE;In German)
Design and test of a MR-imager with superconducting magnet. Final report, 15:3624 (R;DE;In German)
Determination of compatibility conditions of the burner/boiler system of heating equipment with a view to energy conservation by means of optimum adjustment of components. Final report. Pt. 3. Investigations of pressure swings in the starting process in a burner/boiler system, 15:3235 (R;DE;In German)
Determination of the dependence of engine characteristics on the properties of alternative fuels, 15:2800 (R;DE;In German)
Development of a technique for dismantling geometric complicated and thick components of closed down nuclear power plants with the principle of arc-waterjet cutting. Final report, 15:2532 (R;DE;In German)
Development of methods for the evaluation and reduction of risk factors for the maintenance of nuclear power plants, 15:2435 (R;DE;In German)
Effects of acid and lime on mesofauna of forest soils in the laboratory and in the field. Final report, 15:3762 (R;DE;In German)

Elastic-plastic fracture mechanics analysis of a pressure vessel with an axial outer surface flaw. Technical report, 15:2531 (R;DE;In German)
Experimental analysis of the behavior of iodine in the event of hypothetical accidents - iodine partition coefficients (follow-on project). Final report, 15:2555 (R;DE;In German)
Hydrogeological, geohydraulic and geothermal studies in projected final storage sites for radioactive waste. Pt. 3. Geothermal studies. Final Report, 15:2200 (R;DE;In German)
Investigations on combined deposition of particulate and gaseous pollutants in a packed bed filter at high temperatures, 15:2730 (R;DE;In German)
Methanol fuel M 100. Study into boundary conditions and optimisation of constituents, 15:2785 (R;DE;In German)
Options and techniques for enhanced waste heat recovery in small- and medium-sized enterprises. A guideline, 15:2731 (R;DE;In German)
Photovoltaic energy conversion - research projects on solar energy use, 15:2293 (R;DE;In German)
Rationalization of aerobic-thermophilic stabilisation by means of raw sludge dehydration, 15:2760 (R;DE;In German)
Shaping of working conditions for handicapped persons according to results of human-engineering research in hardcoal mining - main phase. Final report, 15:2103 (R;DE;In German)
Studies of the ternary phase diagram U-Pu-O between 1000 and 2000deg C. Structural and physico-chemical properties of $Pu_xU_yO_z$ mixed oxides with a view to applications as fuel, 15:2919 (R;DE;In German)
The DESONOX flue gas purification process, 15:2427 (R;DE;In German)

Bundesministerium fuer Umwelt, Naturschutz und Reaktorsicherheit, Bonn (Germany, F.R.)
Accumulation of radionuclides in fish during specified normal operation of nuclear installations and after incidents. Annual report 1987, 15:3567 (R;DE;In German)
Ingestion of radiocesium and strontium-90 by self-suppliers and non-self-suppliers in the first year following the Chernobyl reactor accident. Data taken as a basis for derivation of secondary intervention reference levels, 15:3502 (R;DE;In German)
Measures for reduction of severe accident consequences: Comprehensive evaluation of the results sponsored by the BMI, 15:2495 (R;DE;In German)

Bureau of Mines, Salt Lake City, UT (USA). Salt Lake City Research Center
Column flotation of coal with fluorosurfactants: Final report, 15:2014 (R;US)

C

Cal-Tech Management Associates, Sacramento, CA (USA)
Turning off the tap: Strategies for hazardous waste minimization in the city of Los Angeles, 15:2776 (R;US)

California Energy Resources Conservation and Development Commission, Sacramento, CA (USA)
Quarterly oil report: First quarter, 1989, 15:2124 (R;US)

California State Air Resources Board, Sacramento, CA (USA). Stationary Source Div.
Information on substances for review as toxic air contaminants. Summary report, January 1984-February 1989 (Final), 15:3430 (R;US)

California Univ., Berkeley, CA (USA)
Frequency dependence of quasi-particle mixers, 15:3118 (R;US)
Inverse a-c Josephson effect at terahertz frequencies, 15:3119 (R;US)

California Univ., Berkeley, CA (USA). Dept. of Chemical Engineering
The influence of texture on steady foam flow in Berea sandstone, 15:2109 (R;US)

California Univ., Davis, CA (USA)
Effects of air pollutants on photosynthesis, vegetative growth, and development of grapevines in the San Joaquin Valley of California. Final report, February 1987-February 1989, 15:3445 (R;US)

California Univ., Irvine, CA (USA). Public Policy Research Organization
Pilot investigation of indoor-outdoor and personal PM10 (thoracic) and associated ionic compounds and mutagenic activity. Final report, February 1987-April 1989, 15:3447 (R;US)

California Univ., Los Angeles, CA (USA)
The TITAN Reversed-Field Pinch fusion reactor study: Collection of papers, 15:4443 (R;US)

California Univ., Riverside, CA (USA)
Plant senescence: Its biochemistry and physiology, 15:3601 (B;US)

California Univ., Riverside, CA (USA). Statewide Air Pollution Research Center
Effects of acid fog and ozone on conifers. Final report, 15:3446 (R;US)
Maintain and operate California Air Resources Board field fumigation facility for experimental use. Final report, 17 December 1987-30 June 1989, 15:3435 (R;US)

California Univ., San Diego, La Jolla, CA (USA). Dept. of Electrical Engineering and Computer Sciences
Studies of high power density, pico-second rise-time light-activated semiconductor switch. Final report, 1 September 1987-31 December 1988, 15:3223 (R;US)

California Univ., Santa Barbara, CA (USA). Dept. of Biological Sciences
Characterization of year-round sensitivity of California's Montane Lakes to acidic deposition. Final report, October 1986-June 1989, 15:3552 (R;US)

California Univ., Santa Cruz, CA (USA). Inst. of Marine Sciences
Accumulation patterns of heavy metals and chlorinated hydrocarbons by sea otters, Enhydra lutris, in California. Final report, 15:3788 (R;US)

Calyxes Research and Development Corp., Albuquerque, NM (USA)
Final report on the investigation of water purification and waste concentration by the Vacuum Freezing Multiple Phase Transformation Process and its eutectic extension, September 1986-September 1987, 15:3572 (R;US)

Cambridge Univ. (UK)
Effect of twins on critical currents of high T_c superconductors. Interim report No 4, 15:3120 (R;GB)

Casazza, Schultz and Associates, Inc., Arlington, VA (USA)
Composite ceramic superconducting wires for electric-motor applications. Annual report No. 1, 30 June 1988-30 June 1989, 15:3117 (R;US)

Caterpillar, Inc., Peoria, IL (USA)
Caterpillar 3406 spark-ignited natural-gas-engine emissions on EPA (Environmental Protection Agency) heavy-duty transient test cycle. Topical report, March-December 1988, 15:2801 (R;US)

CEA Centre d'Etudes de Bruyeres-le-Chatel, 91 (France)
Dirac-Fock calculations in multi-harmonic-oscillator basis, 15:4507 (R;FR;In French)
Stress corrosion cracking of an uranium-6 weight per cent niobium in gaseous oxygen, nitrogen and hydrogen, 15:2814 (R;FR;In French)

CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)
Implosion symmetry and stability, 15:4386 (R;FR)
Soft X-Ray amplification in laser plasmas, 15:4300 (R;FR)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. d'Analyse de Surete
International cooperation for operating safety, 15:2497 (R;FR;In French)
Trend and pattern analysis of operational data through cooperation between OECD countries, 15:2498 (R;FR)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Chimie Appliquee et d'Etudes Analytiques
Stress corrosion cracking of nickel base alloys characterization and prediction, 15:2813 (R;FR)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Inst. de Recherche Technologique et de Developpement Industriel (IRDI)
Optogalvanic spectroscopy in flames, 15:3040 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. d'Etudes Mecaniques et Thermiques
Electron beam diagnostics study, 15:3363 (R;FR;In French)
Parallel algorithms for solving the diffusion equation by finite elements methods and by nodal methods, 15:2470 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique Nucleaire
Electron beam diagnostics study, 15:3363 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Div. de Metallurgie et d'Etude des Combustibles Nucleaires
Ionizing radiations dosimetry: new results in the megagray range, 15:4184 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique
Theoretical aspect of J/PSI production in nucleus-nucleus collisions, 15:3976 (R;FR)

Celgene Corp., Warren, NJ (USA)
Biological and biochemical methane reactions. Final report, March 1986-March 1989, 15:2268 (R;US)

Central Electricity Generating Board, Berkeley (UK). Berkeley Nuclear Labs.
Role of $Fe_xCr_{2-x}O_3$ standard solid solutions in the identification of rhombohedral phase composition by XRD, 15:2815 (R;GB)

Central Electricity Generating Board, Southampton (UK). Marchwood Engineering Labs.
Weld simulated US Mod 9Cr 1 Mo steel: Pt. 1. General microstructure, 15:2817 (R;GB)

Central Electricity Research Labs., Leatherhead (UK)
Ageing kinetics of CF3 cast stainless steel in the temperature range 300°C to 400°C, 15:2816 (R;GB)
Remaining-life estimation of boiler pressure parts: Volume 3, Base metal model: Final report, 15:2410 (R;US)

Central Research Inst. of Electric Power Industry, Komae, Tokyo (Japan). Energy and Environment Lab.
Development of high-efficiency molten carbonate fuel cell. Evaluation of stack performance and clarification of degradation mechanism at high fuel utilization, 15:2656 (R;JP;In Japanese)

Centre Experimental de Recherches et d'Etudes du Batiment et de Travaux Publics, 75 - Paris (France)
Preliminary study to a demonstration building climatic design program in the Ivory Coast, 15:2664 (R;FR;In French)

Centro de Energia Nuclear na Agricultura, Piracicaba, SP (Brazil)
Bud irradiation to obtain resistence to citrus canker through induction of mutation, 15:3686 (R;BR;In Portuguese)

Centro Tecnico Aeroespacial, Sao Jose dos Campos, SP (Brazil). Inst. de Atividades Espaciais
Spectroscopic analysis of orthonitrodiphenyl sulfide $C_{12}H_9NO_2S$, 15:4223 (R;BR;In Portuguese)

Centro Tecnico Aeroespacial, Sao Jose dos Campos, SP (Brazil). Inst. de Estudos Avancados
SU(4) proprerties of the Dirac equation, 15:4032 (R;BR)

CeramPhysics, Inc., Westerville, OH (USA)
Capacitive energy storage at cryogenic temperatures. Phase 2. Final report, 1 January 1986-31 December 1988, 15:2560 (R;US)

Ceska Lekarska Spolecnost J.E. Purkyne, Prague (Czechoslovakia). Spolecnost Nukleami Mediciny a Radiacni Hygieny
Abstracts of 14th radiation hygiene days, 15:4191 (R;CS;In Czech, Slovak)

Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Dozimetrie Zareni
Abstracts of 14th radiation hygiene days, 15:4191 (R;CS;In Czech, Slovak)

Chalmers Inst. of Tech., Goeteborg (Sweden). Earth Heat Pump Group
Sunclay clay plant at Kungsbacka. Technical follow-up of the thermal storage, 15:2351 (R;SE;In Swedish)

Cincinnati Univ., OH (USA). Dept. of Civil and Environmental Engineering
Steam stripping and batch distillation for the removal/recovery of volatile organic compounds, 15:2736 (R;US)

Circuit Chemistry Corp., Maple Plain, MN (USA)
Recovery of metals using aluminum displacement, 15:2741 (R;US)

Clark Univ., Worcester, MA (USA)
Global trends and structural consequences of the proton-neutron interaction, 15:4125 (R;US)

Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire
Elementary analysis by means of the x fluorescence and energy dispersion, 15:3066 (R;FR;In French)
Study of the energetic proton production in relativistic heavy ions Ne + nuclei collisions, using Diogene detector. Hadronic matter temperature, 15:4068 (R;FR;In French)

Coast Guard, Washington, DC (USA). Office of Research and Development
Evaluation of fuel-cell technology for Coast Guard applications. Final report, 15:2653 (R;US)

Cohen (S.) and Associates, Inc., McLean, VA (USA)
Radiation-related impacts for nuclear plant physical modifications: Final report, 15:2543 (R;US)

Colloidal Contrete Corp., Golden, CO (USA)
Use of foaming mud cement to terminate underground coal fires and to control subsidence of burn cavities. Final report, 15:2091 (R;US)

Colorado School of Mines, Golden, CO (USA). Dept. of Chemical Engineering and Petroleum Refining
Process and analytical studies of enhanced low severity co-processing using selective coal pretreatment: Quarterly technical progress report, June–August, 1989, 15:2022 (R;US)

Colorado State Univ., Fort Collins, CO (USA)
Optimal real-time pump and irrigation scheduling for center-pivot sprinkler systems, 15:2724 (R;US)

Colorado State Univ., Fort Collins, CO (USA). Solar Energy Applications Lab.
Colorado State University program for developing, testing, evaluating and optimizing solar heating and cooling systems: Project status report for the months of September and October 1989, 15:2332 (R;US)

Colorado Univ., Boulder, CO (USA)
Large signal nonlinear model of anisotropic transformers for nonsinusoidal operation: Final report, July 1, 1986–March 30, 1989, 15:3225 (R;US)

Colorado Univ., Boulder, CO (USA). Dept. of Chemistry and Biochemistry
Laser photoelectron spectroscopy of ions: Progress report, 1988–1989, 15:3095 (R;US)

Columbia Gas System Service Corp., Columbus, OH (USA)
Multizone completion opportunities in the Appalachian basin: Final report, 15:2138 (R;US)

Columbia Univ., New York, NY (USA)
Relativistic heavy ion research: Progress report, November 15, 1988–November 14, 1989, 15:4108 (R;US)

Columbia Univ., New York, NY (USA). Coll. of Physicians and Surgeons
Radiation physics, biophysics, and radiation biology: Progress report, December 1, 1988–November 30, 1989, 15:3694 (R;US)
The Radiological Research Accelerator Facility: Progress report, December 1, 1988–November 30, 1989, 15:3695 (R;US)

Columbia Univ., Palisades, NY (USA). Lamont-Doherty Geological Observatory
Transport and transfer rates in the waters of the continental shelf and slope: SEEP: Triennial report, 1 May 1987–30 April 1990, 15:3817 (R;US)

Combustion Engineering, Inc., Chattanooga, TN (USA)
Remaining-life estimation of boiler pressure parts: Volume 3, Base metal model: Final report, 15:2410 (R;US)

Comissao Nacional de Energia Nuclear, Rio de Janeiro, RJ (Brazil)
Evaluation of the utilization of neutron activation analysis for measuring non-irradiated nuclear fuels for safeguards, 15:2167 (R;BR;In Portuguese)

Comissao Nacional de Energia Nuclear, Rio de Janeiro, RJ (Brazil). Dept. de Normas e Especificacoes
Licesing of mining and milling facilities of uranium and/or thorium ores, 15:2248 (R;BR;In Portuguese)
Programs of meteorology in support of nuclear power plants, 15:3475 (R;BR;In Portuguese)

Comissao Nacional de Energia Nuclear, Rio de Janeiro, RJ (Brazil). Dept. de Reatores
Determination of the protection set-points lines for the Angra-1 reactor core, 15:2441 (R;BR;In Portuguese)
Procedure to estimate radiation dose in the population in the case of an accident, 15:2499 (R;BR;In Portuguese)
Study of Angra I reactor core with inserted control rods, 15:3991 (R;BR;In Portuguese)

Comissao Nacional de Energia Nuclear, Rio de Janeiro, RJ (Brazil). Lab. de Salvaguardas
Evaluation of the results from uranium chemical analysis by potentiometric tritation method for safeguards utilization through intercomparison programs, 15:3054 (R;BR;In Portuguese)

Commission of the European Communities, Abingdon (UK). JET Joint Undertaking
Model for calculating room air and surface tritium concentrations, 15:3480 (R;GB)

Commission of the European Communities, Brussels (Belgium). Directorate for Social Affairs
Investigation of explosion with delayed start (> 150 m) and methods of prevention. Final report, 15:2104 (R;DE;In German)

Commission of the European Communities, Luxembourg (Luxembourg)
Disposal in granite formations, 15:2197 (R;FR;In French)
Disposal in salt formations, 15:2198 (R;FR)
Disposal into the sub-seabed, 15:2199 (R;FR)
Performance assessment of geological isolation systems for radioactive waste. Disposal in clay formations, 15:2196 (R;FR)

Connecticut Univ., Storrs, CT (USA)
Proceedings of the Storrs meeting, 15:3942 (B;US)

Cool Water Coal Gasification Program, Daggett, CA (USA)
Cool Water Coal Gasification Program: Environmental Monitoring Plan. Volume 1-5, Section 1-12, Appendices A-F. Report for 1984-89, 15:2045 (R;US)
Cool Water Coal Gasification Program: Environmental monitoring plan. Final Report, non-proprietary. Executive summary. Report for 1984-1989, 15:2046 (R;US)

Cornell Univ., Ithaca, NY (USA)
Development and utilization of new diagnostics for dense-phase pneumatic transport: Quarterly technical progress report, July 1, 1989–September 30, 1989, 15:2084 (R;US)

Cornell Univ., Ithaca, NY (USA). Dept. of Natural Resources
Local government techniques for inland wetlands protection. Technical report, 15:3585 (R;US)

Cornell Univ., Ithaca, NY (USA). Lab. for Atomic and Solid State Physics
Dynamically compressed metals - theory. Final report, 1 February 1986-30 April 1989, 15:4200 (R;US)
Trajectory analysis of low-energy and hyperthermal ions scattered from Cu(110), 15:3887 (R;US)

Cowiconsult Raadgivende Ingenioerer A/S, Virum (Denmark)
District heating connections with high consumption, 15:2761 (R;DK;In Danish)

Risk assessment and risk management for an experimental nuclear waste processing facility, 15:2193 (R;US)
Scale model test results for an inverted U-tube steam generator with comparisons to heat transfer correlations, 15:2518 (R;US)
Seismic design criteria at the Idaho National Engineering Laboratory (INEL), 15:3808 (R;US)
Shielding design for spent fuel shipping in high-capacity truck casks, 15:2194 (R;US)
Simulations of local Nusselt number using an algebraic stress model (ASM) for turbulent flow in a square 180 degree bend, 15:3937 (R;US)
Siphon penstock installations at hydroelectric projects: A survey of design, construction and operating experience, 15:2277 (R;US)
Site characterization program at the radioactive waste management complex of the Idaho National Engineering Laboratory: Annual progress report: FY-1988, 15:2186 (R;US)
Solution bias in complex systems modeling, 15:4514 (R;US)
The biocorrosion of copper by biopolymers as examined in situ, in real time FT-IR/CIR/ATR in conjunction with pre and post XPS/AES, 15:2832 (R;US)
TMI-2 data qualification and data bases, 15:2520 (R;US)
Verification of the ORIGEN2 code analysis for the TMI-2 reactor core, 15:2485 (R;US)
Where to from here? Future applications of mental models of complex performance, 15:2480 (R;US)

EG and G Mound Applied Technologies, Miamisburg, OH (USA)
Simultaneous thermal analysis techniques for characterization of energetic materials, 15:3380 (R;US)

Electric Power Research Inst., Palo Alto, CA (USA)
1988 interorganizational workshop on future utility SO_2 emissions, 15:2078 (R;US)
1988 survey of residential-sector demand-side management programs: Final report, 15:2645 (R;US)
Below Regulatory Concern (BRC) Owners Group: A comparison of the EPA generic cost-benefit analysis with an industry-specific analysis: Final report, 15:2195 (R;US)
Deposition of cobalt on surface-treated stainless steel under PWR conditions, 15:2445 (R;US)
Determination of thermodynamic data for modeling corrosion: Volume 1, Sulfates (Revision 1): Final report, 15:2443 (R;US)
Determination of thermodynamic data for modeling corrosion: Final report, Volume 2: Chlorides and acetates, 15:2444 (R;US)
EMDEX [Electric and Magnetic Field Digital EXposure] system manuals: Volume 2: Technical reference manual, 15:2425 (R;US)
FGD damper guidelines: Volume 2, Guidelines: Final report, 15:2071 (R;US)
FGD [flue gas desulfurization] damper guidelines: Volume 1, Fundamentals and survey results: Final report, 15:2070 (R;US)
Gas turbine blade life assessment and repair guide: Final report, 15:2414 (R;US)

Guidelines for the prevention of economizer inlet header cracking in fossil boilers: Final report, 15:2412 (R;US)
Hydrogen conference: Workshop proceedings, 15:2258 (R;US)
Knowledge-based system: Voltage and VAR [volt-ampere-reactive] dispatch: Final report, 15:2411 (R;US)
Lower-bound magnitude for probabilistic seismic hazard assessment: Final report, 15:2526 (R;US)
Model validation: Cooling-tower performance: Final report, 15:2415 (R;US)
Multiloop integral system test (MIST): Test Group 32, SBLOCA [small-break loss-of-coolant accidents] with altered leak and HPI [high-pressure injection] configurations: Final report: Volume 4, 15:2547 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)
Multiloop integral system test (MIST): Test Group 35, Noncondensibles and venting: Final report: Volume 7, 15:2549 (R;US)
Multiloop integral system test (MIST): Test Group 36, Pump operation: Final report: Volume 8, 15:2550 (R;US)
Operation and performance of commercial cool storage systems: Volume 1, 1987 cooling season, 15:2564 (R;US)
Operation and performance of commercial cool storage systems: Volume 2, 1988 cooling season and project summary, 15:2565 (R;US)
Remaining-life estimation of boiler pressure parts: Volume 3, Base metal model: Final report, 15:2410 (R;US)
The TVA moving-manifold targeted-chlorination system: Second field demonstration: Final report, 15:2413 (R;US)
Use of ash in highway construction: Delaware demonstration project: Final report, 15:2069 (R;US)

Energetics, Inc., Columbia, MD (USA)
Membrane separation processes for liquid hydrocarbons and gases in the petrochemical industry: A technical case study, 15:2118 (R;US)

Energipolitisk Udvalg, Copenhagen (Denmark)
Report on the Ministry of Energy's statement regarding subsection 2 of section 12 of act number 293 of 10th June 1981, on the utilization of Denmark's subterranean committee on 26th October 1988, 15:2139 (R;DK;In Danish)

Energy and Environmental Research Corp., Irvine, CA (USA)
Enhancing the use of coals by gas reburning-sorbent injection: Quarterly report No. 7, December 1, 1988–February 28, 1989, 15:2422 (R;US)
Guide to oil waste-management alternatives for used oil, oily waste water, oily sludge, and other wastes resulting from the use of oil products. Final report, 15:2127 (R;US)

Energy Research Corp., Danbury, CT (USA)
Effects of coal-derived trace species on the performance of molten carbonate fuel cells: Topical report (Progress report No. 4), 15:2657 (R;US)

Energy Technology Support Unit, Harwell (UK)
Process integration initiative. A review of the process integration activities funded under the Energy Efficiency R and D programme, 15:2732 (R;GB)

Enertech Consultants, Campbell, CA (USA)
EMDEX [Electric and Magnetic Field Digital EXposure] system manuals: Volume 2: Technical reference manual, 15:2425 (R;US)

Environmental Health Research and Testing, Inc., Research Triangle Park, NC (USA)
Application of a simple short-term bioassay for the identification of genotoxins from hazardous wastes, 15:3782 (R;US)

Environmental Management Support, Silver Spring, MD (USA)
Ground-water research: Technical-Assistance Directory, 15:3575 (R;US)

Environmental Protection Agency, Ann Arbor, MI (USA). Emission Control Technology Div.
Programmer's guide to MOBILE4 (mobile source emission factor model). Technical report, 15:2797 (R;US)

Environmental Protection Agency, Boston, MA (USA). Region I
Supplemental risk-assessment guidance for the Superfund program. Part 1. Guidance for Public-Health Risk Assessments. Part 2. Guidance for ecological Risk Assessments. Draft report (Final), 15:3582 (R;US)

Environmental Protection Agency, Cincinnati, OH (USA). Office of Environmental Criteria and Assessment
Analytical methods necessary to implement risk-based criteria for chemicals in municipal sludge, 15:2775 (R;US)
Risk assessment is a developing science: Approaches to improve evaluation of single chemicals and chemical mixtures, 15:3779 (R;US)

Environmental Protection Agency, Cincinnati, OH (USA). Risk Reduction Engineering Lab.
Asbestos-fiber reentrainment during vacuuming and wet cleaning of carpet at a captive research site, 15:3437 (R;US)
EPA's (Environmental Protection Agency's) approach to pollution prevention, 15:2595 (R;US)
Formation and control of non-trihalomethane by-products, 15:3556 (R;US)
Hybrid knowledge-based/algorithmic approach to the design of waste-treatment systems, 15:3234 (R;US)
Incinerability index: A measure of incinerator performance, 15:2743 (R;US)
Quantitative evaluation of air-filtration systems in use at asbestos abatement sites: Research in progress, 15:3256 (R;US)
Statistical evaluation of airborne asbestos measured before, during, and after abatement, 15:3438 (R;US)
Translating research into practice: The drinking-water industry, 15:3578 (R;US)
Waste-minimization insights for the polymer industry, 15:2742 (R;US)

Environmental Protection Agency, Duluth, MN (USA). Environmental Research Lab.
Structural properties for determining mechanisms of toxic action, 15:3778 (R;US)

Environmental Protection Agency, Montgomery, AL (USA). Eastern Environmental Radiation Facility
Radiological survey of the Mare Island Naval Shipyard, Alameda Naval Air Station, and Hunters Point Shipyard, 15:3568 (R;US)
Radiological surveys of Naval facilities on Puget Sound. Final report, 15:3571 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Air and Energy Engineering Research Lab.
Air toxics control situation room. Report for July 1988-March 1989, 15:3450 (R;US)
Application of radon reduction methods (revised), 15:3484 (R;US)
Destruction of volatile organic compounds using catalytic oxidation. Report for April 1987-December 1988, 15:3439 (R;US)
Recent developments of emission control technology in the United States for fossil fuel combustion sources, 15:3249 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Atmospheric Research and Exposure Assessment Lab.
Trial burns: methods perspective, 15:2763 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Atmospheric Sciences Research Lab.
Comparison of 0600-0900 AM hydrocarbon compositions obtained from 29 cities, 15:3431 (R;US)
Integration of fluid modeling with complex-terrain field studies and model-development efforts, 15:3449 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab.
Chronic exposure to ozone causes restrictive lung disease, 15:3781 (R;US)
Complex mixtures of urban air pollutants: Identification and comparative assessment of mutagenic and tumorigenic chemicals and emission sources, 15:3784 (R;US)
Detection of genetic hazards from environmental chemicals with plant test systems, 15:3776 (R;US)
Effects of atmospheric mix and toxic fumes on military performance, 15:3777 (R;US)
Electrophysiological systems for neurotoxicity field testing: PEARL II and alternatives, 15:3780 (R;US)
Estimating human-equivalent no observed adverse-effect levels for VOCs (volatile organic compounds) based on minimal knowledge of physiological parameters. Technical paper, 15:3783 (R;US)
Genetic activity profiles: Use in management of risk from genotoxic substances in the environment, 15:3766 (R;US)

Genetic-activity profiles and hazard assessment, 15:3768 (R;US)
Human-health studies of carbon monoxide (CO) under conditions of military weapons systems crewman exposures. Protocol 1: Formation of cohb. Final report, September 1982-March 1985, 15:3755 (R;US)
Mutagenicity of combustion emissions from a biomedical-waste incinerator, 15:3774 (R;US)
Pathophysiological and disease constraints on aerosol delivery, 15:3767 (R;US)
Use of bioassay methods to evaluate incinerator emissions, 15:3440 (R;US)
Use of genotoxic activity profiles in assessment of carcinogenesis and transmissible genetic effects, 15:3775 (R;US)
Utility of short-term tests for genetic toxicity, 15:3612 (R;US)

Environmental Protection Agency, Washington, DC (USA)
A perspective on human exposure to PCDDs and PCDFs emitted form municipal waste combustors, 15:3758 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Cooperative Environmental Management
Ground water protection efforts in four new england states. Technical report, 15:3588 (R;US)

ROD (Record of Decision) annual report, FY 1988, 15:3590 (R;US)
Superfund Record of Decision (EPA Region 2): Lipari Landfill, Mantua Township, Gloucester County, New Jersey, July 11, 1988. Third remedial action. Final report, 15:3579 (R;US)
Superfund Record of Decision (EPA Region 5): Forest Waste Disposal, MI. (Second remedial action), March 1988, 15:3584 (R;US)
Superfund Record of Decision (EPA Region 5): Belvidere Landfill, IL. (First Remedial Action), June 1988, 15:3522 (R;US)
Superfund Record of Decision (EPA Region 5): Poer Farm, IN. (First Remedial Action), September 1988. Final report, 15:3523 (R;US)
Superfund Record of Decision (EPA Region 6): South Valley/Edmunds Street, NM. (Second Remedial Action), June 1988, 15:3524 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump Site, PA. (Second Remedial Action), September 1988, 15:3525 (R;US)
Superfund Record of Decision (EPA Region 10): Commencement Bay/Near Shore, WA. (First Remedial Action), December 1988, 15:3526 (R;US)
Superfund Record of Decision (EPA Region 1): Cannon Engineering, MA. (First Remedial Action), March 1988. Final report, 15:3527 (R;US)
Superfund Record of Decision (EPA Region 5): Summit National Site, Deerfield, OH. June 1988. First Remedial Action. Final report, 15:3528 (R;US)
Superfund Record of Decision (EPA Region 8): Libby Ground Water Contamination, MT. (Second Remedial Action), December 1988, 15:3529 (R;US)
Superfund Record of Decision (EPA Region 3): Croyden TCE Spill, PA. (First Remedial Action), December 1988, 15:3586 (R;US)
Superfund Record of Decision (EPA Region 5): Wausau Water Supply, WI. (First Remedial Action), December 1988, 15:3587 (R;US)
Superfund Record of Decision (EPA Region 7): Findett, MO. (First Remedial Action), December 1988, 15:3500 (R;US)
Superfund Record of Decision (EPA Region 2): Ciba-Geigy, NJ. (First Remedial Action), April 1989, 15:3530 (R;US)
Superfund Record of Decision (EPA Region 7): Todtz, Lawrence Farm, IA. (First Remedial Action), November 1988. Final report, 15:3531 (R;US)
Superfund Record of Decision (EPA Region 6): Pesses Chemical, TX. (First Remedial Action), December 1988. Final report, 15:3532 (R;US)
Superfund Record of Decision (EPA Region 4): American Creosote Works, TN. (First Remedial Action), December 1988, 15:3533 (R;US)
Superfund Record of Decision (EPA Region 3): M. W. /Manufacturing, PA. (First Remedial Action), March 1989, 15:3534 (R;US)
Superfund Record of Decision (EPA Region 3): Wildcat Landfill, DE. (Second Remedial Action), November 1988. Final report, 15:3535 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump, PA. (First remedial action), March 1988. Final report, 15:3589 (R;US)
Superfund Record of Decision (EPA Region 2): Clothier Disposal Site, Oswego County, New York, December 28, 1988. First remedial action, 15:3591 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Health and Environmental Assessment
Assessment of ecologic risks related to chemical exposure: Methods and strategies used in the United States, 15:3772 (R;US)
Methods used in the United States for the assessment and management of health risk due to chemicals, 15:3773 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Solid Waste
Best demonstrated available technology (BDAT) background document for wastes from the production of dinitrotoluene, toluenediamine, and toluene diisocyanate (K027, K111, K112, K113, K114, K115, K116, U221, and U223). Final report, 15:2774 (R;US)
Methodology for developing best demonstrated available technology (BDAT) treatment standards, 15:2765 (R;US)
Response to capacity-related comments submitted on the Second Third proposed land disposal restrictions rule, 15:3520 (R;US)
Response to the Second Third wastes treatment standards: Related comments for the Second Third land-disposal restrictions proposed rule (Issue Numbers 1 through 12), 15:3519 (R;US)
Treatment technology background document, 15:2764 (R;US)

Envirosphere Co., Santa Ana, CA (USA)
Reduction of arsenic wastes in the electronics industry (application to study). Final report, 15:2748 (R;US)
Reduction of solvent wastes in the electronics industry. Waste reduction grant program. Final report, 15:2749 (R;US)

Escola de Comando e Estado-Maior do Exercito, Rio de Janeiro, RJ (Brazil)
Brazilian nuclear policy with respect to the public opinion, 15:2614 (R;BR;In Portuguese)

Reactions and interactions of the reservoir rock with heat exchange media in the hot dry rock process: A case study in the Falkenberg granite, 15:2359 (R;DE;In German)

Kassel Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 15 - Maschinenbau
Experimental and theoretical investigation of passive use of solar energy on house facades, 15:2676 (R;DE;In German)

Kauppa- ja Teollisuusministerio, Helsinki (Finland). Energiaosasto
Alternative development programme of the projects concerning the building management control, 15:2682 (R;FI;In Finnish)
Design instructions for ventilation of day-care centres, 15:2684 (R;FI;In Finnish)
Displacement ventilation - dimensioning of supply air flow, 15:2683 (R;FI;In Finnish)
Gasification of solid fuels in energy management of industry, 15:2030 (R;FI;In Finnish)

Keller (Ed), Santa Barbara, CA (USA)
The ecology of riparian habitats of the southern California coastal region: A community profile, 15:3538 (R;US)

Keo Consultants, Brookline, MA (USA)
Optical instrumentation support for the airborne ionospheric observatory. Report for 1 July 1987-30 June 1988, 15:3884 (R;US)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Abt. Sicherheit und Strahlenschutz
Documentation of the first measuring campaign of September 8-12, 1986 within the framework of the research project 'Dispersion of pollutants in complex terrain after short-term emissions', 15:3392 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Angewandte Physikalische Chemie
Biological materials residues from pressurized decomposition with nitric acid. Identification of reaction products and their impact on inverse voltammetric element analysis, 15:3062 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Radioagronomie
Investigation of the transfer of ^{90}Sr, ^{137}Cs, ^{60}Co, and ^{54}Mn from soil to plant, and of the main soil parameters that have influence on the transfer process. Final report, 15:3506 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Internationales Buero
Program of research and development on the thorium utilization in PWRS. Final report (1979-1988), 15:2449 (R;DE)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik
Uncertainty analyses for the atmospheric dispersion submodule of UFOMOD with emphasis on parameter correlations, 15:3481 (R;DE)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorentwicklung
Algorithms and programs for evaluating fault trees with multi-state components, 15:4519 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftre
5th status colloquium of the PEF, March 7-9, 1989 in the Nuclear Research Center in Karlsruhe. Summarizing reviews of the program management, 15:3416 (R;DE;In German)
Changes in ground vegetation of forest ecosystems in the middle and southern regions of the Black Forest, 15:3763 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Wiederaufarbeitung und Abfallbehandlung
Analytical studies of plutonium containing solutions by Laser-Raman-Spectroscopy (LRS) with special regard to the Pu(IV)-Ru(III)-HNO_3 and Pu(VI)-H_2O_2-reactions, 15:3064 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projektgruppe LWR-Sicherheit (PRS)
Uncertainty analyses for the atmospheric dispersion submodule of UFOMOD with emphasis on parameter correlations, 15:3481 (R;DE)

Kohler Corp., WI (USA)
Residential cogeneration system development. Annual interim report, February 1988-January 1989, 15:2777 (R;US)

KRAFTSAM, Stockholm (Sweden)
Electricity supply in Sweden 1988, 15:2638 (R;SE;In Swedish)

Krug International, San Antonio, TX (USA). Technology Services Div.
Behavioral measurement of laser flashblindness in rhesus monkeys. Final report, June-August 1985, 15:3796 (R;US)

KRW Energy Systems, Inc., Pittsburgh, PA (USA)
Advanced gasifier-desulfurizer process development for SNG (substitute natural gas) application. Final report, August 1987-December 1988, 15:2047 (R;US)

Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.
Proceedings of the specialists' meeting on physics and engineering of fission and spallation, 1988, 15:4159 (R;JP;In Japanese)

Kyoto Univ., Uji (Japan). Plasma Physics Lab.
Biased limiter experiment in the Heliotron E device, 15:4441 (R;JP)
Density clamping phenomena in electron cyclotron resonance heated plasmas on Heliotron E, 15:4344 (R;JP)
Effect of loss cone on confinement in toroidal helical device, 15:4348 (R;JP)
In situ measurement of neutral beam components using the Doppler-shifted H_α emissions in Heliotron E, 15:4345 (R;JP)
Investigation of boundary for the negative ion extraction in the sheet-plasma negative ion source, 15:4349 (R;JP)
Phase properties of the rapid cooled palladium-silicon alloy in the concentration range 40 to 58 at.% Si, 15:2851 (R;JP)
Proceedings of US-Japan workshop on new generation experiments and reactors (joined by EC), 15:4440 (R;JP)
Second harmonic electron cyclotron heating in low and over density plasmas in Heliotron DR, 15:4347 (R;JP)
STEP code improvements and extensions, 15:4346 (R;JP)
Study on edge plasma physics and particle control in the Heliotron E device, 15:4343 (R;JP)

L

Laboratoriet for Energiforskning, Odense (Denmark)
Electromagnetic flywheel energy storage for use in electric powered trucks and vehicles for domestic transport, 15:2561 (R;DK;In Danish)

Laboratorio Nacional de Computacao Cientifica, Rio de Janeiro, RJ (Brazil)
Error analysis of some Galerkin - least squares methods for the elasticity equations, 15:3192 (R;BR)
Finite element approximations of the stokes flow problem based upon various variational principles, 15:3193 (R;BR)
Strong source heat transfer simulations based on a GalerKin/Gradient - least - squares method, 15:3194 (R;BR)

Landesanstalt fuer Immissionsschutz des Landes Nordrhein-Westfalen, Essen (Germany, F.R.)
Hints and search strategies for the substances listed in the Accident Ordinance, 15:3803 (R;DE;In German)

Law Environmental, Inc., Kennesaw, GA (USA)
Evaluation of hypotheses for the cause of the 1886 Charleston earthquake: Final report, 15:3813 (R;US)

Lawrence Berkeley Lab., CA (USA)
A high charge state multicusp ion source, 15:3304 (R;US)
A review of assumptions and analysis in EPRI EA-3409: "Household appliance choice: Revision of REEPS [Residential End-use Energy Planning System] behavioral models", 15:2686 (R;US)
A study of aggregation bias in estimating the market for home heating and cooling equipment, 15:2687 (R;US)
A study of phase control in the FEL [free electron laser] two-beam accelerator, 15:3272 (R;US)
A tomographic study of premixed turbulent stagnation point flames, 15:3108 (R;US)

A versatile procedure for calculating heat transfer through windows, 15:2690 (R;US)
Abbreviated query interpretation in extended entity-relationship oriented databases, 15:4542 (R;US)
Accelerator and Fusion Research Division: 1988 summary of activities, 15:3259 (R;US)
An alternate end design for SSC dipoles, 15:3300 (R;US)
Analytic solution of pseudocolloid migration in fractured rock, 15:2212 (R;US)
Analytical models for C-14 transport in a partially saturated, fractured, porous media, 15:2209 (R;US)
Aspects of faceting in the study of percipitate interfaces, 15:2841 (R;US)
Binary complex fragment emission and multifragmentation from very hot nuclei, 15:4099 (R;US)
Broad-beam multi-ampere metal ion source, 15:3301 (R;US)
Center for Building Science of the Applied Science Division annual report, FY 1988, 15:2689 (R;US)
Center for X-ray Optics, 1988, 15:3264 (R;US)
Challenges for utilization of the new synchrotron facilities, 15:3266 (R;US)
Charge state distribution studies of the metal vapor vacuum arc ion source, 15:3302 (R;US)
Comparison of H^{minus} and D^{minus} production in a magnetically filtered multicusp source, 15:4439 (R;US)
Conformation, orientation and interaction in molecular monolayers: A surface second harmonic and sum frequency generation study, 15:4234 (R;US)
Delayed-fission properties of neutron-deficient americium nuclei, 15:4120 (R;US)
Design and testing of a superfluid liquid helium cooling loop, 15:3131 (R;US)
DNA damage in mammalian cells following heavy-ion irradiation, 15:3745 (R;US)
Earth Sciences Division annual report 1988, 15:3811 (R;US)
ECR sources for the production of highly charged ions, 15:3306 (R;US)
Effect of media properties on side erase bands, 15:4521 (R;US)
Effects of precipitate distribution on 293 K and 77 K properties of 2090-T81 weldments, 15:2840 (R;US)
Electronic materials high-T_c superconductivity polymers and composites structural materials surface science and catalysts industry participation: Annual report, 1988, 15:2923 (R;US)
Evaluation methods in competitive bidding for electric power: Volume 2, Technical appendix, 15:2635 (R;US)
Event-join optimization in temporal relational databases, 15:4543 (R;US)
Factors influencing soil as a source of indoor radon: Framework for assessing radon source potential, 15:2688 (R;US)
Gas flow in and out of a nuclear waste container, 15:2211 (R;US)
General properties of an asymmetric B-factory lattice, 15:3273 (R;US)
Geotechnical support and topical studies for nuclear waste geologic repositories: Annual report, fiscal year 1988, 15:2208 (R;US)
Ground motion measurements at the 1 - 2 GeV synchrotron radiation source site, 15:3299 (R;US)
Heavy Ion Fusion Accelerator Research (HIFAR) half-year report, October 1, 1988–March 31, 1989, 15:4438 (R;US)
High school honors program, July 23–August 5, 1989: Revision, October 1989, 15:2609 (R;US)
Improved charge collection of the buried p-i-n a-Si:H radiation detectors, 15:3354 (R;US)
Key issues in developing demand-side bidding programs, 15:2636 (R;US)
Least-cost planning in the utility sector: Progress and challenges: Volume 2, Technical appendix, 15:2624 (R;US)
Looking for precursors of neutron matter exotica, 15:4161 (R;US)
Low energy $\bar{p}p$ physics, 15:3960 (R;US)
Market share elasticities for fuel and technology choice in home heating and cooling, 15:2685 (R;US)
Mass transport in salt repositories: Transient diffusion into interbeds, 15:2206 (R;US)
Mass transport in salt repositories: Steady-state transport through interbeds, 15:2207 (R;US)
Molecular beam studies of oxygen atom reactions with unsaturated hydrocarbons, 15:3109 (R;US)
Monitoring and modeling for radon entry into basements: A status report for the small structures project, 15:2691 (R;US)
Operation of a DC large aperture volume-production H^- source, 15:3305 (R;US)
Operational characteristics of a metal vapor vacuum arc ion source, 15:3891 (R;US)
Optimizing voting-type algorithms for replicated data, 15:4541 (R;US)
Photofragmentation of ketene to $CH_2(\tilde{X}^3B_1)$ + CO: Dissociation rate, energy release and exit barrier height, 15:3096 (R;US)
Policies and programs for promoting energy conservation in the residential sector: Lessons from five OECD [Organization for Economic Cooperation and Development] countries, 15:2622 (R;US)
Quantum mechanical reactive scattering theory for simple chemical reactions: Recent developments in methodology and applications, 15:3077 (R;US)
Release rates of soluble species at Yucca Mountain, 15:2210 (R;US)
Residential energy demand in the six OCED countries: Historic trends and future directions, 15:2646 (R;US)
Retractable gas cooled leads for ASTROMAG, 15:3130 (R;US)
Review of SC/RF refrigeration systems, 15:3129 (R;US)
Scry: A distributed image handling system: Version 1.1, 15:4520 (R;US)
Search for the quark-gluon plasma (1989): The NA35 experiment at the CERN SPS, 15:4066 (R;US)
Soil water and vegetation management for cleanup of selenium contaminated soils: Progress report, 15:3498 (R;US)
Some new theoretical methods for treating reaction dynamics in polyatomic molecular systems, 15:3079 (R;US)
Some novel design features of the LBL metal vapor vacuum arc ion sources, 15:3303 (R;US)
Spatially resolved localized vibrational mode spectroscopy of carbon in liquid encapsulated Czochralski grown gallium arsenide wafers, 15:4233 (R;US)
Successful observation of Schottky signals at the Tevatron collider, 15:3307 (R;US)
Supernovae, compact stars and nuclear physics, 15:3828 (R;US)
Technology Base Research Project for electrochemical energy storage: Annual report for 1988, 15:2578 (R;US)
Testing string dynamics in lepton nucleus reactions, 15:4067 (R;US)
Tests of time reversal invariance via transmission experiments, 15:4023 (R;US)
The Ahuachapan geothermal field, El Salvador: Reservoir analysis: Volume 1, Text and main figures, 15:2355 (R;US)
The Ahuachapan geothermal field, El Salvador: Reservoir analysis: Volume 2, Appendices A through E, 15:2356 (R;US)
The challenges of third-generation synchrotron light source, 15:3265 (R;US)
The influence of oscillating electromagnetic fields on membrane structure and function: Synthetic liposome and natural membrane bilayer systems with direct application to the controlled delivery of chemical agents, 15:3802 (R;US)
The influence of texture on steady foam flow in Berea sandstone, 15:2111 (R;US)
The role of oil in electricity generation in five European countries: Past, present, and potential, 15:2631 (R;US)
The secondary slurry-zinc/air battery: Final report, 15:2579 (R;US)
Theoretical issues in the search for the quark gluon plasma, 15:4162 (R;US)
Theoretical methods for the study of chemical dynamics, 15:3078 (R;US)
Treatment planning for stereotactic heavy-charged particle radiosurgery of the brain, 15:3677 (R;US)
Variable temperature effects on release rates of readily soluble nuclides: Revision, 15:2205 (R;US)
Variational quantum Monte Carlo calculation of electronic and structural properties of crystals, 15:4235 (R;US)
VSP [Vertical Seismic Profiling] and cross hole tomographic imaging for fracture characterization, 15:3812 (R;US)
WES, a robust expert system for well test analysis, 15:2105 (R;US)

Lawrence Livermore National Lab., CA (USA)
2.5D EM direct implicit PIC simulation using AVANTI, 15:4356 (R;US)
A kinetic model for dissolution of borosilicate glass, 15:2240 (R;US)
A photon accelerator, 15:3279 (R;US)
A review of the literature on the toxicity of rare-earth metals as it pertains to the Engineering Demonstration System surrogate testing, 15:3792 (R;US)
Advanced fusion MHD power conversion using the CFAR [compact fusion advanced Rankine] cycle concept, 15:4444 (R;US)
Analyses of particles in beryllium by ion imaging, 15:2856 (R;US)
Application of the results of excavation response experiments at climax and the Colorado School of Mines to the development of an experiment for the underground research laboratory, 15:2237 (R;US)
Beryllium dispersion near explosive firing tables: A comparison of computed and observed results, 15:3468 (R;US)
Bounding dispersion analysis for rare-earth elements as it pertains to the Engineering Demonstration System surrogate testing, 15:3752 (R;US)
Burning rates of two cast nitramine explosives using a hybrid closed bomb-strand burner, 15:3382 (R;US)
Carbohydrate translocation and branch autonomy of Pinus ponderosa, 15:2309 (R;US)
Challenges in processing for polymer composites, 15:2988 (R;US)
Computer simulation of laser plasma interaction: Progress report for 1988, 15:4354 (R;US)
Concerning advanced architectures for strategic defense, 15:2802 (R;US)
Design and fabrication of the CPQ [Conductor Performance Qualification] coil, 15:4446 (R;US)
Design of a high-gain flux-compression generator, 15:4445 (R;US)
Effects of nitrogen pulsing on sputter-deposited beryllium films, 15:2855 (R;US)
Electron-positron momentum distribution measurements of high-T superconductors and related systems, 15:4258 (R;US)
Energy and Technology Review, October 1989, 15:4355 (R;US)
Environmental considerations for the conduct of surrogate tests in the Engineering Demonstration System, 15:3791 (R;US)
Environmental corrections for a neutron-induced gamma-ray spectroscopy logging system in an air-filled borehole, 15:3390 (R;US)
Evaluation of the post-emplacement environment of high level radioactive waste packages at Yucca Mountain, Nevada, 15:2239 (R;US)
First-principles interatomic potentials in transition metals: Multi-ion interactions and their analytic representation, 15:4236 (R;US)
Gels and foams from ultrahigh molecular weight polyethylene, 15:2986 (R;US)
High-power-density prime power systems: A literature search and analysis, 15:2581 (R;US)
Hugoniot measurements with the LLNL electric gun facility, 15:3221 (R;US)
Impact of a simulated nuclear winter environment on growth development and productivity of potatoes, winter wheat, pines and soybeans, 15:3489 (R;US)
In situ optical measurements of hydrofluoric acid aerosols, 15:3469 (R;US)
Induction linear accelerators for commercial photon irradiation processing, 15:3267 (R;US)
Inductive store opening switch and tests for energy transfer to a load, 15:3140 (R;US)
Interactive multidimensional data analysis and understanding, 15:4530 (R;US)
Interagency Nuclear Safety Review Panel: Safety evaluation report for Galileo: Volume 2, 15:2651 (R;US)
Intra-stark relaxation of Nd^{3+} in silicate glass: Subpicosecond accumulated photon echo experiments, 15:4237 (R;US)
Investigation of an electron beam evaporative source: Part 1, Theory; Part 2, Measurements, 15:3898 (R;US)
ITER [International Thermonuclear Experimental Reactor] in perspective, 15:4452 (R;US)
Kestrel 3 Program: Final report, 15:4488 (R;US)
Laboratory microfusion facility – Neutronics and radiological safety analysis, 15:4449 (R;US)
Laser glass (1989), 15:3168 (R;US)
More about breathing on the Mesa, 15:3516 (R;US)
MTX [Microwave Tokamak Experiment] diagnostic and auxiliary systems for confinement, transport, and plasma physics studies, 15:4352 (R;US)
Neutronics issues for starlight: An inertial confinement fusion reactor concept, 15:4447 (R;US)
NTES [Nuclear Test and Experimental Sciences Program] laser facility for physics experiments Building 391 High Bay Option, 15:4442 (R;US)
Optically based potassium sensor, 15:3372 (R;US)
PCP [Parallel C Preprocessor]: A parallel extension of C that is 99% fat free: Revision 1, 15:4531 (R;US)
Practical aspects of a 2-D edge-plasma model, 15:4450 (R;US)
Prospects for a soft x-ray FEL powered by a relativistic-klystron high-gradient accelerator (RK-HGA), 15:3167 (R;US)
Radiation damage and its influence on source requirements for high resolution x-ray holography, 15:3680 (R;US)
Relativistic cross sections for excitation of highly charged ions to specific magnetic sublevels by an electron beam, 15:3896 (R;US)
Relativistic distorted wave collision strengths and oscillator strengths for the 85 Li-like ions with $8 \leq Z \leq 92$, 15:3897 (R;US)
Relativistic extension of the electromagnetic direct implicit PIC algorithm, 15:4357 (R;US)
Results from heavy-ion bombardments of ^{254}Es, 15:4122 (R;US)
Safety evaluation report for Galileo: Volume 1, 15:2650 (R;US)
SBS [stimulated Brillouin scattering] pulse distortion in multimode optical fibers: Preliminary results, 15:4451 (R;US)
Structure of niobium carbides, 15:2934 (TJ;US)
Studies of polymer foam morphology with FIR [far-infrared radiation] laser scattering, 15:2987 (R;US)
The coupling of stimulated Raman and Brillouin scattering in a plasma, 15:4353 (R;US)
The degradation of natural resources in the Soviet Union, 15:3593 (R;US)
The EQ3/6 software package for geochemical modeling: Current status, 15:2238 (R;US)
The MTX [Microwave Tokamak Experiment] data acquisition system, 15:4358 (R;US)
Theory for high gain, high power free electron lasers: Final report, 15:3166 (R;US)
Time-dependent free convection in low Prandtl number fluids, 15:3207 (R;US)
UC accelerator mass spectrometry 1: Proceedings, 15:3364 (R;US)
Wall ablation, gas dynamics, and the history of wall stresses in ICF target chambers, 15:4448 (R;US)

Lehigh Univ., Bethlehem, PA (USA). Dept. of Chemistry
Kinetics of coal conversion to soluble products: January 1, 1989–June 30, 1989, 15:2019 (R;US)
Kinetics of coal conversion to soluble products: Quarterly report, July 1, 1989–September 30, 1989, 15:2020 (R;US)

Liburdi Engineering Ltd., Hamilton, ON (Canada)
Gas turbine blade life assessment and repair guide: Final report, 15:2414 (R;US)

Lightwave Electronics Corp., Mountain View, CA (USA)
Efficient nonlinear conversion of laser-diode-pumped miniature solid-state laser sources. Final report, 1 May 1986-30 April 1989, 15:3144 (R;US)

Linfield Coll., McMinnville, OR (USA). Research Inst.
High-power-density prime power systems: A literature search and analysis, 15:2581 (R;US)

Linkoeping Univ. (Sweden). Dept. of Mechanical Engineering
Industrial load management at Vaargaarda, 15:2641 (R;SE;In Swedish)
MINTOP industrial load management system, 15:2637 (R;SE;In Swedish)
Some heat transfer problems with phase change processes. Numerical and experimental analysis, 15:3191 (R;SE)

Lockheed Engineering and Sciences Co., Inc., Las Vegas, NV (USA)
Performance testing of Method 1312. QA (quality assurance) support for RCRA (Resource Conservation and Recovery Act) testing: Project report, 15:3583 (R;US)

Lodestar Research Corp., Boulder, CO (USA)
Fundamental studies of fusion plasmas: Annual performance report, 15:4307 (R;US)

Los Alamos National Lab., NM (USA)
A computer study of source-detector geometries proposed for the induced-emission tomography of transuranic elements, 15:3353 (R;US)
A cost effective battery bank for I^2t testing and evaluation of electrical switchgear, 15:4432 (R;US)
A high-speed beam of lithium droplets for collecting diverted energy and particles in ITER [International Thermonuclear Experimental Reactor], 15:4430 (R;US)
Analyses of transport in the upper soil layer and interpretation of caisson experiments, 15:2202 (R;US)
Analysis of caisson transport experiments by travel time approach, 15:2201 (R;US)
Analysis of physical training of security inspectors at Los Alamos National Laboratory: A preliminary report, 15:4487 (R;US)
Attempted use of zinc in vivo to protect against nitrogen mustard toxicity in tumor-free and in L1210 leukemia-bearing $B6D2F_1$ mice, 15:3764 (R;US)
Calculation of the production cross sections of high-spin isomeric states in hafnium, 15:4429 (R;US)
Compact rf-linac free-electron lasers, 15:3158 (R;US)
Cross sections and analyzing powers of $^{15}N(p,n)^{15}O$ at 200 MeV and 494 MeV, 15:4079 (R;US)
Design and performance of future KrF laser-fusion facilities, 15:4437 (R;US)
Fiber optic control and diagnostic family of hardwares for the Confinement Physics Research Facility (CPRF) toroidal field and dc interrupter systems, 15:4433 (R;US)
Fusion burn dynamics in dense Z-pinches (DZP), 15:4342 (R;US)
Hamiltonian chaos in a nonlinear polarized optical beam, 15:4285 (R;US)
High-field pulsed microwigglers, 15:3157 (R;US)
INEX [integrated numerical experiment] simulations of the Los Alamos HIBAF [high-brightness accelerator free-electron laser] free-electron laser MOPA [master oscillator power amplifier] experiment, 15:3298 (R;US)
Interpretation of recent LAMPF results on D T MU formation, 15:4073 (R;US)
Lasing on the third harmonic, 15:3156 (R;US)
Los Alamos Science: AIDS research, 15:3676 (R;US)
Magnetic ordering in $(Y_{1-x}Pr_x)Ba_2Cu_3O_7$ as evidenced by muon spin relaxation, 15:4256 (R;US)
Magnetic separation as a plutonium residue enrichment process, 15:2203 (R;US)
MCNP [Monte Carlo Neutron Photon] capabilities for nuclear well logging calculations, 15:3378 (R;US)
Measurements of plutonium residues from recovery processes, 15:2246 (R;US)
Microstructures of Y123 films on $SrTiO_3$, $LaGaO_3$ and $LaAlO_3$, 15:2922 (R;US)
Microwave characterization of high-temperature superconductors, 15:2921 (R;US)
Mixing of gases in large volumes by forced injection, 15:3155 (R;US)
Neutrino mass: Recent results, 15:3959 (R;US)
Optical design and performance of an XUV FEL [free-electron laser] oscillator, 15:3159 (R;US)
Optimization of the testing volumes with respect to neutron flux levels in the two-target high flux D-Li neutron source for the international fusion materials irradiation facility, 15:4435 (R;US)
Performance of the 10kV, 100-kA pulsed-power modules for the FRX-C magnetic compression experiment, 15:4428 (R;US)
Physics with ultra-low energy antiprotons, 15:4044 (R;US)
Pion induced double-charge exchange above the resonance, 15:4160 (R;US)
Possible FERMI liquid behavior of 5f electrons in UPt_3 at $T \gg T_K$, 15:4232 (R;US)
Preliminary integrated calculation of radionuclide cation and anion transport at Yucca Mountain using a geochemical model, 15:2204 (R;US)
Progress at LAMPF: Progress report, January–December 1988, 15:3946 (R;US)
Quality assurance and quality control for the compact physics research facility (CPRF) and ZTH experiment, 15:4431 (R;US)
Quality-assurance plan for the Basic Environmental Compliance and Monitoring Program (BECAMP), 15:3744 (R;US)
Report from the workshop on computing directions and options for data acquisition and analysis at LAMPF [Los Alamos Meson Physics Facility], 15:3297 (R;US)
Rf superconductivity research and development at Los Alamos National Laboratory, 15:3128 (R;US)
Strongly correlated quasi-one-dimensional bands: Ground states, optical absorption, and phonons, 15:4231 (R;US)
Symplectic numerical integration of Hamiltonian systems, 15:4286 (R;US)
Testing of a 50 kA, 50 kV current interrupter with I^2t preheating and long recovery voltage, 15:4436 (R;US)
The continuing saga of alpha CAM [continuous air monitor] development at Los Alamos, 15:3482 (R;US)
The design and performance of the FNAL high-energy polarized beam facility, 15:3271 (R;US)

Inland wetlands legislation and management. January 1970-September 1989 (Citations from the NTIS data base). Report for January 1970-September 1989, 15:3592 (R;US)
Lightning, surge, and transient protection. December 1982-September 1989 (Citations from the NTIS data base). Report for December 1982-September 1989, 15:2433 (R;US)
Lithium batteries. October 1987-September 1989 (Citations from the COMPENDEX data base). Report for October 1987-September 1989, 15:2580 (R;US)
Lubricants and greases: Properties and evaluation. January 1973-April 1988 (Citations from Fluidex data base). Report for January 1973-April 1988, 15:3135 (R;US)
Lubricants and greases: Properties and evaluation. May 1988-September 1989 (Citations from Fluidex data base). Report for May 1988-September 1989, 15:3136 (R;US)
Lubrication for high and extreme pressures. January 1974-September 1989 (Citations from Fluidex data base). Report for January 1974-September 1989, 15:3218 (R;US)
Lubrication for high and extreme pressures. January 1971-September 1989 (Citations from the US Patent data base). Report for January 1971-September 1989, 15:3219 (R;US)
Membrane gas separation. January 1970-September 1989 (Citations from the NTIS data base). Report for January 1970-September 1989, 15:3065 (R;US)
National Institute for Occupational Safety and Health (NIOSH): Health Hazard Evaluation Reports. January 1987-September 1989 (Citations from the NTIS data base). Report for January 1987-September 1989, 15:3685 (R;US)
Nuclear power plant decommissioning. January 1972-September 1989 (Citations from the NTIS data base). Report for January 1972-September 1989, 15:2469 (R;US)
Nuclear reactor accidents: Chernobyl, TMI (Three Mile Island), and Windscale. January 1974-September 1989 (Citations from Pollution Abstracts). Report for January 1974-September 1989, 15:2554 (R;US)
Oil-spill removal techniques and equipment. January 1973-September 1989 (Citations from Fluidex data base). Report for January 1973-September 1989, 15:2133 (R;US)
Plastics and elastomers: Radiation crosslinking. April 1986-September 1989 (Citations from the Rubber and Plastics Research Association data base). Report for April 1986-September 1989, 15:2981 (R;US)
Pulping effluents: Biological treatment. January 1976-September 1989 (Citations from the Paper and Board, Printing, and Packaging Industries Research Associations data base). Report for January 1976-September 1989, 15:2752 (R;US)
Radioactive waste storage sites: Reclamation and remedial action. January 1970-July 1989 (Citations from the NTIS data base). Report for January 1970-July 1989, 15:2221 (R;US)
Semiconductor gas sensors. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:3370 (R;US)
Sialon ceramics. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:2933 (R;US)
Sol-gel processes. January 1970-September 1989 (Citations from the NTIS data base). Report for January 1970-September 1989, 15:2222 (R;US)
Thermal energy storage. July 1987-September 1989 (Citations from the NTIS data base). Report for July 1987-September 1989, 15:2566 (R;US)
Toxicity: Polymeric materials in food-contact applications. January 1977-September 1989 (Citations from the Rubber and Plastics Research Association data base). Report for January 1977-September 1989, 15:3789 (R;US)
Tungsten and tungsten-alloy powder metallurgy: Powder production and applications-excluding lamps. November 1971-July 1989 (Citations from the US Patent data base). Report for November 1971-July 1989, 15:2847 (R;US)

Wastepaper recycling. January 1976-September 1989 (Citations from the Paper and Board, Printing, and Packaging Industries Research Associations data base). Report for January 1976-September 1989, 15:2751 (R;US)

Wastewater treatment: Chemical industry. January 1970-September 1989 (Citations from Pollution Abstracts). Report for January 1970-September 1989, 15:3563 (R;US)

Water treatment: Air stripping. December 1981-July 1989 (Citations from the Selected Water Resources Abstracts data base). Report for December 1981-July 1989, 15:3562 (R;US)

National Wetlands Research Center, Slidell, LA (USA)

The ecology of riparian habitats of the southern California coastal region: A community profile, 15:3538 (R;US)

Naval Medical Research Inst., Bethesda, MD (USA)

Robust spatial calibration of a planar positron camera. Final report, October 1985-September 1987, 15:3614 (R;US)

Naval Postgraduate School, Monterey, CA (USA)

Analysis of forest-fire smoke using satellite imagery. Master's thesis, 15:3384 (R;US)

Origin of the universe from Quantum Chaos: An introduction to current ideas (professor John Dyer Memorial Lecture). Technical report, 15:3820 (R;US)

Naval Research Lab., Washington, DC (USA)

Eye/sensor protection against laser irradiation: Organic nonlinear optical materials. Final report, April-December 1988, 15:3798 (R;US)

High-efficiency fast-neutron detector. Memorandum report, 15:3329 (R;US)

Numerical simulation of the compressible Orszag-Tang vortex. Interim report, June 1988-February 1989, 15:3935 (R;US)

Naval Surface Warfare Center, Silver Spring, MD (USA)

Battery actuation of NITINOL at sub-zero temperatures, 15:2572 (R;US)

Nebraska Univ., Lincoln, NE (USA). Dept. of Physics

Theory of RBE: Annual progress report, January 1, 1989–December 31, 1989, 15:3617 (R;US)

Netherlands Energy Research Foundation, Petten (Netherlands)

Experiences with the application of a solar boiler on a camping-site in Sint Maartenszee, Netherlands, 15:2333 (R;NL;In (In Dutch))

Mineral matter transformations and slagging in a semi-industrial furnace, 15:2100 (R;NL)

Review on mineral matter transformations and slagging in pulverized coal combustion, 15:2099 (R;NL)

Nevada Univ., Las Vegas, NV (USA). Environmental Research Center

Bench-scale fixation of soils from the Tacoma Tar Pits Superfund Site. Final report, 15:3521 (R;US)

New Mexico Energy and Minerals Dept., Santa Fe, NM (USA)

Developmental state programm for institutional conservation: Executive summary: Final technical report, October 1, 1986–September 30, 1988, 15:2621 (R;US)

New Mexico Inst. of Mining and Technology, Socorro, NM (USA). New Mexico Petroleum Recovery Research Center

Rock matrix and fracture analysis of flow in western tight gas sands: 1988 annual report (Phase 4). Report for 30 December 1987-31 March 1989, 15:2146 (R;US)

New Mexico State Univ., Las Cruces, NM (USA)

Soil physical properties at the Las Cruces trench site, 15:2218 (R;US)

New Mexico Univ., Albuquerque, NM (USA). Dept. of Chemistry

Electrochemical characterization and derivatization of coal: Final technical report, September 15, 1986–September 14, 1989, 15:2059 (R;US)

New York Univ., NY (USA)

Advanced toroidal theory: Progress report, 15:4306 (R;US)

Interactions of carcinogens with DNA [deoxyribonucleic acid]: Final progress report, July 1, 1987–July 31, 1989, 15:3760 (R;US)

New York Univ., NY (USA). Courant Inst. of Mathematical Sciences

Uncertainties associated with extrapolating L mode energy confinement to ITER and CIT, 15:4305 (R;US)

New York Univ., NY (USA). Dept. of Environmental Medicine

Cancer risk for radon exposure in a polluted environment: Progress report, March 1, 1989–February 28, 1990, 15:3413 (R;US)

Lung cancer risk from inhalation of radon and other pollutants in rats: Comprehensive progress report, March 1, 1987–February 28, 1990, 15:3412 (R;US)

Niedersaechsische Forstliche Versuchsanstalt, Goettingen (Germany, F.R.)

Effects of acid and lime on mesofauna of forest soils in the laboratory and in the field. Final report, 15:3762 (R;DE;In German)

Niedersaechsisches Inst. fuer Radiooekologie (Germany, F.R.)

HTO deposition through gas exchange between soil and atmosphere, 15:3507 (R;DE;In German)

Nippon Steel Corp., Sagamihara, Kanagawa (Japan)

Effects of environmental variables on fatigue crack growth rate in steel immersed in seawater, 15:2826 (R;JP)

Nordvestjysk Folkecenter for Vedvarende Energi, Hurup (Denmark)

Development of a container for pumps, measuring equipment and motorgenerators in connection with a bioconversion energy system, 15:2297 (R;DK;In Danish)

Norfolk State Univ., VA (USA)

Research, development, training, and education using the Ada programming language. Final report, 1 September 1987-31 May 1989, 15:4503 (R;US)

Norsk Inst. for Luftforskning, Lillestroem (Norway)

NO_X emissions from stationary sources in eastern Europe, 15:3421 (R;NO)

North American Electric Reliability Council, Princeton, NJ (USA)

1989 reliability assessment: The future of bulk electric system reliability in North America, 1989–1998, 15:2639 (R;US)

North Carolina State Univ., Raleigh, NC (USA)

Effects of acid deposition on painted wood substrates, 15:3432 (R;US)

North Dakota Univ., Grand Forks, ND (USA). Dept. of Physics

Role of porosity in supercritical fluid extraction of coal: Final technical report, 15:2060 (R;US)

North Dakota Univ., Grand Forks, ND (USA). Energy and Mineral Research Center

Test plan for valveless ash removal from pressurized fluid bed combustion systems, 15:2095 (R;US)

NSI Technology Services Corp., Corvallis, OR (USA)

Geographic information system documentation of watershed data for Direct/Delayed Response Project. Southern Blue Ridge Province data base, 15:3553 (R;US)

Geographic information system documentation of watershed data for Direct/Delayed Response Project. Northeast data base, 15:3555 (R;US)

Nuclear Energy Agency, 75 - Paris (France)

Data for decay Heat Predictions Proceedings of a specialists' meeting, 15:4121 (R;FR)

Nuclear Energy Agency, 75 - Paris (France). Nuclear Data Committee

Annual progress report on nuclear data 1987, 15:4193 (R;FR)

Nuclear Regulatory Commission, Washington, DC (USA)

NRC regulatory information conference: Proceedings: Volume 1, 15:2538 (R;US)

Workshop on cement stabilization of low-level radioactive waste: Proceedings, 15:2214 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Computer and Telecommunications Services

Population dose commitments due to radioactive releases from nuclear power plant sites in 1986, 15:2539 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering

Evaluation of hypotheses for the cause of the 1886 Charleston earthquake: Final report, 15:3813 (R;US)

Near-surface neotectonic deformation associated with seismicity in the northeastern United States, 15:3814 (R;US)

Service life of concrete, 15:2219 (R;US)

Soil physical properties at the Las Cruces trench site, 15:2218 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering and Systems Technology

PLOTnFIT: A BASIC program for data plotting and curve fitting, 15:4522 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Freedom of Information and Publications Services
NRC Regulatory Agenda: Quarterly report, July–September 1989, 15:2468 (R;US)
Title list of documents made publicly available, July 1–31, 1989, 15:2466 (R;US)
Title list of documents made publicly available, August 1–31, 1989: Volume 2, No. 8, 15:2467 (R;US)

FLAC (Fast Lagrangian Analysis of Continua) Version 2.20: Software summary: Volume 1, 15:2215 (R;US)
FLAC (Fast Lagrangian Analysis of Continua), Version 2.20: User's manual, 15:2216 (R;US)
FLAC (Fast Lagrangian Analysis of Continua) Version 2.20: Verification, example and benchmark problems: Volume 3, 15:2217 (R;US)
UDEC (Universal Distinct Element Code) version ICG1.5: User's manual: Volume 2, 15:3816 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Low-Level Waste Management and Decommissioning
Standard Review Plan for a petition for rulemaking on radioactive waste streams below regulatory concern: Expedited review in accordance with Appendix B to 10 CFR, Part 2: Data report for comment, 15:2213 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Operational Assessment
Closeout of IE Bulletin 86-02: Static "O" ring differential pressure switches, 15:2545 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Operational Events Assessment
Closeout of IE Bulletin 86-01: Minimum flow logic problems that could disable residual heat removal pumps: Minimum flow logic problems that could disable residual heat removal pumps, 15:2544 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Regulatory Applications
Radiation-related impacts for nuclear plant physical modifications: Final report, 15:2543 (R;US)
Summary of advanced LMR [Liquid Metal Reactor] evaluations: PRISM [Power Reactor Inherently Safe Module] and SAFR [Sodium Advanced Fast Reactor], 15:2546 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Safeguards and Transportation
Directory of certificates of compliance for radioactive materials packages: Report of NRC approved packages: Volume 1, Revision 12, 15:2173 (R;US)
Directory of certificates of compliance for radioactive materials packages: Certificates of compliance: Volume 2, Revision 12, 15:2174 (R;US)
Directory of certificates of compliance for radioactive materials packages: Report of NRC approved quality assurance programs for radioactive materials packages: Volume 3: Revision 9, 15:3132 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Safety Issue Resolution
An overview of BWR Mark-I containment venting risk implications, 15:2542 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Systems Research
A standard problem for HECTR-MAAP [Hydrogen Event: Containment Transient Responses-Modular Accident Analysis Program] comparison: In-cavity oxidation, 15:2541 (R;US)
Human Factors Regulatory Research Program Plan, FY 1989–FY 1992: Volume 1, 15:2537 (R;US)
Multiloop integral system test (MIST): Test Group 32, SBLOCA [small-break loss-of-coolant accidents] with altered leak and HPI [high-pressure injection] configurations: Final report: Volume 4, 15:2547 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)
Multiloop integral system test (MIST): Test Group 35, Noncondensibles and venting: Final report: Volume 7, 15:2549 (R;US)
Multiloop integral system test (MIST): Test Group 36, Pump operation: Final report: Volume 8, 15:2550 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Information Resources Management
Radioactive materials released from nuclear power plants: Annual report, 1987, 15:2540 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
Final Environmental Statement related to the operation of Comanche Peak Steam Electric Station, Units 1 and 2 (Docket Nos. 50-445 and 50-446): Supplement, 15:3594 (R;US)
Safety evaluation report on Tennessee Valley Authority: Browns Ferry nuclear performance plan: Browns Ferry Unit 2 restart: Volume 3, Supplement 1, 15:2536 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
Assessment of RELAP5/MOD2, Cycle 36.04 against FIX-II split break experiment No. 3051, 15:2552 (R;US)
Review of LOFT [Loss-of-Fluid Test] large break experiments: OECD LOFT project, 15:2551 (R;US)

Nuklear-Chemie und -Metallurgie G.m.b.H. (NUKEM), Hanau (Germany, F.R.)
Corrosion database for the nuclear fuel cycle. Sub-project no. 1. Final report, 15:4544 (R;DE;In German)

Regulatory requirements for groundwater monitoring networks at hazardous waste sites, 15:3501 (R;US)
Remediation of DOE hazardous waste sites: Planning and integration requirements, 15:2243 (R;US)
Slurry-fed ceramic melter–A broadly accepted system to vitrify high-level waste, 15:2226 (R;US)
Solid oxide fuel cells electrodes based on IN_2O_3-$PRrO_{1.83}$-ZrO_2, 15:2659 (R;US)
Strontium-90 in Canada goose eggshells: Non-fatal monitoring for contamination in wildlife, 15:3515 (R;US)
Summary of commercial conservation programs environmental issues and program consistency, 15:3517 (R;US)
Summary of residential environmental issues and program consistency, 15:2698 (R;US)
Survey of Columbia River Basin streams for giant Columbia River spire snail Fluminicola columbiana and great Columbia River limpet Fisherola nuttalli, 15:3541 (R;US)
The determination of the penetrating radiation dose at Hanford, 15:4195 (R;US)
The Hanford Environmental Dose Reconstruction Project: Overview, 15:3749 (R;US)
The identification of terrain-induced circulations using principal components, 15:2230 (R;US)
The microdosimetry of radon decay products in the respiratory tract, 15:3748 (R;US)
Trends in radionuclide concentrations for wildlife and food products near Hanford for the period 1971 through 1988, 15:2232 (R;US)

Use of the Multimedia Environmental Pollutant Assessment System (MEPAS) for large- and small-scale applications, 15:2229 (R;US)

Pacific Power and Light Co., Portland, OR (USA)
The Hood River Story: How a conservation project was implemented: Volume 1, Final report, 15:2670 (R;US)

Parameter, Inc., Elm Grove, WI (USA)
Closeout of IE Bulletin 86-01: Minimum flow logic problems that could disable residual heat removal pumps: Minimum flow logic problems that could disable residual heat removal pumps, 15:2544 (R;US)
Closeout of IE Bulletin 86-02: Static "O" ring differential pressure switches, 15:2545 (R;US)

Parana Univ., Curitiba, PR (Brazil). Dept. de Fisica
Determination of X-ray anomalous scattering in silicon, 15:4180 (R;BR;In Portuguese)

Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire
High density matter state equation and phase transitions, 15:4003 (R;FR;In French)

Paul Scherrer Inst. (PSI), Wuerenlingen (Switzerland)
Review of LOFT [Loss-of-Fluid Test] large break experiments: OECD LOFT project, 15:2551 (R;US)

Pechan (E.H.) and Associates, Inc., Springfield, VA (USA)
1988 interorganizational workshop on future utility SO_2 emissions, 15:2078 (R;US)

PEI Associates, Inc., Cincinnati, OH (USA)
BACT/LAER (Best Available Control Technology/Lowest Achievable Emission Rate) Clearinghouse: A compilation of control-technology determinations. Fourth supplement to 1985 edition. Summary tables and appendices A-H, 15:3491 (R;US)
Evaluation of airborne-asbestos concentrations before and during an O and M (operations and maintenance) activity: A case study, 15:3451 (R;US)

Pennsylvania State Univ., University Park, PA (USA)
Participation in the MAP3S precipitation chemistry network: Progress report, August 1, 1988–July 31, 1989, 15:3410 (R;US)
Transition metal catalyzed transformations of unsaturated molecules, 15:3074 (R;US)

Pennsylvania State Univ., University Park, PA (USA). Applied Research Lab.
Physics and materials science of high-temperature superconductors. Final report, 15:3121 (R;US)

Pennsylvania State Univ., University Park, PA (USA). Coll. of Earth and Mineral Sciences
Inhibition of retrogressive reactions in coal/petroleum coprocessing: Quarterly technical progress report, June 1, 1989–August 31, 1989, 15:2025 (R;US)

Pennsylvania State Univ., University Park, PA (USA). Dept. of Astronomy
Relativistic distorted wave collision strengths and oscillator strengths for the 85 Li-like ions with $8 \leq Z \leq 92$, 15:3897 (R;US)

Pennsylvania State Univ., University Park, PA (USA). Dept. of Geosciences
Near-surface neotectonic deformation associated with seismicity in the northeastern United States, 15:3814 (R;US)

Pennsylvania State Univ., University Park, PA (USA). Dept. of Physics
Acoustic studies of new materials: Quasi crystals, low-loss glasses, and high tc superconductors. Annual summary report, 1 October 1988-30 September 1989, 15:2901 (R;US)

Pennsylvania State Univ., University Park, PA (USA). Energy and Fuels Research Center
Enhanced coal liquefaction by low-severity catalytic reactions: Final report, 15:2026 (R;US)

Pennsylvania Univ., Philadelphia, PA (USA)
Synthesis and properties of new preceramic materials: Research progress report, December 1, 1988–November 30, 1989, 15:2970 (R;US)

Pennsylvania Univ., Philadelphia, PA (USA). Dept. of Physics
Status of BNL E791: Study of very rare K_L^0 decays, 15:3984 (R;US)

Pinnacle Research Inst., Cupertino, CA (USA)
The secondary slurry-zinc/air battery: Final report, 15:2579 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Chemical and Petroleum Engineering
Coal surface control for advanced physical fine coal cleaning technologies: Quarterly report, May 1–July 31, 1989, 15:2015 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Chemistry
Characterization of oxidized coal surfaces: Final report, 15:2061 (R;US)

Pittsburgh Univ., PA (USA). Pymatuning Lab. of Ecology
Pathogenic regulation of running water macroinvertebrates: Progress report, January 1, 1989–October 15, 1989, 15:3539 (R;US)

Pittsburgh Univ., PA (USA). Univ. Center for Social and Urban Research
Volunteering for emergency preparedness. Final report, March 1988-March 1989, 15:4550 (R;US)

Pontificia Univ. Catolica do Rio de Janeiro, RJ (Brazil). Dept. de Engenharia Mecanica
Thermohydraulic analysis of smooth and finned annular ducts, 15:3189 (R;BR;In Portuguese)

Pontificia Univ. Catolica do Rio de Janeiro, RJ (Brazil). Dept. de Quimica
Development of sequential analytical method for the determination of U-238, U-234, Th-232, Th-230, Th-228, Ra-226 and Ra-228 and its application in mineral waters, 15:3046 (R;BR;In Portuguese)
Geochemical of the sodic-uranium metasomatic mineralization from Espinhas (PB)-Brazil, 15:2160 (R;BR;In Portuguese)

Portland State Univ., OR (USA). Center for Transit Research and Management Development
Understanding the dynamics of innovation in urban transit. Final report on Phase 2, 15:2714 (R;US)

Power Reactor and Nuclear Fuel Development Corp., Tokyo (Japan)
Natural analogue study of volcanic glass. A case study of basaltic glasses in pyroclastic fall deposits of Fuji volcano, Japan, 15:3804 (R;JP)
Plutonium diffusivity in compacted bentonite, 15:2223 (R;JP)
Static leaching of actinides and fission products from fully radioactive waste glass of HLLW generated in Tokai reprocessing plant, 15:2224 (R;JP)

Princeton Univ., NJ (USA). Plasma Physics Lab.
Energy confinement time and electron density profile shape in TFTR [Tokamak Fusion Test Reactor], 15:4350 (R;US)
Study of electron density and pressure profile behavior in a tokamak plasma, 15:4351 (R;US)

PTI Environmental Services, Bellevue, WA (USA)
Comparison of bioassays for assessing sediment toxicity in Puget Sound. (Appendices included). Report for 1988-1989 (Final), 15:3561 (R;US)

Purdue Research Foundation, Lafayette, IN (USA)
[Gamma scattering in condensed matter with high intensity Moessbauer radiation]: Progress report, 15:4212 (R;US)

Q

Quaid-I-Azam Univ., Islamabad (Pakistan)
Resistivity measurements of superconducting materials. Master's thesis, 15:2932 (R;PK)

R

Raastofforvaltningen for Groenland, Copenhagen (Denmark)
Report for the period 1 July 1988–30 June 1989 from the Mineral Resources Administration in Greenland, 15:2600 (R;DK;In Danish)

Radian Corp., Austin, TX (USA)
Baseline testing of the Stretford Process on the GRI 120-liter bench-scale liquid redox sulfur recovery unit. Topical report, 15:2143 (R;US)

Radian Corp., Research Triangle Park, NC (USA)
Best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatic hydrocarbons F024. Final report, 15:2772 (R;US)

Best demonstrated available technology (BDAT) background document for wastes from the production of 1,1,1-trichloroethane K028, K029, K095, and K096. Final report, 15:2773 (R;US)

Radian Corp., Sacramento, CA (USA)
Installation-Restoration Program Stage 3. McClellan AFB, California. Remedial investigation/feasibility study ground-water sampling and analysis program, January through March 1989 data summary. Final report, January-March 1989, 15:3542 (R;US)

Railway Technical Research Inst., Kokubunji, Tokyo (Japan)
Fuel-injected system for diesel engines with injection pressure control, 15:2787 (R;JP)

Rensselaer Polytechnic Inst., Troy, NY (USA)
Evolution of reaction center in an explosive material, 15:3106 (R;US)

Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Materials Engineering
Exploratory study of niobium, titanium, zirconium, and tantalum aluminides. Final report, 1 March 1988-31 May 1989, 15:2807 (R;US)
Rhenium alloying of tungsten heavy alloys, 15:2808 (R;US)

Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Mechanical Engineering, Aeronautical Engineering and Mechanics
Continuous high-temperature lubrication of ceramics by carbon generated catalytically, 15:2900 (R;US)

Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Nuclear Engineering and Engineering Physics
The TITAN Reversed-Field Pinch fusion reactor study: Collection of papers, 15:4443 (R;US)

Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA)
Light sensitivity of .13 mm thick LiF-teflon thermoluminesence dosimeters, 15:4185 (R;US)

Rikkyo Univ., Yokosuka, Kanagawa (Japan). Inst. for Atomic Energy
Proceedings of Institute for Atomic Energy, Rikkyo University (IAERU) seminar-4, 15:4486 (R;JP)

Risk and Industrial Safety Consultants, Inc., Des Plaines, IL (USA)
Dike insulation for LNG (liquefied natural gas) vapor mitigation. Topical report, September 1987-December 1988, 15:2154 (R;US)

Risoe National Lab., Roskilde (Denmark)
Calculation of air pollution dispersion over a complex terrain with special emphasis on dimensioning of chimney stacks, 15:3420 (R;DK;In Danish)
CROSS SECTION. Program description and user manual, 15:3137 (R;DK)
Development of a data-processing model for steady turbulent 3-D gas particle flow, 15:3110 (R;DK;In Danish, English)
Flywheel for vehicles, 15:2562 (R;DK;In Danish)
Generation of fatigue loads on Windane 40/2, 15:2382 (R;DK;In Danish)
HERMES-model for Denmark, 15:4525 (R;DK)
Meteorology and Wind Energy Department annual progress report 1 January - 31 December 1988, 15:2361 (R;DK)
Simulation of the Italian energy system with the DESS-model, 15:2626 (R;DK)

Rochester Univ., NY (USA). Dept. of Chemical Engineering
Pore structure and reactivity changes in hot coal gas desulfurization sorbents: Technical progress report, July–September 1989, 15:2067 (R;US)

Rochester Univ., NY (USA). Inst. of Optics
Modulation mixing in a multimode dye laser, 15:3153 (R;US)

Rockwell International Corp., Canoga Park, CA (USA). Energy Technology Engineering Center
The Gevaltig: An inertial fusion powered manned spacecraft design for outer solar system missions, 15:2710 (R;US)

Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant
Abstract for Zeiss editor presentation, 15:4524 (R;US)
Development of a hazardous materials dispersion modeling capability with application to ambient air monitoring network design: Project plan, 15:3465 (R;US)
Hydrogen permeability coefficient determinations for used waste drum liners, 15:2985 (R;US)

Rockwell International Corp., Thousand Oaks, CA (USA). Science Center
Growth of tungsten bronze family crystals. Final technical report, 6 May 1985-30 November 1988, 15:2809 (R;US)

Rogers and Associates Engineering Corp., Salt Lake City, UT (USA)
Below Regulatory Concern (BRC) Owners Group: A comparison of the EPA generic cost-benefit analysis with an industry-specific analysis: Final report, 15:2195 (R;US)

Ruhrkohle A.G., Essen (Germany, F.R.)
Shaping of working conditions for handicapped persons according to results of human-engineering research in hardcoal mining - main phase. Final report, 15:2103 (R;DE;In German)

Rutgers–the State Univ., New Brunswick, NJ (USA)
Selection with minimal bias, of an experimental control from natural wetland environments. Technical report (Final), 15:3576 (R;US)

Rutgers–the State Univ., New Brunswick, NJ (USA). Center for Coastal and Environmental Studies
Influence of discharge and urbanization on the concentration, speciation, and bioavailability of trace metals in the Raritan River, New Jersey. Final report, 15:3551 (R;US)

Rutgers–the State Univ., Piscataway, NJ (USA). Dept. of Chemical and Biochemical Engineering
Conventional research house: Cooling characterization test results. Topical report, June-September 1987, 15:2697 (R;US)

Rutherford Appleton Lab., Chilton (UK)
90-GeV Higgs boson in supersymmetric models, 15:4024 (R;GB)
Half-string oscillator approach to string field theory, 15:4045 (R;GB)
Light kaonic and antiprotonic atoms, 15:3893 (R;GB)
Particle physics experiments 1988, 15:3961 (R;GB)
Towards a 'pointless' generalisation of Yang-Mills theory, 15:4046 (R;GB)

S

San Francisco State Univ., CA (USA)
Binding of adenosine diphosphoribosyltransferase to the termini and internal regions of linear DNAs (deoxyribonucleic acids), 15:3597 (R;US)

Sandia National Labs., Albuquerque, NM (USA)
3D thermal stress analysis of WIPP [Waste Isolation Pilot Plant] Room T RH TRU [Remote Handled Transuranic] experiments, 15:2235 (R;US)
A standard problem for HECTR-MAAP [Hydrogen Event: Containment Transient Responses-Modular Accident Analysis Program] comparison: In-cavity oxidation, 15:2541 (R;US)
An experimental investigation of wall-interference effects for parachutes in closed wind tunnels, 15:3139 (R;US)
ANEOS [analytic equation of state package] models for shock compression of saturated limestone: Applications to ground shock calculations, 15:3081 (R;US)
Approach to first principles model prediction of measured WIPP [Waste Isolation Pilot Plant] in situ room closure in salt, 15:2233 (R;US)
Autonomous land navigation in a structured environment, 15:3138 (R;US)
Cure analysis of printed-circuit boards containing reactive adhesive layers, 15:3226 (R;US)
Detection of a chirping electromagnetic signal, 15:4288 (R;US)
Energy technologies at Sandia National Laboratories: Past, Present, Future, 15:2612 (R;US)
Fast transit gas- and condensed-phase chemistry of energetic materials, 15:3381 (R;US)
High-efficiency silicon concentrator solar cells for use with prismatic covers, 15:2302 (R;US)
In-situ ion beam measurements of deuterium loading in thin foil electrochemical cells, 15:2853 (R;US)
Loss minimization through recombination center identification, 15:2301 (R;US)
Loss-of-coolant accident (LOCA) testing of aged cables for nuclear plant life extension, 15:2476 (R;US)
Magma energy extraction: Annual report for FY88, 15:2360 (R;US)

Microwave coupling phenomenology of pc [printed-circuit] boards, 15:3227 (R;US)
Performance characteristics of a three-stage railgun, 15:3220 (R;US)
Physics guide to CEPXS: A multigroup coupled electron-photon cross-section generating code: Version 1.0, 15:3894 (R;US)
Position of Sandia National Laboratories with respect to product definition standards, 15:4527 (R;US)
Predicting flow through low-permeability, partially saturated, fractured rock: A review of modeling and experimental efforts at Yucca Mountain, 15:2234 (R;US)
RADLAC-II propagation experiments, 15:3895 (R;US)
Reverse Hopkinson bar testing, 15:3389 (R;US)
RLA simulations, 15:3274 (R;US)
Seismic signal modeling of the RSTN and the NORESS/ARCESS data, 15:3815 (R;US)
Shock-wave characterization of energetic booster-rocket propellant WAK-2 and its simulant UGS, 15:2260 (R;US)
Single fluid simulations of plasma openings switch behavior, 15:3308 (R;US)
Summary of RLA [Recirculating Linear Accelerator] beam transport experiments using a 1.5 MV injector, 15:3275 (R;US)
Surface and bulk properties which influence ion-beam hydrogenation of silicon, 15:2852 (R;US)
The Waste Isolation Pilot Plant (WIPP) Seal System Performance Program, 15:2236 (R;US)

Sands (Anne), Mill Valley, CA (USA)
The ecology of riparian habitats of the southern California coastal region: A community profile, 15:3538 (R;US)

Sao Paulo Univ., Sao Carlos, SP (Brazil). Inst. de Fisica e Quimica
Characterization of the emerald of Santa Terezinha de Goias by spectroscopy, fluorescence and X-ray difraction, 15:4226 (R;BR;In Portuguese)

Sao Paulo Univ., SP (Brazil). Faculdade de Medicina
Rapid purification of radiodinated glucagon with Sep-Pak^{R} reversed phase cartridges, 15:3621 (R;BR)

Sao Paulo Univ., SP (Brazil). Inst. de Fisica
Dating of aragonite and dolomite from Devil's cave - SP, by dosimetric thermoluminescent method (DTL) and ESR, 15:3057 (R;BR;In Portuguese)
Decay of ^{57}Ni, 15:4084 (R;BR;In Portuguese)
Fluorescence and optical absorption in spodumene, 15:2971 (R;BR;In Portuguese)
Thermoluminescent of induced calcite by gamma and ultraviolet radiation, 15:4225 (R;BR;In Portuguese)

Sao Paulo Univ., SP (Brazil). Inst. de Quimica
Addition compounds between trifluoromethanessulfonates and N,N-Dimethylacetamide (DMA), 15:3045 (R;BR;In Portuguese)
Analytical use of zide ion. Chemical equilibrium studies and correlates in U(VI)/N_3 and Co(III)/N_3 systems, 15:3047 (R;BR;In Portuguese)
Cholesteric lyomesophases based on sodium N-lauroyl asparte: characterization of new system by nuclear magnetic resonance and polarizing microscopy, 15:3076 (R;BR;In Portuguese)
Spectrophotometric investigation of addition compounds between neodymium (III) and europium (III) perchorates and hexafluorophosphate and cyclic ligants with two oxygen in opposite position, 15:3055 (R;BR;In Portuguese)
Study of niobium corrosion in alkaline medium, 15:2837 (R;BR;In Portuguese)

Science and Engineering Associates, Inc., Albuquerque, NM (USA)
Radiation-related impacts for nuclear plant physical modifications: Final report, 15:2543 (R;US)

Science Applications International Corp., Bellevue, WA (USA)
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Wood-treating industries, 15:2737 (R;US)
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Printing and publishing, 15:2738 (R;US)
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Dry cleaners and commercial laundries, 15:2739 (R;US)
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Analytical laboratories, 15:2740 (R;US)

Science Applications International Corp., McLean, VA (USA)
Development of the advanced utility simulation model. Report for May 1985-September 1988, 15:2430 (R;US)
System software for Soviet computers, 15:4526 (R;US)
United States policy on negative security assurances: A reassessment, 15:2803 (R;US)

Science Applications International Corp., San Diego, CA (USA)
Operation and performance of commercial cool storage systems: Volume 1, 1987 cooling season, 15:2564 (R;US)
Operation and performance of commercial cool storage systems: Volume 2, 1988 cooling season and project summary, 15:2565 (R;US)

SCS Engineers, Inc., Long Beach, CA (USA)
Waste audit study: Automotive paint shops, 15:2744 (R;US)

Selskapet for Industriell og Teknisk Forskning, Trondheim (Norway)
Simulation of energy consumption by taking thermal comfort into account, 15:2701 (R;NO)

Siemens A.G. Unternehmensbereich KWU, Erlangen (Germany, F.R.)
Experimental analysis of the behavior of iodine in the event of hypothetical accidents - iodine partition coefficients (follow-on project). Final report, 15:2555 (R;DE;In German)

Siemens A.G., Erlangen (Germany, F.R.). Unternehmensbereich Medizinische Technik
Design and test of a MR-imager with superconducting magnet. Final report, 15:3624 (R;DE;In German)

Skibsteknisk Laboratorium, Lyngby (Denmark)
Power mesurements on a 99 kW "Smedemoelle" wind turbine, erected at Hasle, Bornholm, 15:2385 (R;DK;In Danish)

Skovteknisk Inst., Copenhagen (Denmark)
Flue gas condensation in stoking system for wood chips, 15:2272 (R;DK;In Danish)

Smithsonian Institution, Cambridge, MA (USA). Smithsonian Astrophysical Observatory
Coronagraph observations and analyses of the ultraviolet solar corona. Semiannual status report, 1 April 1987-31 March 1989, 15:3868 (R;US)

Sociedade Brasileira de Geologia, Sao Paulo, SP (Brazil)
Geology and Geochronology of Abuna-Ariquemes-RO, 15:3044 (R;BR;In Spanish)

Solar Energy Research Inst., Golden, CO (USA)
An initial look at the dynamics of the microscale flow field within a large wind farm in response to variations in the natural inflow, 15:2384 (R;US)
Computer simulation of wind/diesel system operation, 15:2383 (R;US)
Desiccant cooling and dehumidification opportunities for buildings workshop, 15:2700 (R;US)
High-efficiency large-area CdTe modules: Annual subcontract report, 1 July 1988–30 June 1989, 15:2306 (R;US)
Membrane separation processes for liquid hydrocarbons and gases in the petrochemical industry: A technical case study, 15:2118 (R;US)
Research on high-efficiency, single-junction, monolithic, thin-film amorphous silicon solar cells: Phase 3 final subcontract report, February 1, 1986–January 31, 1987, 15:2303 (R;US)
Research on high-efficiency, single-junction, monolithic, thin-film amorphous silicon solar cells: Phase 1, Annual subcontract report, February 1, 1987–January 31, 1988, 15:2304 (R;US)
Research on high-efficiency, single-junction, monolithic, thin-film amorphous silicon solar cells: Phase 2, Semiannual report, February 1, 1988–July 31, 1989, 15:2305 (R;US)
Thin film cadmium telluride, zinc telluride, and mercury zinc telluride solar cells: Annual subcontract report, 1 July 1988–30 June 1989, 15:2307 (R;US)
US polycrystalline thin film solar cells program, 15:2308 (R;US)

Solarex Corp., Newtown, PA (USA). Thin Film Div.
Research on high-efficiency, single-junction, monolithic, thin-film amorphous silicon solar cells: Phase 3 final subcontract report, February 1, 1986–January 31, 1987, 15:2303 (R;US)

Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility
Outlook and perspectives (excited baryons, 1988), 15:3948 (R;US)

Southern Illinois Univ., Carbondale, IL (USA). Coal Extraction and Utilization Research Center
High-sulfur coal research at the SIUC [Southern Illinois University at Carbondale] Coal Technology Laboratory: Quarterly progress report, July 1–September 30, 1989, 15:2058 (R;US)

Southern Methodist Univ., Dallas, TX (USA). Dept. of Computer Science and Engineering
Optimization algorithms for new computer architectures with applications to personnel-assignment models. Annual report (Final), 1 May 1988-30 April 1989, 15:4501 (R;US)

Southern Research Inst., Birmingham, AL (USA)
Characterization and modification of particulate properties to enhance filtration performance: Quarterly technical progress report, December 1988–February 1989, 15:2423 (R;US)
Measurement of condensable vapor contribution to PM10 emissions, 15:2696 (R;US)

Southwest Research Inst., San Antonio, TX (USA)
Coal-fueled diesel systems research: Volume 1, Basic fuel, fuel system, and combustion studies: Final report, 15:2796 (R;US)
Gas turbine blade life assessment and repair guide: Final report, 15:2414 (R;US)
Measurement of on-road vehicle emission factors in the California South Coast Air Basin. Volume 1. Regulated emissions. Final report, 15:2796 (R;US)
Sliding seal materials for low heat rejection engines, 15:2783 (R;US)

Southwest Research Inst., San Antonio, TX (USA). Belvoir Fuels and Lubricants Research Facility
US Marine 3rd Tank Battalion lubrication evaluation under hot ambient temperatures at Twenty-Nine Palms, California. Interim report, April-September 1988, 15:2122 (R;US)

Space Power, Inc., San Jose, CA (USA)
Megawatt class nuclear space power systems (MCNSPS) conceptual design and evaluation report. Volume 2, technologies 1: Reactors, heat transport, integration issues. Final report, 15:2464 (R;US)

SRI International, Menlo Park, CA (USA)
Influence of microstructure and microdamage processes on fracture at high loading rates. Final report, 1 February 1986-30 September 1988, 15:2806 (R;US)
Laser probes of natural gas ignition chemistry. Annual report, January-December 1988, 15:2153 (R;US)
Processing and fabrication of high-temperature oxide superconductors. Annual report, 1 August 1988-30 June 1989, 15:2897 (R;US)
Rewrite Rule Machine project. Final report, 15:4500 (R;US)

SRI International, Menlo Park, CA (USA). Molecular Biology Dept.
Cloning and characterization of the recA gene of Aquaspirillum magnetotacticum, 15:3610 (R;US)
Genetic engineering of single-domain magnetic particles. Progress report, 1 March-15 June 1989, 15:3611 (R;US)

Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic)
Conduct of local dosimetry in X-ray diagnosis, 15:4197 (R;DD;In German)
Experience in the use of the UA-type teaching kit of sealed radioactive sources, 15:4199 (R;DD;In German)
Radiation protection measurements at a UA-type teaching kit of sealed radioactive sources, 15:4198 (R;DD;In German)
State control in the GDR of the handling of unsealed radioactive materials in laboratories of type I to III, 15:4196 (R;DD;In German)

Stadtwerke Muenster G.m.b.H. (Germany, F.R.)
The DESONOX flue gas purification process, 15:2427 (R;DE;In German)

Stanford Linear Accelerator Center, Menlo Park, CA (USA)
A search for single electron production in electron positron annihilation at E = 29 GeV, 15:3964 (R;US)
An adiabatic focuser, 15:3277 (R;US)
B physics at the Z^0 pole, 15:3966 (R;US)
Coherent pair creation from beam-beam interaction, 15:3278 (R;US)
Final focus test beam alignment: A draft proposal, 15:3310 (R;US)
Finding the magnetic center of a quadrupole to high resolution: A draft proposal, 15:3309 (R;US)
Optimizing the average longitudinal phase of the beam in the SLC linac, 15:3276 (R;US)
Proceedings of the tau-charm factory workshop: Study of tau, charm and J/psi physics; development of high luminosity esup +esup minus rings; design of esup +esup minus detectors for tau-charm physics, 15:3962 (R;US)
Rare decays, 15:3965 (R;US)
Recent results on weak decays of charmed mesons from the Mark III experiment, 15:3967 (R;US)
Study of four-lepton final states in electron-positron interactions at 29 GeV, 15:3963 (R;US)
The digital data acquisition chain and the cosmic ray trigger system for the SLD Warm Iron Calorimeter, 15:3357 (R;US)

Stanford Univ., CA (USA)
Statistical study of the correlation of hard X-ray and type 3 radio bursts in solar flares, 15:3850 (R;US)
Studying turbulence using numerical simulation databases, 2. Proceedings of the 1988 Summer Program, 15:3203 (R;US)

Stanford Univ., CA (USA). Dept. of Civil Engineering
In-situ aquifer restoration of chlorinated aliphatics by methanotrophic bacteria. Research report, 1 May 1985-30 April 1989, 15:3554 (R;US)

Stanford Univ., CA (USA). Dept. of Operations Research
A basic theorem of complementarity for the generalized variational-like inequality problem: Technical report, 15:4529 (R;US)
Computational and statistical issues in discrete-event simulation. Technical report, 15:4502 (R;US)

Stanford Univ., CA (USA). Edward L. Ginzton Lab.
Laser physics and laser techniques. Final report, 15:3154 (R;US)
Lasers without inversion: Interference of lifetime-broadened resonances, 15:3152 (R;US)
Non-reciprocity of autoionizing interferences: Lasers without inversion, 15:3151 (R;US)

Stanford Univ., CA (USA). High Temperature Gasdynamics Lab.
An engineering model for coal devolatilization: Quarterly report, March 15, 1989–June 15, 1989, 15:2098 (R;US)

Stanford Univ., CA (USA). Systems Optimization Lab.
A class of "onto" multifunctions, 15:4548 (R;US)
A modified Newton method for unconstrained minimization, 15:4547 (R;US)
Generalized quasi-variational inequality and implicit complementarity problems, 15:4528 (R;US)
On the identification of local minimizers in inertia-controlling methods for quadratic programming, 15:4546 (R;US)
Sequential quadratic programming algorithms for optimization, 15:4545 (R;US)

State Univ. of New York, Stony Brook, NY (USA). Dept. of Chemistry
Stable isotope studies: Progress report, October 1988–October 1989, 15:3075 (R;US)

Statens Energiverk, Stockholm (Sweden)
Ammonia addition for NO_x reduction in fluidized bed boilers, 15:2074 (R;SE)
Effect of reductive decomposition of $CaSO_4$ on sulphur capture in fluidised bed boilers, 15:3250 (R;SE)
Emission of nitrogen oxide from a circulating fluidized bed boiler - the influence of design parameters, 15:3466 (R;SE)
Energy in Sweden 1988, 15:2625 (R;SE)
Evaluation of the relation (coherence) between wind speed and various set parameters at the Naesudden wind power plant, 15:2386 (R;SE;In Swedish)
Heat transfer in circulating fluidized bed boilers, 15:2101 (R;SE)
Petroleum fuels. Development of quality from 1980 and on, 15:2135 (R;SE;In Swedish)

Statistisches Landesamt Baden-Wuerttemberg, Stuttgart (Germany, F.R.)
Energy report 1987/88, 15:2590 (R;DE;In German)

Stichting Energieonderzoek Centrum Nederland, Petten (Netherlands). Energie Studie Centrum
Cogeneration- and Total Energy potentials at an alternative natural gas price policy and environmental policy in the Dutch National Energy Outlook scenarios, 15:2619 (B;NL;In (In Dutch))

Greenhouse gas emission coefficients from the energy system. Two methods to calculate national CO_2-e issions, 15:2599 (B;NL)
National report for the Netherlands. The IEA energy technology systems analysis project (ETSAP)/Annex 3, 15:3470 (B;NL)

Stiftelsen foer Vaermeteknisk Forskning, Stockholm (Sweden)
Energy management, 15:2754 (R;SE;In Swedish)
Experiences of DOAS technique for flue gas measurements, 15:3467 (R;SE;In Swedish)
Quality control and requirements for corona heated HDPE casing for district heating pipelines, 15:2779 (R;SE;In Swedish)
Sensitivity to hydrogen embrittlement in connection with cathodic protection of stainless duplex steels, 15:2854 (R;SE;In Swedish)

Stone (Ralph) and Co., Inc., Los Angeles, CA (USA)
Waste audit study: Research and educational institutions, 15:2746 (R;US)

Strasbourg-1 Univ., 67 (France)
Study of the structure of the transition nuclei ^{152}Dy, ^{154}Dy and ^{156}Er at high angular momentum, 15:4088 (R;FR;In French)

Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires
CRN: 1987 Progress Report, 15:4485 (R;FR;In French)
Study of the structure of the transition nuclei ^{152}Dy, ^{154}Dy and ^{156}Er at high angular momentum, 15:4088 (R;FR;In French)

Stuttgart Univ. (Germany, F.R.). Fakultaet 4 - Elektrotechnik
Radiation-physical properties of selective solar absorbers, 15:2346 (R;DE;In German)

Stuttgart Univ. (Germany, F.R.). Inst. fuer Kernenergetik und Energiesysteme
Computer-aided analysis of heating pipe networks, 15:2681 (R;DE;In German)

Sverdrup Technology, Inc., Cleveland, OH (USA)
Antiproton powered propulsion with magnetically confined plasma engines, 15:2780 (R;US)

Swedish Council for Building Research, Stockholm (Sweden)
Effects on zooplankton when passing through an open lake water heat pump, 15:3800 (R;SE;In Swedish)

Swedish Environmental Research Inst., Stockholm (Sweden)
Monitoring of air pollution in the southern counties, 15:3478 (R;SE;In Swedish)

Swedish National Board for Technical Development, Stockholm (Sweden)
Evaluation of the contributions made by STU (National Swedish Board for Technical Development) to the sphere of energy. Summary and conclusions, 15:2613 (R;SE;In Swedish)
Separation of wood chips for energy production, 15:2275 (R;SE;In Swedish)

Swedish Nuclear Power Inspectorate, Nykoeping (Sweden)
Assessment of RELAP5/MOD2, Cycle 36.04 against FIX-II split break experiment No. 3051, 15:2552 (R;US)

Swedish State Power Board, Vaellingby (Sweden)
Industrial load management at Vaargaarda, 15:2641 (R;SE;In Swedish)

Swedish Univ. of Agricultural Sciences, Garpenberg (Sweden). Dept. of Operational Efficiency
Handling characteristics of wood fuels - angle of repose for different assortments, 15:2274 (R;SE;In Swedish)

Syracuse Research Corp., NY (USA)
Toxicological profile for selected PCBs (polychlorinated biphenyls) (Aroclor-1260, -1254, -1248, -1242, -1232, -1221, and -1016). Final report, 15:3785 (R;US)

Syracuse Univ., NY (USA)
Northeast Artificial Intelligence Consortium annual report for 1987. Volume 5. Building an intelligent assistant: The acquisition, integration, and maintenance of complex distributed tasks. Interim report, December 1986-December 1987, 15:4498 (R;US)
Northeast Artificial Intelligence Consortium annual report for 1987. Volume 7. Part A. Time oriented problem solving. Interim report, December 1986-December 1987, 15:4499 (R;US)

Systems Applications, Inc., San Rafael, CA (USA)
Sensitivity of a regional oxidant model to variations in climate parameters. Volume 1 and 2. Final report, 15:3453 (R;US)

T

TDA Research, Inc., Wheat Ridge, CO (USA)
Photoconversion of inorganics to methane. Final topical report, October 1987-February 1989, 15:2267 (R;US)

Technische Hochschule Aachen (Germany, F.R.). Fakultaet fuer Bergbau und Huettenwesen
Production of coke with specific metallurgical properties. Analysis of conditions in the blast furnace, 15:2029 (R;DE;In German)

Technische Hochschule Darmstadt (Germany, F.R.). Inst. fuer Chemische Technologie
Key chemicals from synthesis gas - development of novel zeolites as catalysts for conversion of methanol into hydrocarbons, 15:2028 (R;DE;In German)

Technische Hochschule Darmstadt (Germany, F.R.). Inst. fuer Wasserversorgung, Abwasserbeseitigung und Raumplanung
Rationalization of aerobic-thermophilic stabilisation by means of raw sludge dehydration, 15:2760 (R;DE;In German)

Technische Univ. Berlin (Germany, F.R.)
Festive colloquium to celebrate the 70th anniversary of Prof. em. o. Dr.-Ing. Friedrich Adler. Berlin, October 17, 1986, 15:2085 (R;DE;In German)

Technische Univ. Clausthal, Clausthal-Zellerfeld (Germany, F.R.). Fakultaet fuer Bergbau, Huettenwesen und Maschinenwesen
Basic investigation of mixtures consisting of binders and tailings from coal mining with regard to their applicability as building materials in the mining industry, 15:2072 (R;DE;In German)

Technische Univ. Muenchen (Germany, F.R.). Lehrstuhl fuer Thermische Kraftanlagen mit Heizkraftwerk
Flue gas denitrification processes using tissue filters. Final report, 15:2426 (R;DE;In German)

Technischer Ueberwachungs-Verein Rheinland e.V., Koeln (Germany, F.R.). Inst. fuer Unfallforschung und Ergonomie (IfU)
Development of methods for the evaluation and reduction of risk factors for the maintenance of nuclear power plants, 15:2435 (R;DE;In German)

Technischer Ueberwachungs-Verien Rheinland e.V., Koeln (Germany, F.R.). Inst. fuer Energietechnik und Umweltschutz
Determination of compatibility conditions of the burner/boiler system of heating equipment with a view to energy conservation by means of optimum adjustment of components. Final report. Pt. 3. Investigations of pressure swings in the starting process in a burner/boiler system, 15:3235 (R;DE;In German)

Technology Transition Corp., Washington, DC (USA)
Hydrogen conference: Workshop proceedings, 15:2258 (R;US)

Teknologisk Inst., Taastrup (Denmark). Bioteknik
Two-step process for conversion of lignocellulose into methane, 15:2266 (R;DK)

Tel Aviv Univ. (Israel)
Treatment of laser-induced retinal injuries. Final report, 12 February 1985-31 January 1987, 15:3797 (R;IL)

Temple Univ., Philadelphia, PA (USA)
Gastric response to methyl methacrylate vapor. Progress report, 15:3769 (R;US)

Temple Univ., Philadelphia, PA (USA). Dept. of Physics
Experimental investigations in particle physics at intermediate energies: Performance report, December 1, 1988–December 31, 1989, 15:3951 (R;US)
$K_L^0 \rightarrow \mu^{\mp} e^{\pm}$ at the Fermilab main injector, 15:3950 (R;US)
Muon capture at large y-energetic nucleon emission, 15:4083 (R;US)
The low energy frontier in high energy particle physics, 15:3332 (R;US)

Tennessee Univ., Knoxville, TN (USA). Dept. of Chemistry
New chemical alternatives to chlorofluorocarbons and halons. Report for August 1988-February 1989, 15:3436 (R;US)

Tennessee Univ., Knoxville, TN (USA). Dept. of Physics
[Elementary particle interactions]: Progress report, 15:3978 (R;US)

Texas A and M Univ., College Station, TX (USA). Center for Tectonophysics
Anisotropic yielding of rocks at high temperatures and pressures: Technical progress report No. 1, April 15, 1987–April 14, 1988, 15:2358 (R;US)

Texas A and M Univ., College Station, TX (USA). Texas Transportation Inst.
Revised manual for planning, designing, and operating transitway facilities in Texas. Research report, September 1983-August 1988 (Final), 15:2711 (R;US)

Texas Univ., Austin, TX (USA)
Feasibility study of methods for stopping the depletion of ozone over Antarctica. Final report, 15:3417 (R;US)
The free energy of Maxwell-Vlasov equilibria, 15:4309 (R;US)

Texas Univ., Austin, TX (USA). Center for Energy Studies
Effect of shading devices on residential energy use in Austin, Texas. Research report, 15:2694 (R;US)

Texas Univ., Austin, TX (USA). Center for Studies in Statistical Mechanics
The behavior of matter under nonequilibrium conditions: Fundamental aspects and applications: Progress report, April 15, 1989–April 14, 1990, 15:4262 (R;US)

Texas Univ., Austin, TX (USA). Inst. for Fusion Studies
Introduction to bifurcation theory, 15:4310 (R;US)
Stability of the Global Alfven Eigenmode in the presence of fusion alpha particles in an ignited tokamak plasma, 15:4308 (R;US)

Tohoku Univ., Sendai (Japan)
Measurements of prompt fission neutron spectra and double-differential neutron inelastic-scattering cross sections for ^{238}U and ^{232}Th, 15:4119 (R;JP;In Japanese)

Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study
Breaking of separability condition for dynamical collective subspace. Onset of quantum chaos in large-amplitude collective motion, 15:4152 (R;JP)
Degenerate fermion and Wilson loop in 1+1 dimensions, 15:4021 (R;JP)
Design of a large superconducting spectrometer magnet, 15:3296 (R;JP)
Dissipation mechanism of the large-amplitude collective motion. Dynamical evolution of a collective bundle of trajectories in the TDHF phase space for a simple soluble model, 15:4155 (R;JP)
Double-periodic wormholes in theories with global symmetries, 15:4020 (R;JP)
Estimation of the one-loop mass shifts in open superstring theory, 15:4022 (R;JP)
Extended local gauge invariance and the BRS symmetry in stochastic quantization of gauge fields, 15:4043 (R;JP)
Nuclear collective rotation in the SU_3 model, 2. Quantal rotation for a triaxial configuration, 15:4153 (R;JP)
Nuclear collective rotation in the SU_3 model, 3. Quantal rotation for an axially symmetric configuration, 15:4154 (R;JP)
Possible measurement of the gravitational acceleration of molecules, atoms, nuclei, elementary particles and antiparticles, 15:3958 (R;JP)
Study of hypernuclei via (π^+, K^+) reactions at KEK, 15:3957 (R;JP)
Super-hypernuclei in the quark-shell model, 2, 15:4002 (R;JP)
Universe as a topological defect in a higher-dimensional Einstein-Yang-Mills theory, 15:3827 (R;JP)

Toyota Motor Co. Ltd., Aichi (Japan)
Development of mechanical-pilot injection device for automotive diesel engines, 15:2786 (R;JP)
Development of thermal-resistant catalysts, 15:2795 (R;JP)

TRW Space and Technology Group, Redondo Beach, CA (USA). Applied Technology Div.
MHD [Magnetohydrodynamics] Integrated Topping Cycle Project: Fourth quarterly technical progress report, May 1, 1988–July 31, 1988, 15:2649 (R;US)

U

U.S. Fuel Cells, Inc. (USA)
An approach for testing fuel-cell/battery hybrid power sources for bus applications, 15:2658 (R;US)

UKAEA Atomic Energy Establishment, Winfrith (UK). Chemistry Div.
Characterisation of molecular boric acid by mass spectrometry and matrix isolation-infrared spectroscopy, 15:3068 (R;GB)
Immobilisation in cement of ion exchange resins arising from the purification of reagents used for the decontamination of reactor circuits. Fourth semestrial report January-June 1988, 15:2175 (R;GB)
Matrix isolation-infrared and mass spectrometric studies of high-temperature molecules, 15:3039 (R;GB)
New estimates for the thermodynamic functions of molecular boric acid, 15:3069 (R;GB)
Rheological measurements on cement grouts, 15:2177 (R;GB)

UKAEA Atomic Energy Establishment, Winfrith (UK). Materials Technology Div.
Gas velocity measurements in purged port posting systems, 15:3124 (R;GB)
Ultrasonic and immersion cleaning: a comparison using aqueous and fluorocarbon solvents, 15:2176 (R;GB)

UKAEA Atomic Energy Establishment, Winfrith (UK). Safety and Engineering Science Div.
Calculated performance of a "hot-patch" for steady state post dry-out experiments, 15:3186 (R;GB)
Method for predicting the impact velocity of a projectile fired from a compressed air gun facility, 15:3122 (R;GB)
Three-dimensional effects in flask impact testing, 15:3123 (R;GB)

UKAEA Harwell Lab. (UK). Energy Technology Div.
Adaptive pitch control for power regulation of the MS-2 wind turbine, 15:2363 (R;GB)
Electricity producing renewable energy technologies common costing methodology. V. 2, 15:2647 (R;GB)
Small scale hydroelectric generation potential in the UK. V. 1, 15:2276 (R;GB)
WEG MS-2 stall-regulated rotor study, 15:2362 (R;GB)

UKAEA Harwell Lab. (UK). Materials Development Div.
Evolution of pH in a radwaste repository: internal reactions between concrete constituents, 15:2178 (R;GB)
Management of tritium wastes in the United Kingdom. A survey of present and future arisings, review of possible disposal options and areas where further R and D may be needed to develop a management strategy for the future, 15:2179 (R;GB)

UKAEA Northern Research Labs., Risley (UK)
Detection of fine pore structures in graphite by impregnation with Wood's metal, 15:2978 (R;GB)

Umweltbundesamt, Berlin (Germany, F.R.)
Water quality criteria and management models for the tidal region of the Elbe-River, 15:3566 (R;DE;In German)

UNESP, Araraquara, SP (Brazil). Inst. de Quimica
Electrochemistry of pentaamminruthenium (II) complexes with cyanopyridinium ions, 15:3053 (R;BR;In Portuguese)

Union Electric Co., St. Louis, MO (USA)
Knowledge-based system: Voltage and VAR [volt-ampere-reactive] dispatch: Final report, 15:2411 (R;US)

Unit Tenaga Nuklear, Bangi, Selangor (Malaysia)
Effect of heat treatment of toughness and strength properties of C-Mn steel, 15:2850 (R;MY)
Electron beam (EB) curing of wood surface finishing - lamination of PVC film on wood substrates. Final report STA scientist exchange program JAERI, Takasaki, Japan (September to November 1988), 15:2256 (R;MY)
Non-destructive radiometry inspection technique for locating reinforcements and void/porosity in bridge bearings, 15:2257 (R;MY)
Preparation methodology of radiation - curable resin. Unsaturated polyesters, 15:2255 (R;MY)
Radiation hazard from the tantalum dumps in Penang, 15:2244 (R;MY)
Synthesis of acrylated urethane oligomer, 15:3080 (R;MY)
Synthesis of acrylic prepolymer, 15:2983 (R;MY)
Synthesis of epoxidised soya bean oil acrylate, 15:2984 (R;MY)

Universidade Estadual de Campinas, SP (Brazil). Inst. de Quimica
Study of α-monosubstituted methyl acetates by C-13 and H-1 Nuclear Magnetic resonance, 15:4221 (R;BR;In Portuguese)

Universidade Federal, Rio de Janeiro, RJ (Brazil). Coordenacao dos Programas de Pos-graduacao de Engenharia
Computer-aided event tree analysis by the impact vector method, 15:2475 (R;BR;In Portuguese)
Computerized tomographic in non-destructive testing, 15:3334 (R;BR;In Portuguese)
Considerations about the uncertainty propagation in the probabilistic safety analysis, 15:2446 (R;BR;In Portuguese)
Environmental protection and safety of nuclear facilities, 15:2529 (R;BR;In Portuguese)
Event tree for the Angra 1 big LOCA, 15:2447 (R;BR;In Portuguese)
Falling-sphere radioactive viscometry, 15:3190 (R;BR;In Portuguese)
Reliability study of low pressure recirculation system of Angra 1, 15:2448 (R;BR;In Portuguese)

Universidade Federal, Rio de Janeiro, RJ (Brazil). Inst. de Biofisica
Simultaneous determination of Rn-220 and Rn-222 concentrations in atmospheres by cellulose nitrate ionographic detectors, 15:3056 (R;BR;In Portuguese)

University of South Florida, Tampa, FL (USA)
Thermal evaluation of advanced solar dynamic heat receiver performance. Final report, January-December 1988, 15:2320 (R;US)
Thin film cadmium telluride, zinc telluride, and mercury zinc telluride solar cells: Annual subcontract report, 1 July 1988–30 June 1989, 15:2307 (R;US)

Unocal Corp., Parachute, CO (USA). Energy Mining Div.
Unocal Parachute Creek Shale Oil Program. Environmental Monitoring Plan quarterly report, first quarter, 1989. Report for 1 January 1989-31 March 1989, 15:2158 (R;US)
Unocal Parachute Creek Shale Oil Program. Environmental Monitoring Plan supplemental environmental data report. Volume 1. Trial trip sampling results. Report for 1 January 1988-31 March 1989, 15:2159 (R;US)
Unocal Parachute Creek shale-oil Program. Environmental Monitoring Plan quarterly report, fourth quarter, 1988. Report for 1 October-31 December 1988, 15:2157 (R;US)

UOP, Inc., Des Plaines, IL (USA)
Upgrading of light Fischer-Tropsch products: Quarterly report No. 6, January 1, 1988–March 31, 1988, 15:2264 (R;US)
Upgrading of light Fischer-Tropsch products: Quarterly report No. 7, April 1, 1988–June 30, 1988, 15:2265 (R;US)

Urban Mass Transportation Research Information Service, Washington, DC (USA)
Urban Transportation Abstracts. Volume 7, 1988. Report for September 1988-February 1989, 15:2712 (R;US)

USDOE Assistant Secretary for Conservation and Renewable Energy, Washington, DC (USA). Office of Industrial Programs
Steel initiative: Development of superplastic steel processing: First annual progress report, March 15, 1988–March 15, 1989, 15:2827 (R;US)

USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC (USA)
Technical Safety Appraisal of the Fast Flux Test Facility, Westinghouse Hanford Company, 15:2514 (R;US)

USDOE Assistant Secretary for Fossil Energy, Washington, DC (USA). Office of Planning and Environment
The directory of US coal and technology export resources, 15:2102 (R;US)

USDOE Assistant Secretary for Management and Administration, Washington, DC (USA). Employee Development and Training Div.
Technical skills training program: Program management, project management, procurement and assistance, 15:4489 (R;US)

USDOE Assistant Secretary for Nuclear Energy, Washington, DC (USA)
1988 annual report on low-level radioactive waste management progress, 15:2187 (R;US)

USDOE Assistant Secretary for Policy, Planning and Analysis, Washington, DC (USA). Office of Policy Integration
Assessment of costs and benefits of flexible and alternative fuel use in the US transportation sector: Technical report three: Methanol production and transportation costs, 15:2618 (R;US)

USDOE Bonneville Power Administration, Portland, OR (USA)
Electricity use in the Pacific Northwest: Utility historical sales by sector, 1988 and preceding years, 15:2643 (R;US)
Radon monitoring results from BPA's Residential Weatherization Program: Report No. 10, 15:2665 (R;US)
Radon monitoring results from BPS's Residential Conservation Programs: Report No. 11, 15:2667 (R;US)

USDOE Bonneville Power Administration, Portland, OR (USA). Div. of Fish and Wildlife
Quantification of Hungry Horse Reservoir water level needed to maintain or enhance reservoir fisheries: Methods and data summary, 1983–1987, 15:2278 (R;US)
State of Idaho augmented anadromous fish health monitoring: Annual report, FY 1988, 15:2281 (R;US)

USDOE Bonneville Power Administration, Portland, OR (USA). Div. of Resource Management
Northwest Residential Radon Standard: Volume 1, Project report, 15:2668 (R;US)
Northwest residential radon standard: Volume 2, Comment letters, 15:2669 (R;US)

USDOE Bonneville Power Administration, Portland, OR (USA). Office of Energy Resources
Research projects in residential technology, 15:2606 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, *EDB Subject Thesaurus* (DOE/OSTI-7000). In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

A

A CODES
Short-time-scale measurements of fenestration thermal performance under realistic springtime conditions, 15:2343 (BA;US)

A0-980 MESONS
Composite scalar mesons in QCD, 15:3988 (R;XA)

ABANDONED SHAFTS
Use of foaming mud cement to terminate underground coal fires and to control subsidence of burn cavities. Final report, 15:2091 (R;US)

ABANDONED SITES
Demonstration of a computer model for residual radioactive material guidelines, RESRAD, 15:2183 (R;US)
Phase 1 spring and seep report: Weldon Spring Site Remedial Action Project, Weldon Spring, Missouri: Revision 0, 15:2242 (R;US)
Results of the independent verification of radiological remedial action at 196 East 3rd South Street, Monticello, Utah (MS00083), 15:3513 (R;US)
Results of the independent verification of radiological remedial action at 381 East 3rd South Street, Monticello, Utah (MS00140), 15:3511 (R;US)
Results of the independent verification of radiological remedial action at 384 South 2nd East Street, Monticello, Utah (MS00084), 15:3514 (R;US)
Results of the independent verification of radiological remedial action at 98 East 5th South Street, Monticello, Utah (MS00076), 15:3512 (R;US)
Results of the radiological survey at 133 Maywood Avenue, Maywood, New Jersey (MJ025), 15:3510 (R;US)
Results of the radiological survey at 72 Sidney Stret, Lodi, New Jersey (LJ067), 15:3509 (R;US)
Results of the radiological survey at 9 Hancock Street, Lodi, New Jersey (LJ028), 15:3508 (R;US)

ACCIDENTAL INTAKE
See ACCIDENTS

ACCIDENTAL IRRADIATION
See RADIATION ACCIDENTS

ACCIDENTS
See also RADIATION ACCIDENTS
REACTOR ACCIDENTS
Hints and search strategies for the substances listed in the Accident Ordinance, 15:3803 (R;DE;In German)

ACCUMULATION (RADIOECOLOGICAL)
See RADIOECOLOGICAL CONCENTRATION

ACES
See QUARKS

ACETONITRILE
The bonding of acetonitrile and CH_2CN on Ag(110) determined by near edge x-ray absorption fine structure: Evidence for π-donor bonding and azimuthal ordering, 15:3090 (J;US)

ACETYLENE
High resolution spectroscopic detection of acetylene–vinylidene isomerization by spectral cross correlation, 15:3084 (J;US)
Laser photoelectron spectroscopy of ions: Progress report, 1988–1989, 15:3095 (R;US)

ACID RAIN
A collaborative effort to model plant response to acidic rain, 15:3404 (R;US)
A process for the preparation of cysteine from cystine, 15:2076 (P;US)
Characterization of year-round sensitivity of California's Montane Lakes to acidic deposition. Final report, October 1986-June 1989, 15:3552 (R;US)
Development of an inventory of materials potentially sensitive to ambient atmospheric acidity in the South Coast Air Basin. Final report, 15:3558 (R;US)
Development of the advanced utility simulation model. Report for May 1985-September 1988, 15:2430 (R;US)
Effects of acid deposition on painted wood substrates, 15:3432 (R;US)
Effects of acid fog and ozone on conifers. Final report, 15:3446 (R;US)
Geographic information system documentation of watershed data for Direct/Delayed Response Project. Southern Blue Ridge Province data base, 15:3553 (R;US)
Geographic information system documentation of watershed data for Direct/Delayed Response Project. Northeast data base, 15:3555 (R;US)

Physical characteristics of study plots. Across-a-Lake States acidic-deposition gradient. Forest Service resource bulletin, 15:3455 (R;US)
Re-examination of interim estimates of annual sulfur dry deposition across the eastern United States. Final report, 1988-1989, 15:3460 (R;US)
Red spruce decline—Winter injury and air pollutants, 15:3427 (R;US)
US and Canadian emissions inventory, 1985. Report for March-September 1988, 15:3442 (R;US)
Water resources data for Wisconsin, Water Year 1988. Water-data report (Annual), 1 October 1987-30 September 1988, 15:3559 (R;US)
[Deposition of atmospheric nitrogen species to forests in North America and Europe]: Foreign trip report, September 24–October 11, 1989, 15:3422 (R;US)
[Discussions of global environmental problems]: Foreign trip report, October 14, 1989–October 21, 1989, 15:3426 (R;US)
[Growth and physiology of red spruce in relationship to acidic deposition in the Great Smoky Mountains National Park, USA]: Foreign trip report, September 30, 1989–October 14, 1989, 15:3423 (R;US)

ACIDIFICATION
Effects of acid and lime on mesofauna of forest soils in the laboratory and in the field. Final report, 15:3762 (R;DE;In German)

ACOUSTICS
Acoustic studies of new materials: Quasi crystals, low-loss glasses, and high tc superconductors. Annual summary report, 1 October 1988-30 September 1989, 15:2901 (R;US)

ACQUIRED IMMUNODEFICIENCY SYNDROME
See AIDS

ACRYLIC POLYMERS
See POLYACRYLATES

ACRYLONITRILE
Best demonstrated available technology (BDAT) background document for K011, K013, and K014. Final report, 15:2769 (R;US)

ACTINIDE BURNER REACTORS
Thermal-hydraulics of actinide burner reactors. Conceptual study of actinide burner reactors, (3), 15:2471 (R;JP;In Japanese)

ACTINIDE NUCLEI
See also EINSTEINIUM 254

URANIUM 238
Translation of selected papers published in Nuclear Constants 4, 1986, 15:4112 (R;XA)

ACTINIUM X
See RADIUM 223

ACTIVATION ANALYSIS
Activities of the neutron activation analysis laboratory of the radiochemistry division of IPEN - CNEN/SP, 15:4494 (R;BR;In Portuguese)

ADA
Rationale for the proposed standard for a generic package of elementary functions for Ada: Revision 1, 15:4504 (R;US)
Research, development, training, and education using the Ada programming language. Final report, 1 September 1987-31 May 1989, 15:4503 (R;US)

ADENINES
Radiation chemistry of adenine derivatives following direct ionization in solids: ESR and ENDOR investigations, 15:3716 (RA;DE)

ADENOCARCINOMAS
See CARCINOMAS

ADENOSINE TRIPHOSPHATASE
See ATP-ASE

ADENOSINE TRIPHOSPHATE
See ATP

ADSORBENTS
Calcination of calcium hydroxide sorbent in the presence of SO_2 and its effect on reactivity. Report for October 1988-March 1989, 15:3443 (R;US)

ADVANCED TEST IDAHO REACTOR
See ATR REACTOR

AERODYNAMICS
Actuator disc edge singularity. The key to a revised actuator disc concept and momentum theory, 15:2367 (RA;DK)
Joint action on aerodynamics of wind turbines, 15:2365 (R;DK)

AEROSOLS
See also SMOKES
Beryllium dispersion near explosive firing tables: A comparison of computed and observed results, 15:3468 (R;US)
Estimation of aerosol absorption from measurements of intensity and polarization of the sky radiation at Tsumeb (Namibia). Final report, 15:2291 (R;DE;In German)
In situ optical measurements of hydrofluoric acid aerosols, 15:3469 (R;US)
Pathophysiological and disease constraints on aerosol delivery, 15:3767 (R;US)
Regional aerosol deposition in human upper airways: Annual progress report, March 1, 1989–February 28, 1990, 15:3414 (R;US)
Respiratory effects of inhaled gases and aerosols. Report for 1 November 1973-31 March 1977, 15:3787 (R;US)
Vertical distribution of pollutants in the presence of convective storms, 15:3406 (R;US)

AFTERGLOW
Experimental study of microwave transmission through a decaying plasma. Final report, January 1986-February 1988, 15:3936 (R;US)

AFTERLOADING
Dependence of local radiation complications on methods of intracavitary gamma-therapy in concomitant radiotherapy of stage 1 cervix uteri carcinoma, 15:3741 (RA;SU;In Russian)

AGGLUTINATION
See ANTIGEN-ANTIBODY REACTIONS

AGRICULTURAL RESIDUES
See AGRICULTURAL WASTES

AGRICULTURAL WASTES
Incineration studies. October 1985-September 1989 (Citations from the COMPENDEX data base). Report for October 1985-September 1989, 15:2778 (R;US)

AHUACHAPAN GEOTHERMAL FIELD
The Ahuachapan geothermal field, El Salvador: Reservoir analysis: Volume 1, Text and main figures, 15:2355 (R;US)
The Ahuachapan geothermal field, El Salvador: Reservoir analysis: Volume 2, Appendices A through E, 15:2356 (R;US)

AIDS
Los Alamos Science: AIDS research, 15:3676 (R;US)

AIR
Enhanced flame stability and soot radiation using electric fields. Final report, July 1986-January 1989, 15:3114 (R;US)
Environmental Radiation Data: Report 56, October-December 1988. Quarterly report, 15:3486 (R;US)
Participation in the MAP3S precipitation chemistry network: Progress report, August 1, 1988–July 31, 1989, 15:3410 (R;US)

AIR CONDITIONERS
Conventional research house: Cooling characterization test results. Topical report, June-September 1987, 15:2697 (R;US)
Development of high-efficiency scroll compressors for air conditioners, 15:2695 (R;JP)
Mobile air-conditioner refrigerant evaluation. Report for April 1988-March 1989, 15:3441 (R;US)

AIR FILTERS
Method for measuring the effectiveness of gaseous-contaminant removal filters, 15:3257 (R;US)

AIR FLOW
Experimental investigations of the rotor loads and the rotor-induced flow of a two-bladed wind turbine model in the low speed wind tunnel of DLR, 15:2378 (RA;DK)

AIR POLLUTION
See also INDOOR AIR POLLUTION
Ozone depletion, greenhouse gases, and climate change, 15:3429 (R;US)

Bioassay
Use of bioassay methods to evaluate incinerator emissions, 15:3440 (R;US)

Biological Effects
Carbohydrate translocation and branch autonomy of Pinus ponderosa, 15:2309 (R;US)
Effects of acid fog and ozone on conifers. Final report, 15:3446 (R;US)
Effects of air pollutants on photosynthesis, vegetative growth, and development of grapevines in the San Joaquin Valley of California. Final report, February 1987-February 1989, 15:3445 (R;US)
Human-health studies of carbon monoxide (CO) under conditions of military weapons systems crewman exposures. Protocol 1: Formation of cohb. Final report, September 1982-March 1985, 15:3755 (R;US)
Respiratory effects of inhaled gases and aerosols. Report for 1 November 1973-31 March 1977, 15:3787 (R;US)

Carcinogens
Complex mixtures of urban air pollutants: Identification and comparative assessment of mutagenic and tumorigenic chemicals and emission sources, 15:3784 (R;US)

Comparative Evaluations
Comparison of 0600-0900 AM hydrocarbon compositions obtained from 29 cities, 15:3431 (R;US)

Computer Codes
Programmer's guide to MOBILE4 (mobile source emission factor model). Technical report, 15:2797 (R;US)

Computerized Control Systems
FACE: A free-air facility for fumigation with gaseous air pollutants: Revision, 15:3405 (R;US)

Environmental Effects
5th status colloquium of the PEF, March 7-9, 1989 in the Nuclear Research Center in Karlsruhe. Summarizing reviews of the program management, 15:3416 (R;DE;In German)

Forests
5th status colloquium of the PEF, March 7-9, 1989 in the Nuclear Research Center in Karlsruhe. Summarizing reviews of the program management, 15:3416 (R;DE;In German)

Long-Range Transport
Calculation of air pollution dispersion over a complex terrain with special emphasis on dimensioning of chimney stacks, 15:3420 (R;DK;In Danish)

Mathematical Models
Are ozone exceedance rates decreasing? Comment on extreme value analysis of environmental time-series: An application to trend detection in ground-level ozone. Technical report, 1 January-31 July 1989, 15:3401 (R;US)
Integration of fluid modeling with complex-terrain field studies and model-development efforts, 15:3449 (R;US)

Mutagens
Complex mixtures of urban air pollutants: Identification and comparative assessment of mutagenic and tumorigenic chemicals and emission sources, 15:3784 (R;US)

Occupational Diseases
Asbestos and silicate pollution in the work place. January 1978-July 1989 (Citations from Pollution Abstracts). Report for January 1978-July 1989, 15:3461 (R;US)

Pollution Control Equipment
Quantitative evaluation of air-filtration systems in use at asbestos abatement sites: Research in progress, 15:3256 (R;US)

Public Health
Information on substances for review as toxic air contaminants. Summary report, January 1984-February 1989 (Final), 15:3430 (R;US)

Regional Analysis
Re-examination of interim estimates of annual sulfur dry deposition across the eastern United States. Final report, 1988-1989, 15:3460 (R;US)

AIR POLLUTION ABATEMENT
Analysis of the national and regional potential for gas use in electric-utility emissions control. Topical report, December 1988, 15:2418 (R;US)
Method for measuring the effectiveness of gaseous-contaminant removal filters, 15:3257 (R;US)
National report for the Netherlands. The IEA energy technology systems analysis project (ETSAP)/Annex 3, 15:3470 (B;NL)
New chemical alternatives to chlorofluorocarbons and halons. Report for August 1988-February 1989, 15:3436 (R;US)

AIR POLLUTION CONTROL
Air toxics control situation room. Report for July 1988-March 1989, 15:3450 (R;US)
BACT/LAER (Best Available Control Technology/Lowest Achievable Emission Rate) Clearinghouse: A compilation of control-technology determinations. Fourth supplement to 1985 edition. Summary tables and appendices A-H, 15:3491 (R;US)
Calcination of calcium hydroxide sorbent in the presence of SO_2 and its effect on reactivity. Report for October 1988-March 1989, 15:3443 (R;US)
Compliance testing of the Eglin AFB (Air Force Base) asphalt-concrete Batch Plant, Eglin AFB, Florida. Final report, 5-11 March 1989, 15:3403 (R;US)
Destruction of volatile organic compounds using catalytic oxidation. Report for April 1987-December 1988, 15:3439 (R;US)
Electrostatic precipitation of charged particles from a turbulent flow between coaxial cylinders, 15:3402 (R;US)
Incinerability index: A measure of incinerator performance, 15:2743 (R;US)
Recent developments of emission control technology in the United States for fossil fuel combustion sources, 15:3249 (R;US)
Source characterization and control technology assessment of methylene chloride emissions from Eastman Kodak Company, Rochester, NY. Final report, July 1988-April 1989, 15:3452 (R;US)

AIR POLLUTION MONITORING
Semiconductor gas sensors. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:3370 (R;US)

AIR POLLUTION MONITORS
Experiences of DOAS technique for flue gas measurements, 15:3467 (R;SE;In Swedish)

AIR QUALITY
Air quality monitoring at toxic waste sites: A Hanford perspective, 15:3464 (R;US)
Contribution to atmospheric pollution of the activities of CSI Italsider in Bagnoli, 15:3415 (TG;US)
Indoor air quality: Selected references, 15:3448 (R;US)
Sensitivity of a regional oxidant model to variations in climate parameters. Volume 1 and 2. Final report, 15:3453 (R;US)

AIR SAMPLERS
Measurement of condensable vapor contribution to PM10 emissions, 15:2696 (R;US)
Pilot investigation of indoor-outdoor and personal PM10 (thoracic) and associated ionic compounds and mutagenic activity. Final report, February 1987-April 1989, 15:3447 (R;US)
Use of micrometeorological parameters in the establishment of a VOC (volatile organic compounds) monitoring network. Technical report (Final), 15:3454 (R;US)

AIR-FUEL RATIO
See FUEL-AIR RATIO

AIR-WATER INTERACTIONS
Water treatment: Air stripping. December 1981-July 1989 (Citations from the Selected Water Resources Abstracts data base). Report for December 1981-July 1989, 15:3562 (R;US)

AIRBORNE PARTICLES
See PARTICULATES

AIRBORNE PARTICULATES
See PARTICULATES

AIRCRAFT
Engineering Assignment 5, E-4B surveillance methodology. Final report, 15:3386 (R;US)

Model for measuring complex performance in an aviation environment, 15:3127 (R;US)
AIRCRAFT ACCIDENTS
See ACCIDENTS
AIRCRAFT COMPONENTS
Compatibility of fuel-system components with high density fuel. Final report, April 1987-January 1989, 15:2781 (R;US)
AIRCRAFT FUELS
See AVIATION FUELS
AIRFOILS
High temperature constitutive and crack initiation modeling of coated single crystal superalloys, 15:2845 (RA;US)
Measurement of airfoil heat transfer coefficients on a turbine stage, 15:3199 (RA;US)
Turbine airfoil film cooling, 15:3202 (RA;US)
AIRGLOW
Optical instrumentation support for the airborne ionospheric observatory. Report for 1 July 1987-30 June 1988, 15:3884 (R;US)
ALARA
Below Regulatory Concern (BRC) Owners Group: A comparison of the EPA generic cost-benefit analysis with an industry-specific analysis: Final report, 15:2195 (R;US)
ALARM DOSEMETERS
See RADIATION MONITORS
ALARM SYSTEMS
Applying AI techniques to improve alarm display effectiveness, 15:2247 (BA;US)
ALASKA
Specifying monthly mean surface temperatures in Canada and Alaska from the 500 mb height field, 15:3398 (J;US)
ALBERTA
Alberta/Canada Energy Resources Fund annual review, 1987-88, 15:2603 (R;CA;In English and French)
ALCATOR DEVICE
Applications of free-electron laser technology to magnetic fusion, 15:4481 (J;US)
ALDEHYDES
See also FORMALDEHYDE
Selection of an effective biocide and toxicity evaluation for a specific MEOR [microbial enhanced oil recovery] microbial formulation, 15:2114 (R;US)

Effect of chromium on properties of Fe_3Al, 15:2874 (J;US)
Elastic instability during amorphization of intermetallic compounds by charged-particle beams, 15:2861 (BA;US)
Evaluation and thermodynamic analysis of phase equilibria in the U-Al system, 15:2869 (J;NL)
Exploratory study of niobium, titanium, zirconium, and tantalum aluminides. Final report, 1 March 1988-31 May 1989, 15:2807 (R;US)
Fatigue characterization of a VAWT blade material, 15:2396 (BA;US)
Fundamentals of beam-solid interactions and transient thermal processing, 15:2857 (B;US)
Hydrogen effects in aluminum, 15:2870 (J;IL)
Influence of microstructure and microdamage processes on fracture at high loading rates. Final report, 1 February 1986-30 September 1988, 15:2806 (R;US)
Kinetic paths of B2 and DO_3 order parameters: Experiment, 15:2872 (J;US)
Patterson analysis of aperiodic crystals, 15:2894 (J;US)
Pretreatment and conditioning of storage ring vacuum systems, 15:3315 (R;US)
Status of high-density fuel plates fabrication: Final draft, 15:2164 (R;US)

ALUMINIUM ARSENIDES
Electric field response of a semiconductor superlattice optical mirror from electroreflectance spectra, 15:3008 (J;US)
Magnetic studies of persistent photoconductivity in *n*-$Al_xGa_{1-x}As$, 15:3010 (J;US)
Pressure dependence of the *DX* center in $Ga_{1-x}Al_xAs$:Te, 15:3033 (J;US)
Semiconductor quantum-well lasers and related optoelectronic devices on silicon, III-V. Technical report, 15:3145 (R;US)

ALUMINIUM BASE ALLOYS
Chemical cleaning of aluminum alloy surfaces for use as vacuum materials in synchrotron light sources, 15:2818 (R;US)
Effects of precipitate distribution on 293 K and 77 K properties of 2090-T81 weldments, 15:2840 (R;US)
Fracture toughness of SiC/Al metal matrix composite, 15:2973 (R;US)

ALUMINIUM BROMIDES
Dissociation energy of the molecule AlBr from equilibrium measurements, 15:3092 (J;US)

ALUMINIUM NITRIDES
Sialon ceramics. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:2933 (R;US)

ALUMINIUM OXIDES
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: Final report for Task 2, 15:2262 (R;US)
Comprehensive characterization studies of sulfided molybdenum catalysts: Final progress report, 15:2828 (R;US)
Continuous high-temperature lubrication of ceramics by carbon generated catalytically, 15:2900 (R;US)
High-temperature corrosion of heat exchanger materials, 15:2911 (R;US)
Measurements of complex permittivity of microwave substrates in the 20 to 300 K temperature range from 26.5 to 40.0 GHz, 15:2928 (R;US)
Single layer $Al_2O_3 \cdot H_2O$ and multilayer $Al_2O_3 \cdot H_2O$–SiO_2 optical coatings prepared from colloidal suspensions, 15:3020 (J;US)
Structure and insulator material choices for the TITAN reversed-field-pinch reactor study, 15:4470 (BA;US)
Structure of amorphous Al_2O_3 produced by ion implantation, 15:2908 (R;US)
Synthesis of oxide powders by plasma vaporization of solutions, 15:2938 (BA;US)
The effects of annealing on the structure and distribution of charge states of iron implanted into α-Al_2O_3 at 77 K, 15:2907 (R;US)

ALUMINUM

ALVEOLI (PULMONARY)
See LUNGS

AMBIPLASMA
High density matter state equation and phase transitions, 15:4003 (R;FR;In French)

AMERICIUM
Search for a fission fragment anisotropy signal after optical spin exchange pumping on ^{242m}Am, 15:4117 (RA;DE;In German)

AMERICIUM ISOTOPES
Delayed-fission properties of neutron-deficient americium nuclei, 15:4120 (R;US)

AMES TEST
See MUTAGEN SCREENING

AMIDES
Laser photoelectron spectroscopy of ions: Progress report, 1988–1989, 15:3095 (R;US)

AMINO ACIDS
See also CYSTEINE
Gamma-radiation affects active electrolyte transport by rabbit ileum. 2. Correlation of alanine and theophylline response with morphology, 15:3689 (R;US)

AMINOHYPOXANTHINE
See GUANINE
AMINOTOLUENES
See TOLUIDINES
AMMONIA
Corrections for non-ideal effects in reflected shock waves at low Mach numbers, 15:3072 (R;US)
Effects of coal-derived trace species on the performance of molten carbonate fuel cells: Topical report (Progress report No. 4), 15:2657 (R;US)
Stable isotope studies: Progress report, October 1988–October 1989, 15:3075 (R;US)
The influence of adsorbate–absorbate hydrogen bonding in molecular chemisorption: NH_3, HF, and H_2O on Au(111), 15:3094 (J;US)
AMMONIUM SULFATES
Characterization and modification of particulate properties to enhance filtration performance: Quarterly technical progress report, December 1988–February 1989, 15:2423 (R;US)
Respiratory effects of inhaled gases and aerosols. Report for 1 November 1973-31 March 1977, 15:3787 (R;US)
AMORPHOUS STATE
Statistical mechanical models for liquid and amorphous structure in covalently bonded systems, 15:4217 (R;XA)
AMPLIFIERS
Broadband cryogenic preamplifiers incorporating GaAs MESFETs for use with low-temperature particle detectors, 15:3232 (J;US)
ANADROMOUS FISHES
See also SALMON
State of Idaho augmented anadromous fish health monitoring: Annual report, FY 1988, 15:2281 (R;US)

ANGRA-1 REACTOR
Computer-aided event tree analysis by the impact vector method, 15:2475 (R;BR;In Portuguese)
Considerations about the uncertainty propagation in the probabilistic safety analysis, 15:2446 (R;BR;In Portuguese)
Determination of the protection set-points lines for the Angra-1 reactor core, 15:2441 (R;BR;In Portuguese)
Event tree for the Angra 1 big LOCA, 15:2447 (R;BR;In Portuguese)
Reliability study of low pressure recirculation system of Angra 1, 15:2448 (R;BR;In Portuguese)
Study of Angra I reactor core with inserted control rods, 15:3991 (R;BR;In Portuguese)
ANIMAL CELLS
See also CHO CELLS
TUMOR CELLS
Radiation damage and its influence on source requirements for high resolution x-ray holography, 15:3680 (R;US)
ANIMAL FEEDS
Water hyacinth horticulture management of manure, 15:2735 (R;DK;In Danish)
ANIMAL TISSUES
See also BONE MARROW
Handbook of selected tissue doses for projections common in diagnostic radiology, 15:3679 (R;US)
ANIMALS
See also INVERTEBRATES
A review of the literature on the toxicity of rare-earth metals as it pertains to the Engineering Demonstration System surrogate testing, 15:3792 (R;US)
Convention on international trade in endangered species of wild fauna and flora. 1987 annual report. Final report, 15:3613 (R;US)
ANISOLE
Molecular beam studies of oxygen atom reactions with unsaturated hydrocarbons, 15:3109 (R;US)
ANL
In situ tem observations of heavy ion damage in gallium arsenide, 15:2991 (BA;US)
ANODES
Development of high-efficiency molten carbonate fuel cell. Evaluation of stack performance and clarification of degradation mechanism at high fuel utilization, 15:2656 (R;JP;In Japanese)
ANTARCTIC REGIONS
Feasibility study of methods for stopping the depletion of ozone over Antarctica. Final report, 15:3417 (R;US)
Ozone depletion, greenhouse gases, and climate change, 15:3429 (R;US)
ANTENNAS
An assessment of the lifetime of Faraday shield elements, 15:4392 (R;US)
ANTICORROSION
See CORROSION PROTECTION
ANTIFERROMAGNETIC MATERIALS
Phase separation of holes in antiferromagnets, 15:2904 (R;US)
ANTIGEN-ANTIBODY REACTIONS
Antigen-specific composition and in-vivo methods for detecting and localizing an antigenic site and for radiotherapy, 15:3682 (P;US)
ANTIKAONS NEUTRAL
Possible test of *CPT* invariance in neutral-kaon regeneration, 15:4028 (J;US)
ANTIPROTON REACTIONS
Role of mesonic resonances in antiproton annihilation on nuclei, 15:4173 (J;US)
ANTIPROTON SOURCES
Potential for a near-term very-low-energy antiproton source at Brookhaven Bational Laboratory. Special report, 15:3947 (R;US)
ANTIPROTONIC ATOMS
See HADRONIC ATOMS
ANTIPROTONS
Operational experience with Tevatron I antiproton source, 15:3268 (BA;US)
Physics with ultra-low energy antiprotons, 15:4044 (R;US)
ANTIREFLECTION COATINGS
Corrosion-resistant coatings. February 1983-September 1989 (Citations from the NTIS data base). Report for February 1983-September 1989, 15:2848 (R;US)
Single layer $Al_2O_3 \cdot H_2O$ and multilayer $Al_2O_3 \cdot H_2O$–SiO_2 optical coatings prepared from colloidal suspensions, 15:3020 (J;US)
Sol-gel processes. January 1970-September 1989 (Citations from the NTIS data base). Report for January 1970-September 1989, 15:2222 (R;US)
APARTMENT BUILDINGS
Measuring heat flows in collective heating systems. Appendices and figures, 15:2703 (R;NL;In (In Dutch))
Measuring heat flows in collective heating systems. Illusion or reality, 15:2702 (R;NL;In (In Dutch))
APPALACHIAN BASIN
Multizone completion opportunities in the Appalachian basin: Final report, 15:2138 (R;US)

BEAM TRANSPORT
Comparison of photodesorption yields from aluminum stainless and Cu-plated beam tubes, 15:3285 (R;US)
Summary of RLA [Recirculating Linear Accelerator] beam transport experiments using a 1.5 MV injector, 15:3275 (R;US)
BEAM-BEAM INTERACTIONS
Coherent pair creation from beam-beam interaction, 15:3278 (R;US)
BEAM-PLASMA SYSTEMS
Wakefield accelerator in a magnetized electron-positron plasma, 15:3262 (R;XA)
BEAMS (STRUCTURAL)
See STRUCTURAL BEAMS
BEARINGS
See also JOURNAL BEARINGS
Non-destructive radiometry inspection technique for locating reinforcements and void/porosity in bridge bearings, 15:2257 (R;MY)
BEAUTY BARYONS
B physics at the Z^0 pole, 15:3966 (R;US)
BEAUTY PARTICLES
See also BEAUTY BARYONS
B production in hadron collisions: Theory, 15:3973 (R;US)
BEHAVIOR
Effects of iron particles on behavior and brain function: Initial studies, 15:3756 (R;US)
Radiation quality and rat motor performance, 15:3691 (R;US)
BENCH-SCALE EXPERIMENTS
Parallel algorithms for solving the diffusion equation by finite elements methods and by nodal methods, 15:2470 (R;FR;In French)
BENTONITE
Plutonium diffusivity in compacted bentonite, 15:2223 (R;JP)
BENZENE
Upgrading of light Fischer-Tropsch products: Quarterly report No. 6, January 1, 1988–March 31, 1988, 15:2264 (R;US)
BENZOPYRENE
Production of oxidative DNA damage during the metabolic activation of benzo[α]pyrene in human mammary epithelial cells correlates with cell killing, 15:3794 (J;US)
BERKELEY BEVALAC
See BEVALAC
BERYLLIUM
Analyses of particles in beryllium by ion imaging, 15:2856 (R;US)
Beryllium dispersion near explosive firing tables: A comparison of computed and observed results, 15:3468 (R;US)
Effects of nitrogen pulsing on sputter-deposited beryllium films, 15:2855 (R;US)
The optical properties of beryllium, 15:2830 (R;US)
Translation of reports from the first international conference on neutron physics, Kiev, USSR, 14-18 September 1987, 15:4179 (R;XA)

Translations from Russian publications of proceedings of the international conference on neutron physics, Kiev, 14-18 September 1987, 15:4416 (R;XA)

BERYLLIUM 7
Atmospheric depositional characteristics of Beryllium 7 and Lead 210 along Southeastern Virginia coast, 15:3490 (J;US)

BERYLLIUM 9 BEAMS
Laser cooling, 15:3294 (RA;DE;In German)

BERYLLIUM 9 TARGET
Contribution of two-pion annihilation to dilepton emission from proton-nucleon collisions, 15:4008 (J;US)

BERYLLIUM MODERATORS
See BERYLLIUM

BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS

BETA DECAY
See also BETA-MINUS DECAY
Proton-neutron quasiparticle RPA and charge-changing transitions, 15:4138 (RA;DE)

BETA SOURCES
Preparation of ^{60}cobalt sources by molecular plating, 15:2254 (RA;DE;In German)

BETA-MINUS DECAY
See also DOUBLE BETA DECAY
Calculation of β^--decay half-lives by the proton-neutron QRPA, 15:4139 (RA;DE;In German)

BETATRON OSCILLATIONS
Successful observation of Schottky signals at the Tevatron collider, 15:3307 (R;US)

BETATRONS
RADLAC-II propagation experiments, 15:3895 (R;US)

BEVALAC
A raster scanning power supply system for controlling relativistic heavy ion beams at the Bevalac biomedical facility, 15:3280 (BA;US)

BHABHA ATOMIC RESEARCH CENTER
See BARC

BIDS
Evaluation methods in competitive bidding for electric power: Volume 2, Technical appendix, 15:2635 (R;US)

BILATERAL AGREEMENTS
Report for the period 1 July 1988–30 June 1989 from the Mineral Resources Administration in Greenland, 15:2600 (R;DK;In Danish)

BINARY ALLOY SYSTEMS
Evaluated phase diagrams of binary metal-tellurium systems of the D-block transition elements, 15:2811 (R;IN)
Kinetic paths of B2 and DO_3 order parameters: Theory, 15:2871 (J;US)

BINARY MIXTURES
Viscosity of a phase-separating critical mixture, 15:3210 (J;US)

BINARY STARS
Gravitational radiation from primordial solitons and soliton-star binaries, 15:4292 (J;US)

BIOASSAY
Comparison of bioassays for assessing sediment toxicity in Puget Sound. (Appendices included). Report for 1988-1989 (Final), 15:3561 (R;US)

BIOCENOSES
See ECOSYSTEMS

BIOCHEMICAL ACTIVITY
See BIOCHEMISTRY

BIOCHEMICAL REACTION KINETICS
Gene-enzyme relationships in somatic cells and their organismal derivatives in higher plants: Progress report, August 1, 1988–July 31, 1989, 15:3602 (R;US)

BIOCHEMISTRY
Molecular biology and physiology of methanogenic archaebacteria. Annual report, July 1988-June 1989, 15:3596 (R;US)

BIOCONVERSION
Development of a container for pumps, measuring equipment and motorgenerators in connection with a bioconversion energy system, 15:2297 (R;DK;In Danish)

BIOGAS
See METHANE

BIOGEOCENOSES
See ECOSYSTEMS

BIOLOGICAL MATERIALS
Biological materials residues from pressurized decomposition with nitric acid. Identification of reaction products and their impact on inverse voltammetric element analysis, 15:3062 (R;DE;In German)

BIOLOGICAL RADIATION EFFECTS
See also RADIATION INJURIES
Treatment planning for stereotactic heavy-charged particle radiosurgery of the brain, 15:3677 (R;US)

BIOLOGICAL STRESS
Assessment of smolt condition for travel time analysis: Annual report 1988, 15:2279 (R;US)

BIOLOGICAL TESTING
See BIOASSAY

BIOMASS
A collaborative effort to model plant response to acidic rain, 15:3404 (R;US)
Microcomputer Scientific Software Series 5: The Biomass User's Manual. Forest Service general technical report, 15:2298 (R;US)

BIOMASS PLANTATIONS
Geographic variation in red alder. Forest Service research paper, 15:2299 (R;US)

BIOMEDICAL RADIOGRAPHY
Advanced methods of instantaneous zonography of temporal bone pyramids, 15:3630 (RA;SU;In Russian)
Handbook of selected tissue doses for projections common in diagnostic radiology, 15:3679 (R;US)
Possibilities of stomach X-ray examination in low exposure dose, 15:3633 (RA;SU;In Russian)
Use of color interpretation of roentgrams of chest organs, 15:3629 (RA;SU;In Russian)

BIOTECHNOLOGY
Biotechnology research and development activities in industry: 1984 and 1985. Surveys of Science Resources series, 15:3604 (R;US)

BIRDS
See also FOWL
Establishment of a viable population of red-cockaded woodpeckers at the Savannah River Site: Progress report, FY 1989, 15:3492 (R;US)

BIS(CHLORETHYL)AMINE

See TURBINE BLADES

BLANKETS (BREEDING)
See BREEDING BLANKETS

BLAST EFFECTS
Modeling casualties in nuclear warfare. Final report, 15:3385 (R;US)

BLASTS
See EXPLOSIONS

BLOOD CIRCULATION
Method of synchronous determination of linear blood flow time in arteries and veins separately, 15:3634 (RA;SU;In Russian)

BLOWERS
Fan pressurization test results from the residential construction demonstration project: Cycle 1, 15:2666 (R;US)

BNL
Overview of recent focussing horns for the BNL neutrino program, 15:3269 (BA;US)

BODY CENTERED CUBIC
See BCC LATTICES

BOILERS
See also FLUIDIZED BED BOILERS
REFUSE-FUELED BOILERS
WASTE HEAT BOILERS
Advanced gas-turbine steam-injection program water treatment for steam-injected gas-turbine systems. Topical report, October 1987-March 1989, 15:2417 (R;US)
Development of a data-processing model for steady turbulent 3-D gas particle flow, 15:3110 (R;DK;In Danish, English)
Measurements of gas concentrations and temperature in a boiler room, 15:2428 (R;DK;In Danish)
Numerical integration method of radiative exchange (NIMREX), 15:3113 (RA;DK)
User manual and program documentation for the "TUFCA" flow program, 15:3112 (RA;DK;In Danish)

BOILING WATER COOLED AND MODERATED REACTOR
See BWR TYPE REACTORS

BOMBS
Reverse Hopkinson bar testing, 15:3389 (R;US)

BONE MARROW
Acute radiation syndrome in the ^{137}Cs Brazilian accident, 1987, 15:3698 (R;BR)

BONNEVILLE POWER ADMINISTRATION
Research and Development report: Fiscal years 1987–1988, 15:2607 (R;US)
Summary of commercial conservation programs environmental issues and program consistency, 15:3517 (R;US)
Summary of residential environmental issues and program consistency, 15:2698 (R;US)

BORANES
Further theoretical studies on B_2H_4 and $B_2H^+_4$, 15:2953 (J;US)
Laser photoelectron spectroscopy of ions: Progress report, 1988–1989, 15:3095 (R;US)

BOREHOLES
Oil wells and gas wells: aspects of radiological safety, 15:2123 (R;BR;In Portuguese)
Pilot project for a larger solar heating system with seasonal heat storage. Further documentation of borehole storage yield and economy, 15:2352 (R;DK;In Danish)
The Waste Isolation Pilot Plant (WIPP) Seal System Performance Program, 15:2236 (R;US)

BORIC ACID
Characterisation of molecular boric acid by mass spectrometry and matrix isolation-infrared spectroscopy, 15:3068 (R;GB)
New estimates for the thermodynamic functions of molecular boric acid, 15:3069 (R;GB)

BORON
Neutron capture therapy for melanoma, 15:3615 (R;US)
Structure determination of the Si(111):B($\sqrt{3}\times\sqrt{3}$)*R*30° surface: Subsurface substitutional doping, 15:3006 (J;US)

BORON 10
Thiourea derivatives: Process for their production and for their use for neutron capture therapy of malignant melanomas, 15:3618 (TG;US)

BORON COMPOUNDS
See also BORANES
BORON HYDRIDES
Synthesis and properties of new preceramic materials: Research progress report, December 1, 1988–November 30, 1989, 15:2970 (R;US)

BORON HYDRIDES
Further theoretical studies on B_2H_4 and $B_2H^+_4$, 15:2953 (J;US)
Molecular structure and thermal stability of B_2H_4 and $B_2H^+_4$ species, 15:2952 (J;US)
Structure and bonding in the B_2H_5 radical and cation, 15:3927 (J;US)
Theoretical study of the ionization of B_2H_5, 15:3928 (J;US)
Theroretical study of $B_2H^+_3$, $B_2H^+_2$, and B_2H^+, 15:3934 (J;US)

BORON INJECTION
See SAFETY INJECTION

BOROSILICATE GLASS
A kinetic model for dissolution of borosilicate glass, 15:2240 (R;US)
Static leaching of actinides and fission products from fully radioactive waste glass of HLLW generated in Tokai reprocessing plant, 15:2224 (R;JP)

BOROSILICATES

[Graphite and carbon/carbon composition]: Foreign trip report, September 17, 1988–September 28, 1988, 15:2979 (R;US)

CARBON 11
New techniques for positron emission tomography in the study of human neurological disorders: Progress report, June 15, 1987–November 15, 1989, 15:3616 (R;US)

CARBON 12 REACTIONS
Effect of vacuum polarization on the sub-Coulomb ^{12}C-^{12}C scattering, 15:4077 (RA;DE;In German)
Two-centre shell model description of quasi-molecular resonance states in heavy ion collisions, 15:4130 (R;XA)

CARBON 12 TARGET
Deep-inelastic myon-nucleus scattering at the CERN SPS; EMC and NMC Collaboration, 15:3956 (RA;DE;In German)
Effect of vacuum polarization on the sub-Coulomb ^{12}C-^{12}C scattering, 15:4077 (RA;DE;In German)
The interference term between nuclear charge and nuclear current matrix elements of the E1 giant resonance in ^{12}C and ^{58}Ni, 15:4075 (RA;DE;In German)
Time of flight measurements at the pulsed proton beam, 15:4076 (RA;DE;In German)
Two-centre shell model description of quasi-molecular resonance states in heavy ion collisions, 15:4130 (R;XA)

CARBON 14 TARGET
Pion induced double-charge exchange above the resonance, 15:4160 (R;US)

CARBON ADDITIONS
Strain aging in tungsten-heavy alloys. Final report, 15:2810 (R;US)

CARBON DIOXIDE
A county-level approach to regional resource analysis based on climate simulation, 15:3396 (J;US)
Carbon dioxide and climate: Summaries of research in FY 1989, 15:3409 (R;US)
Effects of air pollutants on photosynthesis, vegetative growth, and development of grapevines in the San Joaquin Valley of California. Final report, February 1987-February 1989, 15:3445 (R;US)
Effects of atmospheric mix and toxic fumes on military performance, 15:3777 (R;US)
Energy transfer studies with lasers, 15:3904 (J;US)
Quantum state-resolved study of pure rotational excitation of CO_2 by hot atoms, 15:3933 (J;US)
Seasonal climatic changes induced by doubled CO_2 as simulated by the OSU atmospheric GCM/mixed-layer ocean model, 15:3471 (J;US)
[The role of oceans in determining atmospheric CO_2]: Foreign trip report, October 14, 1989–October 22, 1989, 15:3425 (R;US)

CARBON DIOXIDE LASERS
Noise levels in a tunable CO_2 laser source, 15:3147 (R;US)

CARBON IONS
A review of radiative and dielectronic recombination for C and O ions, 15:3899 (J;SE)
Dielectronic recombination, 15:3890 (RA;DE;In German)
Laser-induced electron-ion interaction, 15:3889 (RA;DE;In German)

CARBON MONOXIDE
Effects of atmospheric mix and toxic fumes on military performance, 15:3777 (R;US)
Human-health studies of carbon monoxide (CO) under conditions of military weapons systems crewman exposures. Protocol 1: Formation of cohb. Final report, September 1982-March 1985, 15:3755 (R;US)
Optical second harmonic generation from Ni(110) with adsorbed CO, 15:2879 (J;US)
Photofragmentation of ketene to $CH_2(\tilde{X}^3B_1)$ + CO: Dissociation rate, energy release and exit barrier height, 15:3096 (R;US)

CARBON STEELS
See also STEEL-ASTM-A212
Effect of heat treatment of toughness and strength properties of C-Mn steel, 15:2850 (R;MY)
Metal wastage analysis of carbon steel tubes in FBC environment, 15:2093 (R;US)
Steel initiative: Development of superplastic steel processing: First annual progress report, March 15, 1988–March 15, 1989, 15:2827 (R;US)

CARBONACEOUS MATERIALS
See also COAL
Carbonaceous film coating, 15:3038 (P;US)

CARBOXYHEMOGLOBIN
Human-health studies of carbon monoxide (CO) under conditions of military weapons systems crewman exposures. Protocol 1: Formation of cohb. Final report, September 1982-March 1985, 15:3755 (R;US)

CARCINOGEN SCREENING
Utility of short-term tests for genetic toxicity, 15:3612 (R;US)

CARCINOGENESIS
EPA (Environmental Protection Agency) programs and the regulation of carcinogens: Methods and philosophies. Technical report, 15:3786 (R;US)

CARCINOGENS
Complex mixtures of urban air pollutants: Identification and comparative assessment of mutagenic and tumorigenic chemicals and emission sources, 15:3784 (R;US)
EPA (Environmental Protection Agency) programs and the regulation of carcinogens: Methods and philosophies. Technical report, 15:3786 (R;US)
Genetic activity profiles: Use in management of risk from genotoxic substances in the environment, 15:3766 (R;US)
Genetic-activity profiles and hazard assessment, 15:3768 (R;US)
Registry of Toxic Effects of Chemical Substances (RTECS), 1988 computer tape. Data file, 15:3790 (R;US)
Risk assessment is a developing science: Approaches to improve evaluation of single chemicals and chemical mixtures, 15:3779 (R;US)
Use of genotoxic activity profiles in assessment of carcinogenesis and transmissible genetic effects, 15:3775 (R;US)
Utility of short-term tests for genetic toxicity, 15:3612 (R;US)

CARCINOMAS
Afterloading
Dependence of local radiation complications on methods of intracavitary gamma-therapy in concomitant radiotherapy of stage 1 cervix uteri carcinoma, 15:3741 (RA;SU;In Russian)

Anoxia
Modifying action of gaseous hypoxia in radiotherapy of pulmonary cancer, 15:3668 (RA;SU;In Russian)

Chemotherapy
Immediate results of concomitant radiotherapy of advanced forms of cervix uteri carcinoma with the use of thymaline, 15:3663 (RA;SU;In Russian)
Immunologic status of patients with epidermoid lung cancer in radiotherapy on split course and chemoimmunotherapy, 15:3665 (RA;SU;In Russian)
Potentialities of 100 per cent objective effect receiving during chemoradiation therapy of patients with small cell lung carcinoma, 15:3649 (RA;SU;In Russian)

Fractionated Irradiation
Injuries of healthy tissues in nontraditional regimen of dose fractionating in patients with cervix uteri carcinoma, 15:3662 (RA;SU;In Russian)

Hyperglycemia
Results of combined treatment of patients with pulmonary carcinoma using artificial hyperglycemia, 15:3667 (RA;SU;In Russian)

Immunotherapy
Immediate results of concomitant radiotherapy of advanced forms of cervix uteri carcinoma with the use of thymaline, 15:3663 (RA;SU;In Russian)
Immunologic status of patients with epidermoid lung cancer in radiotherapy on split course and chemoimmunotherapy, 15:3665 (RA;SU;In Russian)

Radiocolloids
Radioactive colloid gold ^{198}Au in combined treatment of lung cancer, 15:3674 (RA;SU;In Russian)

Radiosensitivity
Evaluation of radiocurability of small cell pulmonary carcinoma according to full value of local control during radiotherapy in clinic, 15:3638 (RA;SU;In Russian)

Radiotherapy
15-th experience on application of non-standard dose fractionating in radiotherapy of patients with lung carcinoma, 15:3648 (RA;SU;In Russian)
Basis for use of combined treatment of patients with corpus uteri carcinoma including preoperative irradiation, 15:3658 (RA;SU;In Russian)
Comparative evaluation of efficiency of radiation and surgecal treatment of microinvasive cervix uteri carcinoma, 15:3651 (RA;SU;In Russian)
Comparative evaluation of efficiency of two methods of preoperative radiotherapy of patients with lung carcinoma, 15:3656 (RA;SU;In Russian)
Conservative and surgical treatment of rectovaginal fistulas induced by irradiation, 15:3737 (RA;SU;In Russian)
Evaluation of radiocurability of small cell pulmonary carcinoma according to full value of local control during radiotherapy in clinic, 15:3638 (RA;SU;In Russian)
Immediate results of concomitant radiotherapy of advanced forms of cervix uteri carcinoma with the use of thymaline, 15:3663 (RA;SU;In Russian)
Immunologic status of patients with epidermoid lung cancer in radiotherapy on split course and chemoimmunotherapy, 15:3665 (RA;SU;In Russian)
Injuries of healthy tissues in nontraditional regimen of dose fractionating in patients with cervix uteri carcinoma, 15:3662 (RA;SU;In Russian)
Local radiation injuries after radiotherapy on radical program in patients with locally disseminated lung carcinoma subjected to exploratory thorocotomy, 15:3743 (RA;SU;In Russian)
Modifying action of gaseous hypoxia in radiotherapy of pulmonary cancer, 15:3668 (RA;SU;In Russian)
Peculiarities of testing and introduction into clinical practice of Selectron installation in Research Institute of Health Ministry of Byelorussian SSR, 15:3669 (RA;SU;In Russian)
Potentialities of 100 per cent objective effect receiving during chemoradiation therapy of patients with small cell lung carcinoma, 15:3649 (RA;SU;In Russian)
Potentialities of Simulix-Simtomix complex use for preradiation preparation of patients with lung cancer, 15:3647 (RA;SU;In Russian)
Quality garantee of radiotherapy of patients with lung cancer, 15:3650 (RA;SU;In Russian)
Radiation response in patients with pulmonary carcinoma during remote gamma therapy by means of dynamic multifractionating, 15:3642 (RA;SU;In Russian)
Radioactive colloid gold ^{198}Au in combined treatment of lung cancer, 15:3674 (RA;SU;In Russian)
Results of combined treatment of patients with pulmonary carcinoma using artificial hyperglycemia, 15:3667 (RA;SU;In Russian)

Surgery
Basis for use of combined treatment of patients with corpus uteri carcinoma including preoperative irradiation, 15:3658 (RA;SU;In Russian)
Comparative evaluation of efficiency of radiation and surgecal treatment of microinvasive cervix uteri carcinoma, 15:3651 (RA;SU;In Russian)
Radioactive colloid gold ^{198}Au in combined treatment of lung cancer, 15:3674 (RA;SU;In Russian)

CARDIAC OUTPUT
See BLOOD CIRCULATION

CARDIAC PACEMAKERS
Use of lithium batteries in biomedical devices. Technical report No. 8, July 1988-June 1989, 15:2569 (R;US)

CASKS
See also SPENT FUEL CASKS
Three-dimensional effects in flask impact testing, 15:3123 (R;GB)

CASTE (INSECTS)
See POPULATIONS

CATALYSIS
Electronic materials high-T_c superconductivity polymers and composites structural materials surface science and catalysts industry participation: Annual report, 1988, 15:2923 (R;US)

CATALYSTS
Comprehensive characterization studies of sulfided molybdenum catalysts: Final progress report, 15:2828 (R;US)
Development of thermal-resistant catalysts, 15:2795 (R;JP)
Investigation of the formation and chemical aspects of coke deposits occurring on acid, monofunctional zeolite catalysts through typical reactions with hydrocarbons, 15:2270 (R;DE;In German)
Stable isotope studies: Progress report, October 1988–October 1989, 15:3075 (R;US)

CATALYTIC COMBUSTORS
Pulsating catalytic combustion of gaseous fuels. Final report, January 1987-September 1988, 15:2152 (R;US)

CATALYTIC CONVERTERS
Development of thermal-resistant catalysts, 15:2795 (R;JP)

CATAPHORESIS
See ELECTROPHORESIS

CATHODES
Cell performance of ultra-thin polymer-cathode system: Theoretical energy and power-density projections. Technical report No. 3, July 1988-June 1989, 15:2568 (R;US)
Impedance analysis of ionic transport in polypyrrole-polyazulene copolymer and its charge-discharge characteristics. Technical report, July 1988-June 1989, 15:2571 (R;US)
Rechargeable lithium/polymer cathode batteries. Technical report, July 1988-June 1989, 15:2570 (R;US)

CAVITY RECEIVERS
Comparison of a cavity solar receiver numerical model and experimental data, 15:2326 (BA;US)

CCD
See CHARGE-COUPLED DEVICES

CELL GROWTH (ANIMAL)
See ANIMAL CELLS

CELL NUCLEI
The microdosimetry of radon decay products in the respiratory tract, 15:3748 (R;US)

CELLS (ANIMAL)
See ANIMAL CELLS

CELLS (BACTERIAL)
See BACTERIA

CELLS (ELECTROLYTIC)
See ELECTROLYTIC CELLS

CELLULOSE
Cellulose and lignin: Biodegradation. June 1987-September 1989 (Citations from the Life Sciences Collection data base). Report for June 1987-September 1989, 15:2300 (R;US)

CEMENTS
Evolution of pH in a radwaste repository: internal reactions between concrete constituents, 15:2178 (R;GB)
Immobilisation in cement of ion exchange resins arising from the purification of reagents used for the decontamination of reactor circuits. Fourth semestrial report January-June 1988, 15:2175 (R;GB)
Use of foaming mud cement to terminate underground coal fires and to control subsidence of burn cavities. Final report, 15:2091 (R;US)
Workshop on cement stabilization of low-level radioactive waste: Proceedings, 15:2214 (R;US)

CENTRAL NERVOUS SYSTEM
See also BRAIN

Electrophysiological systems for neurotoxicity field testing: PEARL II and alternatives, 15:3780 (R;US)

CENTRAL RECEIVERS
An assessment of the optical performance of stretched-membrane mirror modules, 15:2328 (BA;US)
Drop ejection in molten-salt direct absorption central receivers, 15:2324 (BA;US)
Potential of advanced-design solar central receiver power systems, 15:2321 (BA;US)
Structural integrity studies of an external direct absorption solar central receiver, 15:2329 (BA;US)
The economic potential of a photovoltaic central receiver power plant, 15:2322 (BA;US)

CENTRIFUGES
Magnetically suspended centrifuge for studies of nonlinear phenomena in stratified fluids: Developmental aspects, 15:3211 (J;US)

CEPHEIDS
The evolution of variable stars, 15:3870 (BA;US)

CERAMICS
Capacitive energy storage at cryogenic temperatures. Phase 2. Final report, 1 January 1986-31 December 1988, 15:2560 (R;US)
Ceramics for transportation engines - siren or solution, 15:2782 (R;US)
Composite ceramic superconducting wires for electric-motor applications. Annual report No. 1, 30 June 1988-30 June 1989, 15:3117 (R;US)
Dispersion and rheology in ceramic processing, 15:2942 (BA;US)
High-temperature ceramic superconductors. Annual technical report, 24 May 1988-30 June 1989, 15:2899 (R;US)
Microwave cavity studies for thermal testing of ceramic breeder materials, 15:2944 (BA;US)
Nanophase materials assembled from atomic clusters, 15:2824 (R;US)
Numerical and empirical verification of the stress state in a ceramic, button-head, tensile specimen, 15:2913 (R;US)
Physics and materials science of high-temperature superconductors. Final report, 15:3121 (R;US)
Process monitoring using optical ultrasonic wave detection, 15:2915 (R;US)
Sialon ceramics. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:2933 (R;US)
Solid lubrication of ceramic sufraces by IAD [ion-assisted deposition]-silver coatings for heat engine applications, 15:2906 (R;US)

CERAMICS INDUSTRY
Sentinel Event Notification System for Occupational Risks (SENSOR): Recommendations for control of silica exposure at Woodbridge Sanitary Pottery Corporation, Woodbridge, New Jersey, 15:3456 (R;US)

CEREALS
See also MAIZE
Food and grain preservation through irradiation. January 1970-April 1989 (Citations from the NTIS data base). Report for January 1970-April 1989, 15:3688 (R;US)

CERIUM
Photoemission study of formation and oxidation of a cerium-copper interface, 15:2891 (J;US)

CERIUM SULFIDES
Thermophysical properties of the lanthanide sesquisulfides. I. Schottky functions and magnetic and electronic properties of γ-La_2S_3, γ-Ce_2S_3, γ-Nd_2S_3, and γ-Gd_2S_3, 15:3021 (J;US)

CESIUM 137
Ingestion of radiocesium and strontium-90 by self-suppliers and non-self-suppliers in the first year following the Chernobyl reactor accident. Data taken as a basis for derivation of secondary intervention reference levels, 15:3502 (R;DE;In German)
Investigation of the transfer of ^{90}Sr, ^{137}Cs, ^{60}Co, and ^{54}Mn from soil to plant, and of the main soil parameters that have influence on the transfer process. Final report, 15:3506 (R;DE;In German)
Radionuclide deposition and exposure in the Federal Republic of Germany after the Chernobyl accident, 15:3746 (R;US)

CESIUM ALLOYS
Structural properties of liquid alkali-metal–lead alloys: NaPb, KPb, RbPb, and CsPb, 15:2887 (J;US)

CHALKS
See LIMESTONE

CHARGE-COUPLED DEVICES
Use of a charge-coupled device camera for broadband coherent anti-Stokes Raman scattering measurements, 15:3377 (J;US)

CHARGED PARTICLES
See also DEUTERONS
Electrostatic precipitation of charged particles from a turbulent flow between coaxial cylinders, 15:3402 (R;US)
On the interactions of charged particles with cosmic string, 15:3987 (R;XA)

CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS
CHARGED PARTICLES

CHARM PARTICLES
Proceedings of the tau-charm factory workshop: Study of tau, charm and J/psi physics; development of high luminosity esup +esup minus rings; design of esup +esup minus detectors for tau-charm physics, 15:3962 (R;US)

CHARTS
See DIAGRAMS

CHEMICAL ANALYSIS
See also ACTIVATION ANALYSIS
QUANTITATIVE CHEMICAL ANALYSIS
Polarization spectroscopy in analytical measurements, 15:3067 (J;US)

CHEMICAL EXPLOSIONS
Dynamically compressed metals - theory. Final report, 1 February 1986-30 April 1989, 15:4200 (R;US)

CHEMICAL EXPLOSIVES
See also PETN
TATB
Burning rates of two cast nitramine explosives using a hybrid closed bomb-strand burner, 15:3382 (R;US)
Fast transit gas- and condensed-phase chemistry of energetic materials, 15:3381 (R;US)
Simultaneous thermal analysis techniques for characterization of energetic materials, 15:3380 (R;US)

CHEMICAL FEEDSTOCKS
Greenhouse gas emission coefficients from the energy system. Two methods to calculate national CO_2-e issions, 15:2599 (B;NL)

CHEMICAL INDUSTRY
Membrane separation processes for liquid hydrocarbons and gases in the petrochemical industry: A technical case study, 15:2118 (R;US)
Source characterization and control technology assessment of methylene chloride emissions from Eastman Kodak Company, Rochester, NY. Final report, July 1988-April 1989, 15:3452 (R;US)
Wastewater treatment: Chemical industry. January 1970-September 1989 (Citations from Pollution Abstracts). Report for January 1970-September 1989, 15:3563 (R;US)

CHEMICAL LASERS
Coupled multiline c-w (continuous-wave) HF (hydrogen fluoride) lasers: Experimental performance. Technical report, 15:3149 (R;US)
Design and operation of high efficiency electron-beam-initiated chemical lasers, 15:3171 (BA;US)
Multiline multimode c-w (continuous-wave) chemical laser performance. Technical report, 15:3142 (R;US)

CHEMICAL MUTAGENS
See MUTAGENS

CHEMICAL REACTION KINETICS
See also COMBUSTION KINETICS
A semiclassical tunneling model for use in classical trajectory simulations, 15:3086 (J;US)
Characterization of an experimental strange attractor by periodic orbits, 15:4298 (J;US)

Corrections for non-ideal effects in reflected shock waves at low Mach numbers, 15:3072 (R;US)

CHEMICAL REACTIONS

CHLORINE

CHLORINATED ALICYCLIC HYDROCARBONS
Optically based potassium sensor, 15:3372 (R;US)

CHLORINATED ALIPHATIC HYDROCARBONS
See also CHLOROFORM
PVC
Best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatic hydrocarbons F024. Final report, 15:2772 (R;US)
Best demonstrated available technology (BDAT) background document for wastes from the production of 1,1,1-trichloroethane K028, K029, K095, and K096. Final report, 15:2773 (R;US)
In-situ aquifer restoration of chlorinated aliphatics by methanotrophic bacteria. Research report, 1 May 1985-30 April 1989, 15:3554 (R;US)
Superfund Record of Decision (EPA Region 3): Croyden TCE Spill, PA. (First Remedial Action), December 1988, 15:3586 (R;US)

CHLORINATED AROMATIC HYDROCARBONS
Accumulation patterns of heavy metals and chlorinated hydrocarbons by sea otters, Enhydra lutris, in California. Final report, 15:3788 (R;US)
International aspects of restrictions of ozone-depleting substances, 15:3462 (R;US)
PCBs in humans: What we know and what we don't know, 15:3759 (R;US)
Toxicological profile for selected PCBs (polychlorinated biphenyls) (Aroclor-1260, -1254, -1248, -1242, -1232, -1221, and -1016). Final report, 15:3785 (R;US)

CHLORINATION
Case-control study of bladder cancer in Massachusetts among populations receiving chlorinated and chloraminated drinking water, 15:3771 (R;US)

CHLORINE
Chlorine related degradation of materials in coal liquefaction, 15:2018 (R;US)
Quantum state-resolved study of pure rotational excitation of CO_2 by hot atoms, 15:3933 (J;US)
The TVA moving-manifold targeted-chlorination system: Second field demonstration: Final report, 15:2413 (R;US)

CHLORINE CHLORIDES
See CHLORINE

CHLORINE COMPLEXES
A three-dimensional L^2 simulation of the photodetachment spectra of $ClHCl^-$ and IHI^-, 15:3100 (J;US)

CHLORINE IONS
Direct and resonance contributions to electron-impact excitation of n=2 to n=3 transitions in neonlike ions, 15:3907 (J;US)

CHLOROFORM
Best demonstrated available technology (BDAT) background document for K009 and K010, 15:2768 (R;US)

CHO CELLS
Radiobiology of ultrasoft X rays. IV. Flat and round-shaped hamster cells (CHO-10B, HS-23), 15:3754 (J;US)

SUBBITUMINOUS COAL
Agglomeration
Coal surface control for advanced physical fine coal cleaning technologies: Quarterly report, May 1–July 31, 1989, 15:2015 (R;US)
Ash Content
Apparatus for direct measurement of ash fusion and sintering behavior at elevated temperatures and pressures, 15:2066 (J;US)
Chemical Reactions
[Coal science]: Foreign trip report, October 20, 1989–October 31, 1989, 15:2065 (R;US)
Cleaning
[Advanced physical fine coal cleaning: Froth flotation]: Quarterly technical progress report, July 1, 1989–September 30, 1989, 15:2016 (R;US)
Combustion
Coal-fueled diesel systems research: Volume 1, Basic fuel, fuel system, and combustion studies: Final report, 15:2798 (R;US)
Coal-fueled diesel systems research: Volume 2, Engine operation, durability and economic: Final report, 15:2799 (R;US)
Mineral matter transformations and slagging in a semi-industrial furnace, 15:2100 (R;NL)
[Analysis of acid rain and associated phenomena]: Final report, 15:2077 (R;US)
Combustion Products
Environmental aspects of coal-fueled diesel engines, 15:2080 (BA;US)
In-situ measurements of coal ash deposit optical properties: Final report, September 11, 1987–September 30, 1989, 15:2096 (R;US)
Laser diagnostics of mineral matter and combustion processes in coal: Research report, September 1, 1988–January 31, 1989, 15:2097 (R;US)
Combustion Properties
Apparatus for direct measurement of ash fusion and sintering behavior at elevated temperatures and pressures, 15:2066 (J;US)
Combustors
[US Agency for International Development–Government of India collaborative coal projects]: Foreign trip report, October 21, 1989–November 2, 1989, 15:2429 (R;US)
Compiled Data
International energy annual, 1988, 15:2630 (R;US)
Coprocessing
An investigation of coal-oil reaction pathways using model compounds, 15:2049 (B;US)
Inhibition of retrogressive reactions in coal/petroleum coprocessing: Quarterly technical progress report, June 1, 1989–August 31, 1989, 15:2025 (R;US)
Process and analytical studies of enhanced low severity coprocessing using selective coal pretreatment: Quarterly technical progress report, June–August, 1989, 15:2022 (R;US)
Synthetic fuels from coal-heavy oil mixtures. Phase 1. A survey of the work applicable to coal bitumen mixtures as synthetic fuels feedstock, 15:2027 (R;CA)
Devolatilization
An engineering model for coal devolatilization: Quarterly report, March 15, 1989–June 15, 1989, 15:2098 (R;US)
Exports
The directory of US coal and technology export resources, 15:2102 (R;US)
Flocculation
A new approach in ultrapurification of coal by selective flocculation: Annual report, 15:2024 (R;US)
Flotation
Column flotation of coal with fluorosurfactants: Final report, 15:2014 (R;US)
Hydrogenation
Electrochemical characterization and derivatization of coal: Final technical report, September 15, 1986–September 14, 1989, 15:2059 (R;US)
Mass Spectra
Numerical comparisons between the pyrolysis mass spectra of twelve US coals and their relative solubility in microbial cultures or alkaline buffer, 15:2062 (R;US)
Molecular Structure
[Coal structure and basic reactions]: Foreign trip report, October 20, 1989–October 28, 1989, 15:2064 (R;US)
Nmr Spectra
A solid-state NMR study of condensation/retrograde reactions during coal liquefaction: Quarterly progress report, July 1–September 30, 1989, 15:2023 (R;US)
Oxidation
Characterization of oxidized coal surfaces: Final report, 15:2061 (R;US)
Porosity
Role of porosity in supercritical fluid extraction of coal: Final technical report, 15:2060 (R;US)

Reactivity
High-sulfur coal research at the SIUC [Southern Illinois University at Carbondale] Coal Technology Laboratory: Quarterly progress report, July 1–September 30, 1989, 15:2058 (R;US)
Shape
A study of coal particle shape and three-body wear: Quarterly report, August–October 1989, 15:2057 (R;US)
Solubility
Numerical comparisons between the pyrolysis mass spectra of twelve US coals and their relative solubility in microbial cultures or alkaline buffer, 15:2062 (R;US)
Supercritical fluid thermodynamics for coal processing: Quarterly progress report, July 1, 1989–September 30, 1989, 15:2055 (R;US)
Spectroscopy
A solid-state NMR study of condensation/retrograde reactions during coal liquefaction: Quarterly progress report, July 1–September 30, 1989, 15:2023 (R;US)
Surface Properties
Enhancement of surface properties for coal benefication: Progress report, August 1, 1989–September 30, 1989, 15:2056 (R;US)
Wear
A study of coal particle shape and three-body wear: Quarterly report, August–October 1989, 15:2057 (R;US)

COAL DEPOSITS
Technical and economic factors influencing the exploration of black-coal deposits in developing countries, 15:2081 (RA;DE;In German)

COAL FINES
Review on mineral matter transformations and slagging in pulverized coal combustion, 15:2099 (R;NL)
The effect of system parameters on fines generation in limestone/coal char mixtures, 15:2048 (B;US)

COAL GASIFICATION
See also DOW GASIFICATION PROCESS
KRW GASIFICATION PROCESS
Apparatus for direct measurement of ash fusion and sintering behavior at elevated temperatures and pressures, 15:2066 (J;US)
Environmental Monitoring Plan for the Dow Syngas Project. Annual report. Report for 1 April 1988-31 March 1989, 15:2043 (R;US)
Coal Tar
Bench-scale fixation of soils from the Tacoma Tar Pits Superfund Site. Final report, 15:3521 (R;US)
Combined-Cycle Power Plants
Cool Water Coal Gasification Program: Environmental Monitoring Plan. Volume 1-5, Section 1-12, Appendices A-F. Report for 1984-89, 15:2045 (R;US)
Cool Water Coal Gasification Program: Environmental monitoring plan. Final Report, non-proprietary. Executive summary. Report for 1984-1989, 15:2046 (R;US)
Dow Gasification Process
Environmental Monitoring Plan for the Dow Syngas Project. Annual Health and Safety Report, 1987. Report for 1 January-31 December 1987, 15:2039 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: First quarter, 1987. Report for 1 January-31 March 1987, 15:2035 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: First quarter, 1986. Report for 1 January-31 March 1986, 15:2031 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Fourth quarter, 1986. Report for 1 October-31 December 1986, 15:2034 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Fourth quarter, 1988. Report for 1 October-31 December 1988, 15:2042 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Fourth quarter, 1987. Report for 1 October-31 December 1987, 15:2038 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1986. Report for 1 April-30 June 1986, 15:2032 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1987. Report for 1 April-30 June 1987, 15:2036 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1988. Report for 1 April-30 June 1988, 15:2040 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1989. Report for 1 April-30 June 1989, 15:2044 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Third quarter, 1986. Report for 1 July-30 September 1986, 15:2033 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Third quarter, 1988. Report for 1 July-30 September 1988, 15:2041 (R;US)
Environmental Monitoring plan for the Dow Syngas Project. Quarterly report: Third quarter, 1987. Report for 1 July-30 September 1987, 15:2037 (R;US)
High Btu Gas
Advanced gasifier-desulfurizer process development for SNG (substitute natural gas) application. Final report, August 1987-December 1988, 15:2047 (R;US)
Research Programs
Review of physical science research, 1979-1988, 15:2136 (R;US)
Stretford Process
Baseline testing of the Stretford Process on the GRI 120-liter bench-scale liquid redox sulfur recovery unit. Topical report, 15:2143 (R;US)

COAL LIQUEFACTION
A solid-state NMR study of condensation/retrograde reactions during coal liquefaction: Quarterly progress report, July 1–September 30, 1989, 15:2023 (R;US)
Effectiveness factors for hydroprocessing of coal and coal liquids: Progress report No. 8, June 15, 1989–September 15, 1989, 15:2021 (R;US)
Enhanced coal liquefaction by low-severity catalytic reactions: Final report, 15:2026 (R;US)
Kinetics of coal conversion to soluble products: January 1, 1989–June 30, 1989, 15:2019 (R;US)
Kinetics of coal conversion to soluble products: Quarterly report, July 1, 1989–September 30, 1989, 15:2020 (R;US)

COAL LIQUEFACTION PLANTS
Chlorine related degradation of materials in coal liquefaction, 15:2018 (R;US)

COAL LIQUIDS
Prediction of thermodynamic properties of coal derivatives: Progress report, March 1, 1989–February 28, 1990, 15:2054 (R;US)

COAL MINES
Use of foaming mud cement to terminate underground coal fires and to control subsidence of burn cavities. Final report, 15:2091 (R;US)

COAL MINING
Basic investigation of mixtures consisting of binders and tailings from coal mining with regard to their applicability as building materials in the mining industry, 15:2072 (R;DE;In German)
Methane drainage from gassy Western US coal seams, 15:2083 (R;US)
Shaping of working conditions for handicapped persons according to results of human-engineering research in hardcoal mining - main phase. Final report, 15:2103 (R;DE;In German)

COAL PREPARATION
High-sulfur coal research at the SIUC [Southern Illinois University at Carbondale] Coal Technology Laboratory: Quarterly progress report, July 1–September 30, 1989, 15:2058 (R;US)
The development of clean coal technology in the United States, 15:2013 (R;US)

COAL TAR
Bench-scale fixation of soils from the Tacoma Tar Pits Superfund Site. Final report, 15:3521 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-OIL MIXTURES
See COAL
FUEL SLURRIES

COALIFICATION
Isotope labeling investigations in simulated coalification: A view of geological metamorphism, 15:2052 (R;US)

COASTAL REGIONS
Cape Cod Waste-water Renovation and Retrieval System. A study of water treatment and conservation. Data supplement for annual report, June 11, 1974-June 10, 1975. Technical report, 15:3573 (R;US)
Cape Cod Waste-water Renovation and Retrieval System. A study of water treatment and conservation. Interim report, June 11, 1975-June 10, 1976. Technical report, 15:3574 (R;US)
Current and suspended sediment measurements on the central California continental shelf, 15:3819 (R;US)
Effects of wind and Gulf Stream events on the currents off the coast of North Carolina as it relates to oil-spill risk potential, 15:2128 (R;US)

COASTAL WATERS
Current measurement studies around the Cesme Peninsula (Turkey), 15:3569 (R;XA)

COBALT
Amorphous phase formation by solid-state reaction between polycrystalline Co thin films and single-crystal GaAs, 15:3014 (J;US)
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: Final report for Task 2, 15:2262 (R;US)

COBALT 59
Investigation of monoenergetic pair conversion, 15:3344 (RA;DE;In German)

COBALT 60
Investigation of the transfer of ^{90}Sr, ^{137}Cs, ^{60}Co, and ^{54}Mn from soil to plant, and of the main soil parameters that have influence on the transfer process. Final report, 15:3506 (R;DE;In German)
Treatment planning for stereotactic heavy-charged particle radiosurgery of the brain, 15:3677 (R;US)

COBALT COMPOUNDS
See also COBALT SILICIDES
Amorphous phase formation by solid-state reaction between polycrystalline Co thin films and single-crystal GaAs, 15:3014 (J;US)

COBALT IONS
Analytical use of zide ion. Chemical equilibrium studies and correlates in $U(VI)/N_3$ and $Co(III)/N_3$ systems, 15:3047 (R;BR;In Portuguese)
Electron paramagnetic resonance investigations of divalent cobalt in single crystals of perovskite ($CaTiO_3$), 15:3023 (J;US)

COBALT SILICIDES
Silicide structural evolution in high-dose cobalt-implanted Si(100) crystals, 15:3028 (J;US)

COGENERATION
Cogeneration- and Total Energy potentials at an alternative natural gas price policy and environmental policy in the Dutch National Energy Outlook scenarios, 15:2619 (B;NL;In (In Dutch))
Commercial building research workshop. July 30-31, 1986, 15:2145 (R;US)
Regional application of natural-gas-fired combined-cycle power generation, 15:2759 (R;US)
Residential cogeneration system development. Annual interim report, February 1988-January 1989, 15:2777 (R;US)

COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS

COHERENT RADIATION
Dephasing-induced coherences: higher-order selection rules and experiments in a magnetic field, 15:3901 (J;US)
Ultrahigh brightness XeCl laser system, 15:3170 (BA;US)

COILS (MAGNETIC)
See MAGNET COILS

COKE
Investigation of the formation and chemical aspects of coke deposits occurring on acid, monofunctional zeolite catalysts through typical reactions with hydrocarbons, 15:2270 (R;DE;In German)

COKE OVENS
Detailed control technology survey of a coke-oven plant, 15:2050 (R;US)

COKING
Production of coke with specific metallurgical properties. Analysis of conditions in the blast furnace, 15:2029 (R;DE;In German)

COLD PLASMA
Electron plasma interactions in crossed fields, 15:4361 (BA;US)
Study of a plasma edge cathode scheme for electron beam extraction, 15:4365 (BA;US)

COLLECTIVE MODEL
Breaking of separability condition for dynamical collective subspace. Onset of quantum chaos in large-amplitude collective motion, 15:4152 (R;JP)
Dissipation mechanism of the large-amplitude collective motion. Dynamical evolution of a collective bundle of trajectories in the TDHF phase space for a simple soluble model, 15:4155 (R;JP)

COLLEGES
See EDUCATIONAL FACILITIES

COLLIDING BEAMS
General properties of an asymmetric B-factory lattice, 15:3273 (R;US)

COLLIERIES
See COAL MINES

COLLISIONLESS PLASMA
Structure of slow magnetosonic shocks in low beta plasmas, 15:4371 (J;US)

COLLOIDS
See also ALGINIC ACID
EMULSIONS
FOAMS
Analytic solution of pseudocolloid migration in fractured rock, 15:2212 (R;US)
Field-flow fractionation in the analysis of energy-related materials: Final report, April 1, 1986–March 31, 1989, 15:3545 (R;US)

COLONIES
See POPULATIONS

COLORIMETRY
See ABSORPTION SPECTROSCOPY

COLUMBIA RIVER
Columbia River situation: A semi-technical review, 15:3548 (R;US)

COLUMBIUM
See NIOBIUM

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES

COMANCHE PEAK-1 REACTOR
Final Environmental Statement related to the operation of Comanche Peak Steam Electric Station, Units 1 and 2 (Docket Nos. 50-445 and 50-446): Supplement, 15:3594 (R;US)

COMANCHE PEAK-2 REACTOR
Final Environmental Statement related to the operation of Comanche Peak Steam Electric Station, Units 1 and 2 (Docket Nos. 50-445 and 50-446): Supplement, 15:3594 (R;US)

COMBINED CYCLES
Regional application of natural-gas-fired combined-cycle power generation, 15:2759 (R;US)

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBINED-CYCLE POWER PLANTS
Cool Water Coal Gasification Program: Environmental Monitoring Plan. Volume 1-5, Section 1-12, Appendices A-F. Report for 1984-89, 15:2045 (R;US)
Cool Water Coal Gasification Program: Environmental monitoring plan. Final Report, non-proprietary. Executive summary. Report for 1984-1989, 15:2046 (R;US)

COMBUSTION
See also FLUIDIZED-BED COMBUSTION
PULSE COMBUSTION

Kinetics data base for combustion modeling: Status report, February 1, 1988–January 31, 1989, 15:3107 (R;US)
Molecular beam studies of oxygen atom reactions with unsaturated hydrocarbons, 15:3109 (R;US)
Note on improved k-ε turbulent flow model, 15:3111 (RA;DK;In Danish)
Peat - Environment - Society. Part 2: Emissions from combustion of peat, 15:2073 (R;FI;In Finnish)
Qualitative modeling and control of combustion, 15:3251 (R;FI;In Finnish)
Review on mineral matter transformations and slagging in pulverized coal combustion, 15:2099 (R;NL)
Sonic pyrometry in furnaces. Fundamentals, 15:3253 (R;FI;In Finnish)

COMBUSTION CHAMBERS
Aerothermal modeling program. Phase 2, element A: improved numerical methods for turbulent viscous recirculating flows, 15:3196 (RA;US)
Application of advanced diagnostics to airblast injector flows, 15:3198 (RA;US)
Constitutive modeling for isotropic materials, 15:3243 (RA;US)
Creep fatigue life prediction for engine hot section materials (ISOTROPIC) fifth year progress review, 15:3247 (RA;US)
Elevated temperature crack growth, 15:3246 (RA;US)
Finite element implementation of viscoplastic models, 15:3244 (RA;US)
Mechanics of materials model, 15:3240 (RA;US)
Qualitative modeling and control of combustion, 15:3251 (R;FI;In Finnish)
Structural response of an advanced combustor liner: Test and analysis, 15:3245 (RA;US)
Three-dimensional inelastic analysis methods for hot section components, 15:3237 (RA;US)
Three-dimensional inelastic analysis methods for hot section components, 15:3242 (RA;US)
Turbine Engine Hot Section Technology, 1987, 15:3236 (R;US)

COMBUSTION KINETICS
A standard problem for HECTR-MAAP [Hydrogen Event: Containment Transient Responses-Modular Accident Analysis Program] comparison: In-cavity oxidation, 15:2541 (R;US)

COMBUSTION PRODUCTS
Caterpillar 3406 spark-ignited natural-gas-engine emissions on EPA (Environmental Protection Agency) heavy-duty transient test cycle. Topical report, March-December 1988, 15:2801 (R;US)
Laser-induced-fluorescence spectroscopy of jet-cooled C_3, 15:3116 (J;US)
Measurements of gas concentrations and temperature in a boiler room, 15:2428 (R;DK;In Danish)
Mutagenicity of combustion emissions from a biomedical-waste incinerator, 15:3774 (R;US)
Recent developments of emission control technology in the United States for fossil fuel combustion sources, 15:3249 (R;US)

COMBUSTION WAVES
Evolution of reaction center in an explosive material, 15:3106 (R;US)

COMBUSTORS
See also CATALYTIC COMBUSTORS
FLUIDIZED-BED COMBUSTORS
Heat transfer, 15:2805 (B;US)
MHD [Magnetohydrodynamics] Integrated Topping Cycle Project: Fourth quarterly technical progress report, May 1, 1988–July 31, 1988, 15:2649 (R;US)

COMETS
See also HALLEY COMET
CoMA, an instrument for the detailed in-situ analysis of collected cometary particulates, 15:3348 (RA;DE;In German)

COMMERCE
See TRADE

COMMERCIAL BUILDINGS
Commercial building research workshop. July 30-31, 1986, 15:2145 (R;US)
Evaluation of the energy conservation program for the NMB bank offices, 15:2677 (R;NL;In (In Dutch))
Evaluation of the energy conservation program for the NMB bank offices. Appendices and figures, 15:2678 (R;NL;In (In Dutch))

COMMERCIALIZATION
Development of solar collector modules, 15:2347 (R;DK;In Danish)

COMMUNICATIONS
Business communications, 15:4536 (R;US)
ELF (extremely low frequency) communications system ecological monitoring program: Electromagnetic field measurements and engineering support – 1988. Technical report, 1982-1988, 15:3795 (R;US)
Northeast Artificial Intelligence Consortium annual report for 1987. Volume 5. Building an intelligent assistant: The acquisition, integration, and maintenance of complex distributed tasks. Interim report, December 1986-December 1987, 15:4498 (R;US)
Northeast Artificial Intelligence Consortium annual report for 1987. Volume 7. Part A. Time oriented problem solving. Interim report, December 1986-December 1987, 15:4499 (R;US)

COMMUNITIES (ECOLOGICAL)
See ECOSYSTEMS

COMPACT IGNITION TOKAMAK
Critical safety function guidelines for experimental fusion facilities, 15:4405 (R;US)
Design process for the CIT (compact ignition tokamak) poloidal field coil system, 15:4474 (BA;US)
Ring coil optimization with respect to stress, temperature, and system energy over a range of physics requirements, 15:4471 (BA;US)

COMPACT TORUS
Reflection of accelerated plasma rings from conical electrodes in the RACE experiment, 15:4368 (BA;US)

COMPARATIVE EVALUATIONS
Predicting flow through low-permeability, partially saturated, fractured rock: A review of modeling and experimental efforts at Yucca Mountain, 15:2234 (R;US)

COMPLEX TERRAIN
Integration of fluid modeling with complex-terrain field studies and model-development efforts, 15:3449 (R;US)

COMPLEXES
See also CHLORINE COMPLEXES
IODINE COMPLEXES
RARE EARTH COMPLEXES
Direct insertion of metal ions into tetrasulfonated phthalocyanine, 15:3071 (R;US)
Transition metal complexes as sensitizers or protectors against $O_2 \cdot^-$ toxicity, 15:3700 (RA;DE)

COMPOSITE MATERIALS
Challenges in processing for polymer composites, 15:2988 (R;US)
Computational simulation of high temperature metal matrix composites cyclic behavior, 15:2976 (R;US)
Fatigue crack growth study of SCS6/Ti-15-3 composite, 15:2974 (R;US)
Fracture-toughness testing of metal-matrix composites, 15:2966 (R;US)
Optimum interface properties for metal matrix composites, 15:2975 (R;US)
Protective coating for alumina-silicon carbide whisker composites, 15:3037 (P;US)
Research and technology plans for FY 1989 and accomplishments for FY 1988, 15:2977 (R;US)
Use of ash in highway construction: Delaware demonstration project: Final report, 15:2069 (R;US)
Y-Si-Al-O-N glass fibers. Final report, 15:2967 (R;US)
[Graphite and carbon/carbon composition]: Foreign trip report, September 17, 1988–September 28, 1988, 15:2979 (R;US)

COMPOUND NUCLEI
Binary complex fragment emission and multifragmentation from very hot nuclei, 15:4099 (R;US)

COMPOUND PARABOLIC CONCENTRATORS
Optical properties of one and two-stage concentrator systems with non-paraboloidal and non-axisymmetric primaries, 15:2348 (BA;US)

COMPOUND-NUCLEUS REACTIONS
Compound elastic enhancement, 15:4146 (RA;DE)
Sensitivity of the fluctuating cross-section to time-reversal violation, 15:4144 (RA;DE)
The statistical theory of nuclear reactions in the limit of isolated resonances, 15:4148 (RA;DE)
Variance in the fluctuating cross-section, 15:4145 (RA;DE)

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSIBLE FLOW
Numerical simulation of the compressible Orszag-Tang vortex. Interim report, June 1988-February 1989, 15:3935 (R;US)
Survey of measurements and measuring techniques in rapidly distorted compressible turbulent boundary layers, 15:3185 (R;FR)

COMPRESSORS
Development of high-efficiency scroll compressors for air conditioners, 15:2695 (R;JP)

COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY

COMPUTER ARCHITECTURE
Northeast Artificial Intelligence Consortium annual report for 1987. Volume 5. Building an intelligent assistant: The acquisition, integration, and maintenance of complex distributed tasks. Interim report, December 1986-December 1987, 15:4498 (R;US)
Northeast Artificial Intelligence Consortium annual report for 1987. Volume 7. Part A. Time oriented problem solving. Interim report, December 1986-December 1987, 15:4499 (R;US)
Optimization algorithms for new computer architectures with applications to personnel-assignment models. Annual report (Final), 1 May 1988-30 April 1989, 15:4501 (R;US)
Rewrite Rule Machine project. Final report, 15:4500 (R;US)

Laser-induced interface reactions of copper thin films on sapphire substrates, 15:2878 (J;US)
Nuclear spin relaxation of ^{12}B implanted in various metallic single crystals, 15:4228 (RA;DE;In German)
Photoemission study of formation and oxidation of a cerium-copper interface, 15:2891 (J;US)
Pretreatment and conditioning of storage ring vacuum systems, 15:3315 (R;US)
The biocorrosion of copper by biopolymers as examined in situ, in real time FT-IR/CIR/ATR in conjunction with pre and post XPS/AES, 15:2832 (R;US)
Thermodynamic properties of fcc transition metals as calculated with the embedded-atom method, 15:2883 (J;US)
Trajectory analysis of low-energy and hyperthermal ions scattered from Cu(110), 15:3887 (R;US)

COPPER 59
Shapes of ^{59}Cu nuclei at moderate excitation energies and spin, 15:4091 (J;US)

COPPER 63 TARGET
Deep-inelastic myon-nucleus scattering at the CERN SPS; EMC and NMC Collaboration, 15:3956 (RA;DE;In German)

COPPER ALLOYS
Formation of metastable structures and amorphous phases in Cu-W alloys using the triode sputtering technique, 15:2860 (BA;US)
Magnetic viscosity in Ni/Cu compositionally-modulated alloys, 15:2812 (R;US)
The dose, temperature, and projectile-mass dependence for irradiation-induced amorphization of CuTi, 15:2873 (J;US)
The projectile mass dependence of the amorphization process and the critical temperature in the ion irradiated CuTi, 15:2858 (BA;US)

COPPER COMPOUNDS
See also COPPER OXIDES
CUPRATES
Processing and fabrication of high-temperature oxide superconductors. Annual report, 1 August 1988-30 June 1989, 15:2897 (R;US)
Resistivity measurements of superconducting materials. Master's thesis, 15:2932 (R;PK)

COPPER OXIDES
Antiferromagnetism
Neutron-powder-diffraction study of the structure and antiferromagnetic ordering in Pr_2CuO_4, 15:3031 (J;US)
Chemical Preparation
Sulfur dioxide removal from flue gases by supported copper and iron absorbents: Final technical report, May 16, 1986-December 31, 1988, 15:2068 (R;US)
Critical Current
Dissipation measurement in high T_c superconductors with electromagnetic probes, 15:2916 (R;US)
Crystal Defects
Lattice defects and flux pinning in crystallized metal-oxide glasses in the Bi-Sr-Ca-Cu-O system, 15:2947 (J;US)
Crystal Lattices
Local atomic displacements in high T_c oxides studied by pulsed neutron scattering, 15:2905 (R;US)
Crystal Structure
Neutron-powder-diffraction study of the structure and antiferromagnetic ordering in Pr_2CuO_4, 15:3031 (J;US)
Diffusion
Anisotropy of oxygen tracer diffusion in $YBa_2Cu_3O_{7-\delta}$ single crystals, 15:2914 (R;US)

Electric Conductivity
Microwave characterization of high-temperature superconductors, 15:2921 (R;US)

Electronic Structure
Electronic structure of $Pb_2Sr_2PrCu_3O_8$ as studied by resonant photoemission spectroscopy, 15:2956 (J;US)

Energy Gap
Break junction measurement of the tunneling gap of a thallium-based high-temperature superconductor crystal, 15:2950 (J;US)

Heat Treatments
Effect of heat treatment time and temperature of the properties of $YBa_2Cu_3O_{7-x}$, 15:2945 (J;US)

Ion Implantation
Ion implantation of sputtered Y-Ba-Cu-O films, 15:2951 (J;US)

Magnetic Flux
Lattice defects and flux pinning in crystallized metal-oxide glasses in the Bi-Sr-Ca-Cu-O system, 15:2947 (J;US)

Microstructure
Microstructures of Y123 films on $SrTiO_3$, $LaGaO_3$ and $LaAlO_3$, 15:2922 (R;US)

Muon Spin Relaxation
Magnetic ordering in $(Y_{1-x}Pr_x)Ba_2Cu_3O_7$ as evidenced by muon spin relaxation, 15:4256 (R;US)

Nmr Spectra
^{17}O nuclear-magnetic-resonance spectroscopic study of high-T_c superconductors, 15:2957 (J;US)

Optical Properties
Ground-state and optical properties of Cu_2O and CuO crystals, 15:3032 (J;US)

Order Parameters
States of partial order in $YBa_2Cu_3O_z$, 15:2948 (J;US)

Order-Disorder Transformations
Lattice mode study of La_2CuO_{4-y} implanted with Sr, 15:2937 (BA;US)
Mean-field theory of oxygen-vacancy ordering in $YBa_2Cu_3O_{7-\delta}$, 15:2961 (J;US)

Processing
The effect of composition and processing on high T_c superconductors containing bismuth, 15:2909 (R;US)

Research Programs
Electronic materials high-T_c superconductivity polymers and composites structural materials surface science and catalysts industry participation: Annual report, 1988, 15:2923 (R;US)

Sputtering
Ion implantation of sputtered Y-Ba-Cu-O films, 15:2951 (J;US)

Superconductivity
Effects of oxygen and strontium vacancies on the superconductivity of single crystals of $Bi_2Sr_{2-x}CuO_{6-y}$, 15:2959 (J;US)
Exchange-driven pairing of delocalized carriers in high-temperature superconductors, 15:4260 (J;US)
The formation of metal-oxygen species at low temperatures, 15:4253 (R;US)
Variation of T_{c0} in the 110 K superconductor $Bi_{1.5}Pb_{0.5}Ca_2Sr_2Cu_3O_x$, 15:2949 (J;US)
[Dynamics of magnetic fluctuations in high-T_c materials]: Foreign trip report, October 5–October 15, 1989, 15:4257 (R;US)

Transition Temperature
Effects of oxygen and strontium vacancies on the superconductivity of single crystals of $Bi_2Sr_{2-x}CuO_{6-y}$, 15:2959 (J;US)

Vacancies
Effects of oxygen and strontium vacancies on the superconductivity of single crystals of $Bi_2Sr_{2-x}CuO_{6-y}$, 15:2959 (J;US)
Mean-field theory of oxygen-vacancy ordering in $YBa_2Cu_3O_{7-\delta}$, 15:2961 (J;US)

National program plan for electric vehicle battery research and development: Technical plan, 15:2790 (R;US)

ELECTRICAL ENGINEERING
Center for Electronics and Electrical Engineering Technical Publication Announcements. Covering center programs, January-March 1989, with 1989 CEEE events calendar, 15:3133 (R;US)

ELECTRICAL TRANSIENTS
Lightning, surge, and transient protection. December 1982-September 1989 (Citations from the NTIS data base). Report for December 1982-September 1989, 15:2433 (R;US)

ELECTRICITY
See also THERMOELECTRICITY
Electricity use in the Pacific Northwest: Utility historical sales by sector, 1988 and preceding years, 15:2643 (R;US)
International energy annual, 1988, 15:2630 (R;US)
Potential minimum cost of electricity of superconducting coil tokamak power reactors, 15:4395 (R;US)

ELECTROCHEMICAL CELLS
See also ELECTRIC BATTERIES
FUEL CELLS
Calorimetric measurements on electrochemical cells with Pd-D cathodes, 15:2575 (R;US)

ELECTRODES
See also ANODES
CATHODES
Electrode development in monolithic solid oxide fuel cells, 15:2654 (R;US)

ELECTROLUMINESCENCE
Human factors evaluation of electroluminescent display #1, 15:3126 (R;US)

ELECTROLYTE TILES
See MATRIX MATERIALS

ELECTROLYTES
Use of lithium batteries in biomedical devices. Technical report No. 8, July 1988-June 1989, 15:2569 (R;US)
ELECTROLYTIC CELLS
Cell performance of ultra-thin polymer-cathode system: Theoretical energy and power-density projections. Technical report No. 3, July 1988-June 1989, 15:2568 (R;US)
Use of lithium batteries in biomedical devices. Technical report No. 8, July 1988-June 1989, 15:2569 (R;US)
ELECTROMAGNETIC FIELDS
The influence of oscillating electromagnetic fields on membrane structure and function: Synthetic liposome and natural membrane bilayer systems with direct application to the controlled delivery of chemical agents, 15:3802 (R;US)
Thermodynamic principles of the process of the effect of electromagnetic fields on a polymer melt, 15:3799 (R;US)
ELECTROMAGNETIC INTERACTIONS
See also PHOTON-PHOTON INTERACTIONS
Electroweak interactions with gauged baryon and lepton numbers, 15:4061 (J;US)
ELECTROMAGNETIC PULSES
Detection of a chirping electromagnetic signal, 15:4288 (R;US)
Lightning, surge, and transient protection. December 1982-September 1989 (Citations from the NTIS data base). Report for December 1982-September 1989, 15:2433 (R;US)
ELECTROMIGRATION
See ELECTROPHORESIS
ELECTRON ACCEPTOR
See ELECTRONS
ELECTRON BEAM MACHINING
Electron beam (EB) curing of wood surface finishing - lamination of PVC film on wood substrates. Final report STA scientist exchange program JAERI, Takasaki, Japan (September to November 1988), 15:2256 (R;MY)
ELECTRON BEAMS
Effect of electron prebunching on the radiation growth rate in a collective (Raman) free electron laser amplifier, 15:4366 (BA;US)
Investigation of an electron beam evaporative source: Part 1, Theory; Part 2, Measurements, 15:3898 (R;US)
Linear analysis of a free-electron laser coupled to betatron oscillations, 15:3182 (J;US)
RADLAC-II propagation experiments, 15:3895 (R;US)
Radiation of a finite electron-beam pulse in a free-electron laser amplifier, 15:4456 (BA;US)
Study of a plasma edge cathode scheme for electron beam extraction, 15:4365 (BA;US)
ELECTRON COLLISIONS
See also ELECTRON-ION COLLISIONS
ELECTRON-POSITRON COLLISIONS
PHOTON-ELECTRON COLLISIONS
International bulletin on atomic and molecular data for fusion. No. 39, 15:4317 (R;XA)
ELECTRON CONFIGURATION (ATOMS)
See ELECTRONIC STRUCTURE
ELECTRON COOLING
Ultracold ion beam, 15:3293 (RA;DE;In German)
ELECTRON CYCLOTRON-RESONANCE
Effect of resonant-to-bulk electron momentum transfer on the efficiency of electron-cyclotron current-drive, 15:4327 (RA;JP)
ELECTRON CYCLOTRON-RESONANCE HEATING
See ECR HEATING
ELECTRON DENSITY
Spectral characteristics of arc-heated low density plasma flows (3). Helium plasma, 15:3892 (R;JP;In Japanese)
ELECTRON DONOR
See ELECTRONS
ELECTRON DOSIMETRY
Ionizing radiations dosimetry: new results in the megagray range, 15:4184 (R;FR;In French)
ELECTRON EMISSION
Experimental and theoretical study of two center electron emission in 25-MeV/u Mo^{40+} + He collisions, 15:4071 (R;FR)
ELECTRON GAS
Dynamically compressed metals - theory. Final report, 1 February 1986-30 April 1989, 15:4200 (R;US)
Electron correlations and dielectric screening in a layered electron gas, 15:4219 (R;XA)
ELECTRON MICROSCOPES
Computer control of the tunnel barrier width for the scanning tunneling microscope, 15:3374 (J;US)
ELECTRON NEUTRINOS
Neutrino mass: Recent results, 15:3959 (R;US)
ELECTRON PAIRS
Contribution of two-pion annihilation to dilepton emission from proton-nucleon collisions, 15:4008 (J;US)
Pair production from photon-pulse collisions, 15:4016 (J;US)
ELECTRON REACTIONS
^{4}He(e,e'c) coincidence experiments for investigation of charge symmetry in ^{4}He, 15:4072 (RA;DE;In German)
Direct decay of giant resonances in medium-heavy nuclei, 15:4089 (RA;DE;In German)
Emission of fast protons in (e,e'p) coincidence experiments, 15:4085 (RA;DE;In German)
The interference term between nuclear charge and nuclear current matrix elements of the E1 giant resonance in ^{12}C and ^{58}Ni, 15:4075 (RA;DE;In German)
ELECTRON SPECTROMETERS
Development of an electron spectrometer for the HELIOS heavy ion experiment at CERN, 15:3346 (RA;DE;In German)
Energy calibration and quantitative analysis with ESCA, 15:3351 (RA;DE;In German)
ELECTRON-ELECTRON COUPLING
Strongly correlated quasi-one-dimensional bands: Ground states, optical absorption, and phonons, 15:4231 (R;US)
ELECTRON-ION COLLISIONS
Collision-radiation recombination, 15:3345 (RA;DE;In German)
Dielectronic recombination, 15:3890 (RA;DE;In German)
Laser-induced electron-ion interaction, 15:3889 (RA;DE;In German)
ELECTRON-NUCLEON INTERACTIONS
Chiral symmetry restoration and quasi-elastic electron-nucleus scattering, 15:4019 (R;US)
ELECTRON-POSITRON COLLISIONS
Electron-positron momentum distribution measurements of high-T superconductors and related systems, 15:4258 (R;US)
ELECTRON-POSITRON INTERACTIONS
A search for single electron production in electron positron annihilation at E = 29 GeV, 15:3964 (R;US)
Multiplicity distribution of particles from string fragmentation calculated in a statistical model, 15:3994 (RA;DE)
Rapidity distribution and scaling violation in a statistical approach to string fragmentation, 15:3993 (RA;DE)
Search for unstable heavy neutral leptons in e^+e^- annihilations at $\sqrt{s}$ from 50 to 60.8 GeV, 15:3970 (J;US)
Study of four-lepton final states in electron-positron interactions at 29 GeV, 15:3963 (R;US)
ELECTRONIC DATA PROCESSING
See DATA PROCESSING
ELECTRONIC EQUIPMENT
See also AMPLIFIERS
MULTIPLEXERS
OSCILLATORS
POWER SUPPLIES
Center for Electronics and Electrical Engineering Technical Publication Announcements. Covering center programs, January-March 1989, with 1989 CEEE events calendar, 15:3133 (R;US)
Reduction of arsenic wastes in the electronics industry (application to study). Final report, 15:2748 (R;US)
Reduction of solvent wastes in the electronics industry. Waste reduction grant program. Final report, 15:2749 (R;US)
ELECTRONIC STRUCTURE
Variational quantum Monte Carlo calculation of electronic and structural properties of crystals, 15:4235 (R;US)
ELECTRONS
A photon accelerator, 15:3279 (R;US)

A search for single electron production in electron positron annihilation at E = 29 GeV, 15:3964 (R;US)
Electron plasma interactions in crossed fields, 15:4361 (BA;US)
Relativistic dynamics of electrons in intense laser fields, 15:4384 (J;US)

ELECTROPHORESIS
See also TWO-DIMENSIONAL ELECTROPHORESIS
Combined capillary electrophoresis and electrospray ionization mass spectrometry, 15:3371 (R;US)

ELECTROPHYSIOLOGY
Electrophysiological systems for neurotoxicity field testing: PEARL II and alternatives, 15:3780 (R;US)

ELECTROSTATIC PRECIPITATORS
Electrostatic precipitation of charged particles from a turbulent flow between coaxial cylinders, 15:3402 (R;US)

ELECTROSTATIC WAVES
See PLASMA WAVES

ELEMENTARY PARTICLES
See also BEAUTY PARTICLES
CHARM PARTICLES
HADRONS
Particle physics experiments 1988, 15:3961 (R;GB)

EMERGENCIES
See ACCIDENTS

EMERGENCY CORE COOLING SYSTEM
See ECCS

EMERGENCY PLANS
Final Environmental Statement related to the operation of Comanche Peak Steam Electric Station, Units 1 and 2 (Docket Nos. 50-445 and 50-446): Supplement, 15:3594 (R;US)
Volunteering for emergency preparedness. Final report, March 1988-March 1989, 15:4550 (R;US)

EMERGENCY PROVISIONS
See EMERGENCY PLANS

EMISSION
See also ELECTRON EMISSION
STIMULATED EMISSION
National report for the Netherlands. The IEA energy technology systems analysis project (ETSAP)/Annex 3, 15:3470 (B;NL)

EMISSION (ELECTRON)
See ELECTRON EMISSION

EMP
See ELECTROMAGNETIC PULSES

EMPLOYEES
See PERSONNEL

EMULSIONS
Crude oil emulsions. Abstracts, 15:2108 (R;DE;In German)

ENDANGERED SPECIES
Convention on international trade in endangered species of wild fauna and flora. 1987 annual report. Final report, 15:3613 (R;US)
Innovation and teamwork in the North American waterfowl management plan. Waterfowl Management Handbook, 15:2601 (R;US)
Migration of radio-marked whooping cranes from the Aransas-wood buffalo population: Patterns of habitat use, behavior, and survival. Technical report, 15:2602 (R;US)

ENERGETIC SOLAR PARTICLES
See SOLAR PARTICLES

ENERGY
See also GEOTHERMAL ENERGY
NUCLEAR ENERGY
Evaluation of the contributions made by STU (National Swedish Board for Technical Development) to the sphere of energy. Summary and conclusions, 15:2613 (R;SE;In Swedish)

ENERGY ANALYSIS
Energy report 1987/88, 15:2590 (R;DE;In German)

ENERGY CONSERVATION
ACEEE 1988 summer study on energy efficiency in buildings: Proceedings: Volume 7, Community and local government conservation programs, 15:2620 (R;US)
Energy conservation trends understanding the factors that affect conservation gains in the US economy, 15:2644 (R;US)
Three-dimensional modeling of heat transfer from slab floors. Final report, 15:2661 (R;US)

ENERGY CONSUMPTION
A simplified battery discharge profile based upon the federal urban driving schedule, 15:2577 (R;US)
Electric power monthly, August 1989, 15:2634 (R;US)
Electricity use in the Pacific Northwest: Utility historical sales by sector, 1988 and preceding years, 15:2643 (R;US)
Energy report 1987/88, 15:2590 (R;DE;In German)
HERMES-model for Denmark, 15:4525 (R;DK)
Industrial load management at Vaargaarda, 15:2641 (R;SE;In Swedish)
Measuring heat flows in collective heating systems. Illusion or reality, 15:2702 (R;NL;In (In Dutch))
Simulation of the Italian energy system with the DESS-model, 15:2626 (R;DK)

ENERGY DEMAND
HERMES-model for Denmark, 15:4525 (R;DK)
Simulation of the Italian energy system with the DESS-model, 15:2626 (R;DK)

ENERGY EFFICIENCY
Process integration initiative. A review of the process integration activities funded under the Energy Efficiency R and D programme, 15:2732 (R;GB)

ENERGY INTEGRATED INDUSTRIAL PARKS
See INDUSTRIAL PARKS

ENERGY MANAGEMENT
Heating energy flexibility of dwellings, 15:2706 (R;FI;In Finnish)
Review of facility-technology options and their development status. Final report, 15:2604 (R;US)

ENERGY MANAGEMENT SYSTEMS
Building management systems: user experiences, 15:2662 (R;GB)
Energy management, 15:2754 (R;SE;In Swedish)

ENERGY POLICY
Report on the Ministry of Energy's statement regarding subsection 2 of section 12 of act number 293 of 10th June 1981, on the utilization of Denmark's subterranean committee on 26th October 1988, 15:2139 (R;DK;In Danish)

ENERGY SECURITY ACT
Cool Water Coal Gasification Program: Environmental Monitoring Plan. Volume 1-5, Section 1-12, Appendices A-F. Report for 1984-89, 15:2045 (R;US)
Cool Water Coal Gasification Program: Environmental monitoring plan. Final Report, non-proprietary. Executive summary. Report for 1984-1989, 15:2046 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Annual Health and Safety Report, 1987. Report for 1 January-31 December 1987, 15:2039 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Annual report. Report for 1 April 1988-31 March 1989, 15:2043 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: First quarter, 1986. Report for 1 January-31 March 1986, 15:2031 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: First quarter, 1987. Report for 1 January-31 March 1987, 15:2035 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Fourth quarter, 1988. Report for 1 October-31 December 1988, 15:2042 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Fourth quarter, 1986. Report for 1 October-31 December 1986, 15:2034 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Fourth quarter, 1987. Report for 1 October-31 December 1987, 15:2038 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1986. Report for 1 April-30 June 1986, 15:2032 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1988. Report for 1 April-30 June 1988, 15:2040 (R;US)

Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1989. Report for 1 April-30 June 1989, 15:2044 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Second quarter, 1987. Report for 1 April-30 June 1987, 15:2036 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Third quarter, 1986. Report for 1 July-30 September 1986, 15:2033 (R;US)
Environmental Monitoring Plan for the Dow Syngas Project. Quarterly report: Third quarter, 1988. Report for 1 July-30 September 1988, 15:2041 (R;US)
Environmental Monitoring plan for the Dow Syngas Project. Quarterly report: Third quarter, 1987. Report for 1 July-30 September 1987, 15:2037 (R;US)
Unocal Parachute Creek Shale Oil Program. Environmental Monitoring Plan quarterly report, first quarter, 1989. Report for 1 January 1989-31 March 1989, 15:2158 (R;US)
Unocal Parachute Creek Shale Oil Program. Environmental Monitoring Plan supplemental environmental data report. Volume 1. Trial trip sampling results. Report for 1 January 1988-31 March 1989, 15:2159 (R;US)
Unocal Parachute Creek shale-oil Program. Environmental Monitoring Plan quarterly report, fourth quarter, 1988. Report for 1 October-31 December 1988, 15:2157 (R;US)

ENVIRONMENT
Environmental impacts: Computer analysis. January 1970-September 1988 (Citations from the NTIS data base). Report for January 1970-September 1988, 15:2596 (R;US)
Environmental impacts: Computer analysis. October 1988-September 1989 (Citations from the NTIS data base). Report for October 1988-September 1989, 15:2597 (R;US)

ENVIRONMENTAL EFFECTS
Beryllium dispersion near explosive firing tables: A comparison of computed and observed results, 15:3468 (R;US)

ENVIRONMENTAL EXPOSURE
Detection of genetic hazards from environmental chemicals with plant test systems, 15:3776 (R;US)
Risk assessment is a developing science: Approaches to improve evaluation of single chemicals and chemical mixtures, 15:3779 (R;US)

ENVIRONMENTAL EXPOSURE CHAMBERS
See EXPOSURE CHAMBERS

ENVIRONMENTAL EXPOSURE PATHWAY
Population dose commitments due to radioactive releases from nuclear power plant sites in 1986, 15:2539 (R;US)

ENVIRONMENTAL IMPACTS
Assessment of smolt condition for travel time analysis: Annual report 1988, 15:2279 (R;US)
Environmental impacts: Computer analysis. January 1970-September 1988 (Citations from the NTIS data base). Report for January 1970-September 1988, 15:2596 (R;US)
Environmental impacts: Computer analysis. October 1988-September 1989 (Citations from the NTIS data base). Report for October 1988-September 1989, 15:2597 (R;US)
Integrated computer-based tools to facilitate environmental monitoring, assessment, and restoration, 15:2598 (R;US)
Use of the Multimedia Environmental Pollutant Assessment System (MEPAS) for large- and small-scale applications, 15:2229 (R;US)

ENVIRONMENTAL MATERIALS
Biological materials residues from pressurized decomposition with nitric acid. Identification of reaction products and their impact on inverse voltammetric element analysis, 15:3062 (R;DE;In German)

ENVIRONMENTAL POLICY
Summary of commercial conservation programs environmental issues and program consistency, 15:3517 (R;US)
Summary of residential environmental issues and program consistency, 15:2698 (R;US)
US Energy use: New technologies and policies in response to global warming, 15:3408 (R;US)

ENVIRONMENTAL PROTECTION AGENCY
See US EPA

ENVIRONMENTAL QUALITY
See also AIR QUALITY
WATER QUALITY
Environmental data qualification system, 15:4540 (R;US)

ENZYME INHIBITORS
Transcription of oxygen-regulated photosynthetic genes requires DNA gyrase in Rhodobacter capsulatus, 15:3606 (J;US)

ENZYMES
See also DNA HELICASES
OXIDOREDUCTASES
Gene-enzyme relationships in somatic cells and their organismal derivatives in higher plants: Progress report, August 1, 1988–July 31, 1989, 15:3602 (R;US)

EPA
See US EPA

EPOXIDES
Synthesis of epoxidised soya bean oil acrylate, 15:2984 (R;MY)

EPOXY COMPOUNDS
See EPOXIDES

EQUATIONS (DIFFERENTIAL)
See DIFFERENTIAL EQUATIONS

EQUATIONS OF MOTION
Introduction to bifurcation theory, 15:4310 (R;US)

EQUILIBRIUM PLASMA
Free-energy expressions for Vlasov equilibria, 15:4385 (J;US)
Production of high poloidal tokamak equilibria in Versator II by means of RF current drive, 15:4323 (RA;JP)

EQUIPMENT
See also CAPACITIVE ENERGY STORAGE EQUIPMENT
ELECTRONIC EQUIPMENT
LABORATORY EQUIPMENT
MILITARY EQUIPMENT
OPTICAL EQUIPMENT
POLLUTION CONTROL EQUIPMENT
THERMAL ENERGY STORAGE EQUIPMENT
X-RAY EQUIPMENT
How would you know an intelligent system if you saw one?, 15:4511 (R;US)
Uranium enrichment export control guide: Gaseous diffusion, 15:2249 (R;US)

EQUIPMENT PROTECTION DEVICES
See also CIRCUIT BREAKERS
Lightning, surge, and transient protection. December 1982-September 1989 (Citations from the NTIS data base). Report for December 1982-September 1989, 15:2433 (R;US)

ERBIUM 156
Study of the structure of the transition nuclei ^{152}Dy, ^{154}Dy and ^{156}Er at high angular momentum, 15:4088 (R;FR;In French)

ERBIUM 164
Angular momentum dependence of the dipole giant resonance in hot nuclei, 15:4102 (RA;DE;In German)

ERBIUM BORIDES
Superconducting properties of a single-crystal sphere of $ErRh_4B_4$, 15:2954 (J;US)

ERGONOMICS
See HUMAN FACTORS ENGINEERING

ESTUARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

ETA MESONS
Role of mesonic resonances in antiproton annihilation on nuclei, 15:4173 (J;US)

ETA-549
See ETA MESONS

ETHINE
See ACETYLENE

ETHOCEL
See CELLULOSE

ETHYLENE
Continuous high-temperature lubrication of ceramics by carbon generated catalytically, 15:2900 (R;US)
Laser photoelectron spectroscopy of ions: Progress report, 1988–1989, 15:3095 (R;US)
Supercritical fluid thermodynamics for coal processing: Quarterly progress report, July 1, 1989–September 30, 1989, 15:2055 (R;US)

ETHYLENE POLYMERS
See POLYETHYLENES

ETHYNE
See ACETYLENE

ETR REACTOR
Architecture of the ETR systems code, 15:4459 (BA;US)

EUROPIUM
High energy ion beam annealing in implanted CdTe, 15:2994 (BA;US)
Spectrophotometric investigation of addition compounds between neodymium (III) and europium (III) perchorates and hexafluorophosphate and cyclic ligants with two oxygen in opposite position, 15:3055 (R;BR;In Portuguese)
Study for the determination of samarium, europium,terbium, dysprosium and yttrium in gadolinium oxide matrix by means of atomic absorption spectrophotometry using a graphite furnace, 15:3058 (R;BR;In Portuguese)

EXCAVATION
Application of the results of excavation response experiments at climax and the Colorado School of Mines to the development of an experiment for the underground research laboratory, 15:2237 (R;US)

EXCHANGE (HEAT)
See HEAT TRANSFER

EXCIMER LASERS
See also KRYPTON FLUORIDE LASERS
Dissociation and vibrational relaxation of XeF by various collision partners, 15:3146 (R;US)
Excimer lasers: Applied research and commercial development. January 1980-September 1989 (Citations from the Searchable Physics Information Notices data base). Report for January 1980-September 1989, 15:3165 (R;US)
Liquid excimers: lasing Xe_2 and Kr_2 in liquid argon, 15:3179 (J;US)
Ultrahigh brightness XeCl laser system, 15:3170 (BA;US)

EXCITATION
Effect of electron-excitation on radiation damage in ion-irradiated FCC metals, 15:4230 (R;JP;In Japanese)

EXHAUST GASES
Caterpillar 3406 spark-ignited natural-gas-engine emissions on EPA (Environmental Protection Agency) heavy-duty transient test cycle. Topical report, March-December 1988, 15:2801 (R;US)
Measurement of on-road vehicle emission factors in the California South Coast Air Basin. Volume 1. Regulated emissions. Final report, 15:2796 (R;US)
Programmer's guide to MOBILE4 (mobile source emission factor model). Technical report, 15:2797 (R;US)
Respiratory effects of inhaled gases and aerosols. Report for 1 November 1973-31 March 1977, 15:3787 (R;US)
Use of bioassay methods to evaluate incinerator emissions, 15:3440 (R;US)

EXHAUST SYSTEMS
Development of thermal-resistant catalysts, 15:2795 (R;JP)

EXOTIC ATOMS

FINLAND
Peat - Environment - Society. Part 2: Emissions from combustion of peat, 15:2073 (R;FI;In Finnish)
FIRE EXTINGUISHERS
Fire-extinguishing agents. January 1970-September 1989 (Citations from the COMPENDEX data base). Report for January 1970-September 1989, 15:2982 (R;US)
FIRE FIGHTING
Fire-extinguishing agents. January 1970-September 1989 (Citations from the COMPENDEX data base). Report for January 1970-September 1989, 15:2982 (R;US)
Health-hazard evaluation report HETA 87-109-1950, North Riverside Fire Department, North Riverside, Illinois, 15:3458 (R;US)
Use of foaming mud cement to terminate underground coal fires and to control subsidence of burn cavities. Final report, 15:2091 (R;US)
FIRE STATIONS
See PUBLIC BUILDINGS
FIREDAMP
See METHANE
FIRES
Analysis of forest-fire smoke using satellite imagery. Master's thesis, 15:3384 (R;US)
FIREWOOD
See WOOD FUELS
FIRS
Effects of acid fog and ozone on conifers. Final report, 15:3446 (R;US)
FIRST WALL
Calculation of the production cross sections of high-spin isomeric states in hafnium, 15:4429 (R;US)
Neutronics issues for starlight: An inertial confinement fusion reactor concept, 15:4447 (R;US)
Quick installation/removal technology for first wall, 15:4424 (R;JP;In Japanese)
FISCHER-TROPSCH SYNTHESIS
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: Final report for Task 4, 15:2263 (R;US)
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: Final report for Task 2, 15:2262 (R;US)
Slurry reactor hydrodynamics studies: Final report, 15:2261 (R;US)
Upgrading of light Fischer-Tropsch products: Quarterly report No. 6, January 1, 1988–March 31, 1988, 15:2264 (R;US)
Upgrading of light Fischer-Tropsch products: Quarterly report No. 7, April 1, 1988–June 30, 1988, 15:2265 (R;US)
FISHES
See also ANADROMOUS FISHES
Accumulation of radionuclides in fish during specified normal operation of nuclear installations and after incidents. Annual report 1987, 15:3567 (R;DE;In German)
Hanford environmental dose reconstruction project: Technical approach, 15:3750 (R;US)
Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (Pacific Southwest): Brown rockfish, copper rockfish, and black rockfish, 15:3537 (R;US)
Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (South Atlantic): Alewife and blueback herring, 15:3536 (R;US)
FISSILE MATERIALS
Improved neutron monitor systems for Savannah River Site separations facilities, 15:2165 (R;US)
FISSION
See also FAST FISSION
PHOTOFISSION
SPONTANEOUS FISSION
THERMAL FISSION
Physics of neutron emission in fission. Proceedings of a consultants meeting held in Mito City, Japan, 24-27 May 1988, 15:4134 (R;XA)
Proceedings of the specialists' meeting on physics and engineering of fission and spallation, 1988, 15:4159 (R;JP;In Japanese)
FISSION NEUTRONS
Physics of neutron emission in fission. Proceedings of a consultants meeting held in Mito City, Japan, 24-27 May 1988, 15:4134 (R;XA)
FISSION PRODUCT RELEASE
In-core thermal hydraulic and fission product calculations for severe fuel damage analyses, 15:2438 (R;US)
Review on fission product source term from fuel at severe accident conditions, chemical forms and release rates, 15:2534 (R;JP;In Japanese)
Uncertainty analyses for the atmospheric dispersion submodule of UFOMOD with emphasis on parameter correlations, 15:3481 (R;DE)
FISSION PRODUCTS
Data for decay Heat Predictions Proceedings of a specialists' meeting, 15:4121 (R;FR)
More about breathing on the Mesa, 15:3516 (R;US)
FITZPATRICK REACTOR
Development and Testing of a RETRAN/MINET composite code and application to the J.A. Fitzpatrick plant, 15:2496 (R;US)
FIXED BED
See PACKED BED
FLAME PROPAGATION
A tomographic study of premixed turbulent stagnation point flames, 15:3108 (R;US)
FLAMES
Enhanced flame stability and soot radiation using electric fields. Final report, July 1986-January 1989, 15:3114 (R;US)
Optogalvanic spectroscopy in flames, 15:3040 (R;FR;In French)
FLAMMABILITY
Laser probes of natural gas ignition chemistry. Annual report, January-December 1988, 15:2153 (R;US)
FLASKS
See CASKS
FLAWS
See DEFECTS
FLIBE
Translation of reports from the first international conference on neutron physics, Kiev, USSR, 14-18 September 1987, 15:4179 (R;XA)
FLOORS
Three-dimensional modeling of heat transfer from slab floors. Final report, 15:2661 (R;US)
FLOW (FLUID)
See FLUID FLOW
FLOW RATE
Quantification of Hungry Horse Reservoir water level needed to maintain or enhance reservoir fisheries: Methods and data summary, 1983–1987, 15:2278 (R;US)
FLOWMETERS
Wide-range fuel flowmeter. Phase 2. Final report, 4 June 1986-3 February 1988, 15:2121 (R;US)
FLUE GAS
Ammonia addition for NO_x reduction in fluidized bed boilers, 15:2074 (R;SE)
Bench-scale evaluation of calcium sorbents for acid-gas emission control. Report for October 1988-March 1989, 15:3444 (R;US)
Combined NO_x/SO_2 control technology, 15:2421 (R;US)
Enhancing the use of coals by gas reburning-sorbent injection: Quarterly report No. 7, December 1, 1988–February 28, 1989, 15:2422 (R;US)
FGD [flue gas desulfurization] damper guidelines: Volume 1, Fundamentals and survey results: Final report, 15:2070 (R;US)

FGD damper guidelines: Volume 2, Guidelines: Final report, 15:2071 (R;US)
Field testing of a ceramic heat exchanger for heat recovery application, 15:2727 (R;US)
Flue gas condensation in stoking system for wood chips, 15:2272 (R;DK;In Danish)
Flue gas denitrification processes using tissue filters. Final report, 15:2426 (R;DE;In German)
Fluid/particle separation and coal cleaning: Progress, potential advances, and their effects on FGD [flue-gas desulfurization], 15:2420 (R;US)
Hydrogen chloride bonding on dry limestone, 15:3419 (R;DK;In Danish)
Measurement of condensable vapor contribution to PM10 emissions, 15:2696 (R;US)
Removal of acidic gases from incinerator flue gas in a fluidized bed scrubber, 15:2075 (B;US)
The DESONOX flue gas purification process, 15:2427 (R;DE;In German)
Theoretical approach for enhanced mass transfer effects in-duct flue gas desulfurization processes: Quarterly report No. 5, July 1–September 30, 1989, 15:2424 (R;US)
Trial burns: methods perspective, 15:2763 (R;US)

G

GADOLINIUM
Determination of gadolinium in power and pellers of $(U,Gd)O_2$ by ion chromatography without supresion, 15:3050 (R;BR;In Portuguese)

GADOLINIUM SULFIDES
Thermophysical properties of the lanthanide sesquisulfides. I. Schottky functions and magnetic and electronic properties of γ-La_2S_3, γ-Ce_2S_3, γ-Nd_2S_3, and γ-Gd_2S_3, 15:3021 (J;US)

GAGES (STRAIN)
See STRAIN GAGES

GALACTIC EVOLUTION
Origin of the universe from Quantum Chaos: An introduction to current ideas (professor John Dyer Memorial Lecture). Technical report, 15:3820 (R;US)

GALLIUM ARSENIDES
Electroabsorption in single quantum-well GaAs laser structures, 15:3150 (R;US)

Atom Transport
Amorphous phase formation by solid-state reaction between polycrystalline Co thin films and single-crystal GaAs, 15:3014 (J;US)

Carbon Additions
Spatially resolved localized vibrational mode spectroscopy of carbon in liquid encapsulated Czochralski grown gallium arsenide wafers, 15:4233 (R;US)

Electrical Properties
Ultralow recombination velocity at $Ga_{0.5}In_{0.5}P$/GaAs heterointerfaces, 15:3005 (J;US)

Electro-Optical Effects
Electric field response of a semiconductor superlattice optical mirror from electroreflectance spectra, 15:3008 (J;US)

Electronic Structure
Pressure dependence of the *DX* center in $Ga_{1-x}Al_xAs$:Te, 15:3033 (J;US)

Field Effect Transistors
High-energy-neutron irradiation effects in GaAs modulation-doped field effect transistors (MODFETs): Threshold voltage. Technical report, 15:3360 (R;US)

Heterojunctions
Semiconductor quantum-well lasers and related optoelectronic devices on silicon, III-V. Technical report, 15:3145 (R;US)

Industrial Wastes
Reduction of arsenic wastes in the electronics industry (application to study). Final report, 15:2748 (R;US)

Interfaces
Interfacial roughness in InAs/GaAs heterostructures determined by soft x-ray reflectivity, 15:3018 (J;US)

Irradiation
In situ tem observations of heavy ion damage in gallium arsenide, 15:2991 (BA;US)

Photoconductivity
Magnetic studies of persistent photoconductivity in *n*-$Al_xGa_{1-x}As$, 15:3010 (J;US)

Photoemission
Enhanced electron spin polarization in photoemission from thin GaAs, 15:3015 (J;US)

Physical Radiation Effects
Radiation resistance of solar cells for space application, 1. Study on the irradiation procedure of electron beams, 15:2294 (R;JP;In Japanese)

Research Programs
Electronic materials high-T_c superconductivity polymers and composites structural materials surface science and catalysts industry participation: Annual report, 1988, 15:2923 (R;US)

Roughness
Interfacial roughness in InAs/GaAs heterostructures determined by soft x-ray reflectivity, 15:3018 (J;US)

Schottky Barrier Diodes
Niobium and niobium nitride contacts on semiconducting material, 15:3233 (P;US)

Strains
Scaling relations for strained-layer relaxation, 15:3009 (J;US)

Substrates
Ion beam modification of film stress and the effectiveness of thin film encapsulants on GaAs, 15:3001 (BA;US)

Thermionic Emission
Anisotropic thermionic emission of electrons contained in GaAs/AlAs floating gate device structures, 15:3004 (J;US)

GALLIUM COMPOUNDS
See also GALLIUM ARSENIDES
GALLIUM PHOSPHIDES
Amorphous phase formation by solid-state reaction between polycrystalline Co thin films and single-crystal GaAs, 15:3014 (J;US)

GALLIUM PHOSPHIDES
Ultralow recombination velocity at $Ga_{0.5}In_{0.5}P$/GaAs heterointerfaces, 15:3005 (J;US)

GAMMA DOSIMETRY
Ionizing radiations dosimetry: new results in the megagray range, 15:4184 (R;FR;In French)

GAMMA RADIATION
A computer study of source-detector geometries proposed for the induced-emission tomography of transuranic elements, 15:3353 (R;US)
Effects of gamma radiation on Crotalus durissus terrificus venom, 15:3696 (R;BR;In Portuguese)

GAMMA SPECTROMETERS
In situ XRF and gamma ray spectrometer for Mars sample return mission, 15:3355 (RA;US)

GAMMA SPECTROSCOPY
Environmental corrections for a neutron-induced gamma-ray spectroscopy logging system in an air-filled borehole, 15:3390 (R;US)

GAS ANALYSIS
Semiconductor gas sensors. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:3370 (R;US)

GAS COOLANTS
See GASES

GAS ENGINES
See INTERNAL COMBUSTION ENGINES

GAS FLOW
See also AIR FLOW
Heat and momentum transfer in a gas coolant flow through a circular pipe in a high temperature gas cooled reactor, 15:2453 (R;JP;In Japanese)

GAS FUELS
See also FUEL GAS
Pulsating catalytic combustion of gaseous fuels. Final report, January 1987-September 1988, 15:2152 (R;US)

GAS HYDRATES
Development of a reservoir simulation for thermal recovery of heavy oils/tar sands in the presence of gas hydrates: Final report, 15:2156 (R;US)
Proceedings of the natural gas R&D contractors review meeting, 15:2142 (R;US)

GAS LASERS
See also CARBON DIOXIDE LASERS
EXCIMER LASERS
Binary micro optics: An application to beam steering, 15:3148 (R;US)

GAS TURBINE ENGINES
Aerothermal modeling program. Phase 2, element B: Flow interaction experiment, 15:3197 (RA;US)
Application of advanced diagnostics to airblast injector flows, 15:3198 (RA;US)
Component specific modeling, 15:3241 (RA;US)
Development of a high temperature thin film static strain gage, 15:3367 (RA;US)
Measurement of airfoil heat transfer coefficients on a turbine stage, 15:3199 (RA;US)
Response characteristics of MHOST (MARC Hot-Section Technology) for 3-D inelastic analysis of hot-section components, 15:3239 (RA;US)
Three-dimensional inelastic analysis for hot section components, BEST 3D code, 15:3238 (RA;US)
Two- and three-dimensional turbine blade row flow field simulations, 15:3200 (RA;US)

GAS TURBINE POWER PLANTS
Advanced gas-turbine steam-injection program water treatment for steam-injected gas-turbine systems. Topical report, October 1987-March 1989, 15:2417 (R;US)

GAS TURBINES
Gas turbine blade life assessment and repair guide: Final report, 15:2414 (R;US)
Sialon ceramics. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:2933 (R;US)

GAS WELLS
See NATURAL GAS WELLS

GASEOUS DIFFUSION PROCESS
Uranium enrichment export control guide: Gaseous diffusion, 15:2249 (R;US)

GASEOUS EFFLUENTS
See GASEOUS WASTES

GASEOUS WASTES
See also EXHAUST GASES
FLUE GAS
Desulfurization of industrial gaseous effluents. Final report, 15:2729 (R;DE;In German)
Investigations on combined deposition of particulate and gaseous pollutants in a packed bed filter at high temperatures, 15:2730 (R;DE;In German)

GASES

ELECTRON GAS
EXHAUST GASES
FUEL GAS
SHALE GAS
Continuous cryopump with a method for removal of solidified gases, 15:3141 (P;US)
Gas velocity measurements in purged port posting systems, 15:3124 (R;GB)
Gasification of solid fuels in energy management of industry, 15:2030 (R;FI;In Finnish)
Method for measuring the effectiveness of gaseous-contaminant removal filters, 15:3257 (R;US)
On the topic of single and multicomponent chemisorption isotherms, 15:2092 (R;US)

GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES

GASTEROPODS
See MOLLUSCS

GASTRIN
Gastrin labelled at IPEN-CNEN/SP-Brazil. Comparison with a commercial tracer, 15:3104 (R;BR)
Quality control of radioimmunoassay technique for gastrine dosage, 15:3622 (R;BR;In Portuguese)

GASTROINTESTINAL TRACT
See also STOMACH
Gastric response to methyl methacrylate vapor. Progress report, 15:3769 (R;US)

GATING CIRCUITS
Bias and oxide thickness dependence of trapped-charge buildup in MOS (metal oxide semiconductors) devices. Technical report, 15:3222 (R;US)

GAUGE INVARIANCE
Extended local gauge invariance and the BRS symmetry in stochastic quantization of gauge fields, 15:4043 (R;JP)

GAUGE TRANSFORMATIONS
See GAUGE INVARIANCE

GENE LOCI
See GENES

GENERAL RELATIVITY THEORY
Hydromagnetic space-time, 15:4284 (RA;DE;In German)

GENERATORS (PULSE)
See PULSE GENERATORS

GENERATORS (STEAM)
See STEAM GENERATORS

GENES
Cloning and characterization of the recA gene of Aquaspirillum magnetotacticum, 15:3610 (R;US)
Genetic engineering of single-domain magnetic particles. Progress report, 1 March-15 June 1989, 15:3611 (R;US)
Mapping and ordered cloning of the human X chromosome: Progress report, November 1988–October 1989, 15:3603 (R;US)

GENETIC ENGINEERING
Cloning and characterization of the recA gene of Aquaspirillum magnetotacticum, 15:3610 (R;US)
Genetic engineering of single-domain magnetic particles. Progress report, 1 March-15 June 1989, 15:3611 (R;US)

GENETIC MAPPING
Molecular biology and physiology of methanogenic archaebacteria. Annual report, July 1988-June 1989, 15:3596 (R;US)

GENETICS
Genetic-activity profiles and hazard assessment, 15:3768 (R;US)

GEOCHEMISTRY
The EQ3/6 software package for geochemical modeling: Current status, 15:2238 (R;US)

GEOLOGIC FRACTURES
Analysis of natural fractures observed by borehole video camera in a horizontal well, 15:2140 (BA;US)
Analytical models for C-14 transport in a partially saturated, fractured, porous media, 15:2209 (R;US)
VSP [Vertical Seismic Profiling] and cross hole tomographic imaging for fracture characterization, 15:3812 (R;US)

GEOMAGNETIC EQUATOR
Solar diurnal variation in the amplitude of sudden commencements of magnetic storms at the geomagnetic equator, 15:3885 (R;US)

GEOMAGNETIC STORMS
See MAGNETIC STORMS

GEORGES BANK
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 3. Appendices, 15:2131 (R;US)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 1. Final executive summary, 15:2129 (R;US)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 3. Appendices, 15:2131 (R;US)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 2, 15:2130 (R;US)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 1. Final executive summary, 15:2129 (R;US)
Georges Bank benthic infauna monitoring program. Final report for third year of sampling. Volume 2, 15:2130 (R;US)

GEOTHERMAL ENERGY
Geothermal direct use projects in the United States: Status and trends, 15:2357 (R;US)
The Ahuachapan geothermal field, El Salvador: Reservoir analysis: Volume 2, Appendices A through E, 15:2356 (R;US)

GEOTHERMAL FLUIDS
The Ahuachapan geothermal field, El Salvador: Reservoir analysis: Volume 1, Text and main figures, 15:2355 (R;US)

GEOTHERMAL RESOURCES
The Ahuachapan geothermal field, El Salvador: Reservoir analysis: Volume 1, Text and main figures, 15:2355 (R;US)

GEOTHERMAL SYSTEMS
See also HOT-DRY-ROCK SYSTEMS
MAGMA SYSTEMS
Aspects of the Kalina technology applied to geothermal power production, 15:2354 (R;US)

GERMANIUM
Aspects of faceting in the study of percipitate interfaces, 15:2841 (R;US)
Semiempirical modified embedded-atom potentials for silicon and germanium, 15:3024 (J;US)
Temperature dependence of acceptor-hole recombination in germanium, 15:3012 (J;US)

Thermally and ion-induced phase formation in a Pd/Ge bilayer, 15:2882 (J;US)

GERMANIUM 70 TARGET
Results of the α-scattering on the even, stable Ge isotopes, 15:4090 (RA;DE;In German)

GERMANIUM 76
Calculation of 2ν double beta decay of ^{76}Ge, ^{82}Se, $^{128,130}Te$, 15:4137 (RA;DE)
Double beta decay matrix elements in the Germanium region, 15:4133 (R;XA)

GERMANIUM ALLOYS
Characteristics of hydrogenated amorphous silicon-germanium alloys, 15:2863 (BA;US)
Semiempirical modified embedded-atom potentials for silicon and germanium, 15:3024 (J;US)

GERMANIUM ARSENIDES
Antiphase domain boundary formation in single-crystal chalcopyrite-structure $ZnGeAs_2$ grown on GaAs, 15:3013 (J;US)

GERMS (MICROORGANISMS)
See MICROORGANISMS

GIANT CELLS
See TUMOR CELLS

GIANT RESONANCE
(e,e'f) coincidence experiments for fission decay of giant resonances in $^{235,238}U$, 15:4113 (RA;DE;In German)
Angular momentum dependence of the dipole giant resonance in hot nuclei, 15:4102 (RA;DE;In German)

GLASS
See also BOROSILICATE GLASS
Acoustic studies of new materials: Quasi crystals, low-loss glasses, and high tc superconductors. Annual summary report, 1 October 1988-30 September 1989, 15:2901 (R;US)
Comment on "Speckle in the diffraction patterns of Hendricks-Teller and icosahedral glass models", 15:4241 (J;US)
Natural analogue study of volcanic glass. A case study of basaltic glasses in pyroclastic fall deposits of Fuji volcano, Japan, 15:3804 (R;JP)
Y-Si-Al-O-N glass fibers. Final report, 15:2967 (R;US)

GLAUBER'S SALT
See SODIUM SULFATES

GLAZING
Short-time-scale measurements of fenestration thermal performance under realistic springtime conditions, 15:2343 (BA;US)

GLAZING MATERIALS
Determination and application of bidirectional solar-optical properties of fenestration systems, 15:2335 (BA;US)

GLUCAGON
Rapid method for purification of radioiodinated glucagon, 15:3623 (R;BR;In Portuguese)
Rapid purification of radiodinated glucagon with Sep-Pak^R reversed phase cartridges, 15:3621 (R;BR)

GLUEBALLS
Status of glueball mass calculations in lattice gauge theory, 15:3986 (R;US)

GLUON MODEL
Meteorite tracking network, 15:4151 (RA;DE;In German)

GLUONIUM
See GLUEBALLS

GLUONS
One-jet inclusive cross section at order α_s^3. I. Gluons only, 15:4011 (J;US)
Search for supersymmetric particles at CDF, 15:3974 (R;US)

GOBAR GAS
See METHANE

GOLD
Phonon dispersion measurements and first-principles calculations for the Au(110) surface, 15:2895 (J;US)
The influence of adsorbate–absorbate hydrogen bonding in molecular chemisorption: NH_3, HF, and H_2O on Au(111), 15:3094 (J;US)
Theoretical study of noble-metal (100) surface reconstructions using first-principles techniques, 15:2877 (J;US)
Thermodynamic properties of fcc transition metals as calculated with the embedded-atom method, 15:2883 (J;US)

GOLD 194 TARGET
Search for the quark-gluon plasma (1989): The NA35 experiment at the CERN SPS, 15:4066 (R;US)

GOLD 197 TARGET
Relativistic heavy ion research: Progress report, November 15, 1988–November 14, 1989, 15:4108 (R;US)

GOLD 198
Falling-sphere radioactive viscometry, 15:3190 (R;BR;In Portuguese)
Radioactive colloid gold ^{198}Au in combined treatment of lung cancer, 15:3674 (RA;SU;In Russian)

GOLD ALLOYS
Ion-beam mixing and amorphization in Au/Zr bilayers, 15:2859 (BA;US)

GRADED LIE GROUPS
N=2 superconformal symmetry and SO(2,1) current algebra, 15:4025 (J;NL)

GRAIN BOUNDARIES
Quasicrystals and grain boundaries, 15:2823 (R;US)

See CEREALS
SEEDS

GRANULAR BED FILTERS
Investigations on combined deposition of particulate and gaseous pollutants in a packed bed filter at high temperatures, 15:2730 (R;DE;In German)

GRAPHITE
Detection of fine pore structures in graphite by impregnation with Wood's metal, 15:2978 (R;GB)
Graphite as a plasma-facing material in fusion experiments, 15:4389 (R;US)
[Graphite and carbon/carbon composition]: Foreign trip report, September 17, 1988–September 28, 1988, 15:2979 (R;US)

GRAPHITE MODERATOR
See GRAPHITE

GRAVIMETRY
Possible measurement of the gravitational acceleration of molecules, atoms, nuclei, elementary particles and antiparticles, 15:3958 (R;JP)

GRAVITATION
Comparisons of two-phase microgravity calculations using current and new flow regime maps in RELAP5, 15:3209 (J;US)
Origin of the universe from Quantum Chaos: An introduction to current ideas (professor John Dyer Memorial Lecture). Technical report, 15:3820 (R;US)
Testing the inverse-square law of gravity: Error and design with the upward continuation integral, 15:3877 (J;US)

GRAVITATIONAL FIELDS
(2+1)-dimensional quantum gravity, 15:4287 (R;JP)

GRAVITATIONAL RADIATION
Gravitational radiation from primordial solitons and soliton-star binaries, 15:4292 (J;US)

GREASES
Lubricants and greases: Properties and evaluation. January 1973-April 1988 (Citations from Fluidex data base). Report for January 1973-April 1988, 15:3135 (R;US)
Lubricants and greases: Properties and evaluation. May 1988-September 1989 (Citations from Fluidex data base). Report for May 1988-September 1989, 15:3136 (R;US)

GREAT BRITAIN
See UNITED KINGDOM

GREEN FUNCTION
Generalized relations among *N*-dimensional Coulomb Green's functions using fractional derivatives, 15:4294 (J;US)

GREENHOUSE EFFECT
Carbon dioxide and climate: Summaries of research in FY 1989, 15:3409 (R;US)
Greenhouse gas emission coefficients from the energy system. Two methods to calculate national CO_2-e issions, 15:2599 (B;NL)
Ozone depletion, greenhouse gases, and climate change, 15:3429 (R;US)

[Discussions of global environmental problems]: Foreign trip report, October 14, 1989–October 21, 1989, 15:3426 (R;US)
[The cause of the glacial to interglacial atmospheric CO_2 change]: Foreign trip report, October 14, 1989–October 24, 1989, 15:3424 (R;US)
[The role of oceans in determining atmospheric CO_2]: Foreign trip report, October 14, 1989–October 22, 1989, 15:3425 (R;US)

GREENLAND
Report for the period 1 July 1988–30 June 1989 from the Mineral Resources Administration in Greenland, 15:2600 (R;DK;In Danish)

GRENOBLE REACTOR
Conversion feasibility studies for the Grenoble high flux reactor, 15:2458 (R;US)

GROSS-NEVEU MODEL
See LAGRANGIAN FIELD THEORY

GROUND DISPOSAL
Best demonstrated available technology (BDAT) background document for K009 and K010, 15:2768 (R;US)
Best demonstrated available technology (BDAT) background document for K011, K013, and K014. Final report, 15:2769 (R;US)
Best demonstrated available technology (BDAT) background document for K043. Final report, 15:2771 (R;US)
Best demonstrated available technology (BDAT) background document for cyanide wastes, 15:2770 (R;US)
Best demonstrated available technology (BDAT) background document for organophosphorous wastes, 15:2766 (R;US)
Best demonstrated available technology (BDAT) background document for phthalate wastes, 15:2767 (R;US)
Best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatic hydrocarbons F024. Final report, 15:2772 (R;US)
Best demonstrated available technology (BDAT) background document for wastes from the production of dinitrotoluene, toluenediamine, and toluene diisocyanate (K027, K111, K112, K113, K114, K115, K116, U221, and U223). Final report, 15:2774 (R;US)
Best demonstrated available technology (BDAT) background document for wastes from the production of 1,1,1-trichloroethane K028, K029, K095, and K096. Final report, 15:2773 (R;US)
Methodology for developing best demonstrated available technology (BDAT) treatment standards, 15:2765 (R;US)
Response to capacity-related comments submitted on the Second Third proposed land disposal restrictions rule, 15:3520 (R;US)
Response to comments: Background document for the second third-land disposal restrictions proposed rule: Policy-related comments, 15:3518 (R;US)
Response to the Second Third wastes treatment standards: Related comments for the Second Third land-disposal restrictions proposed rule (Issue Numbers 1 through 12), 15:3519 (R;US)

GROUND MOTION
Earthquake strong ground motion studies at the Idaho National Engineering Laboratory, 15:3807 (R;US)
Ground motion measurements at the 1 - 2 GeV synchrotron radiation source site, 15:3299 (R;US)

GROUND WATER
Acidification
Water resources data for Wisconsin, Water Year 1988. Water-data report (Annual), 1 October 1987-30 September 1988, 15:3559 (R;US)

Contamination
Evaluation of the ground-water contaminant plume extending from the 183-H Solar Evaporation Basins, 15:2225 (R;US)
Soil water and vegetation management for cleanup of selenium contaminated soils: Progress report, 15:3498 (R;US)

Flow Rate
Predicting flow through low-permeability, partially saturated, fractured rock: A review of modeling and experimental efforts at Yucca Mountain, 15:2234 (R;US)

Pollutants
Distribution of heavy metals and anions in the groundwater of quaternary gravel deposits in the Munich area (Dornach). Laboratory and field test results, 15:3540 (R;DE;In German)

Recharge
Cape Cod Waste-water Renovation and Retrieval System. A study of water treatment and conservation. Data supplement for annual report, June 11, 1974-June 10, 1975. Technical report, 15:3573 (R;US)
Cape Cod Waste-water Renovation and Retrieval System. A study of water treatment and conservation. Interim report, June 11, 1975-June 10, 1976. Technical report, 15:3574 (R;US)

Research Programs
Ground-water research: Technical-Assistance Directory, 15:3575 (R;US)

Sampling
Phase 1 spring and seep report: Weldon Spring Site Remedial Action Project, Weldon Spring, Missouri: Revision 0, 15:2242 (R;US)

Water Pollution
Establishment of a Ground Water Research Data Center for validation of subsurface flow and transport models. Final report, August 1986-November 1988, 15:3557 (R;US)
Installation-Restoration Program Stage 3. McClellan AFB, California. Remedial investigation/feasibility study ground-water sampling and analysis program, January through March 1989 data summary. Final report, January-March 1989, 15:3542 (R;US)
Performance testing of Method 1312. QA (quality assurance) support for RCRA (Resource Conservation and Recovery Act) testing: Project report, 15:3583 (R;US)
Superfund Record of Decision (EPA Region 3): Croyden TCE Spill, PA. (First Remedial Action), December 1988, 15:3586 (R;US)
Superfund Record of Decision (EPA Region 5): Forest Waste Disposal, MI. (Second remedial action), March 1988, 15:3584 (R;US)
Superfund Record of Decision (EPA Region 5): Wausau Water Supply, WI. (First Remedial Action), December 1988, 15:3587 (R;US)
Use of ground-penetrating radar to define recharge areas in the Central Sand Plain. Technical completion report, 15:3560 (R;US)

Water Pollution Abatement
Ground water protection efforts in four new england states. Technical report, 15:3588 (R;US)

Water Pollution Control
Role of standards in Iowa's ground-water protection program: A report to the Iowa General Assembly, 15:3580 (R;US)
Role of standards in Iowa's ground-water protection program: A report to the Iowa General Assembly. Appendix 2. Written comments, 15:3581 (R;US)

Water Quality
Regulatory requirements for groundwater monitoring networks at hazardous waste sites, 15:3501 (R;US)

Water Treatment
Water treatment: Air stripping. December 1981-July 1989 (Citations from the Selected Water Resources Abstracts data base). Report for December 1981-July 1989, 15:3562 (R;US)

GROUND-WATER RESERVES

FLUORINATED ALIPHATIC HYDROCARBONS
FREONS
IODINATED ALIPHATIC HYDROCARBONS
Validation and application of pharmacokinetic models for interspecies extrapolations in toxicity risk assessments of volatile organics. Annual report No. 2, 1 July 1988-30 June 1989, 15:3757 (R;US)

HAMILTON-JACOBI EQUATIONS
Symplectic numerical integration of Hamiltonian systems, 15:4286 (R;US)

HANDLING (DATA)
See DATA PROCESSING

HANDLING (MATERIALS)
See MATERIALS HANDLING

HANDLING (WASTES)
See WASTE MANAGEMENT

HANFORD ATOMIC PRODUCTS OPERATION
See HAPO

HANFORD PRODUCTION REACTORS
Integrated computer-based tools to facilitate environmental monitoring, assessment, and restoration, 15:2598 (R;US)
Preliminary report, KW reactor incident, 15:2527 (R;US)

HANFORD RESERVATION
Environmental monitoring for radionuclides, chemicals, fish and wildlife at a US energy research facility: A case story, 15:3751 (R;US)
Strontium-90 in Canada goose eggshells: Non-fatal monitoring for contamination in wildlife, 15:3515 (R;US)

HAPO
Radiological Sciences Department Annual report: Research and development, Fiscal year 1955, 15:3504 (R;US)
Radiological Sciences Department annual report, research and development, fiscal year 1954, 15:3503 (R;US)

HARMONIC OSCILLATORS
Dirac-Fock calculations in multi-harmonic-oscillator basis, 15:4507 (R;FR;In French)

HAYNES 188 ALLOY
Preliminary study of creep thresholds and thermomechanical response in Haynes 188 at temperatures in the range 649 to 871 C, 15:2844 (RA;US)

HAZARDOUS MATERIALS
Best demonstrated available technology (BDAT) background document for organophosphorous wastes, 15:2766 (R;US)
Detection of genetic hazards from environmental chemicals with plant test systems, 15:3776 (R;US)

Acrylonitrile
Best demonstrated available technology (BDAT) background document for K011, K013, and K014. Final report, 15:2769 (R;US)

Arsenic Compounds
Reduction of arsenic wastes in the electronics industry (application to study). Final report, 15:2748 (R;US)

Asbestos
Early detection of health hazards due to asbestos exposure. Final report, 15:3428 (R;YU)
Health-hazard evaluation report HETA 88-372-1953, Barbados Ministry of Health, Bridgetown, Barbados, 15:3459 (R;US)

Carcinogens
EPA (Environmental Protection Agency) programs and the regulation of carcinogens: Methods and philosophies. Technical report, 15:3786 (R;US)

Catalogs
Hints and search strategies for the substances listed in the Accident Ordinance, 15:3803 (R;DE;In German)

Chlorinated Aliphatic Hydrocarbons
Best demonstrated available technology (BDAT) background document for wastes from the production of 1,1,1-trichloroethane K028, K029, K095, and K096. Final report, 15:2773 (R;US)
Best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatic hydrocarbons F024. Final report, 15:2772 (R;US)

Chloroform
Best demonstrated available technology (BDAT) background document for K009 and K010, 15:2768 (R;US)

Cyanides
Best demonstrated available technology (BDAT) background document for cyanide wastes, 15:2770 (R;US)

Dusts
Health-hazard evaluation report HETA-88-244-1951, Orrville Bronze and Aluminum Company, Orrville, Ohio, 15:3457 (R;US)

Ground Release
Development of a hazardous materials dispersion modeling capability with application to ambient air monitoring network design: Project plan, 15:3465 (R;US)
In situ optical measurements of hydrofluoric acid aerosols, 15:3469 (R;US)

Health Hazards
Methods used in the United States for the assessment and management of health risk due to chemicals, 15:3773 (R;US)

Information Dissemination
Testimony of the National Institute for Occupational Safety and Health on the Occupational Safety and Health Administration's proposed rule on hazard communication, 15:3684 (R;US)

Mass Transfer
The Pacific Basin Consortium: A new device for problems without borders, 15:3496 (R;US)

Occupational Safety
National Institute for Occupational Safety and Health (NIOSH): Health Hazard Evaluation Reports. January 1987-September 1989 (Citations from the NTIS data base). Report for January 1987-September 1989, 15:3685 (R;US)

Organic Compounds
Steam stripping and batch distillation for the removal/recovery of volatile organic compounds, 15:2736 (R;US)

Organic Nitrogen Compounds
Best demonstrated available technology (BDAT) background document for wastes from the production of dinitrotoluene,

toluenediamine, and toluene diisocyanate (K027, K111, K112, K113, K114, K115, K116, U221, and U223). Final report, 15:2774 (R;US)

Organic Solvents
Reduction of solvent wastes in the electronics industry. Waste reduction grant program. Final report, 15:2749 (R;US)

Paints
Waste audit study: Automotive paint shops, 15:2744 (R;US)

Performance Testing
Trial burns: methods perspective, 15:2763 (R;US)

Pesticides
Best demonstrated available technology (BDAT) background document for K043. Final report, 15:2771 (R;US)

Phthalates
Best demonstrated available technology (BDAT) background document for phthalate wastes, 15:2767 (R;US)

Preservatives
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Wood-treating industries, 15:2737 (R;US)

Production
The generation and control of hazardous waste in the Pacific Basin, 15:3497 (R;US)

Public Information
The Hazardous Materials Information Exchange: An electronic bulletin board for the emergency response community, 15:3494 (R;US)

Radioactive Waste Disposal
Training waste generators: The first responder in proper waste management, 15:2184 (R;US)

Risk Assessment
Risk assessment is a developing science: Approaches to improve evaluation of single chemicals and chemical mixtures, 15:3779 (R;US)
Supplemental risk-assessment guidance for the Superfund program. Part 1. Guidance for Public-Health Risk Assessments. Part 2. Guidance for ecological Risk Assessments. Draft report (Final), 15:3582 (R;US)

Sanitary Landfills
Performance testing of Method 1312. QA (quality assurance) support for RCRA (Resource Conservation and Recovery Act) testing: Project report, 15:3583 (R;US)
Superfund Record of Decision (EPA Region 5): Forest Waste Disposal, MI. (Second remedial action), March 1988, 15:3584 (R;US)

Silica
Sentinel Event Notification System for Occupational Risks (SENSOR): Recommendations for control of silica exposure at Woodbridge Sanitary Pottery Corporation, Woodbridge, New Jersey, 15:3456 (R;US)

Smokes
Health-hazard evaluation report HETA 87-109-1950, North Riverside Fire Department, North Riverside, Illinois, 15:3458 (R;US)

Styrene
In-depth industrial-hygiene survey report on styrene exposure at Fiberform, Spokane, Washington, January 16-18, 1979, 15:3433 (R;US)
In-depth industrial-hygiene survey report on styrene exposure at Larson Industries, Incorporated Boat Plant, Little Falls, Minnesota, February 27-March 1, 1979, 15:3434 (R;US)

Toluidines
Best demonstrated available technology (BDAT) background document for wastes from the production of dinitrotoluene, toluenediamine, and toluene diisocyanate (K027, K111, K112, K113, K114, K115, K116, U221, and U223). Final report, 15:2774 (R;US)

Transportation Systems
Hazardous-materials transportation. September 1982-September 1989 (Citations from the COMPENDEX data base). Report for September 1982-September 1989, 15:2715 (R;US)

Waste Disposal
Applicable or relevant and appropriate requirements (ARARs) for radioactive mixed waste, 15:2228 (R;US)
Application of a simple short-term bioassay for the identification of genotoxins from hazardous wastes, 15:3782 (R;US)
Below Regulatory Concern (BRC) Owners Group: A comparison of the EPA generic cost-benefit analysis with an industry-specific analysis: Final report, 15:2195 (R;US)
Incinerability index: A measure of incinerator performance, 15:2743 (R;US)
Installation-Restoration Program Preliminary Assessment Bethel Radio Relay Station, Alaska, 15:2717 (R;US)
Installation-Restoration Program Preliminary Assessment Kalakaket Creek Radio Relay Station, Alaska, 15:2716 (R;US)
Installation-Restoration Program Preliminary Assessment, Bear Creek Radio Relay Station, Alaska, 15:2721 (R;US)
Installation-Restoration Program Preliminary Assessment, Big Mountain Radio Relay Station, Alaska, 15:2723 (R;US)
Installation-Restoration Program Preliminary Assessment, Canyon Creek Radio Relay Station, Alaska, 15:2722 (R;US)
Installation-Restoration Program Preliminary Assessment, Gold King Creek Radio Relay Station, Alaska, 15:2720 (R;US)
Installation-Restoration Program Preliminary Assessment, Granite Mountain Radio Relay Station, Alaska, 15:2719 (R;US)
Installation-Restoration Program Preliminary Assessment, Naknek Recreational Camps, Alaska, 15:2718 (R;US)
ROD (Record of Decision) annual report, FY 1988, 15:3590 (R;US)
Regulatory requirements for groundwater monitoring networks at hazardous waste sites, 15:3501 (R;US)
Response to capacity-related comments submitted on the Second Third proposed land disposal restrictions rule, 15:3520 (R;US)
Response to comments: Background document for the second third-land disposal restrictions proposed rule: Policy-related comments, 15:3518 (R;US)
Safe disposal of hazardous wastes: The special needs and problems of developing countries. Volume 1-Volume 3. World Bank technical paper, 15:2750 (R;US)
Superfund Record of Decision (EPA Region 1): Cannon Engineering, MA. (First Remedial Action), March 1988. Final report, 15:3527 (R;US)
Superfund Record of Decision (EPA Region 10): Commencement Bay/Near Shore, WA. (First Remedial Action), December 1988, 15:3526 (R;US)
Superfund Record of Decision (EPA Region 2): Ciba-Geigy, NJ. (First Remedial Action), April 1989, 15:3530 (R;US)
Superfund Record of Decision (EPA Region 2): Lipari Landfill, Mantua Township, Gloucester County, New Jersey, July 11, 1988. Third remedial action. Final report, 15:3579 (R;US)
Superfund Record of Decision (EPA Region 3): M. W. /Manufacturing, PA. (First Remedial Action), March 1989, 15:3534 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump Site, PA. (Second Remedial Action), September 1988, 15:3525 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump, PA. (First remedial action), March 1988. Final report, 15:3589 (R;US)
Superfund Record of Decision (EPA Region 3): Wildcat Landfill, DE. (Second Remedial Action), November 1988. Final report, 15:3535 (R;US)
Superfund Record of Decision (EPA Region 4): American Creosote Works, TN. (First Remedial Action), December 1988, 15:3533 (R;US)
Superfund Record of Decision (EPA Region 5): Belvidere Landfill, IL. (First Remedial Action), June 1988, 15:3522 (R;US)
Superfund Record of Decision (EPA Region 5): Poer Farm, IN. (First Remedial Action), September 1988. Final report, 15:3523 (R;US)
Superfund Record of Decision (EPA Region 5): Summit National Site, Deerfield, OH. June 1988. First Remedial Action. Final report, 15:3528 (R;US)
Superfund Record of Decision (EPA Region 6): Pesses Chemical, TX. (First Remedial Action), December 1988. Final report, 15:3532 (R;US)

Superfund Record of Decision (EPA Region 6): South Valley/Edmunds Street, NM. (Second Remedial Action), June 1988, 15:3524 (R;US)
Superfund Record of Decision (EPA Region 7): Findett, MO. (First Remedial Action), December 1988, 15:3500 (R;US)
Superfund Record of Decision (EPA Region 7): Todtz, Lawrence Farm, IA. (First Remedial Action), November 1988. Final report, 15:3531 (R;US)
Superfund Record of Decision (EPA Region 8): Libby Ground Water Contamination, MT. (Second Remedial Action), December 1988, 15:3529 (R;US)
Technology transfer in hazardous waste management, 15:2185 (R;US)
The generation and control of hazardous waste in the Pacific Basin, 15:3497 (R;US)
Uncontrolled hazardous waste site cleanup programs in the US: An overview, 15:3495 (R;US)

Waste Management
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Analytical laboratories, 15:2740 (R;US)
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Dry cleaners and commercial laundries, 15:2739 (R;US)
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Printing and publishing, 15:2738 (R;US)
Turning off the tap: Strategies for hazardous waste minimization in the city of Los Angeles, 15:2776 (R;US)
Waste audit study: Automotive paint shops, 15:2744 (R;US)
Waste audit study: Research and educational institutions, 15:2746 (R;US)

Waste Processing
Methodology for developing best demonstrated available technology (BDAT) treatment standards, 15:2765 (R;US)
Response to the Second Third wastes treatment standards: Related comments for the Second Third land-disposal restrictions proposed rule (Issue Numbers 1 through 12), 15:3519 (R;US)
Treatment technology background document, 15:2764 (R;US)

Water Pollution
Superfund Record of Decision (EPA Region 7): Findett, MO. (First Remedial Action), December 1988, 15:3500 (R;US)

HAZARDOUS MATERIALS SPILLS
Superfund Record of Decision (EPA Region 3): Croyden TCE Spill, PA. (First Remedial Action), December 1988, 15:3586 (R;US)

Underground Disposal
A kinetic model for dissolution of borosilicate glass, 15:2240 (R;US)
A sensitivity study of near-field thermomechanical conditions in tuff, 15:2227 (R;US)
Analyses of transport in the upper soil layer and interpretation of caisson experiments, 15:2202 (R;US)
Analysis of caisson transport experiments by travel time approach, 15:2201 (R;US)
Analytical models for C-14 transport in a partially saturated, fractured, porous media, 15:2209 (R;US)
Application of the results of excavation response experiments at climax and the Colorado School of Mines to the development of an experiment for the underground research laboratory, 15:2237 (R;US)
Approach to first principles model prediction of measured WIPP [Waste Isolation Pilot Plant] in situ room closure in salt, 15:2233 (R;US)
Evaluation of the post-emplacement environment of high level radioactive waste packages at Yucca Mountain, Nevada (Yucca Mountain project), 15:2239 (R;US)
Gas flow in and out of a nuclear waste container, 15:2211 (R;US)
Geotechnical support and topical studies for nuclear waste geologic repositories: Annual report, fiscal year 1988, 15:2208 (R;US)
Mass transport in salt repositories: Steady-state transport through interbeds, 15:2207 (R;US)
Mass transport in salt repositories: Transient diffusion into interbeds, 15:2206 (R;US)
Preliminary integrated calculation of radionuclide cation and anion transport at Yucca Mountain using a geochemical model, 15:2204 (R;US)
Release rates of soluble species at Yucca Mountain, 15:2210 (R;US)
The EQ3/6 software package for geochemical modeling: Current status, 15:2238 (R;US)
The Waste Isolation Pilot Plant (WIPP) Seal System Performance Program, 15:2236 (R;US)
VSP [Vertical Seismic Profiling] and cross hole tomographic imaging for fracture characterization, 15:3812 (R;US)
Variable temperature effects on release rates of readily soluble nuclides: Revision, 15:2205 (R;US)

HIGH-VOLTAGE PULSE GENERATORS
Fiber optic control and diagnostic family of hardwares for the Confinement Physics Research Facility (CPRF) toroidal field and dc interrupter systems, 15:4433 (R;US)
Performance of the 10kV, 100-kA pulsed-power modules for the FRX-C magnetic compression experiment, 15:4428 (R;US)

HIGHWAYS
See ROADS

HIPPOCAMPUS
Enhanced acoustic startle responding in rats with radiation-induced hippocampal granule cell hypoplasia, 15:3692 (R;US)

HODGKINS DISEASE
Modification of radiotherapy of patients with 1A-3A stage lymphogranulomatosis, 15:3646 (RA;SU;In Russian)
Use of subtotal body irradiation as the first stage of systemic antitumoral therapy of patients with generalized lymphogranulomatosis, 15:3645 (RA;SU;In Russian)

HOG FUEL
See WOOD WASTES

HOLMIUM 152
Measurement of γ angular distributions in ^{152}Dy and ^{152,153}Ho, 15:4104 (RA;DE;In German)

HOLMIUM 153
Measurement of γ angular distributions in ^{152}Dy and ^{152,153}Ho, 15:4104 (RA;DE;In German)

HOLMIUM 165 TARGET
Correlations between fragment mass and excitation energy in damped reactions, 15:4168 (J;US)

HOLMIUM COMPOUNDS
Resistivity measurements of superconducting materials. Master's thesis, 15:2932 (R;PK)

HOLOGRAPHY
Fiber-optic wavelength-division multiplexing and demultiplexing using volume holographic gratings, 15:3373 (J;US)

HOMOGENIZATION METHODS
Studies of the homogenization of structurally viscous and viscoelastic liquids in stirring containers, 15:2757 (TJ;US)

HOMOJUNCTIONS
An empirical investigation of the InP shallow-homojunction solar cell, 15:2314 (BA;US)

HORIZONTAL AXIS TURBINES
A comparison of results from dynamic-response field tests, 15:2404 (BA;US)
Aerodynamic pressure and flow-visualization measurement from a rotating wind turbine blade, 15:2402 (BA;US)
Liquid-crystal, shear-stress-visualization experiments on a horizontal axis wind turbine, 15:2403 (BA;US)

Power mesurements on a 99 kW "Smedemoelle" wind turbine, erected at Hasle, Bornholm, 15:2385 (R;DK;In Danish)

HORTICULTURE
Water hyacinth horticulture management of manure, 15:2735 (R;DK;In Danish)

HOSPITALS
Mutagenicity of combustion emissions from a biomedical-waste incinerator, 15:3774 (R;US)

HOT GAS CLEANUP
Pore structure and reactivity changes in hot coal gas desulfurization sorbents: Technical progress report, July–September 1989, 15:2067 (R;US)

HOT PLASMA
Preferential electron-cyclotron heating of hot electrons and formation of overdense plasmas, 15:4378 (J;US)

HOT WATER HEATERS
See WATER HEATERS

HOT-DRY-ROCK SYSTEMS
Reactions and interactions of the reservoir rock with heat exchange media in the hot dry rock process: A case study in the Falkenberg granite, 15:2359 (R;DE;In German)

HOUSES
Application of radon reduction methods (revised), 15:3484 (R;US)
Effect of shading devices on residential energy use in Austin, Texas. Research report, 15:2694 (R;US)
Household energy consumption and expenditures, 1987: Part 1, National data, 15:2672 (R;US)
Investigation of the indoor air quality of renovated houses in Bois-le-Duc, Netherlands, 15:2704 (R;NL;In (In Dutch))
Measuring heat flows in collective heating systems. Appendices and figures, 15:2703 (R;NL;In (In Dutch))
Measuring heat flows in collective heating systems. Illusion or reality, 15:2702 (R;NL;In (In Dutch))
Space heating performance of the ghost ranch sundwellings, 15:2334 (BA;US)
Testing of indoor radon-reduction techniques in central Ohio houses: Phase 1 (Winter 1987-1988). Report for October 1987-August 1988 (Final), 15:3485 (R;US)
The Hood River Story: How a conservation project was implemented: Volume 1, Final report, 15:2670 (R;US)

HTGR TYPE REACTORS
See also HTTR REACTOR
Study on shaft vibration of gas circulators with gas-bearings for HENDEL helium test facility, 15:2454 (R;JP;In Japanese)
[Safety related reactor physics calculation for HTGR type reactors]: Foreign trip report, October 3, 1989–October 7, 1989, 15:2455 (R;US)

HTO
See HEAVY WATER
TRITIUM COMPOUNDS

HTTR REACTOR
Stabilities of dimension and thermal-resistance of ASR-ORB carbon for thermal barrier materials of HTTR, 15:2491 (R;JP;In Japanese)

HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN CELLS
See ANIMAL CELLS

HUMAN FACTORS
Human Factors Regulatory Research Program Plan, FY 1989–FY 1992: Volume 1, 15:2537 (R;US)

HUMAN FACTORS ENGINEERING
Solution bias in complex systems modeling, 15:4514 (R;US)

HUMAN POPULATIONS
Ingestion of radiocesium and strontium-90 by self-suppliers and non-self-suppliers in the first year following the Chernobyl reactor accident. Data taken as a basis for derivation of secondary intervention reference levels, 15:3502 (R;DE;In German)

HUMAN X CHROMOSOME
Mapping and ordered cloning of the human X chromosome: Progress report, November 1988–October 1989, 15:3603 (R;US)

HUMANS
See HUMAN POPULATIONS

HUMIC ACIDS
Electrochemical characterization and derivatization of coal: Final technical report, September 15, 1986–September 14, 1989, 15:2059 (R;US)
Field-flow fractionation in the analysis of energy-related materials: Final report, April 1, 1986–March 31, 1989, 15:3545 (R;US)

HYBRID ELECTRIC-POWERED VEHICLES
Electric and hybrid vehicles: Technical background report for the DOE flexible and alternative fuels study, 15:2791 (R;US)

HYDRAULIC RAMS
See PUMPS

HYDRAULIC TRANSPORT
Lubricated pipelining: Stability of core-annular flow, 15:2134 (R;US)

HYDROCARBON LOGGING
See WELL LOGGING

HYDROCARBONS
See also ALKANES
ALKENES
BENZENE
BENZOPYRENE
STYRENE
TOLUENE
XYLENES
Comparison of 0600-0900 AM hydrocarbon compositions obtained from 29 cities, 15:3431 (R;US)
High-energy-density solid and liquid hydrocarbon fuels. Final report, July 1987-December 1988, 15:2120 (R;US)
Ionization yields in hydrocarbons under electron irradiation, 15:3101 (J;US)
Kinetics data base for combustion modeling: Status report, February 1, 1988–January 31, 1989, 15:3107 (R;US)
Molecular dynamics studies of aromatic hydrocarbon liquids: Progress report, March 1, 1989–February 28, 1990, 15:4211 (R;US)
Report on the Ministry of Energy's statement regarding subsection 2 of section 12 of act number 293 of 10th June 1981, on the utilization of Denmark's subterranean committee on 26th October 1988, 15:2139 (R;DK;In Danish)
Solution of reference interaction site model for mixtures of short-chain polyatomic molecules, 15:3932 (J;US)

HYDROCHLORIC ACID
Bench-scale evaluation of calcium sorbents for acid-gas emission control. Report for October 1988-March 1989, 15:3444 (R;US)
Effects of coal-derived trace species on the performance of molten carbonate fuel cells: Topical report (Progress report No. 4), 15:2657 (R;US)
Hydrogen chloride bonding on dry limestone, 15:3419 (R;DK;In Danish)
Investigations on combined deposition of particulate and gaseous pollutants in a packed bed filter at high temperatures, 15:2730 (R;DE;In German)

HYDROCYANIC ACID
Effects of atmospheric mix and toxic fumes on military performance, 15:3777 (R;US)

HYDROELECTRIC POWER
Ecological aspects of lake regulation in Northern Finland. Part 2. Geomorphology and vegetation of the littoral zone, 15:2287 (R;FI;In Finnish)
Ecological aspects of lake regulation in Northern Finland. Part 5. Regulation practices and ecological effects, 15:2290 (R;FI;In Finnish)
Ecological aspects of lake regulation in northern Finland. Part 3. Macrozoobenthos and feeding of fish, 15:2288 (R;FI;In Finnish)
Ecological aspects of lake regulation in northern Finland. Part 4. Spawning and the survival of the young fish, 15:2289 (R;FI;In Finnish)

HYDROELECTRIC POWER PLANTS
See also SMALL-SCALE HYDROELECTRIC POWER PLANTS
Jubba Environmental and Socio-economic Studies (JESS). Final report, 15:2282 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 1. Executive report. Final report, 15:2283 (R;US)

Jubba Environmental and Socio-economic Studies (JESS). Volume 2. Environmental studies. Final report, 15:2284 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 3. Socio-economic studies. Final report, 15:2285 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 4. Bibliography. Final report, 15:2286 (R;US)
Quantification of Hungry Horse Reservoir water level needed to maintain or enhance reservoir fisheries: Methods and data summary, 1983–1987, 15:2278 (R;US)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROFLUORIC ACID
The influence of adsorbate–absorbate hydrogen bonding in molecular chemisorption: NH_3, HF, and H_2O on Au(111), 15:3094 (J;US)

HYDROGEN
Atom-Atom Collisions
Single and double ionization of helium by hydrogen-atom impact, 15:3921 (J;US)
Atom-Molecule Collisions
Quantum state-resolved study of pure rotational excitation of CO_2 by hot atoms, 15:3933 (J;US)
Chemical Reactions
Quantum mechanical reactive scattering theory for simple chemical reactions: Recent developments in methodology and applications, 15:3077 (R;US)
Combustion Kinetics
A standard problem for HECTR-MAAP [Hydrogen Event: Containment Transient Responses-Modular Accident Analysis Program] comparison: In-cavity oxidation, 15:2541 (R;US)
Decomposition
Corrections for non-ideal effects in reflected shock waves at low Mach numbers, 15:3072 (R;US)
Desorption
The reactions of iron clusters with water, 15:3091 (J;US)
Diffusion
Surface and bulk properties which influence ion-beam hydrogenation of silicon, 15:2852 (R;US)
Electron Collisions
Electron degradation and yields of initial products. VI. Energy spectra of subexcitation electrons in argon and molecular hydrogen, 15:3908 (J;US)
Electron-Atom Collisions
Comparison of single-electron removal processes in collisions of electrons, positrons, protons, and antiprotons with hydrogen and helium, 15:3910 (J;US)
Energy-Level Transitions
A finite temperature theory of rotationally inelastic diffraction: H_2, HD, and D_2 on Cu(100), 15:4243 (J;US)
Getters
A new polymer-based hydrogen getter, 15:2993 (BA;US)
Ion-Atom Collisions
Comparison of single-electron removal processes in collisions of electrons, positrons, protons, and antiprotons with hydrogen and helium, 15:3910 (J;US)
Coupled-channel calculations of partial capture cross sections in multiply charged ion collisions with hydrogen, 15:3924 (J;US)
Radiative and nonradiative charge transfer in He^++H collisions at low energy, 15:3913 (J;US)
Ion-Molecule Collisions
Electron removal from molecular hydrogen by fully stripped ions at intermediate energies, 15:3919 (J;US)
Impact-parameter treatment of high-velocity electron capture from diatomic molecules at fixed orientation, 15:3920 (J;US)
Test of predicted $\Delta n \geq 1$ *L*-shell dielectronic-recombination cross sections, 15:3926 (J;US)
Multi-Photon Processes
The Autler-Townes effect in hydrogen at low pressure, 15:3902 (J;US)
Permeability
Hydrogen permeability coefficient determinations for used waste drum liners, 15:2985 (R;US)
Positron-Atom Collisions
Comparison of single-electron removal processes in collisions of electrons, positrons, protons, and antiprotons with hydrogen and helium, 15:3910 (J;US)

HYDROGEN 1 MINUS BEAMS
Measurement of impurities in a volume produced H^- ion beam, 15:4426 (R;JP;In Japanese)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN CYANIDES
See HYDROCYANIC ACID

HYDROGEN DEUTERIDE
A finite temperature theory of rotationally inelastic diffraction: H_2, HD, and D_2 on Cu(100), 15:4243 (J;US)

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS 1 PLUS
Absolute differential cross sections for small-angle H^+-He direct and charge-transfer scattering at keV energies, 15:3918 (J;US)
Comparison of single-electron removal processes in collisions of electrons, positrons, protons, and antiprotons with hydrogen and helium, 15:3910 (J;US)
Impact-parameter treatment of high-velocity electron capture from diatomic molecules at fixed orientation, 15:3920 (J;US)
Measurement of transition moments between molecular excited electronic states using the Autler-Townes effect, 15:3175 (J;US)

HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS

HYDROGEN PRODUCTION
Hydrogen conference: Workshop proceedings, 15:2258 (R;US)

HYDROGEN SULFIDES
Baseline testing of the Stretford Process on the GRI 120-liter bench-scale liquid redox sulfur recovery unit. Topical report, 15:2143 (R;US)
Desulfurization of industrial gaseous effluents. Final report, 15:2729 (R;DE;In German)
Effects of coal-derived trace species on the performance of molten carbonate fuel cells: Topical report (Progress report No. 4), 15:2657 (R;US)

HYDROLOGY
Predicting flow through low-permeability, partially saturated, fractured rock: A review of modeling and experimental efforts at Yucca Mountain, 15:2234 (R;US)

HYDRONIUM IONS
See OXONIUM IONS

HYDROXYL RADICALS
Evaluation of the rate constant for the reaction OH+H_2CO: Application of modeling and sensitivity analysis techniques for determination of the product branching ratio, 15:3087 (J;US)
The reactions of peptide peroxyl radicals in aqueous solution, 15:3732 (RA;DE)
Theoretical studies of molecular mechanisms of DNA damage induced by hydroxyl radicals, 15:3703 (RA;DE)

HYPERFRAGMENTS
See HYPERNUCLEI

HYPERNUCLEI
Study of hypernuclei via (π^+, K^+) reactions at KEK, 15:3957 (R;JP)

I

I-BEAM TYPE REACTORS

INCINERATION
See COMBUSTION

INCINERATORS
A perspective on human exposure to PCDDs and PCDFs emitted form municipal waste combustors, 15:3758 (R;US)
Incinerability index: A measure of incinerator performance, 15:2743 (R;US)
Incineration studies. October 1985-September 1989 (Citations from the COMPENDEX data base). Report for October 1985-September 1989, 15:2778 (R;US)
Mutagenicity of combustion emissions from a biomedical-waste incinerator, 15:3774 (R;US)
Trial burns: methods perspective, 15:2763 (R;US)
Use of bioassay methods to evaluate incinerator emissions, 15:3440 (R;US)

INCOMPRESSIBLE FLOW
Numerical simulation of the compressible Orszag-Tang vortex. Interim report, June 1988-February 1989, 15:3935 (R;US)

INDIA
Environmental issues associated with coal-fired power plants in India, 15:2431 (J;US)
Natural background radiation and population dose distribution in India, 15:4190 (R;IN)
U, Th and K distributions inferred from regional geology and the terrestrial radiation profiles in India, 15:3505 (R;IN)

INDIAN POINT-2 REACTOR
Success/simplicity/safety/savings: SI/trip reduction at Indian point 2, 15:2558 (J;US)

INDIUM ARSENIDES
Interfacial roughness in InAs/GaAs heterostructures determined by soft x-ray reflectivity, 15:3018 (J;US)
Scaling relations for strained-layer relaxation, 15:3009 (J;US)

INDIUM IONS
Precipitation, phase transformation, and enhanced diffusion in ion-implanted silicon, 15:2997 (BA;US)

INDIUM OXIDES
Solid oxide fuel cells electrodes based on IN_2O_3-$PRrO_{1.83}$-ZrO_2, 15:2659 (R;US)

INDIUM PHOSPHIDE SOLAR CELLS
An empirical investigation of the InP shallow-homojunction solar cell, 15:2314 (BA;US)
Hybrid solar cells based on DC magnetron sputtered films of n-ITO on APMOVPE grown p-InP, 15:2317 (BA;US)

INDIUM PHOSPHIDES
Ultralow recombination velocity at $Ga_{0.5}In_{0.5}P$/GaAs heterointerfaces, 15:3005 (J;US)

INDOOR AIR POLLUTION
Application of radon reduction methods (revised), 15:3484 (R;US)
Cancer risk for radon exposure in a polluted environment: Progress report, March 1, 1989–February 28, 1990, 15:3413 (R;US)
Evaluation of airborne-asbestos concentrations before and during an O and M (operations and maintenance) activity: A case study, 15:3451 (R;US)
Health-hazard evaluation report HETA-88-244-1951, Orrville Bronze and Aluminum Company, Orrville, Ohio, 15:3457 (R;US)
Indoor air quality: Selected references, 15:3448 (R;US)
Lung cancer risk from inhalation of radon and other pollutants in rats: Comprehensive progress report, March 1, 1987–February 28, 1990, 15:3412 (R;US)
Method for measuring the effectiveness of gaseous-contaminant removal filters, 15:3257 (R;US)
Sentinel Event Notification System for Occupational Risks (SENSOR): Recommendations for control of silica exposure at Woodbridge Sanitary Pottery Corporation, Woodbridge, New Jersey, 15:3456 (R;US)
Testing of indoor radon-reduction techniques in central Ohio houses: Phase 1 (Winter 1987-1988). Report for October 1987-August 1988 (Final), 15:3485 (R;US)

INDUSTRIAL LAUNDRIES

LAND POLLUTION
Bench-scale fixation of soils from the Tacoma Tar Pits Superfund Site. Final report, 15:3521 (R;US)
Response to comments: Background document for the second third-land disposal restrictions proposed rule: Policy-related comments, 15:3518 (R;US)
Superfund Record of Decision (EPA Region 1): Cannon Engineering, MA. (First Remedial Action), March 1988. Final report, 15:3527 (R;US)
Superfund Record of Decision (EPA Region 10): Commencement Bay/Near Shore, WA. (First Remedial Action), December 1988, 15:3526 (R;US)
Superfund Record of Decision (EPA Region 2): Clothier Disposal Site, Oswego County, New York, December 28, 1988. First remedial action, 15:3591 (R;US)
Superfund Record of Decision (EPA Region 2): Lipari Landfill, Mantua Township, Gloucester County, New Jersey, July 11, 1988. Third remedial action. Final report, 15:3579 (R;US)
Superfund Record of Decision (EPA Region 3): M. W. /Manufacturing, PA. (First Remedial Action), March 1989, 15:3534 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump Site, PA. (Second Remedial Action), September 1988, 15:3525 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump, PA. (First remedial action), March 1988. Final report, 15:3589 (R;US)
Superfund Record of Decision (EPA Region 5): Belvidere Landfill, IL. (First Remedial Action), June 1988, 15:3522 (R;US)
Superfund Record of Decision (EPA Region 5): Forest Waste Disposal, MI. (Second remedial action), March 1988, 15:3584 (R;US)
Superfund Record of Decision (EPA Region 5): Poer Farm, IN. (First Remedial Action), September 1988. Final report, 15:3523 (R;US)
Superfund Record of Decision (EPA Region 5): Summit National Site, Deerfield, OH. June 1988. First Remedial Action. Final report, 15:3528 (R;US)
Superfund Record of Decision (EPA Region 6): Pesses Chemical, TX. (First Remedial Action), December 1988. Final report, 15:3532 (R;US)
Superfund Record of Decision (EPA Region 6): South Valley/Edmunds Street, NM. (Second Remedial Action), June 1988, 15:3524 (R;US)
Superfund Record of Decision (EPA Region 7): Findett, MO. (First Remedial Action), December 1988, 15:3500 (R;US)
Superfund Record of Decision (EPA Region 7): Todtz, Lawrence Farm, IA. (First Remedial Action), November 1988. Final report, 15:3531 (R;US)

LAND RECLAMATION
Proceedings of the conference: reclamation, a global perspective, 15:2079 (R;CA)
Selection with minimal bias, of an experimental control from natural wetland environments. Technical report (Final), 15:3576 (R;US)
Superfund Record of Decision (EPA Region 8): Libby Ground Water Contamination, MT. (Second Remedial Action), December 1988, 15:3529 (R;US)

LANDFILLS

LANGMUIR OSCILLATIONS
See PLASMA WAVES

LANL
Design and operation of high efficiency electron-beam-initiated chemical lasers, 15:3171 (BA;US)
Kilojoule operation of the Aurora KrF ICF laser system at Los Alamos, 15:4453 (BA;US)
Status of the design and construction of the CPRF and the ZTH reversed field pinch experiment, 15:4360 (BA;US)

LANTHANIDES
See RARE EARTHS

LANTHANUM 139 TARGET
Binary complex fragment emission and multifragmentation from very hot nuclei, 15:4099 (R;US)
Excitation energy equilibration in damped $^{139}La+^{40}Ar$ collisions at 15 MeV per nucleon, 15:4100 (J;US)

LANTHANUM CHROMITES
See CHROMIUM OXIDES
LANTHANUM OXIDES

LANTHANUM COMPOUNDS
See also LANTHANUM HYDRIDES
LANTHANUM OXIDES
LANTHANUM SULFIDES
Electron-positron momentum distribution measurements of high-T superconductors and related systems, 15:4258 (R;US)
Linear electron-hole-electron pair model of high-temperature superconductivity in $La_{2-x}M_xCuO_4$ and $YBa_2Cu_3O_{7-y}$: 2, Dependence of the superconducting transition temperatures on pressure and on hole concentration, 15:4251 (R;US)

LANTHANUM HYDRIDES
Heat capacities of LaD_x and LaH_x ($1.9 \leq x \leq 3.0$) from 1 to 300 K, 15:2955 (J;US)

LANTHANUM IONS
Electron-impact ionization of La^{q+} ions (q=1,2,3), 15:3917 (J;US)

LANTHANUM OXIDES
Lattice mode study of La_2CuO_{4-y} implanted with Sr, 15:2937 (BA;US)
Measurements of complex permittivity of microwave substrates in the 20 to 300 K temperature range from 26.5 to 40.0 GHz, 15:2928 (R;US)
[Dynamics of magnetic fluctuations in high-T_c materials]: Foreign trip report, October 5–October 15, 1989, 15:4257 (R;US)

LANTHANUM SULFIDES
Thermophysical properties of the lanthanide sesquisulfides. I. Schottky functions and magnetic and electronic properties of γ-La_2S_3, γ-Ce_2S_3, γ-Nd_2S_3, and γ-Gd_2S_3, 15:3021 (J;US)

LARYNX
Influence of local UHF-hyperthermia on frequency of postradiation larynx chondroperichondrites, 15:3659 (RA;SU;In Russian)

LASER FUSION REACTORS
Effects of laser beam smoothing on laser-plasma interaction, 15:4454 (BA;US)
NTES [Nuclear Test and Experimental Sciences Program] laser facility for physics experiments Building 391 High Bay Option, 15:4442 (R;US)

LASER IMPLOSIONS
Implosion symmetry and stability, 15:4386 (R;FR)

LASER MATERIALS
Excited state absorption of Sm^{2+} in SrF_2, 15:3178 (J;US)
Laser glass (1989), 15:3168 (R;US)

LASER RADIATION
Behavioral measurement of laser flashblindness in rhesus monkeys. Final report, June-August 1985, 15:3796 (R;US)
Dynamics of coupled electron-nucleon motion in a laser field, 15:3173 (J;US)
Eye/sensor protection against laser irradiation: Organic nonlinear optical materials. Final report, April-December 1988, 15:3798 (R;US)
Improved laser-beam uniformity using the angular dispersion of frequency-modulated light, 15:3184 (J;US)
Propagation of a laser beam through self-induced turbulence, 15:3886 (J;US)
Treatment of laser-induced retinal injuries. Final report, 12 February 1985-31 January 1987, 15:3797 (R;IL)

LASER TARGETS
Cryogenic-laser-fusion target implosion studies performed with the OMEGA uv-laser system, 15:4484 (J;US)

LASER WELDING
Heat transfer, 15:2805 (B;US)

LASER-PRODUCED PLASMA
Computer simulation of laser plasma interaction: Progress report for 1988, 15:4354 (R;US)
Generation of axial and lateral magnetic fields in laser produced plasmas, 15:4315 (R;XA)
The coupling of stimulated Raman and Brillouin scattering in a plasma, 15:4353 (R;US)
The theory of target compression by longwave laser emission, 15:4359 (B;US)

LASERS

Two-centre shell model description of quasi-molecular resonance states in heavy ion collisions, 15:4130 (R;XA)
MAGNESIUM 24 TARGET
Two-centre shell model description of quasi-molecular resonance states in heavy ion collisions, 15:4130 (R;XA)
MAGNESIUM 26
Fragmentation of high-spin particle-hole states in ^{26}Mg, 15:4081 (R;US)
MAGNESIUM 26 TARGET
Proton threshold states in ^{27}Si and the destruction of ^{26}Al at low stellar temperatures, 15:4082 (J;NL)
Single neutron transfer reactions induced by polarized ^{7}Li ions, 15:4136 (RA;DE)
MAGNESIUM HYDROXIDES
The effects of heavy metals on the scaling ability of $CaCO_3$ and $Mg(OH)_2$, 15:3041 (R;US)
MAGNESIUM OXIDES
Measurements of complex permittivity of microwave substrates in the 20 to 300 K temperature range from 26.5 to 40.0 GHz, 15:2928 (R;US)
Structure and insulator material choices for the TITAN reversed-field-pinch reactor study, 15:4470 (BA;US)
Synthesis of oxide powders by plasma vaporization of solutions, 15:2938 (BA;US)
MAGNET COILS
Design of a high-gain flux-compression generator, 15:4445 (R;US)
Measurements of electromagnetic properties of LCT coils in IFSMTF, 15:4478 (BA;US)
MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION
MAGNETIC COILS
See MAGNET COILS
MAGNETIC DIPOLES
An alternate end design for SSC dipoles, 15:3300 (R;US)
Structural performance of the first SSC [Superconducting Super Collider] Design B dipole magnet, 15:3287 (R;US)
MAGNETIC FIELD CONFIGURATIONS
DIII-D F-coil chopper selection, control and fault recognition system, 15:4413 (R;US)
MAGNETIC FIELDS
EMDEX [Electric and Magnetic Field Digital EXposure] system manuals: Volume 2: Technical reference manual, 15:2425 (R;US)
Thermodynamic principles of the process of the effect of electromagnetic fields on a polymer melt, 15:3799 (R;US)
[Dynamics of magnetic fluctuations in high-T_c materials]: Foreign trip report, October 5–October 15, 1989, 15:4257 (R;US)
MAGNETIC LENS SPECTROMETERS
Developments at the Q3D spectrograph, 15:3338 (RA;DE;In German)
MAGNETIC LEVITATED TRAINS
See LEVITATED TRAINS
MAGNETIC MIRROR TYPE REACTORS
Cusp-stabilized mirror-based neutron source, 15:4482 (J;US)
MAGNETIC STORAGE DEVICES
Effect of media properties on side erase bands, 15:4521 (R;US)
MAGNETIC STORMS
Solar diurnal variation in the amplitude of sudden commencements of magnetic storms at the geomagnetic equator, 15:3885 (R;US)
MAGNETOHYDRODYNAMIC CHANNELS
See MHD CHANNELS
MAGNETOHYDRODYNAMICS
Nonlinear waves in cosmic ray magnetohydrodynamics, 15:3825 (RA;DE;In German)
Numerical simulation of the compressible Orszag-Tang vortex. Interim report, June 1988-February 1989, 15:3935 (R;US)
MAGNETOSPHERE
See EARTH MAGNETOSPHERE
MAGNETOTAIL
Extension of lower hybrid drift instability into the neutral sheet of the earth's magnetotail, 15:4367 (BA;US)
MAGNETS
First test of the Siberian snake magnet arrangement to overcome depolarizing resonances in a circular accelerator, 15:3281 (J;US)
Quadrupole magnet for the APS [Advanced Photon Source] storage ring, 15:3317 (R;US)
MAHOGANY TREES
See TREES
MAINTENANCE FACILITIES
Waste audit study: Automotive paint shops, 15:2744 (R;US)
MAIZE
Simultaneous determination of some nutrient elements in five varieties of maize by instrumental neutrons activation analysis, 15:3048 (R;BR;In Portuguese)
MALIGNANCIES
See NEOPLASMS
MAN

MARINE VEHICLE ACCIDENTS
See ACCIDENTS
MARKETING
A study of aggregation bias in estimating the market for home heating and cooling equipment, 15:2687 (R;US)
MARS PLANET
Age Estimation
Crystal fractionation in the SNC meteorites: Implications for sample selection, 15:3846 (RA;US)
Examination of Martian sedimentary rocks to understand possible paleo-ocean and its age, 15:3844 (RA;US)
Overview of Mars: SNC meteorite results, 15:3847 (RA;US)
U-Th-Pb, Sm-Nd, Rb-Sr, and Lu-Hf systematics of returned Mars samples, 15:3845 (RA;US)
Valles Marineris, Mars: an optimum science-sample site, 15:3834 (RA;US)
Carbon Dioxide
Climate, atmosphere, and volatile inventory evolution: polar processes, climate records, volatile inventories, 15:3837 (RA;US)
Chemical Composition
Overview of Mars: SNC meteorite results, 15:3847 (RA;US)
Valles Marineris, Mars: an optimum science-sample site, 15:3834 (RA;US)
Climates
Climate, atmosphere, and volatile inventory evolution: polar processes, climate records, volatile inventories, 15:3837 (RA;US)
Martian weathering products as tracers of climate change and atmosphere/hydrosphere evolution on Mars, 15:3833 (RA;US)
Zeolites on Mars: Possible environmental indicators in soils and sediments, 15:3835 (RA;US)
Craters
Role of impact cratering for Mars sample return, 15:3841 (RA;US)
Crystal Structure
Crystal fractionation in the SNC meteorites: Implications for sample selection, 15:3846 (RA;US)
Degassing
Degassing history of Mars from Martian atmosphere samples, 15:3838 (RA;US)
Gamma Spectrometers
In situ XRF and gamma ray spectrometer for Mars sample return mission, 15:3355 (RA;US)
Geologic History
Cosmogenic nuclides in the Martian surface: constraints for sample recovery and transport, 15:3832 (RA;US)
Noble gases as tracers of the origin and evolution of the Martian atmosphere and the degassing history of the planet, 15:3843 (RA;US)
Role of impact cratering for Mars sample return, 15:3841 (RA;US)
Volcanic rocks and the geologic history of Mars, 15:3840 (RA;US)
Iron Oxides
What ferric oxide/oxyhydroxide phases are present on Mars, 15:3836 (RA;US)
Isotope Ratio
Accretion and primary differentiation of Mars, 15:3830 (RA;US)
Cosmogenic nuclides: Observable effects of Martian volatiles, 15:3839 (RA;US)
Degassing history of Mars from Martian atmosphere samples, 15:3838 (RA;US)
Overview of Mars: SNC meteorite results, 15:3847 (RA;US)
U-Th-Pb, Sm-Nd, Rb-Sr, and Lu-Hf systematics of returned Mars samples, 15:3845 (RA;US)
Isotopes
Cosmogenic nuclides in the Martian surface: constraints for sample recovery and transport, 15:3832 (RA;US)
Organic Compounds
Experimental simulations of oxidizing conditions and organic decomposition on the surface of Mars, 15:3842 (RA;US)
Photochemistry
Experimental simulations of oxidizing conditions and organic decomposition on the surface of Mars, 15:3842 (RA;US)
Physical Radiation Effects
Cosmogenic nuclides in the Martian surface: constraints for sample recovery and transport, 15:3832 (RA;US)
Planetary Atmospheres
Climate, atmosphere, and volatile inventory evolution: polar processes, climate records, volatile inventories, 15:3837 (RA;US)
Degassing history of Mars from Martian atmosphere samples, 15:3838 (RA;US)
Experimental simulations of oxidizing conditions and organic decomposition on the surface of Mars, 15:3842 (RA;US)
Martian weathering products as tracers of climate change and atmosphere/hydrosphere evolution on Mars, 15:3833 (RA;US)
Noble gases as tracers of the origin and evolution of the Martian atmosphere and the degassing history of the planet, 15:3843 (RA;US)
Planetary Evolution
Accretion and primary differentiation of Mars, 15:3830 (RA;US)
Stable isotopic studies of H,C,N,O and S in samples of Martian origin, 15:3848 (RA;US)
Radiation Scattering Analysis
In situ chemical analyses of extraterrestrial bodies, 15:3831 (RA;US)
Rare Gases
Noble gases as tracers of the origin and evolution of the Martian atmosphere and the degassing history of the planet, 15:3843 (RA;US)
Sampling
Volcanic rocks and the geologic history of Mars, 15:3840 (RA;US)
Sedimentary Rocks
Examination of Martian sedimentary rocks to understand possible paleo-ocean and its age, 15:3844 (RA;US)
Solar Energy
Solar radiation on Mars, 15:2292 (R;US)
Solar Radiation
Solar radiation on Mars, 15:2292 (R;US)
Spectrometers
In situ XRF and gamma ray spectrometer for Mars sample return mission, 15:3355 (RA;US)
Stable Isotopes
Stable isotopic studies of H,C,N,O and S in samples of Martian origin, 15:3848 (RA;US)
Volatility
Stable isotopic studies of H,C,N,O and S in samples of Martian origin, 15:3848 (RA;US)
Volcanic Rocks
Volcanic rocks and the geologic history of Mars, 15:3840 (RA;US)
Weathering
Martian weathering products as tracers of climate change and atmosphere/hydrosphere evolution on Mars, 15:3833 (RA;US)
What ferric oxide/oxyhydroxide phases are present on Mars, 15:3836 (RA;US)

Zeolites
Zeolites on Mars: Possible environmental indicators in soils and sediments, 15:3835 (RA;US)

MASERS
Operating and environmental characteristics of Sigma Tau hydrogen masers used in the Very Long Baseline Array (VLBA), 15:3162 (RA;US)
Operational parameters for the superconducting cavity maser, 15:3161 (RA;US)

MASS NUMBER
Atomic mass measurements with radioactive beams and/or targets: Where to start, 15:3070 (R;US)

MASS SPECTROSCOPY
Characterisation of molecular boric acid by mass spectrometry and matrix isolation-infrared spectroscopy, 15:3068 (R;GB)
Combined capillary electrophoresis and electrospray ionization mass spectrometry, 15:3371 (R;US)
Matrix isolation-infrared and mass spectrometric studies of high-temperature molecules, 15:3039 (R;GB)
Technical and methodical developments, 15:3350 (RA;DE;In German)

Microwave coupling phenomenology of pc [printed-circuit] boards, 15:3227 (R;US)
MICROWAVE RADIATION
Experimental study of microwave transmission through a decaying plasma. Final report, January 1986-February 1988, 15:3936 (R;US)
Intense microwave radiation from a repetitive backward-wave oscillator driven by a relativistic electron beam, 15:4182 (J;US)
MIGRATION
Migration of radio-marked whooping cranes from the Aransas-wood buffalo population: Patterns of habitat use, behavior, and survival. Technical report, 15:2602 (R;US)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY EQUIPMENT
Evaluate and characterize mechanisms controlling transport, fate, and effects of army smokes in the aerosol wind tunnel: Transport, transformations, fate, and terrestrial ecological effects of hexachloroethane obscurant smokes: Final report, 15:3463 (R;US)
Human factors evaluation of electroluminescent display #1, 15:3126 (R;US)

INEL [Idaho National Engineering Laboratory] support to modernization efforts at the Aberdeen Proving Ground, 15:4515 (R;US)
Neutron-radiography system for field use. Final report, 15:3212 (R;US)
US Marine 3rd Tank Battalion lubrication evaluation under hot ambient temperatures at Twenty-Nine Palms, California. Interim report, April-September 1988, 15:2122 (R;US)

MILITARY FACILITIES
Compliance testing of the Eglin AFB (Air Force Base) asphalt-concrete Batch Plant, Eglin AFB, Florida. Final report, 5-11 March 1989, 15:3403 (R;US)
Installation-Restoration Program Preliminary Assessment Bethel Radio Relay Station, Alaska, 15:2717 (R;US)
Installation-Restoration Program Preliminary Assessment Kalakaket Creek Radio Relay Station, Alaska, 15:2716 (R;US)
Installation-Restoration Program Preliminary Assessment, Bear Creek Radio Relay Station, Alaska, 15:2721 (R;US)
Installation-Restoration Program Preliminary Assessment, Big Mountain Radio Relay Station, Alaska, 15:2723 (R;US)
Installation-Restoration Program Preliminary Assessment, Canyon Creek Radio Relay Station, Alaska, 15:2722 (R;US)
Installation-Restoration Program Preliminary Assessment, Gold King Creek Radio Relay Station, Alaska, 15:2720 (R;US)
Installation-Restoration Program Preliminary Assessment, Granite Mountain Radio Relay Station, Alaska, 15:2719 (R;US)
Installation-Restoration Program Preliminary Assessment, Naknek Recreational Camps, Alaska, 15:2718 (R;US)
Installation-Restoration Program Stage 3. McClellan AFB, California. Remedial investigation/feasibility study ground-water sampling and analysis program, January through March 1989 data summary. Final report, January-March 1989, 15:3542 (R;US)
Properties of F-34 (JP-8) fuel for 1988. Summary report, January-December 1988, 15:2119 (R;US)
Review of facility-technology options and their development status. Final report, 15:2604 (R;US)
Waste-water characterization survey, Little Rock AFB, Arizona. Final report, 11-24 July 1988, 15:3577 (R;US)

MILITARY PERSONNEL
Effects of atmospheric mix and toxic fumes on military performance, 15:3777 (R;US)
Human-health studies of carbon monoxide (CO) under conditions of military weapons systems crewman exposures. Protocol 1: Formation of cohb. Final report, September 1982-March 1985, 15:3755 (R;US)
Navy Radon Assessment and Mitigation Program progress report, September 1988–May 1989, 15:2673 (R;US)

MILK
Environmental Radiation Data: Report 56, October-December 1988. Quarterly report, 15:3486 (R;US)

MINE SHAFTS

NEUTRON SOURCES
Neutron range spectrometer, 15:3359 (P;US)
Optimization of the testing volumes with respect to neutron flux levels in the two-target high flux D-Li neutron source for the international fusion materials irradiation facility, 15:4435 (R;US)

NEUTRON SPECTROMETERS
Neutron range spectrometer, 15:3359 (P;US)

NEUTRON TRANSPORT
Radiation-transport calculations of a simple structure using the vehicle code system with 69-group cross sections and the Monte Carlo neutron and photon code. Final report, 15:4178 (R;US)

NEUTRON-ANTINEUTRON INTERACTIONS
Neutron-antineutron oscillations in nuclei, 15:4070 (R;US)

NEUTRONS
See also FAST NEUTRONS
FISSION NEUTRONS
Neutron electric dipole moment in lattice QCD, 15:4053 (J;US)

NEW ENGLAND
See FEDERAL REGION I

NEWTON METHOD
A modified Newton method for unconstrained minimization, 15:4547 (R;US)

NICKEL
Continuous high-temperature lubrication of ceramics by carbon generated catalytically, 15:2900 (R;US)
Effectiveness factors for hydroprocessing of coal and coal liquids: Progress report No. 8, June 15, 1989–September 15, 1989, 15:2021 (R;US)
Hydrogen and helium in metals: positron lifetime experiments. Quarterly report 3. quarter 1987, 15:2839 (R;FI)
Optical second harmonic generation from Ni(110) with adsorbed CO, 15:2879 (J;US)
Pulsed laser mixing of metal overlayers on ceramics, 15:2943 (BA;US)
Thermodynamic properties of fcc transition metals as calculated with the embedded-atom method, 15:2883 (J;US)

NICKEL 57
Decay of ^{57}Ni, 15:4084 (R;BR;In Portuguese)

NICKEL 58 REACTIONS
Transfer reactions with very heavy ions. Quarterly report 3. quarter 1987, 15:4106 (R;FI)

NICKEL 58 TARGET
Emission of fast protons in (e,e'p) coincidence experiments, 15:4085 (RA;DE;In German)
The interference term between nuclear charge and nuclear current matrix elements of the E1 giant resonance in ^{12}C and ^{58}Ni, 15:4075 (RA;DE;In German)

NICKEL 64 TARGET
Measurement of g-factors in Yb isotopes, 15:4103 (RA;DE)
Preequilibrium emission of neutrons in central heavy-ion collisions at 15-20 MeV/A bombarding energy, 15:4086 (RA;DE;In German)

NICKEL ALLOYS
See also ALLOY-FE46NI33CR21
NICKEL BASE ALLOYS
NITINOL
Electronic origin of the intermediate phase of NiTi, 15:2892 (J;US)
Spin dynamics of amorphous $Fe_{90-x}Ni_xZr_{10}$, 15:2819 (R;US)

NICKEL BASE ALLOYS
See also HAYNES 188 ALLOY
Acoustic emission during integranular stress corrosion cracking, 15:2849 (R;US)
Anisotropic constitutive modeling for nickel base single crystal superalloy Rene N4 at 982 C, 15:2842 (RA;US)
Constitutive modelling of single crystal and directionally solidified superalloys, 15:2843 (RA;US)
Magnetic viscosity in Ni/Cu compositionally-modulated alloys, 15:2812 (R;US)

NICKEL-HYDROGEN BATTERIES
Development of advanced battery systems for vehicle applications, 15:2587 (B;US)

NICKEL-IRON BATTERIES
See IRON-NICKEL BATTERIES

NIGHTGLOW
See AIRGLOW

NIOBIUM
Niobium and niobium nitride contacts on semiconducting material, 15:3233 (P;US)
Study of niobium corrosion in alkaline medium, 15:2837 (R;BR;In Portuguese)

NIOBIUM ALLOYS
Exploratory study of niobium, titanium, zirconium, and tantalum aluminides. Final report, 1 March 1988-31 May 1989, 15:2807 (R;US)
Lattice dynamics of quenched diffuse ω phase in $Zr_{0.8}Nb_{0.2}$, 15:2884 (J;US)
Low cross-section Mo-Nb thermocouples for nuclear application: The state-of-the-art, 15:2831 (R;US)
Stress corrosion cracking of an uranium-6 weight per cent niobium in gaseous oxygen, nitrogen and hydrogen, 15:2814 (R;FR;In French)

NIOBIUM CARBIDES
Structure of niobium carbides, 15:2934 (TJ;US)

NIOBIUM IONS
Test of predicted $\Delta n>1$ *L*-shell dielectronic-recombination cross sections, 15:3926 (J;US)

NIOBIUM NITRIDES
Niobium and niobium nitride contacts on semiconducting material, 15:3233 (P;US)
Plasma-activated ion-beam reactive sputtering of NbN thin films, 15:2898 (R;US)

NIOBIUM OXIDES
Method of fabricating optical waveguides by ion implantation doping, 15:2964 (P;US)
Optical waveguide formation by ion implantation of Ti or Ag, 15:2940 (BA;US)

NIOSH
National Institute for Occupational Safety and Health (NIOSH): Health Hazard Evaluation Reports. January 1987-September 1989 (Citations from the NTIS data base). Report for January 1987-September 1989, 15:3685 (R;US)
Technique for chest radiography for pneumoconiosis, 15:3678 (R;US)

NITINOL
Battery actuation of NITINOL at sub-zero temperatures, 15:2572 (R;US)

NITRATES
See also PETN
SILVER NITRATES
THORIUM NITRATES
URANYL NITRATES
An acid rain study in the Washington, D.C. area, 15:3472 (J;US)

Participation in the MAP3S precipitation chemistry network: Progress report, August 1, 1988–July 31, 1989, 15:3410 (R;US)

NITRIC OXIDE
Adsorption of NO on diamond C(111)-(2×1) by band-gap excitation, 15:3003 (J;US)
Development of thermal-resistant catalysts, 15:2795 (R;JP)
High-order multiphoton ionization photoelectron spectroscopy of NO, 15:3903 (J;US)

NITRO COMPOUNDS
Burning rates of two cast nitramine explosives using a hybrid closed bomb-strand burner, 15:3382 (R;US)
Fast transit gas- and condensed-phase chemistry of energetic materials, 15:3381 (R;US)

NITROGEN
Monitoring of air pollution in the southern counties, 15:3478 (R;SE;In Swedish)
Use of a charge-coupled device camera for broadband coherent anti-Stokes Raman scattering measurements, 15:3377 (J;US)

NITROGEN 14 TARGET
Cross sections and analyzing powers of $^{15}N(p,n)^{15}O$ at 200 MeV and 494 MeV, 15:4079 (R;US)

NITROGEN COMPOUNDS
See also NITRATES
NITROGEN OXIDES
Climate change and its effect on wet-removal processes, 15:3395 (B;US)
[Deposition of atmospheric nitrogen species to forests in North America and Europe]: Foreign trip report, September 24–October 11, 1989, 15:3422 (R;US)

NITROGEN DIOXIDE
Maintain and operate California Air Resources Board field fumigation facility for experimental use. Final report, 17 December 1987-30 June 1989, 15:3435 (R;US)

NITROGEN MUSTARD
Attempted use of zinc in vivo to protect against nitrogen mustard toxicity in tumor-free and in L1210 leukemia-bearing $B6D2F_1$ mice, 15:3764 (R;US)

NITROGEN NITRIDES
See NITROGEN

NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
Combined NO_x/SO_2 control technology, 15:2421 (R;US)
Emission of nitrogen oxide from a circulating fluidized bed boiler - the influence of design parameters, 15:3466 (R;SE)
Enhancing the use of coals by gas reburning-sorbent injection: Quarterly report No. 7, December 1, 1988–February 28, 1989, 15:2422 (R;US)
NO_X emissions from stationary sources in eastern Europe, 15:3421 (R;NO)

NITROGEN SULFIDES
See SULFUR NITRIDES

NITROSAMINES
Biological (molecular and cellular) markers of toxicity: Semi-annual technical progress report (No. 2), April 1, 1989–September 30, 1989, 15:3765 (R;US)
Comparison of the production and phenotypic properties of altered hepatocyte foci in rats initiated with diethylnitrosamine neonatally or after partial hepatectomy in early adulthood, 15:3599 (R;US)

NMR
See NUCLEAR MAGNETIC RESONANCE

NMR IMAGING
Design and test of a MR-imager with superconducting magnet. Final report, 15:3624 (R;DE;In German)

NMR SPECTRA
Cholesteric lyomesophases based on sodium N-lauroyl asparte: characterization of new system by nuclear magnetic resonance and polarizing microscopy, 15:3076 (R;BR;In Portuguese)
Study of α-monosubstituted methyl acetates by C-13 and H-1 Nuclear Magnetic resonance, 15:4221 (R;BR;In Portuguese)

NMR SPECTROMETERS
Double rotor for solid-state NMR, 15:3375 (J;US)

NON-INDUCTIVE CURRENT DRIVE
Comment on ICRF current drive in reactor grade tokamak, 15:4332 (RA;JP)
Coupling analysis and experiment on fast wave antenna and multijunction grill for current drive, 15:4325 (RA;JP)
Current drive at General Atomics, 15:4328 (RA;JP)
ECRH current drive in the presence of high energy electrons, 15:4329 (RA;JP)
Effect of electron spatial diffusion on current drive, 15:4334 (RA;JP)
Electron cyclotron current drive experiments on WT-3, 15:4330 (RA;JP)
Particle simulation on high power ECH current drive, 15:4338 (RA;JP)

NON-PROLIFERATION TREATY
United States policy on negative security assurances: A reassessment, 15:2803 (R;US)

NONAXIAL NUCLEI
See DEFORMED NUCLEI

NONDESTRUCTIVE TESTING
NDE (non-destructive evaluation) publications, 1985, 15:3217 (R;US)
Neutron-radiography system for field use. Final report, 15:3212 (R;US)
Radiological protection. Responsibility of the Safety Engineering Company, 15:4188 (R;BR;In Portuguese)

NONLINEAR OPTICS
A new nonlinear-optical perturbation expansion and diagrammatic approach, 15:3900 (J;US)
Laser physics and laser techniques. Final report, 15:3154 (R;US)

NONLINEAR PLASMA INSTABILITIES
See PARAMETRIC INSTABILITIES

NONLINEAR PROBLEMS
A basic theorem of complementarity for the generalized variational-like inequality problem: Technical report, 15:4529 (R;US)
Generalized quasi-variational inequality and implicit complementarity problems, 15:4528 (R;US)
Parallel mathematical software: Technical progress report, September 16, 1988–February 14, 1990, 15:4513 (R;US)

NONLINEAR PROGRAMMING
On the identification of local minimizers in inertia-controlling methods for quadratic programming, 15:4546 (R;US)
Sequential quadratic programming algorithms for optimization, 15:4545 (R;US)

NONLINEAR SYSTEMS
See NONLINEAR PROBLEMS

NONRADIOACTIVE WASTE DISPOSAL
See WASTE DISPOSAL

NORTH ATLANTIC REGION
See FEDERAL REGION I

NORTH CAROLINA
Effects of wind and Gulf Stream events on the currents off the coast of North Carolina as it relates to oil-spill risk potential, 15:2128 (R;US)

NORTHERN HEMISPHERE
The effect of urban warming on the Northern Hemisphere temperature average, 15:3397 (J;US)

PROTEINS
Accumulation patterns of heavy metals and chlorinated hydrocarbons by sea otters, Enhydra lutris, in California. Final report, 15:3788 (R;US)
Comparison of 0600-0900 AM hydrocarbon compositions obtained from 29 cities, 15:3431 (R;US)
Destruction of volatile organic compounds using catalytic oxidation. Report for April 1987-December 1988, 15:3439 (R;US)
Estimating human-equivalent no observed adverse-effect levels for VOCs (volatile organic compounds) based on minimal knowledge of physiological parameters. Technical paper, 15:3783 (R;US)
Steam stripping and batch distillation for the removal/recovery of volatile organic compounds, 15:2736 (R;US)
Superfund Record of Decision (EPA Region 5): Wausau Water Supply, WI. (First Remedial Action), December 1988, 15:3587 (R;US)
Thiourea derivatives: Process for their production and for their use for neutron capture therapy of malignant melanomas, 15:3618 (TG;US)
Use of micrometeorological parameters in the establishment of a VOC (volatile organic compounds) monitoring network. Technical report (Final), 15:3454 (R;US)
Validation and application of pharmacokinetic models for interspecies extrapolations in toxicity risk assessments of volatile organics. Annual report No. 2, 1 July 1988-30 June 1989, 15:3757 (R;US)

ORGANIC FLUORINE COMPOUNDS
See also FLUORINATED ALIPHATIC HYDROCARBONS
Column flotation of coal with fluorosurfactants: Final report, 15:2014 (R;US)
Electronic materials high-T_c superconductivity polymers and composites structural materials surface science and catalysts industry participation: Annual report, 1988, 15:2923 (R;US)

ORGANIC HALOGEN COMPOUNDS
See also HALOGENATED ALIPHATIC HYDROCARBONS
ORGANIC FLUORINE COMPOUNDS
Formation and control of non-trihalomethane by-products, 15:3556 (R;US)
New chemical alternatives to chlorofluorocarbons and halons. Report for August 1988-February 1989, 15:3436 (R;US)

ORGANIC NITROGEN COMPOUNDS
See also AMIDES
NITRO COMPOUNDS
PORPHYRINS
Best demonstrated available technology (BDAT) background document for wastes from the production of dinitrotoluene, toluenediamine, and toluene diisocyanate (K027, K111, K112, K113, K114, K115, K116, U221, and U223). Final report, 15:2774 (R;US)

ORGANIC PHOSPHORUS COMPOUNDS
Best demonstrated available technology (BDAT) background document for organophosphorous wastes, 15:2766 (R;US)

ORGANIC POLYMERS
See also COPOLYMERS
POLYAMIDES
POLYETHYLENE GLYCOLS
POLYOLEFINS
RESINS
Waste-minimization insights for the polymer industry, 15:2742 (R;US)

ORGANIC SOLVENTS
Reduction of solvent wastes in the electronics industry. Waste reduction grant program. Final report, 15:2749 (R;US)
Ultrasonic and immersion cleaning: a comparison using aqueous and fluorocarbon solvents, 15:2176 (R;GB)
ORNL
ORNL [Oak Ridge National Laboratory] 89, 15:2610 (R;US)
[Ecosystem research on Walker Branch watershed]: Foreign trip report, October 22–28, 1989, 15:3499 (R;US)
ORNL RESEARCH REACTOR

The Pacific Basin Consortium: A new device for problems without borders, 15:3496 (R;US)

PACKAGING
Toxicity: Polymeric materials in food-contact applications. January 1977-September 1989 (Citations from the Rubber and Plastics Research Association data base). Report for January 1977-September 1989, 15:3789 (R;US)

PACKED BED
Heat transfer, 15:2805 (B;US)

PAINTS
Effects of acid deposition on painted wood substrates, 15:3432 (R;US)
Walk-through survey report: Northeast Utilities Service Co./Stone and Webster Engineering Corp., Millstone Plant No. 3, Waterford, Connecticut, August 29, 1979, 15:3770 (R;US)
Waste audit study: Automotive paint shops, 15:2744 (R;US)

PALLADIUM
A single turnover (STO) characterization of supported palladium catalysts, 15:3082 (BA;US)
Calorimetric measurements on electrochemical cells with Pd-D cathodes, 15:2575 (R;US)
Characterization of nanophase materials by x-ray diffraction and computer simulation, 15:4206 (R;US)
In-situ ion beam measurements of deuterium loading in thin foil electrochemical cells, 15:2853 (R;US)
Thermally and ion-induced phase formation in a Pd/Ge bilayer, 15:2882 (J;US)
Thermodynamic properties of fcc transition metals as calculated with the embedded-atom method, 15:2883 (J;US)

PALLADIUM BASE ALLOYS
Phase properties of the rapid cooled palladium-silicon alloy in the concentration range 40 to 58 at.% Si, 15:2851 (R;JP)

PALLADIUM COMPLEXES
Transition metal catalyzed transformations of unsaturated molecules, 15:3074 (R;US)

PALLADIUM COMPOUNDS
Molecular-dynamics investigation of deuteron separation in $PdD_{1.1}$, 15:2963 (J;US)

PAPER INDUSTRY
Pulping effluents: Biological treatment. January 1976-September 1989 (Citations from the Paper and Board, Printing, and Packaging Industries Research Associations data base). Report for January 1976-September 1989, 15:2752 (R;US)
Wastepaper recycling. January 1976-September 1989 (Citations from the Paper and Board, Printing, and Packaging Industries Research Associations data base). Report for January 1976-September 1989, 15:2751 (R;US)

PARACHUTES
An experimental investigation of wall-interference effects for parachutes in closed wind tunnels, 15:3139 (R;US)

PARAFFINS
See ALKANES

PARALLEL PROCESSING
Computational and statistical issues in discrete-event simulation. Technical report, 15:4502 (R;US)
Implementation indices (1975-1979). Volume 1. Technical report, 15:4497 (R;US)
Optimization algorithms for new computer architectures with applications to personnel-assignment models. Annual report (Final), 1 May 1988-30 April 1989, 15:4501 (R;US)
PCP [Parallel C Preprocessor]: A parallel extension of C that is 99% fat free: Revision 1, 15:4531 (R;US)
Parallel processing and learning in simple systems. Final report, 10 January 1986-14 January 1989, 15:3595 (R;US)
Research, development, training, and education using the Ada programming language. Final report, 1 September 1987-31 May 1989, 15:4503 (R;US)
Rewrite Rule Machine project. Final report, 15:4500 (R;US)
Strand: A practical parallel programming language, 15:4512 (R;US)

PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE

PARAMETRIC INSTABILITIES
Parametric instabilities of Langmuir waves in weak/moderate magnetic fields, 15:4377 (J;US)

PARASYMPATHOLYTICS
New techniques for positron emission tomography in the study of human neurological disorders: Progress report, June 15, 1987–November 15, 1989, 15:3616 (R;US)

Effects of acid fog and ozone on conifers. Final report, 15:3446 (R;US)

PION MINUS-PROTON INTERACTIONS
Study of $\omega\omega$ systems produced in 38 GeV/c $\pi^- p$ collisions, 15:3969 (J;US)

PION PLUS REACTIONS
Pion induced double-charge exchange above the resonance, 15:4160 (R;US)

PION-NUCLEON INTERACTIONS
Pion distribution in the nucleon, 15:3975 (R;US)

PION-PION INTERACTIONS
Contribution of two-pion annihilation to dilepton emission from proton-nucleon collisions, 15:4008 (J;US)

PIONIC ATOMS
Studies of deeply bound π^- states by (n,p) and (d,^{2}He) pion transfer reactions, 15:4110 (RA;JP)

PIONS
See also PIONS NEUTRAL

Quark-mass dependence of the chiral model parameters, 15:3998 (RA;DE)
Weak decays of K and π mesons, 15:4013 (J;US)

PIONS NEUTRAL
Neutral pion photoproduction of the nucleon near threshold, 15:3977 (R;US)

PIPELINE QUALITY GAS
See HIGH BTU GAS

PIPELINES
Liquefaction hazards and their effects on buried pipelines. Technical report, 15:3254 (R;US)
Lubricated pipelining: Stability of core-annular flow, 15:2134 (R;US)
Statistics of interstate natural gas pipeline companies, 1988, 15:2149 (R;US)

PIPES
Deposition of cobalt on surface-treated stainless steel under PWR conditions, 15:2445 (R;US)
Development of short-term tests for evaluating plastic gas-piping materials. Annual report, January-December 1984, 15:2150 (R;US)
Quality control and requirements for corona heated HDPE casing for district heating pipelines, 15:2779 (R;SE;In Swedish)
Remaining-life estimation of boiler pressure parts: Volume 3, Base metal model: Final report, 15:2410 (R;US)
Stability of core-annular flow in a rotating pipe, 15:3941 (J;US)

PLANETARY EVOLUTION
Isotopic and chemical evolution of planets: Mars as a missing link, 15:3829 (RA;US)

PLANNING
Quality-assurance plan for the Basic Environmental Compliance and Monitoring Program (BECAMP), 15:3744 (R;US)

PLANT GROWTH
Effects of acid fog and ozone on conifers. Final report, 15:3446 (R;US)
Effects of air pollutants on photosynthesis, vegetative growth, and development of grapevines in the San Joaquin Valley of California. Final report, February 1987-February 1989, 15:3445 (R;US)

PLANTS
See also FUNGI
TREES
Convention on international trade in endangered species of wild fauna and flora. 1987 annual report. Final report, 15:3613 (R;US)
Impact of a simulated nuclear winter environment on growth development and productivity of potatoes, winter wheat, pines and soybeans, 15:3489 (R;US)
Maintain and operate California Air Resources Board field fumigation facility for experimental use. Final report, 17 December 1987-30 June 1989, 15:3435 (R;US)
Plant senescence: Its biochemistry and physiology, 15:3601 (B;US)

COLD PLASMA
COLLISIONLESS PLASMA
EQUILIBRIUM PLASMA
HIGH-BETA PLASMA
HOT PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
LOW-BETA PLASMA
RELATIVISTIC PLASMA
Current drive via magnetohydrodynamic helicity waves, 15:3940 (J;US)
Excitation of the toroidicity-induced shear Alfven eigenmode by fusion alpha particles in an ignited tokamak, 15:4374 (J;US)
Experimental study of microwave transmission through a decaying plasma. Final report, January 1986-February 1988, 15:3936 (R;US)
Investigation of the non linear Buneman instability in a multi ion plasma, 15:4313 (R;XA)
Ion temperature gradient-driven turbulence in tokamaks with flat density profiles, 15:4376 (J;US)
Ion-sound emission by Langmuir soliton reflected at density barrier, 15:4316 (R;XA)
Parametric instabilities of Langmuir waves in weak/moderate magnetic fields, 15:4377 (J;US)
Quasilinear diffusion modeling of the alpha-loss-cone instability in a tandem-mirror reactor, 15:4381 (J;US)
Second stability in the ATF torsatron, 15:4372 (J;US)
Temperature fluctuations and transport in a tokamak edge plasma, 15:4379 (J;US)
Theory of weak ion temperature gradient-driven turbulence near the threshold of instability, 15:4375 (J;US)
Visible imaging of edge fluctuations in the TFTR tokamak, 15:4383 (J;US)

PLASMA (QUARK)
See QUARK MATTER

PLASMA ACCELERATION
Electrothermal guns – a theoretical investigation of factors for optimal performance. Technical report, 15:2660 (R;US)
Reflection of accelerated plasma rings from conical electrodes in the RACE experiment, 15:4368 (BA;US)

PLASMA ACCELERATORS
See PLASMA GUNS

PLASMA CONFINEMENT
See also INERTIAL CONFINEMENT
Status of the design and construction of the CPRF and the ZTH reversed field pinch experiment, 15:4360 (BA;US)

PLASMA DIAGNOSTICS
Spectroscopic determination of the electrostatic potential profile in a plasma-prefilled ion diode, 15:3230 (J;US)
Visible imaging of edge fluctuations in the TFTR tokamak, 15:4383 (J;US)
X and UV time resolving diagnostics for X-ray laser experiments, 15:4369 (BA;US)

PLASMA DIODES
See THERMIONIC DIODES

PLASMA DISRUPTION
ITER disruption modeling using TSC [Tokamak Simulation Code], 15:4301 (R;US)
Magnetic microtearing coherence in tokamak plasmas, 15:4311 (R;FR;In French)

PLASMA GUNS
Electrothermal guns – a theoretical investigation of factors for optimal performance. Technical report, 15:2660 (R;US)

PLASMA HEATING
Neutral beam injection current drive sensitivity study for the tokamak ignition/burn experimental reactor II, the U.S.: Option for International Thermonuclear Reactor, and the International Tokamak Reactor, 15:4483 (J;US)

PLASMA MACROINSTABILITIES
See also PARAMETRIC INSTABILITIES
Implosion symmetry and stability, 15:4386 (R;FR)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA PRODUCTION
Characteristics of plasma produced by an RF induction discharge, 15:4364 (BA;US)
Study of a plasma edge cathode scheme for electron beam extraction, 15:4365 (BA;US)

PLASMA SCRAPE-OFF LAYER
Practical aspects of a 2-D edge-plasma model, 15:4450 (R;US)

PLASMA SHEATH
Self-consistent radial sheath, 15:4380 (J;US)

PLASMA SIMULATION
2.5D EM direct implicit PIC simulation using AVANTI, 15:4356 (R;US)
Relativistic extension of the electromagnetic direct implicit PIC algorithm, 15:4357 (R;US)

PLASMA SWITCHES
Single fluid simulations of plasma openings switch behavior, 15:3308 (R;US)
PLASMA WAVES
CRRES (Combined Release and Radiation Effects Satellite) SAPCERAD Plasma Wave Experiment. Final report, 20 April 1982-30 June 1988, 15:3883 (R;US)
Phase conjugate reflection of electromagnetic waves from a plasma, 15:4363 (BA;US)
PLASTICS
Plastics and elastomers: Radiation crosslinking. April 1986-September 1989 (Citations from the Rubber and Plastics Research Association data base). Report for April 1986-September 1989, 15:2981 (R;US)
PLASTICS INDUSTRY
In-depth industrial-hygiene survey report on styrene exposure at Fiberform, Spokane, Washington, January 16-18, 1979, 15:3433 (R;US)
In-depth industrial-hygiene survey report on styrene exposure at Larson Industries, Incorporated Boat Plant, Little Falls, Minnesota, February 27-March 1, 1979, 15:3434 (R;US)
PLATES (FUEL)
See FUEL PLATES
PLATINUM
Anharmonic damping in rare-gas multilayers, 15:2888 (J;US)
Thermodynamic properties of fcc transition metals as calculated with the embedded-atom method, 15:2883 (J;US)
PLESIOTHERAPY
See RADIOTHERAPY
PLUMES
Development of a hazardous materials dispersion modeling capability with application to ambient air monitoring network design: Project plan, 15:3465 (R;US)
Evaluation of the ground-water contaminant plume extending from the 183-H Solar Evaporation Basins, 15:2225 (R;US)
The identification of terrain-induced circulations using principal components, 15:2230 (R;US)
PLUTONIUM
A review of the literature on the toxicity of rare-earth metals as it pertains to the Engineering Demonstration System surrogate testing, 15:3792 (R;US)
Analytical studies of plutonium containing solutions by Laser-Raman-Spectroscopy (LRS) with special regard to the Pu(IV)-Ru(III)-HNO_3 and Pu(VI)-H_2O_2-reactions, 15:3064 (R;DE;In German)
Environmental considerations for the conduct of surrogate tests in the Engineering Demonstration System, 15:3791 (R;US)
Magnetic separation as a plutonium residue enrichment process, 15:2203 (R;US)
Measurements of plutonium residues from recovery processes, 15:2246 (R;US)
Recent plutonium metal production experience at Hanford, 15:2171 (R;US)
PLUTONIUM 239
Electrodeposition and evaporation techniques used for preparation of ^{239}Pu sources. Determination by alpha spectrometry, 15:3052 (R;BR;In Portuguese)
PLUTONIUM COMPOUNDS
Analytical studies of plutonium containing solutions by Laser-Raman-Spectroscopy (LRS) with special regard to the Pu(IV)-Ru(III)-HNO_3 and Pu(VI)-H_2O_2-reactions, 15:3064 (R;DE;In German)
Plutonium diffusivity in compacted bentonite, 15:2223 (R;JP)
PNEUMOCONIOSES
Asbestos and silicate pollution in the work place. January 1978-July 1989 (Citations from Pollution Abstracts). Report for January 1978-July 1989, 15:3461 (R;US)
Technique for chest radiography for pneumoconiosis, 15:3678 (R;US)
POINT CHARGE
Stopping power and energy loss cross section of a point charge penetrating through a dense medium of bound electrons, 15:4205 (R;US)
POISONS (CHEMICAL)
See HAZARDOUS MATERIALS
POLAR REGIONS
See also ANTARCTIC REGIONS
Auroral energy deposition over the polar ionosphere during substorms. Technical report, 15:3882 (R;US)
POLARIZED BEAMS
Development of polarized ion beams and polarized gas targets: Final scientific report, 15:3286 (R;US)
Scatterings and reactions by means of polarized neutron beam, 15:4080 (RA;JP;In Japanese)
The design and performance of the FNAL high-energy polarized beam facility, 15:3271 (R;US)
POLARIZED TARGETS
Development of polarized ion beams and polarized gas targets: Final scientific report, 15:3286 (R;US)
POLLUTANTS
Concentration profiles from lidar measurements in the presence of multiple scattering: the two-stream approximation, 15:3473 (J;US)
Distribution of heavy metals and anions in the groundwater of quaternary gravel deposits in the Munich area (Dornach). Laboratory and field test results, 15:3540 (R;DE;In German)
Respiratory effects of inhaled gases and aerosols. Report for 1 November 1973-31 March 1977, 15:3787 (R;US)
Vertical distribution of pollutants in the presence of convective storms, 15:3406 (R;US)
POLLUTION

Semiclassical distorted wave theory of inclusive nucleon inelastic scattering to continuum, 15:4165 (RA;JP;In Japanese)
Time of flight measurements at the pulsed proton beam, 15:4076 (RA;DE;In German)
Workshop for cascade project, physics using large acceptance spectrograph and its technical considerations, 15:4069 (R;JP;In Japanese)
PROTON-ANTIPROTON INTERACTIONS
Low energy $\bar{p}p$ physics, 15:3960 (R;US)
Measurement of proton-antiproton cross sections at low momenta, 15:3955 (RA;DE;In German)
Polarization asymmetries of large P_t leptons at hadron colliders in E_6 theories, 15:3989 (R;XA)
Recent results from the CDF [Collider Detector at Fermilab] experiment at the Tevatron proton-antiproton collider, 15:3953 (R;US)
PROTON-NEUTRON INTERACTIONS
Global trends and structural consequences of the proton-neutron interaction, 15:4125 (R;US)
PROTON-PROTON INTERACTIONS
Contribution of two-pion annihilation to dilepton emission from proton-nucleon collisions, 15:4008 (J;US)
Jet production and decay in relativistic pp collisions, 15:3995 (RA;DE)
PROTONS
See also SOLAR PROTONS
First test of the Siberian snake magnet arrangement to overcome depolarizing resonances in a circular accelerator, 15:3281 (J;US)
Search for proton decay and supernova neutrino bursts with a lunar base neutron detector, 15:3954 (R;XA)
PSEUDOPARTICLES
See INSTANTONS
PUBLIC BUILDINGS
Health-hazard evaluation report HETA 88-372-1953, Barbados Ministry of Health, Bridgetown, Barbados, 15:3459 (R;US)
PUBLIC HEALTH
Methods used in the United States for the assessment and management of health risk due to chemicals, 15:3773 (R;US)
Risk assessment is a developing science: Approaches to improve evaluation of single chemicals and chemical mixtures, 15:3779 (R;US)
PUBLIC POLICY
Summary of commercial conservation programs environmental issues and program consistency, 15:3517 (R;US)
US Energy use: New technologies and policies in response to global warming, 15:3408 (R;US)
PUBLIC RELATIONS
Community relations programs: Improved planning through better understanding of communication systems, 15:2592 (R;US)
PUBLIC UTILITIES
See also ELECTRIC UTILITIES
WATER UTILITIES
Least-cost planning in the utility sector: Progress and challenges: Volume 2, Technical appendix, 15:2624 (R;US)
The practice of utility least-cost planning: A report on a study-in-progress, 15:2633 (R;US)
PUGET SOUND
Comparison of bioassays for assessing sediment toxicity in Puget Sound. (Appendices included). Report for 1988-1989 (Final), 15:3561 (R;US)
PULMONARY CANCER
See CARCINOMAS
PULMONARY LAVAGE
See LUNGS
PULSATING VARIABLE STARS
See also CEPHEIDS
Nonlinear pulsations of luminous He stars, 15:3873 (BA;US)
PULSE COMBUSTION
Pulsating catalytic combustion of gaseous fuels. Final report, January 1987-September 1988, 15:2152 (R;US)
PULSE GENERATORS
See also HIGH-VOLTAGE PULSE GENERATORS
Computer controlled MHD power consolidation and pulse-generation system: Technical progress report, October 1988–March 1989, 15:2648 (R;US)
PULVERIZED FUEL ASH
See FLY ASH
PUMPS
See also WATER PUMPS
Closeout of IE Bulletin 86-01: Minimum flow logic problems that could disable residual heat removal pumps: Minimum flow logic problems that could disable residual heat removal pumps, 15:2544 (R;US)

Probabilistic structural analysis methods of hot engine structures, 15:3248 (R;US)

PURINES
See also ADENINES
GUANINE
Matrix-isolation of free radicals from purines and derivatives in aqueous low temperature glasses, 15:3713 (RA;DE)
Pulse radiolysis studies on one-electron oxidation of purines, 15:3720 (RA;DE)

PURITY
See IMPURITIES

PVC
Hydrogen permeability coefficient determinations for used waste drum liners, 15:2985 (R;US)

PWR TYPE REACTORS

COMANCHE PEAK-1 REACTOR
COMANCHE PEAK-2 REACTOR
INDIAN POINT-2 REACTOR
LOFT REACTOR
SHIPPINGPORT REACTOR
THREE MILE ISLAND-2 REACTOR

Aging
Embrittlement of cast stainless steels in LWR systems, 15:2513 (R;US)

Fission Product Release
In-core thermal hydraulic and fission product calculations for severe fuel damage analyses, 15:2438 (R;US)

Fuel Element Failure
Study on the behavior of PWR remedy fuel under reactivity initiated accident conditions. Effect of pellet shape modification, 15:2533 (R;JP;In Japanese)
Study on the behavior of waterside corroded PWR fuel rods under reactivity initiated accident conditions, 15:2535 (R;JP;In Japanese)

Fuel Elements
Advancements in the behavioral modeling of fuel elements and related structures, 15:2504 (R;US)

Fuel Pellets
Study on the behavior of PWR remedy fuel under reactivity initiated accident conditions. Effect of pellet shape modification, 15:2533 (R;JP;In Japanese)

Fuel Rods
Design and operation of gamma scan and fission gas sampling systems for characterization of irradiated commercial nuclear fuel, 15:2440 (R;US)
Study on the behavior of waterside corroded PWR fuel rods under reactivity initiated accident conditions, 15:2535 (R;JP;In Japanese)

Heat Transfer
Heat transfer, 15:2805 (B;US)

Loss Of Coolant
Multiloop integral system test (MIST): Test Group 32, SBLOCA [small-break loss-of-coolant accidents] with altered leak and HPI [high-pressure injection] configurations: Final report: Volume 4, 15:2547 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)
Multiloop integral system test (MIST): Test Group 35, Noncondensibles and venting: Final report: Volume 7, 15:2549 (R;US)
Multiloop integral system test (MIST): Test Group 36, Pump operation: Final report: Volume 8, 15:2550 (R;US)
Review of LOFT [Loss-of-Fluid Test] large break experiments: OECD LOFT project, 15:2551 (R;US)
Scale model test results for an inverted U-tube steam generator with comparisons to heat transfer correlations, 15:2518 (R;US)

Meltdown
Measures for reduction of severe accident consequences: Comprehensive evaluation of the results sponsored by the BMI, 15:2495 (R;DE;In German)

Pipes
Deposition of cobalt on surface-treated stainless steel under PWR conditions, 15:2445 (R;US)

Pressure Vessels
[Integrity of pressure components of nuclear power plants]: Foreign trip report, October 3, 1989–October 20, 1989, 15:2553 (R;US)

Radioactive Effluents
Radioactive materials released from nuclear power plants: Annual report, 1987, 15:2540 (R;US)

Reactor Accidents
A standard problem for HECTR-MAAP [Hydrogen Event: Containment Transient Responses-Modular Accident Analysis Program] comparison: In-cavity oxidation, 15:2541 (R;US)

Reactor Cooling Systems
Aging assessment of auxiliary feedwater systems, 15:2511 (R;US)

Reactor Kinetics
ARMP-02 documentation: Part 2, Chapter 5, EPRI-PRESS computer code manuals: Volume 1, Theory and numerics, 15:2525 (R;US)

Reactor Physics
ARMP-02 documentation: Part 2, Chapter 5, EPRI-PRESS computer code manuals: Volume 1, Theory and numerics, 15:2525 (R;US)

Spent Fuels
Shielding design for spent fuel shipping in high-capacity truck casks, 15:2194 (R;US)

Steam Generators
Determination of thermodynamic data for modeling corrosion: Final report, Volume 2: Chlorides and acetates, 15:2444 (R;US)
Determination of thermodynamic data for modeling corrosion: Volume 1, Sulfates (Revision 1): Final report, 15:2443 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)

Thorium Oxides
Program of research and development on the thorium utilization in PWRS. Final report (1979-1988), 15:2449 (R;DE)

PYRITE
Enhancement of surface properties for coal benefication: Progress report, August 1, 1989–September 30, 1989, 15:2056 (R;US)
[Advanced physical fine coal cleaning: Froth flotation]: Quarterly technical progress report, July 1, 1989–September 30, 1989, 15:2016 (R;US)

PYRITES
See PYRITE

Q

QUALITY CONTROL
Back to basics, 15:2753 (R;US)

QUANTITATIVE CHEMICAL ANALYSIS
Elementary analysis by means of the x fluorescence and energy dispersion, 15:3066 (R;FR;In French)
Energy calibration and quantitative analysis with ESCA, 15:3351 (RA;DE;In German)

QUANTUM CHROMODYNAMICS
Finite temperature QCD with four light quark flavours, 15:4005 (J;NL)
Four-flavor QCD with intermediate- and light-mass quarks, 15:4060 (J;US)
How does one see QCD degrees of freedom in physics of interacting hadrons?, 15:4000 (RA;DE;In German)
Low $_{rho}$perpendicular properties of the pomeron: Theoretical implications in QCD, 15:4047 (BA;US)
One-jet inclusive cross section at order α_s^3. I. Gluons only, 15:4011 (J;US)
Renormalization scheme dependence in the next-to-next-to-leading order and the high energy behaviour in QCD, 15:3990 (R;XA)
Scattering amplitudes in hot gauge theories, 15:4052 (J;US)
Soliton baryons and Goldstone mesons in the cell model of the QCD vacuum, 15:3997 (RA;DE)
What is the order of the transition from hadronic matter to the quark-gluon plasma?, 15:4006 (J;NL)

QUANTUM ELECTRODYNAMICS

Biological Radiation Effects
Intracavitary radiotherapy of malignant tumors of rectum, 15:3653 (RA;SU;In Russian)
Quality garantee of radiotherapy of patients with lung cancer, 15:3650 (RA;SU;In Russian)

Blood Chemistry
Chemoluminescence and antioxidative blood activity in patients with rectum cancer in radiotherapy, 15:3739 (RA;SU;In Russian)

Computer Calculations
Clinical experience of application of automated radiotherapy with the use of optimized computer programs, 15:3670 (RA;SU;In Russian)
Computerized Tomography
Potentialities of Simulix-Simtomix complex use for preradiation preparation of patients with lung cancer, 15:3647 (RA;SU;In Russian)
Dose-Response Relationships
Research in photon irradiation dose fields forming by wedge-shaped filters, 15:3673 (RA;SU;In Russian)
Early Radiation Effects
Modification of radiotherapy of patients with 1A-3A stage lymphogranulomatosis, 15:3646 (RA;SU;In Russian)
Fistulae
Conservative and surgical treatment of rectovaginal fistulas induced by irradiation, 15:3737 (RA;SU;In Russian)
Fractionated Irradiation
15-th experience on application of non-standard dose fractionating in radiotherapy of patients with lung carcinoma, 15:3648 (RA;SU;In Russian)
Efficiency of larynx cancer radiotherapy in dose multifractionating, 15:3637 (RA;SU;In Russian)
Individualization of preoperative radiotherapy in esophagus cancer, 15:3644 (RA;SU;In Russian)
Homeostasis
Thymaline as a factor of homeostasis correction in the process of radiotherapy, 15:3652 (RA;SU;In Russian)
Images
Potentialities of Simulix-Simtomix complex use for preradiation preparation of patients with lung cancer, 15:3647 (RA;SU;In Russian)
Iodine 131
Radionuclidetherapy of metastases of thyroid cancer to lungs, 15:3641 (RA;SU;In Russian)
Irradiation Procedures
Comparative evaluation of efficiency of two methods of preoperative radiotherapy of patients with lung carcinoma, 15:3656 (RA;SU;In Russian)
Isodose Curves
Program of accelerated plotting the isodose distribution in computer planning of gamma therapy of malignant tumors, 15:3671 (RA;SU;In Russian)
Meetings
Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports, 15:3625 (R;SU;In Russian)
Metastases
Radiation injuries following repeated irradiation by mean dose fractionating of multiple bone metastases of breast cancer, 15:3740 (RA;SU;In Russian)
Neoplasms
Mathematical model for evaluation of delayed injuries of rectum in radiotherapy, 15:3738 (RA;SU;In Russian)
Peculiarities of surgical treatment of patients with radiation injuries, 15:3661 (RA;SU;In Russian)
Program of accelerated plotting the isodose distribution in computer planning of gamma therapy of malignant tumors, 15:3671 (RA;SU;In Russian)
Optimization
Assessment of time of programmed irradiation in the case of malignant tumors, 15:3672 (RA;SU;In Russian)
Positron Computed Tomography
Antigen-specific composition and in-vivo methods for detecting and localizing an antigenic site and for radiotherapy, 15:3682 (P;US)
Programming
Clinical experience of application of automated radiotherapy with the use of optimized computer programs, 15:3670 (RA;SU;In Russian)
Radiation Injuries
Local complications of radiotherapy in macrofractionated irradiation of patients with larynx cancer, 15:3664 (RA;SU;In Russian)
Local radiation injuries, 15:3736 (RA;SU;In Russian)
Local radiation injuries after radiotherapy on radical program in patients with locally disseminated lung carcinoma subjected to exploratory thorocotomy, 15:3743 (RA;SU;In Russian)
Methods of prophylaxis of local radiation injuries based on use of radiobiological models, 15:3660 (RA;SU;In Russian)
Side Effects
Chemoluminescence and antioxidative blood activity in patients with rectum cancer in radiotherapy, 15:3739 (RA;SU;In Russian)
Conservative and surgical treatment of rectovaginal fistulas induced by irradiation, 15:3737 (RA;SU;In Russian)
Influence of local UHF-hyperthermia on frequency of postradiation larynx chondroperichondrites, 15:3659 (RA;SU;In Russian)
Injuries of healthy tissues in nontraditional regimen of dose fractionating in patients with cervix uteri carcinoma, 15:3662 (RA;SU;In Russian)
Local complications of radiotherapy in macrofractionated irradiation of patients with larynx cancer, 15:3664 (RA;SU;In Russian)
Local radiation injuries, 15:3736 (RA;SU;In Russian)
Mathematical model for evaluation of delayed injuries of rectum in radiotherapy, 15:3738 (RA;SU;In Russian)
Methods of prophylaxis of local radiation injuries based on use of radiobiological models, 15:3660 (RA;SU;In Russian)
Peculiarities of surgical treatment of patients with radiation injuries, 15:3661 (RA;SU;In Russian)
Radiation response in patients with pulmonary carcinoma during remote gamma therapy by means of dynamic multifractionating, 15:3642 (RA;SU;In Russian)
RADIOTHORIUM
See THORIUM 228
RADIUM
Monitoring and modeling for radon entry into basements: A status report for the small structures project, 15:2691 (R;US)
RADIUM 223
Results of the radiological survey at 133 Maywood Avenue, Maywood, New Jersey (MJ025), 15:3510 (R;US)
RADIUM 226
Development of sequential analytical method for the determination of U-238, U-234, Th-232, Th-230, Th-228, Ra-226 and Ra-228 and its application in mineral waters, 15:3046 (R;BR;In Portuguese)
Results of the independent verification of radiological remedial action at 196 East 3rd South Street, Monticello, Utah (MS00083), 15:3513 (R;US)
Results of the independent verification of radiological remedial action at 384 South 2nd East Street, Monticello, Utah (MS00084), 15:3514 (R;US)
Results of the radiological survey at 72 Sidney Stret, Lodi, New Jersey (LJ067), 15:3509 (R;US)
RADIUM 228
Development of sequential analytical method for the determination of U-238, U-234, Th-232, Th-230, Th-228, Ra-226 and Ra-228 and its application in mineral waters, 15:3046 (R;BR;In Portuguese)
RADIUM D
See LEAD 210
RADON
Application of radon reduction methods (revised), 15:3484 (R;US)
Factors influencing soil as a source of indoor radon: Framework for assessing radon source potential, 15:2688 (R;US)
Indoor radon and radon-decay product measurement protocols, 15:3487 (R;US)
Testing of indoor radon-reduction techniques in central Ohio houses: Phase 1 (Winter 1987-1988). Report for October 1987-August 1988 (Final), 15:3485 (R;US)
RADON 220
Simultaneous determination of Rn-220 and Rn-222 concentrations in atmospheres by cellulose nitrate ionographic detectors, 15:3056 (R;BR;In Portuguese)
RADON 222
Cancer risk for radon exposure in a polluted environment: Progress report, March 1, 1989–February 28, 1990, 15:3413 (R;US)
Control of radon in houses, 15:2692 (R;US)

Investigation of radon entry and effectiveness of mitigation measures in seven houses in New Jersey, 15:2693 (R;US)
Lung cancer risk from inhalation of radon and other pollutants in rats: Comprehensive progress report, March 1, 1987–February 28, 1990, 15:3412 (R;US)
Monitoring and modeling for radon entry into basements: A status report for the small structures project, 15:2691 (R;US)
Navy Radon Assessment and Mitigation Program progress report, September 1988–May 1989, 15:2673 (R;US)
Northwest Residential Radon Standard: Volume 1, Project report, 15:2668 (R;US)
Radon monitoring results from BPA's Residential Weatherization Program: Report No. 10, 15:2665 (R;US)
Radon monitoring results from BPS's Residential Conservation Programs: Report No. 11, 15:2667 (R;US)
Simultaneous determination of Rn-220 and Rn-222 concentrations in atmospheres by cellulose nitrate ionographic detectors, 15:3056 (R;BR;In Portuguese)
The microdosimetry of radon decay products in the respiratory tract, 15:3748 (R;US)

RAILGUN ACCELERATORS
Performance characteristics of a three-stage railgun, 15:3220 (R;US)

RAIN WATER
Measurements of environmental radiations and radioactivities in Toki, 5, 15:3476 (R;JP;In Japanese)
Measurements of environmental radiations and radioactivities in Toki, 6, 15:3477 (R;JP;In Japanese)

RAMJET ENGINES
Research and technology plans for FY 1989 and accomplishments for FY 1988, 15:2977 (R;US)

RARE EARTH COMPLEXES
Addition compounds between trifluoromethanessulfonates and N,N-Dimethylacetamide (DMA), 15:3045 (R;BR;In Portuguese)

RARE EARTH COMPOUNDS
See also DYSPROSIUM COMPOUNDS
HOLMIUM COMPOUNDS
LANTHANUM COMPOUNDS
Solubility and superconductivity in $RE(Ba_{2-x}RE_x)Cu_3O_{7+\delta}$ (RE = Nd, Sm, Eu, Gd, Dy), 15:4250 (R;US)

RARE EARTHS
See also CERIUM
DYSPROSIUM
EUROPIUM
GADOLINIUM
NEODYMIUM
SAMARIUM
TERBIUM
A review of the literature on the toxicity of rare-earth metals as it pertains to the Engineering Demonstration System surrogate testing, 15:3792 (R;US)
Bounding dispersion analysis for rare-earth elements as it pertains to the Engineering Demonstration System surrogate testing, 15:3752 (R;US)
Environmental considerations for the conduct of surrogate tests in the Engineering Demonstration System, 15:3791 (R;US)
Some aspects of analytic control used in separation process of rare earths, 15:3049 (R;BR;In Portuguese)

RATS
Analysis of cell lineage during early mouse embryogenesis, 15:3683 (BA;US)
Enhanced acoustic startle responding in rats with radiation-induced hippocampal granule cell hypoplasia, 15:3692 (R;US)
Radiation quality and rat motor performance, 15:3691 (R;US)

RBE
DNA damage in mammalian cells following heavy-ion irradiation, 15:3745 (R;US)
Methods of increasing of radiation action effectiveness in treatment of oncological diseases. V. 2. Summaries of reports, 15:3625 (R;SU;In Russian)

REACTOR ACCIDENTS
See also FUEL ELEMENT FAILURE
LOSS OF COOLANT
MELTDOWN
REACTOR CORE DISRUPTION
Comparisons of two-phase microgravity calculations using current and new flow regime maps in RELAP5, 15:3209 (J;US)
Measures for reduction of severe accident consequences: Comprehensive evaluation of the results sponsored by the BMI, 15:2495 (R;DE;In German)
Nuclear reactor accidents: Chernobyl, TMI (Three Mile Island), and Windscale. January 1974-September 1989 (Citations from Pollution Abstracts). Report for January 1974-September 1989, 15:2554 (R;US)
Studies of potential severe accidents in Finnish nuclear power plants. Quarterly report 3. quarter 1987, 15:2450 (R;FI)
Trend and pattern analysis of operational data through cooperation between OECD countries, 15:2498 (R;FR)
Uncertainty analyses for the atmospheric dispersion submodule of UFOMOD with emphasis on parameter correlations, 15:3481 (R;DE)
[Environmental transport and health effects of radioactive materials]: Foreign trip report, September 16, 1989–October 7, 1989, 15:3747 (R;US)

REACTOR COMPONENTS
See also BREEDING BLANKETS
FUEL ELEMENTS
REACTOR COOLING SYSTEMS
REACTOR CORES
Critical time step estimation for three-dimensional explicit impact analysis, 15:2508 (R;US)
Embrittlement of cast stainless steels in LWR systems, 15:2513 (R;US)

REACTOR CONTROL SYSTEMS
Human factors survey of advanced instrumentation and controls, 15:2437 (R;US)
Where to from here? Future applications of mental models of complex performance, 15:2480 (R;US)

REACTOR CONTROL THEORY
See REACTOR KINETICS

REACTOR COOLING SYSTEMS
Aging assessment of auxiliary feedwater systems, 15:2511 (R;US)
Calculated performance of a "hot-patch" for steady state post dryout experiments, 15:3186 (R;GB)

REACTOR CORE DISRUPTION
Maanshan T_pS_LB accident analysis, 15:2559 (J;US)

REACTOR CORES
Determination of the protection set-points lines for the Angra-1 reactor core, 15:2441 (R;BR;In Portuguese)

REACTOR DECOMMISSIONING
Nuclear power plant decommissioning. January 1972-September 1989 (Citations from the NTIS data base). Report for January 1972-September 1989, 15:2469 (R;US)
Recent decommissioning experiments - a literature survey. Quarterly report 3. quarter 1987, 15:2436 (R;FI;In Finnish)

REACTOR DISMANTLING
Development of a technique for dismantling geometric complicated and thick components of closed down nuclear power plants with the principle of arc-waterjet cutting. Final report, 15:2532 (R;DE;In German)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR FUELS
See NUCLEAR FUELS

REACTOR KINETICS
BWR plant dynamic analysis code BWRDYN user's manual, 15:2439 (R;JP;In Japanese)

REACTOR MAINTENANCE
Development of methods for the evaluation and reduction of risk factors for the maintenance of nuclear power plants, 15:2435 (R;DE;In German)

REACTOR MATERIALS
See also NUCLEAR FUELS
A computer-controlled automated test system for fatigue and fracture testing, 15:3215 (R;US)

Tensile and impact testing of an HFBR [High Flux Beam Reactor] control rod follower, 15:2457 (R;US)
[Graphite and carbon/carbon composition]: Foreign trip report, September 17, 1988–September 28, 1988, 15:2979 (R;US)

REACTOR MONITORING SYSTEMS
Incorporating fuzzy data and logical relations in the design of expert systems for nuclear reactors, 15:2483 (BA;US)
Prolgraf-B: A knowledge-based system for the automated construction of nuclear plant diagnostic models, 15:2484 (BA;US)

REACTOR OPERATION
Success/simplicity/safety/savings: SI/trip reduction at Indian point 2, 15:2558 (J;US)
Trend and pattern analysis of operational data through cooperation between OECD countries, 15:2498 (R;FR)

REACTOR OPERATORS
Model for measuring complex performance in an aviation environment, 15:3127 (R;US)
Preparing a self-evaluation report for training program accreditation, 15:2460 (R;US)

REACTOR SAFETY
International cooperation for operating safety, 15:2497 (R;FR;In French)
Maanshan T_pS_LB accident analysis, 15:2559 (J;US)
Matrix isolation-infrared and mass spectrometric studies of high-temperature molecules, 15:3039 (R;GB)
Radiation-related impacts for nuclear plant physical modifications: Final report, 15:2543 (R;US)
[Environmental transport and health effects of radioactive materials]: Foreign trip report, September 16, 1989–October 7, 1989, 15:3747 (R;US)

REACTOR SIMULATORS
Horizontal cold source friction losses of D_2 model with separate tubes comparison of calculated values to experimental results in D_2, 15:2473 (TG;US)
Horizontal cold source: Fluid dynamics tests on the moderator model in water and air current, 15:2472 (TG;US)

REACTOR VESSELS
Power reactor embrittlement data base, 15:2510 (R;US)

READOUT SYSTEMS
Development of an electron spectrometer for the HELIOS heavy ion experiment at CERN, 15:3346 (RA;DE;In German)

RECEIVERS (SOLAR)
See SOLAR RECEIVERS

RECHARGE
Use of ground-penetrating radar to define recharge areas in the Central Sand Plain. Technical completion report, 15:3560 (R;US)

RECIPROCAL TRANSLOCATIONS
See CHROMOSOMAL ABERRATIONS

RECOMBINANT DNA
Sequence and nitrate regulation of the Arabidopsis thaliana mRNA encoding nitrate reductase, a metalloflavoprotein with three functional domains, 15:3607 (J;US)

RECORDS RETRIEVAL
See INFORMATION RETRIEVAL

RECREATIONAL AREAS
Experiences with the application of a solar boiler on a camping-site in Sint Maartenszee, Netherlands, 15:2333 (R;NL;In (In Dutch))
Installation-Restoration Program Preliminary Assessment, Naknek Recreational Camps, Alaska, 15:2718 (R;US)

RECYCLING (FUEL)
See REPROCESSING

REDUCTASES
See OXIDOREDUCTASES

REFRIGERANTS
Mobile air-conditioner refrigerant evaluation. Report for April 1988-March 1989, 15:3441 (R;US)

REFRIGERATION
Review of SC/RF refrigeration systems, 15:3129 (R;US)

REFUSE

Nuclear collective rotation in the SU_3 model, 3. Quantal rotation for an axially symmetric configuration, 15:4154 (R;JP)
RUBIDIUM ALLOYS
Structural properties of liquid alkali-metal–lead alloys: NaPb, KPb, RbPb, and CsPb, 15:2887 (J;US)
RUMEN
See STOMACH
RUNOFF
Inland wetlands legislation and management. January 1970-September 1989 (Citations from the NTIS data base). Report for January 1970-September 1989, 15:3592 (R;US)
RUTHENIUM
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: Final report for Task 2, 15:2262 (R;US)
RUTHENIUM COMPLEXES
Electrochemistry of pentaamminruthenium (II) complexes with cyanopyridinium ions, 15:3053 (R;BR;In Portuguese)

S

S CODES
Finite difference analysis of the three dimensional flow field of a vertical axis wind turbine, 15:2391 (BA;US)
S-993 RESONANCES
See F0-975 MESONS
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SAFETY INJECTION
Success/simplicity/safety/savings: SI/trip reduction at Indian point 2, 15:2558 (J;US)
SALINE ZONE
See OIL SHALES
SALMON
Use of a fish transportation barge for increasing returns of steelhead imprinted for homing: Final report, 15:2280 (R;US)
SALT DEPOSITS
Hydrogeological, geohydraulic and geothermal studies in projected final storage sites for radioactive waste. Pt. 3. Geothermal studies. Final Report, 15:2200 (R;DE;In German)
SAMARIUM
Study for the determination of samarium, europium,terbium, dysprosium and yttrium in gadolinium oxide matrix by means of atomic absorption spectrophotometry using a graphite furnace, 15:3058 (R;BR;In Portuguese)
SANDIA LABORATORIES
Energy technologies at Sandia National Laboratories: Past, Present, Future, 15:2612 (R;US)
SANDSTONES
Rock matrix and fracture analysis of flow in western tight gas sands: 1988 annual report (Phase 4). Report for 30 December 1987-31 March 1989, 15:2146 (R;US)
The influence of texture on steady foam flow in Berea sandstone, 15:2109 (R;US)
SANITARY LANDFILLS
Methodology for developing best demonstrated available technology (BDAT) treatment standards, 15:2765 (R;US)
Performance testing of Method 1312. QA (quality assurance) support for RCRA (Resource Conservation and Recovery Act) testing: Project report, 15:3583 (R;US)
Superfund Record of Decision (EPA Region 5): Forest Waste Disposal, MI. (Second remedial action), March 1988, 15:3584 (R;US)
SAPPHIRE
Laser-induced interface reactions of copper thin films on sapphire substrates, 15:2878 (J;US)
The charge state of iron ions implanted into sapphire, 15:2936 (BA;US)
SARGASSO SEA
Boundary processes in the nutrient-bearing stratum of the North Atlantic: Progress report, March 1, 1989–February 28, 1990, 15:3818 (R;US)
SATELLITES
CRRES (Combined Release and Radiation Effects Satellite) SAPCERAD Plasma Wave Experiment. Final report, 20 April 1982-30 June 1988, 15:3883 (R;US)
Space radiation environment at 840 km, 15:3881 (R;US)
SCALAR FIELDS
Double-periodic wormholes in theories with global symmetries, 15:4020 (R;JP)
SCATTERING
Direct determination of scattering time delays using the *R*-matrix propagation method, 15:3931 (J;US)

Two-centre electron scattering phase shifts calculated to higher orders using the generalized JWKB method, 15:4131 (R;XA)

SCHOOL BUILDINGS
Developmental state programm for institutional conservation: Executive summary: Final technical report, October 1, 1986–September 30, 1988, 15:2621 (R;US)
Statistical evaluation of airborne asbestos measured before, during, and after abatement, 15:3438 (R;US)

SCHOOL FACILITIES
See EDUCATIONAL FACILITIES

SCHOOL PLANT
See EDUCATIONAL FACILITIES

SCHOOLS
See EDUCATIONAL FACILITIES

SCHOTTKY BARRIER DIODES
Niobium and niobium nitride contacts on semiconducting material, 15:3233 (P;US)

SCHROEDINGER EQUATION
An energy-minimizing mesh for the Schroedinger equation, 15:4289 (J;US)
Solutions to the time-dependent three-dimensional Schroedinger equation: Atoms in intense electric fields, 15:3930 (J;US)

SCHWINGER-TOMONAGA FORMALISM
Discretized light-cone quantization: The massless and the massive Schwinger model, 15:3996 (RA;DE)

SCLERA
See EYES

SCOTLAND
See UNITED KINGDOM

SEALED SOURCES
Experience in the use of the UA-type teaching kit of sealed radioactive sources, 15:4199 (R;DD;In German)
Radiation protection measurements at a UA-type teaching kit of sealed radioactive sources, 15:4198 (R;DD;In German)

SEALS
Gas velocity measurements in purged port posting systems, 15:3124 (R;GB)

SEASONAL THERMAL ENERGY STORAGE
Pilot project for a larger solar heating system with seasonal heat storage. Further documentation of borehole storage yield and economy, 15:2352 (R;DK;In Danish)
Sunclay clay plant at Kungsbacka. Technical follow-up of the thermal storage, 15:2351 (R;SE;In Swedish)

SEASONAL VARIATIONS
Red spruce decline—Winter injury and air pollutants, 15:3427 (R;US)

SEAWATER
Dynamic aspects of radioactive contamination of marine organisms. Proceeding of the 14th NIRS seminar on environmental research, 15:3570 (R;JP;In Japanese)
Effects of environmental variables on fatigue crack growth rate in steel immersed in seawater, 15:2826 (R;JP)
Final report on the investigation of water purification and waste concentration by the Vacuum Freezing Multiple Phase Transformation Process and its eutectic extension, September 1986-September 1987, 15:3572 (R;US)
Integration and optimization of the gas removal system for hybrid-cycle otec power plants, 15:2330 (BA;US)
The biocorrosion of copper by biopolymers as examined in situ, in real time FT-IR/CIR/ATR in conjunction with pre and post XPS/AES, 15:2832 (R;US)

SECONDARY BATTERIES
See ELECTRIC BATTERIES

SECURITY PERSONNEL
Analysis of physical training of security inspectors at Los Alamos National Laboratory: A preliminary report, 15:4487 (R;US)

SEDIMENT-WATER INTERFACES
Sediment-water interactions and contaminants in Corps of Engineers reservoir projects. Final report, 15:3543 (R;US)

SEDIMENTARY ROCKS
See also SANDSTONES
Hydrogeological, geohydraulic and geothermal studies in projected final storage sites for radioactive waste. Pt. 3. Geothermal studies. Final Report, 15:2200 (R;DE;In German)

SEDIMENTS
Comparison of bioassays for assessing sediment toxicity in Puget Sound. (Appendices included). Report for 1988-1989 (Final), 15:3561 (R;US)
Optically stimulated luminescence, 15:3061 (RA;DE;In German)
Thermoluminescence dating of sediments, 15:3060 (RA;DE;In German)

SEEDS
Plant senescence: Its biochemistry and physiology, 15:3601 (B;US)

SEISMIC EVENTS
See also EARTHQUAKES
Evaluation of hypotheses for the cause of the 1886 Charleston earthquake: Final report, 15:3813 (R;US)
Seismic design criteria at the Idaho National Engineering Laboratory (INEL), 15:3808 (R;US)

SEISMIC WAVES
Seismic signal modeling of the RSTN and the NORESS/ARCESS data, 15:3815 (R;US)
VSP [Vertical Seismic Profiling] and cross hole tomographic imaging for fracture characterization, 15:3812 (R;US)

SEISMOLOGY
Thermal stress and seismogenesis, 15:3809 (R;XA)

SELENIUM
Soil water and vegetation management for cleanup of selenium contaminated soils: Progress report, 15:3498 (R;US)

SELENIUM 82
Calculation of 2ν double beta decay of ^{76}Ge, ^{82}Se, $^{128,130}Te$, 15:4137 (RA;DE)
Double beta decay matrix elements in the Germanium region, 15:4133 (R;XA)

SELENIUM IONS
Direct and resonance contributions to electron-impact excitation of n=2 to n=3 transitions in neonlike ions, 15:3907 (J;US)

SELLAFIELD REPROCESSING PLANT
Investigations of iodine-129 in the natural environment: results and implications, 15:2241 (R;GB)

SEMICONDUCTOR DEVICES
See also CHARGE-COUPLED DEVICES
SEMICONDUCTOR DIODES
SEMICONDUCTOR LASERS
SEMICONDUCTOR SWITCHES
Bias and oxide thickness dependence of trapped-charge buildup in MOS (metal oxide semiconductors) devices. Technical report, 15:3222 (R;US)
Center for Electronics and Electrical Engineering Technical Publication Announcements. Covering center programs, January-March 1989, with 1989 CEEE events calendar, 15:3133 (R;US)

SEMICONDUCTOR DIODES
See also PHOTODIODES
SCHOTTKY BARRIER DIODES
Studies of high power density, pico-second rise-time light-activated semiconductor switch. Final report, 1 September 1987-31 December 1988, 15:3223 (R;US)

SEMICONDUCTOR LASERS
Electroabsorption in single quantum-well GaAs laser structures, 15:3150 (R;US)
Low-frequency self-pulsations in asymmetric external-cavity semiconductor lasers due to multiple-feedback effects, 15:3180 (J;US)
Semiconductor quantum-well lasers and related optoelectronic devices on silicon, III-V. Technical report, 15:3145 (R;US)

SEMICONDUCTOR MATERIALS
See also P-TYPE CONDUCTORS
Optical generation of coherent surface acoustic waves: A new probe of surface dynamics and structure, 15:4238 (J;US)
Spatially resolved localized vibrational mode spectroscopy of carbon in liquid encapsulated Czochralski grown gallium arsenide wafers, 15:4233 (R;US)

SEMICONDUCTOR SWITCHES
Studies of high power density, pico-second rise-time light-activated semiconductor switch. Final report, 1 September 1987-31 December 1988, 15:3223 (R;US)

SENIOR CENTERS
See PUBLIC BUILDINGS
SEPARATION EQUIPMENT
Membrane gas separation. January 1970-September 1989 (Citations from the NTIS data base). Report for January 1970-September 1989, 15:3065 (R;US)
Removal of oil from oil-water mixtures using selective oil filtration. Masters thesis, 15:2132 (R;US)
SEPARATION PROCESSES
See also CHEMISORPTION
FRACTIONATION
ISOTOPE SEPARATION
REPROCESSING
Membrane gas separation. January 1970-September 1989 (Citations from the NTIS data base). Report for January 1970-September 1989, 15:3065 (R;US)
Membrane separation processes for liquid hydrocarbons and gases in the petrochemical industry: A technical case study, 15:2118 (R;US)
SEWAGE
See also SEWAGE SLUDGE
Water pollution: More EPA action needed to improve the quality of heavily polluted waters, 15:3547 (R;US)
SEWAGE SLUDGE
Rationalization of aerobic-thermophilic stabilisation by means of raw sludge dehydration, 15:2760 (R;DE;In German)
SHADING
Effect of shading devices on residential energy use in Austin, Texas. Research report, 15:2694 (R;US)
SHALE GAS
Multizone completion opportunities in the Appalachian basin: Final report, 15:2138 (R;US)
SHALLOW LAND BURIAL
See GROUND DISPOSAL
SHELL MODELS
An approximation for shell-model level densities, 15:4142 (RA;DE)
Systematics of neutron single particle energies for $16 \leq A \leq 50$, 15:4135 (RA;DE;In German)
SHIELDING MATERIALS
Shielding design for spent fuel shipping in high-capacity truck casks, 15:2194 (R;US)
SHIPMENT
See TRANSPORT
SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR
SHIPPINGPORT REACTOR
Aging evaluation of electrical circuits using the ECCAD [Electrical Circuit Characterization and Diagnostics] system, 15:2522 (R;US)
Irradiation embrittlement of the shippingport neutron shield tank, 15:2442 (R;US)
SHOCK WAVES
Corrections for non-ideal effects in reflected shock waves at low Mach numbers, 15:3072 (R;US)
SHORT-LENS SPECTROMETERS
See MAGNETIC LENS SPECTROMETERS
SHOWER COUNTERS
Proceedings of the tau-charm factory workshop: Study of tau, charm and J/psi physics; development of high luminosity esup +esup minus rings; design of esup +esup minus detectors for tau-charm physics, 15:3962 (R;US)
SSC [Superconducting Super Collider] supplementary conceptual design report: Cryogenics for detectors, 15:3288 (R;US)
Silicon calorimetry for the SSC[Superconducting Supercollider], 15:3331 (R;US)
SI SEMICONDUCTOR DETECTORS
Si ring counters for detection of evaporation residues, 15:3340 (RA;DE;In German)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGMA-1385 BARYONS
Radiative kaon capture at rest in hydrogen, 15:3971 (J;US)
SIGMA-1385 RESONANCES

SIGMA-MINUS ATOMS
See HADRONIC ATOMS
SILANES
Band bending and oxygen-induced defects in *a*-Si:H, 15:3007 (J;US)
SILICA
Sentinel Event Notification System for Occupational Risks (SENSOR): Recommendations for control of silica exposure at Woodbridge Sanitary Pottery Corporation, Woodbridge, New Jersey, 15:3456 (R;US)
SILICATES
See also CALCIUM SILICATES
Intra-stark relaxation of Nd^{3+} in silicate glass: Subpicosecond accumulated photon echo experiments, 15:4237 (R;US)
SILICEOUS ROCK
See SANDSTONES
SILICON
Determination of X-ray anomalous scattering in silicon, 15:4180 (R;BR;In Portuguese)
Elastic softening in nanocrystalline silicon, 15:2821 (R;US)
Electronic bonding of buried interfaces determined by soft x-ray emission spectroscopy, 15:3019 (J;US)
Free-carrier absorption from Fibonacci sequences of δ-doped layers in silicon, 15:3025 (J;US)
Interface temperatures and temperature gradients in silicon during pulsed laser irradiation, 15:2999 (BA;US)
Low temperature diffusivity for aluminum and silver in amorphous silicon, 15:2310 (BA;US)
Precipitation, phase transformation, and enhanced diffusion in ion-implanted silicon, 15:2997 (BA;US)
Recrystallization characteristics of amorphous Si, 15:2996 (BA;US)
Semiconductor quantum-well lasers and related optoelectronic devices on silicon, III-V. Technical report, 15:3145 (R;US)
Semiempirical modified embedded-atom potentials for silicon and germanium, 15:3024 (J;US)
Silicide structural evolution in high-dose cobalt-implanted Si(100) crystals, 15:3028 (J;US)
Silicon chemistry in interstellar clouds, 15:3866 (R;US)
Structure determination of the Si(111):B($\sqrt{3} \times \sqrt{3}$)*R*30° surface: Subsurface substitutional doping, 15:3006 (J;US)
Supercooling of silicon and germanium after laser melting, 15:2998 (BA;US)
Surface and bulk properties which influence ion-beam hydrogenation of silicon, 15:2852 (R;US)
Time resolved x-ray diffraction study of laser annealing in silicon at grazing incidence, 15:3017 (J;US)
Time-resolved reflectivity measurement of the pressure-enhanced crystallization rate of amorphous Si in a diamond anvil cell, 15:2995 (BA;US)
SILICON 27
Proton threshold states in ^{27}Si and the destruction of ^{26}Al at low stellar temperatures, 15:4082 (J;NL)
SILICON 28 REACTIONS
Two-centre shell model description of quasi-molecular resonance states in heavy ion collisions, 15:4130 (R;XA)
SILICON 28 TARGET
Emission of fast protons in (e,e'p) coincidence experiments, 15:4085 (RA;DE;In German)
Proton threshold states in ^{27}Si and the destruction of ^{26}Al at low stellar temperatures, 15:4082 (J;NL)
Two-centre shell model description of quasi-molecular resonance states in heavy ion collisions, 15:4130 (R;XA)
SILICON ALLOYS
Characteristics of hydrogenated amorphous silicon-germanium alloys, 15:2863 (BA;US)
Enhanced oxidation of $TiSi_2$ films by As^+ implantation, 15:2990 (BA;US)
Patterson analysis of aperiodic crystals, 15:2894 (J;US)
Phase properties of the rapid cooled palladium-silicon alloy in the concentration range 40 to 58 at.% Si, 15:2851 (R;JP)

Semiempirical modified embedded-atom potentials for silicon and germanium, 15:3024 (J;US)
Structure and insulator material choices for the TITAN reversed-field-pinch reactor study, 15:4470 (BA;US)

SILICON CARBIDES
1MeV-electron irradiation induced defects in epitaxially grown 3C-SiC, 15:2920 (R;JP)
Effect of gaseous corrosion on the strength of SiC and Si_3N_4, 15:2912 (R;US)
Fracture toughness of SiC/Al metal matrix composite, 15:2973 (R;US)
High-temperature corrosion of heat exchanger materials, 15:2911 (R;US)
Interface velocity transients during melting of a-Si/c-Si thin films, 15:3000 (BA;US)
Plasma synthesis and characterization of ultrafine SiC, 15:2939 (BA;US)
Protective coating for alumina-silicon carbide whisker composites, 15:3037 (P;US)

SILICON HYDRIDES
See SILANES

SILICON NITRIDES
Effect of gaseous corrosion on the strength of SiC and Si_3N_4, 15:2912 (R;US)
High-temperature corrosion of heat exchanger materials, 15:2911 (R;US)
Pulsed laser mixing of metal overlayers on ceramics, 15:2943 (BA;US)
Sialon ceramics. January 1975-September 1989 (Citations from the INSPEC: Information Services for the Physics and Engineering Communities data base). Report for January 1975-September 1989, 15:2933 (R;US)
[Ceramic powder processing]: Foreign trip report, October 7–15, 1988, 15:2930 (R;US)

SILICON OXIDES
See also SILICA
Ion beam modification of film stress and the effectiveness of thin film encapsulants on GaAs, 15:3001 (BA;US)
Measurements of complex permittivity of microwave substrates in the 20 to 300 K temperature range from 26.5 to 40.0 GHz, 15:2928 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
22.8% efficient silicon solar cell, 15:2318 (J;US)
Low temperature diffusivity for aluminum and silver in amorphous silicon, 15:2310 (BA;US)
Lunar production of solar cells, 15:2295 (R;US)
Research on high-efficiency, single-junction, monolithic, thin-film amorphous silicon solar cells: Phase 1, Annual subcontract report, February 1, 1987–January 31, 1988, 15:2304 (R;US)
Safety considerations for high-efficiency crystalline-silicon solar cell fabrication, 15:2316 (BA;US)
Useful life prediction for first generation a-Si photovoltaic modules using outdoor test data, 15:2312 (BA;US)

SILICOSIS
See PNEUMOCONIOSES

SILOXANES
Amperometric biosensors for glucose, lactate, and glycolate based on oxidases and redox-modified siloxane polymers, 15:3600 (R;US)

SILVER
Low temperature diffusivity for aluminum and silver in amorphous silicon, 15:2310 (BA;US)
Optical waveguide formation by ion implantation of Ti or Ag, 15:2940 (BA;US)
Solid lubrication of ceramic sufraces by IAD [ion-assisted deposition]-silver coatings for heat engine applications, 15:2906 (R;US)
The bonding of acetonitrile and CH_2CN on Ag(110) determined by near edge x-ray absorption fine structure: Evidence for π-donor bonding and azimuthal ordering, 15:3090 (J;US)
Theoretical study of noble-metal (100) surface reconstructions using first-principles techniques, 15:2877 (J;US)
Thermodynamic properties of fcc transition metals as calculated with the embedded-atom method, 15:2883 (J;US)

SILVER NITRATES
The reaction of gaseous iodoethane with silver nitrate, 15:2166 (R;US)

SIMS

US polycrystalline thin film solar cells program, 15:2308 (R;US)

SOLAR COLLECTORS
See also SOLAR PONDS
Development of solar collector modules, 15:2347 (R;DK;In Danish)
Heat transfer, 15:2805 (B;US)
LANSIR: An instrument for measuring the light-scattering properties of laminate membrane mirrors, 15:2350 (BA;US)

SOLAR COOLING SYSTEMS
Colorado State University program for developing, testing, evaluating and optimizing solar heating and cooling systems: Project status report for the months of September and October 1989, 15:2332 (R;US)
Effect of non-absorbable gas on the performance of a falling film absorber for open-cycle absorption solar cooling system, 15:2336 (BA;US)
Facilities for testing desiccant materials and geometries of dehumidifiers for solar-regenerated desiccant cooling systems, 15:2340 (BA;US)
Measurement uncertainty of adsorption testing of desiccant materials, 15:2341 (BA;US)

SOLAR CORONA
Coronagraph observations and analyses of the ultraviolet solar corona. Semiannual status report, 1 April 1987-31 March 1989, 15:3868 (R;US)
SOLAR DOMESTIC WATER HEATING
See SOLAR WATER HEATING
SOLAR ENERGY CONVERSION
Photoconversion of inorganics to methane. Final topical report, October 1987-February 1989, 15:2267 (R;US)
SOLAR FLARES
Predicting the arrival times of solar particles, 15:3858 (RA;US)
Statistical study of the correlation of hard X-ray and type 3 radio bursts in solar flares, 15:3850 (R;US)
SOLAR HEATING SYSTEMS
See also PASSIVE SOLAR HEATING SYSTEMS
Colorado State University program for developing, testing, evaluating and optimizing solar heating and cooling systems: Project status report for the months of September and October 1989, 15:2332 (R;US)
Heat transfer and pressure drop measurements in an air/molten salt direct-contact heat exchanger, 15:2337 (BA;US)
SOLAR MODELS
See STAR MODELS
SOLAR NEUTRINOS
Gallium solar neutrino experiment (project 'GALLEX'), 15:3347 (RA;DE;In German)
SOLAR PARTICLES
See also SOLAR NEUTRINOS
SOLAR PROTONS
High-energy particles very near the sun, 15:3860 (RA;US)
Particles accelerated by shocks in the heliosphere, 15:3859 (RA;US)
Predicting the arrival times of solar particles, 15:3858 (RA;US)
Space radiation environment at 840 km, 15:3881 (R;US)
The radial dependence of the solar energetic particle flux, 15:3856 (RA;US)
SOLAR PONDS
Maintenance of brine transparency in salinity gradient solar ponds, 15:2349 (BA;US)
SOLAR PROTON EVENTS
See SOLAR PROTONS
SOLAR PROTONS
A new proton fluence model for E greater than 10 MeV, 15:3854 (RA;US)
Intensity/time profiles of solar particle events at one astronomical unit, 15:3855 (RA;US)
Predicting the arrival times of solar particles, 15:3858 (RA;US)
Solar proton event forecasts, 15:3857 (RA;US)
SOLAR RADIATION
See also SOLAR PARTICLES
Current models of the intensely ionizing particle environment in space, 15:3853 (RA;US)
Estimation of aerosol absorption from measurements of intensity and polarization of the sky radiation at Tsumeb (Namibia). Final report, 15:2291 (R;DE;In German)
Solar diurnal variation in the amplitude of sudden commencements of magnetic storms at the geomagnetic equator, 15:3885 (R;US)
SOLAR RECEIVERS
See also CAVITY RECEIVERS
CENTRAL RECEIVERS
Design considerations for heat-pipe solar receivers, 15:2327 (BA;US)
Internal film receiver design and systems assessment, 15:2323 (BA;US)
SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS
SOLAR THERMAL POWER PLANTS
Thermal evaluation of advanced solar dynamic heat receiver performance. Final report, January-December 1988, 15:2320 (R;US)
SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS
SOLAR WATER HEATERS
Field survey of 259 active solar DHW systems, 15:2339 (BA;US)
SOLAR WATER HEATING
Colorado State University program for developing, testing, evaluating and optimizing solar heating and cooling systems: Project status report for the months of September and October 1989, 15:2332 (R;US)
SOLAR WIND
Numerical simulation of the compressible Orszag-Tang vortex. Interim report, June 1988-February 1989, 15:3935 (R;US)
SOLID FUELS
See also MIXED OXIDE FUELS
Electricity production at fuel cell power plants, 15:3252 (R;FI;In Finnish)
Gasification of solid fuels in energy management of industry, 15:2030 (R;FI;In Finnish)
High-energy-density solid and liquid hydrocarbon fuels. Final report, July 1987-December 1988, 15:2120 (R;US)
Peat - Environment - Society. Part 2: Emissions from combustion of peat, 15:2073 (R;FI;In Finnish)
SOLID STATE LASERS
See also NEODYMIUM LASERS
SEMICONDUCTOR LASERS
Efficient nonlinear conversion of laser-diode-pumped miniature solid-state laser sources. Final report, 1 May 1986-30 April 1989, 15:3144 (R;US)
SOLID WASTES
See also MINERAL WASTES
WOOD WASTES
Installation-Restoration Program Preliminary Assessment Bethel Radio Relay Station, Alaska, 15:2717 (R;US)
Installation-Restoration Program Preliminary Assessment Kalakaket Creek Radio Relay Station, Alaska, 15:2716 (R;US)
Installation-Restoration Program Preliminary Assessment, Bear Creek Radio Relay Station, Alaska, 15:2721 (R;US)
Installation-Restoration Program Preliminary Assessment, Big Mountain Radio Relay Station, Alaska, 15:2723 (R;US)
Installation-Restoration Program Preliminary Assessment, Canyon Creek Radio Relay Station, Alaska, 15:2722 (R;US)
Installation-Restoration Program Preliminary Assessment, Gold King Creek Radio Relay Station, Alaska, 15:2720 (R;US)
Installation-Restoration Program Preliminary Assessment, Granite Mountain Radio Relay Station, Alaska, 15:2719 (R;US)
Installation-Restoration Program Preliminary Assessment, Naknek Recreational Camps, Alaska, 15:2718 (R;US)
Mutagenicity of combustion emissions from a biomedical-waste incinerator, 15:3774 (R;US)
SOLIDS
Development and utilization of new diagnostics for dense-phase pneumatic transport: Quarterly technical progress report, July 1, 1989–September 30, 1989, 15:2084 (R;US)
Effect of density change on rapid liquid-solid interface kinetics and heat flow, 15:3208 (BA;US)
SOLITONS
Cosmic evolution of non-topological solitons, paper 1, 15:3849 (R;US)
Gravitational radiation from primordial solitons and soliton-star binaries, 15:4292 (J;US)
SOLUTES
Analyses of transport in the upper soil layer and interpretation of caisson experiments, 15:2202 (R;US)
Effectiveness factors for hydroprocessing of coal and coal liquids: Progress report No. 8, June 15, 1989–September 15, 1989, 15:2021 (R;US)
Molecular clustering in supercritical solutions, 15:3073 (R;US)
SOLVENTS
See also ORGANIC SOLVENTS
Development of a centralized solvent recovery system at Carswell Air Force Base, 15:3801 (R;US)
Molecular clustering in supercritical solutions, 15:3073 (R;US)
Waste audit study: Automotive paint shops, 15:2744 (R;US)
SOMALIA
Jubba Environmental and Socio-economic Studies (JESS). Final report, 15:2282 (R;US)

Jubba Environmental and Socio-economic Studies (JESS). Volume 1. Executive report. Final report, 15:2283 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 2. Environmental studies. Final report, 15:2284 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 3. Socio-economic studies. Final report, 15:2285 (R;US)
Jubba Environmental and Socio-economic Studies (JESS). Volume 4. Bibliography. Final report, 15:2286 (R;US)

SONDES
See PROBES

SOOT
Enhanced flame stability and soot radiation using electric fields. Final report, July 1986-January 1989, 15:3114 (R;US)
Laser-induced-fluorescence spectroscopy of jet-cooled C_3, 15:3116 (J;US)

SOUTH KOREA
See REPUBLIC OF KOREA

SOVIET UNION
See USSR

SOY OIL
See SOYBEAN OIL

SOYBEAN OIL
Synthesis of epoxidised soya bean oil acrylate, 15:2984 (R;MY)

SOYBEANS
A county-level approach to regional resource analysis based on climate simulation, 15:3396 (J;US)

SPACE FLIGHT
Analysis of surface composition of a Martian moon with the instrument LIMA-D onboard the Mars mission PHOBOS, 15:3349 (RA;DE;In German)
CoMA, an instrument for the detailed in-situ analysis of collected cometary particulates, 15:3348 (RA;DE;In German)
Effects of iron particles on behavior and brain function: Initial studies, 15:3756 (R;US)
The effects of high energy particles on planetary missions, 15:3362 (RA;US)

SPACE HEATING
Space and hot water heating: energy-efficiency in large gas-fired systems, 15:2663 (R;GB)

SPACE HVAC SYSTEMS
Commercial building research workshop. July 30-31, 1986, 15:2145 (R;US)
Simulation of energy consumption by taking thermal comfort into account, 15:2701 (R;NO)

SPACE LATTICES
See CRYSTAL LATTICES

SPACE POWER REACTORS
Megawatt class nuclear space power systems (MCNSPS) conceptual design and evaluation report. Volume 2, technologies 1: Reactors, heat transport, integration issues. Final report, 15:2464 (R;US)
Space applications of fusion energy, 15:2493 (J;US)

SPACE VEHICLES
Antiproton powered propulsion with magnetically confined plasma engines, 15:2780 (R;US)
Design and testing of a superfluid liquid helium cooling loop, 15:3131 (R;US)
Survivable pulse power space radiator, 15:2494 (P;US)
The VISTA spacecraft: Advantages of ICF for interplanetary fusion propulsion applications, 15:4475 (BA;US)

SPACE-TIME
New spacetime superalgebras and their Kac-Moody extension, 15:4266 (R;XA)

SPACECRAFT POWER SUPPLIES
The Gevaltig: An inertial fusion powered manned spacecraft design for outer solar system missions, 15:2710 (R;US)

SPARK IGNITION ENGINES
Caterpillar 3406 spark-ignited natural-gas-engine emissions on EPA (Environmental Protection Agency) heavy-duty transient test cycle. Topical report, March-December 1988, 15:2801 (R;US)
The solitude of a determined inventor, 15:2784 (TG;US)

SPECIES DIVERSITY
Changes in ground vegetation of forest ecosystems in the middle and southern regions of the Black Forest, 15:3763 (R;DE;In German)

SPECIFIC HEAT
Modeling of heat capacities of metals, 15:2867 (J;NL)

SPECTRAL SHIFT
^{17}O nuclear-magnetic-resonance spectroscopic study of high-T_c superconductors, 15:2957 (J;US)

SPECTRALLY SELECTIVE SURFACES
Radiation-physical properties of selective solar absorbers, 15:2346 (R;DE;In German)

SPECTROMETERS
See also ELECTRON SPECTROMETERS
GAMMA SPECTROMETERS
NMR SPECTROMETERS
NEUTRON SPECTROMETERS
OPTICAL SPECTROMETERS
TIME-OF-FLIGHT SPECTROMETERS
Design of a large superconducting spectrometer magnet, 15:3296 (R;JP)
In situ XRF and gamma ray spectrometer for Mars sample return mission, 15:3355 (RA;US)

SPENT FUEL CASKS
Shielding design for spent fuel shipping in high-capacity truck casks, 15:2194 (R;US)

SPENT FUELS
Design and operation of gamma scan and fission gas sampling systems for characterization of irradiated commercial nuclear fuel, 15:2440 (R;US)
Shielding design for spent fuel shipping in high-capacity truck casks, 15:2194 (R;US)

SPIN GLASS STATE
Irreversibility and self-organization in spin glasses. 1. Origin of irreversibility in spin glasses, 15:4213 (R;XA)
Irreversibility and self-organization in spin glasses. 2. Irreversibility and the problem of configuration averaging, 15:4214 (R;XA)

SPIN-OFF
See TECHNOLOGY TRANSFER

SPINE
See VERTEBRAE

SPINOR FIELDS
Cubic interaction in conformal theory of integer higher-spin fields in four dimensional space-time, 15:4039 (R;XA)

SPONTANEOUS FISSION
Search for a fission fragment anisotropy signal after optical spin exchange pumping on ^{242m}Am, 15:4117 (RA;DE;In German)

SPRUCES
Red spruce decline—Winter injury and air pollutants, 15:3427 (R;US)
[Growth and physiology of red spruce in relationship to acidic deposition in the Great Smoky Mountains National Park, USA]: Foreign trip report, September 30, 1989–October 14, 1989, 15:3423 (R;US)

SQUID DEVICES
Frequency dependence of quasi-particle mixers, 15:3118 (R;US)
Inverse a-c Josephson effect at terahertz frequencies, 15:3119 (R;US)

STAINLESS STEEL-18-4-1
See STAINLESS STEELS

STAINLESS STEEL-19-9DL
See STAINLESS STEELS

STAINLESS STEEL-304
Acoustic emission during integranular stress corrosion cracking, 15:2849 (R;US)
Experience with J testing of 304/308 stainless steel weldment, 15:2833 (R;US)
Investigation of fracture toughness and fracture mechanisms using acoustic emission measurements: Progress report, 1 March 1989–28 February 1990, 15:2829 (R;US)

STAINLESS STEEL-308
Experience with J testing of 304/308 stainless steel weldment, 15:2833 (R;US)

STAINLESS STEEL-316
Chlorine related degradation of materials in coal liquefaction, 15:2018 (R;US)
STAINLESS STEELS
Ageing kinetics of CF3 cast stainless steel in the temperature range 300°C to 400°C, 15:2816 (R;GB)
Embrittlement of laboratory- and reactor-aged CF-3, CF-8, and CF-8M duplex stainless steels, 15:2825 (R;US)
Excimer laser mixing of titanium layers on AISI 304 stainless steel, 15:2866 (BA;US)
In situ ultrahigh vacuum friction measurement and wear track analysis of ion implanted 304 stainless steel, 15:2862 (BA;US)
Pretreatment and conditioning of storage ring vacuum systems, 15:3315 (R;US)
Sensitivity to hydrogen embrittlement in connection with cathodic protection of stainless duplex steels, 15:2854 (R;SE;In Swedish)
STANDARD MODEL
B physics at the Z^0 pole, 15:3966 (R;US)
Corrections to Higgs-boson-mass sum rules from the sfermion sector of a supersymmetric model, 15:4030 (J;US)
Screening of large supersymmetry breaking in low-energy physics, 15:4029 (J;US)
STANDARDIZATION
International aspects of restrictions of ozone-depleting substances, 15:3462 (R;US)
STANDING CROP
See BIOMASS
STANFORD LINEAR COLLIDER
Optimizing the average longitudinal phase of the beam in the SLC linac, 15:3276 (R;US)
STAR BURNING
Proton threshold states in ^{27}Si and the destruction of ^{26}Al at low stellar temperatures, 15:4082 (J;NL)
STAR MODELS
Nonlinear RR Lyrae models with time dependent convection, 15:3872 (BA;US)
STARK EFFECT
Electroabsorption in single quantum-well GaAs laser structures, 15:3150 (R;US)
STARS
See also BINARY STARS
VARIABLE STARS
An asteroseismology explorer, 15:3874 (BA;US)
Linear nonadiabatic pulsations of homogeneous ZAMS stars, 15:3871 (BA;US)

Participation in the MAP3S precipitation chemistry network: Progress report, August 1, 1988–July 31, 1989, 15:3410 (R;US)
Physical characteristics of study plots. Across-a-Lake States acidic-deposition gradient. Forest Service resource bulletin, 15:3455 (R;US)
The $SO^{-}{}_{4}$-induced oxidation of 1,3,6-trimethyluracil and 1,3-dimethylthymine by potassium peroxodisulphate and oxygen in aqueous solution: An interesting contrast, 15:3719 (RA;DE)

SULFIDES
See also CERIUM SULFIDES
GADOLINIUM SULFIDES
HYDROGEN SULFIDES
LANTHANUM SULFIDES
MOLYBDENUM SULFIDES
NEODYMIUM SULFIDES
TANTALUM SULFIDES
Spectroscopic analysis of orthonitrodiphenyl sulfide $C_{12}H_9NO_2S$, 15:4223 (R;BR;In Portuguese)

SULFONATES
Ambient and high-temperature calorimetry of commercial surfactants: Project BE4A, Milestone 8, FY89 annual research plan, 15:2113 (R;US)

SULFUR
Baseline testing of the Stretford Process on the GRI 120-liter bench-scale liquid redox sulfur recovery unit. Topical report, 15:2143 (R;US)
Chromium modified nickel-iron aluminide useful in sulfur bearing environments, 15:2896 (P;US)
Monitoring of air pollution in the southern counties, 15:3478 (R;SE;In Swedish)
Re-examination of interim estimates of annual sulfur dry deposition across the eastern United States. Final report, 1988-1989, 15:3460 (R;US)
Search for the quark-gluon plasma (1989): The NA35 experiment at the CERN SPS, 15:4066 (R;US)

SULFUR 32 REACTIONS
γ-multiplicity distributions for fusion reactions at and below the barrier, 15:4095 (RA;DE;In German)
Shapes of ^{59}Cu nuclei at moderate excitation energies and spin, 15:4091 (J;US)

SULFUR 34 REACTIONS
Angular momentum dependence of the dipole giant resonance in hot nuclei, 15:4102 (RA;DE;In German)

SULFUR 35
Neutrino mass: Recent results, 15:3959 (R;US)

SULFUR 36 REACTIONS
γ-multiplicity distributions for fusion reactions at and below the barrier, 15:4095 (RA;DE;In German)

SULFUR COMPOUNDS
See also SULFATES
SULFIDES
SULFUR NITRIDES
SULFUR OXIDES
Baseline testing of the Stretford Process on the GRI 120-liter bench-scale liquid redox sulfur recovery unit. Topical report, 15:2143 (R;US)
Climate change and its effect on wet-removal processes, 15:3395 (B;US)
Production of coke with specific metallurgical properties. Analysis of conditions in the blast furnace, 15:2029 (R;DE;In German)

SULFUR DIOXIDE
1988 interorganizational workshop on future utility SO_2 emissions, 15:2078 (R;US)
Analysis of the national and regional potential for gas use in electric-utility emissions control. Topical report, December 1988, 15:2418 (R;US)
Bench-scale evaluation of calcium sorbents for acid-gas emission control. Report for October 1988-March 1989, 15:3444 (R;US)
Calcination of calcium hydroxide sorbent in the presence of SO_2 and its effect on reactivity. Report for October 1988-March 1989, 15:3443 (R;US)
Combined NO_x/SO_2 control technology, 15:2421 (R;US)
Investigations on combined deposition of particulate and gaseous pollutants in a packed bed filter at high temperatures, 15:2730 (R;DE;In German)
Maintain and operate California Air Resources Board field fumigation facility for experimental use. Final report, 17 December 1987-30 June 1989, 15:3435 (R;US)
Re-examination of interim estimates of annual sulfur dry deposition across the eastern United States. Final report, 1988-1989, 15:3460 (R;US)
Respiratory effects of inhaled gases and aerosols. Report for 1 November 1973-31 March 1977, 15:3787 (R;US)
Sulfur dioxide removal from flue gases by supported copper and iron absorbents: Final technical report, May 16, 1986-December 31, 1988, 15:2068 (R;US)
Theoretical approach for enhanced mass transfer effects in-duct flue gas desulfurization processes: Quarterly report No. 5, July 1–September 30, 1989, 15:2424 (R;US)

SULFUR HYDRIDES
See HYDROGEN SULFIDES

SULFUR NITRIDES
Electrons and phonons in polymeric sulfur nitride, 15:3034 (J;US)

SULFUR OXIDES
See also SULFUR DIOXIDE
Effect of reductive decomposition of $CaSO_4$ on sulphur capture in fluidised bed boilers, 15:3250 (R;SE)
Enhancing the use of coals by gas reburning-sorbent injection: Quarterly report No. 7, December 1, 1988–February 28, 1989, 15:2422 (R;US)

SULFUR SULFIDES
See SULFUR

SUPERALLOYS
See HEAT RESISTING ALLOYS

SUPERCOMPUTERS
The interesting future of supercomputing, 15:4509 (R;US)

SUPERCONDUCTING CAVITY RESONATORS
Mechanical design of SXLS [Superconducting X-ray Lithography Source] radio-frequency cavity, 15:3284 (R;US)

SUPERCONDUCTING COILS
Conceptual design report for a superconducting coil suitable for use in the large solenoid detector at the SSC [Superconducting Super Collider], 15:3333 (R;US)
Design and fabrication of the CPQ [Conductor Performance Qualification] coil, 15:4446 (R;US)

SUPERCONDUCTING FILMS
Microwave characterization of high-temperature superconductors, 15:2921 (R;US)
The initial scientific program at the NSLS infrared beamline, 15:4204 (R;US)
[Fabrication of superconducting films]: Foreign trip report, September 23, 1989–October 11, 1989, 15:2931 (R;US)

SUPERCONDUCTING JUNCTIONS
See also JOSEPHSON JUNCTIONS
Break junction measurement of the tunneling gap of a thallium-based high-temperature superconductor crystal, 15:2950 (J;US)

SUPERCONDUCTING MAGNETS
Design of a large superconducting spectrometer magnet, 15:3296 (R;JP)
Effect of twins on critical currents of high T_c superconductors. Interim report No 4, 15:3120 (R;GB)
Random errors in the magnetic field coefficients of superconducting quadrupole magnets, 15:3327 (BA;US)
Retractable gas cooled leads for ASTROMAG, 15:3130 (R;US)

SUPERCONDUCTING QUANTUM INTERFERENCE DEVICES
See SQUID DEVICES

SUPERCONDUCTING SUPER COLLIDER
Federal research: Determination of the best qualified sites for DOE's super collider, 15:3326 (B;US)
Federal research: Determination of the best qualified sites for DOE's super collider, 15:3320 (R;US)
Random errors in the magnetic field coefficients of superconducting quadrupole magnets, 15:3327 (BA;US)

SUPERCONDUCTING WIRES
Practical superconductor development for electrical power applications: Annual report for FY 1988, 15:2432 (R;US)

SUPERCONDUCTIVITY
Review of SC/RF refrigeration systems, 15:3129 (R;US)

SUPERCONDUCTORS
A global assessment of the business impacts of high transition temperature superconducting ceramic materials on permanent magnet producers, users, and raw materials suppliers 1987–2002, 15:2917 (R;US)
Acoustic studies of new materials: Quasi crystals, low-loss glasses, and high tc superconductors. Annual summary report, 1 October 1988-30 September 1989, 15:2901 (R;US)
Application of neutron diffraction NDE to high-temperature superconducting composites, 15:3213 (R;US)
Center for Electronics and Electrical Engineering Technical Publication Announcements. Covering center programs, January-March 1989, with 1989 CEEE events calendar, 15:3133 (R;US)
Dissipation measurement in high T_c superconductors with electromagnetic probes, 15:2916 (R;US)
Effect of twins on critical currents of high T_c superconductors. Interim report No 4, 15:3120 (R;GB)
Exchange-driven pairing of delocalized carriers in high-temperature superconductors, 15:4260 (J;US)
Gap energy and long-range order in the boson-fermion model of superconductivity, 15:4259 (J;US)
High-temperature ceramic superconductors. Annual technical report, 24 May 1988-30 June 1989, 15:2899 (R;US)
Measurements of complex permittivity of microwave substrates in the 20 to 300 K temperature range from 26.5 to 40.0 GHz, 15:2928 (R;US)
Niobium and niobium nitride contacts on semiconducting material, 15:3233 (P;US)
Physics and materials science of high-temperature superconductors. Final report, 15:3121 (R;US)
Process for single-crystal growth of high T(c) superconductors, 15:2965 (P;US)
Resistivity measurements of superconducting materials. Master's thesis, 15:2932 (R;PK)
The effect of composition and processing on high T_c superconductors containing bismuth, 15:2909 (R;US)

SUPERCRITICAL FLOW
See TURBULENT FLOW

SUPERFUND
Remedial Action
Bench-scale fixation of soils from the Tacoma Tar Pits Superfund Site. Final report, 15:3521 (R;US)
ROD (Record of Decision) annual report, FY 1988, 15:3590 (R;US)
Response to comments: Background document for the second third-land disposal restrictions proposed rule: Policy-related comments, 15:3518 (R;US)
Superfund Record of Decision (EPA Region 1): Cannon Engineering, MA. (First Remedial Action), March 1988. Final report, 15:3527 (R;US)
Superfund Record of Decision (EPA Region 10): Commencement Bay/Near Shore, WA. (First Remedial Action), December 1988, 15:3526 (R;US)
Superfund Record of Decision (EPA Region 2): Ciba-Geigy, NJ. (First Remedial Action), April 1989, 15:3530 (R;US)
Superfund Record of Decision (EPA Region 2): Clothier Disposal Site, Oswego County, New York, December 28, 1988. First remedial action, 15:3591 (R;US)
Superfund Record of Decision (EPA Region 2): Lipari Landfill, Mantua Township, Gloucester County, New Jersey, July 11, 1988. Third remedial action. Final report, 15:3579 (R;US)
Superfund Record of Decision (EPA Region 3): Croyden TCE Spill, PA. (First Remedial Action), December 1988, 15:3586 (R;US)
Superfund Record of Decision (EPA Region 3): M. W. /Manufacturing, PA. (First Remedial Action), March 1989, 15:3534 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump Site, PA. (Second Remedial Action), September 1988, 15:3525 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump, PA. (First remedial action), March 1988. Final report, 15:3589 (R;US)
Superfund Record of Decision (EPA Region 3): Wildcat Landfill, DE. (Second Remedial Action), November 1988. Final report, 15:3535 (R;US)
Superfund Record of Decision (EPA Region 4): American Creosote Works, TN. (First Remedial Action), December 1988, 15:3533 (R;US)
Superfund Record of Decision (EPA Region 5): Belvidere Landfill, IL. (First Remedial Action), June 1988, 15:3522 (R;US)
Superfund Record of Decision (EPA Region 5): Forest Waste Disposal, MI. (Second remedial action), March 1988, 15:3584 (R;US)
Superfund Record of Decision (EPA Region 5): Poer Farm, IN. (First Remedial Action), September 1988. Final report, 15:3523 (R;US)
Superfund Record of Decision (EPA Region 5): Summit National Site, Deerfield, OH. June 1988. First Remedial Action. Final report, 15:3528 (R;US)
Superfund Record of Decision (EPA Region 5): Wausau Water Supply, WI. (First Remedial Action), December 1988, 15:3587 (R;US)
Superfund Record of Decision (EPA Region 6): Pesses Chemical, TX. (First Remedial Action), December 1988. Final report, 15:3532 (R;US)
Superfund Record of Decision (EPA Region 6): South Valley/Edmunds Street, NM. (Second Remedial Action), June 1988, 15:3524 (R;US)
Superfund Record of Decision (EPA Region 7): Findett, MO. (First Remedial Action), December 1988, 15:3500 (R;US)
Superfund Record of Decision (EPA Region 7): Todtz, Lawrence Farm, IA. (First Remedial Action), November 1988. Final report, 15:3531 (R;US)
Superfund Record of Decision (EPA Region 8): Libby Ground Water Contamination, MT. (Second Remedial Action), December 1988, 15:3529 (R;US)

Risk Assessment
Supplemental risk-assessment guidance for the Superfund program. Part 1. Guidance for Public-Health Risk Assessments. Part 2. Guidance for ecological Risk Assessments. Draft report (Final), 15:3582 (R;US)

SUPERGRAVITY
N=2 supergravity in superspace and the BRS symmetry, 15:4276 (R;XA)

SUPERLATTICES
Magnetoplasma oscillations of the wave-guided type in semiconductor superlattices, 15:4216 (R;XA)
Scaling relations for strained-layer relaxation, 15:3009 (J;US)

SUPERNOVA REMNANTS
Cosmic ray spectrum produced by supernova remnants with an upper limit on wave dissipation, 15:3824 (RA;DE;In German)
Early phase of supernova remnant evolution, 15:3822 (RA;DE;In German)

Supernovae, compact stars and nuclear physics, 15:3828 (R;US)

SUPERNOVAE
Acceleration of cosmic rays in SNR shock waves, 15:3823 (RA;DE;In German)

SUPEROXIDE RADICALS
Production of oxidative DNA damage during the metabolic activation of benzo[α]pyrene in human mammary epithelial cells correlates with cell killing, 15:3794 (J;US)

SUPERSYMMETRY
Extended local gauge invariance and the BRS symmetry in stochastic quantization of gauge fields, 15:4043 (R;JP)
Low-energy lepton violation from supersymmetric flipped SU(5), 15:4031 (J;US)
N=2 superconformal symmetry and SO(2,1) current algebra, 15:4025 (J;NL)
Screening of large supersymmetry breaking in low-energy physics, 15:4029 (J;US)

SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY

SURFACE CLEANING
Ultrasonic and immersion cleaning: a comparison using aqueous and fluorocarbon solvents, 15:2176 (R;GB)

SURFACE MINING
Proceedings of the conference: reclamation, a global perspective, 15:2079 (R;CA)
Special problems in the exploration and operation of loose-rock open-pit mines in developing and threshold countries, 15:2082 (RA;DE;In German)

SURFACE WATERS
See also COASTAL WATERS
LAKES
STREAMS
WATER RESERVOIRS
Environmental Radiation Data: Report 56, October-December 1988. Quarterly report, 15:3486 (R;US)
Formulation of water-quality models for streams, lakes, and reservoirs: Modeler's perspective. Final report, 15:3544 (R;US)
Geographic information system documentation of watershed data for Direct/Delayed Response Project. Southern Blue Ridge Province data base, 15:3553 (R;US)
Geographic information system documentation of watershed data for Direct/Delayed Response Project. Northeast data base, 15:3555 (R;US)
Quantification of Hungry Horse Reservoir water level needed to maintain or enhance reservoir fisheries: Methods and data summary, 1983–1987, 15:2278 (R;US)
Water resources data for Wisconsin, Water Year 1988. Water-data report (Annual), 1 October 1987-30 September 1988, 15:3559 (R;US)

SURFACE-ACTIVE AGENTS
See SURFACTANTS

SURFACES
See also SPECTRALLY SELECTIVE SURFACES
Coal surface control for advanced physical fine coal cleaning technologies: Quarterly report, May 1–July 31, 1989, 15:2015 (R;US)
Self-diffusion on the Lennard-Jones fcc(111) surface: Effects of temperature on dynamical corrections, 15:3093 (J;US)
Trajectory analysis of low-energy and hyperthermal ions scattered from Cu(110), 15:3887 (R;US)

SURFACTANTS
Analysis, development and investigations into phase behaviour of surfactant systems for de-oiling high-salinitiy reservoirs with reference to the Bockstedt field of Wintershall AG. Final report, 15:2110 (R;DE;In German)
Column flotation of coal with fluorosurfactants: Final report, 15:2014 (R;US)
Use of amine oxide surfactants for chemical flooding EOR [enhanced oil recovery], 15:2112 (R;US)

SURGES
Computer systems protection: Uninterruptible power supplies. January 1983-September 1989 (Citations from the Computer data base). Report for January 1983-September 1989, 15:4523 (R;US)
Lightning, surge, and transient protection. December 1982-September 1989 (Citations from the NTIS data base). Report for December 1982-September 1989, 15:2433 (R;US)

Abstract for Zeiss editor presentation, 15:4524 (R;US)
TEXTILES
Asbestos-fiber reentrainment during vacuuming and wet cleaning of carpet at a captive research site, 15:3437 (R;US)
TFTR DEVICE
See TFTR TOKAMAK
TFTR REACTORS
See TFTR TOKAMAK
TFTR TOKAMAK
Energy confinement time and electron density profile shape in TFTR [Tokamak Fusion Test Reactor], 15:4350 (R;US)
THALLIUM
Optogalvanic spectroscopy in flames, 15:3040 (R;FR;In French)
THALLIUM 205
Nuclear magnetic resonance in molten salts, 15:4202 (R;US)
THALLIUM COMPOUNDS
See also THALLIUM OXIDES
Local atomic displacements in high T_c oxides studied by pulsed neutron scattering, 15:2905 (R;US)
THALLIUM OXIDES
Break junction measurement of the tunneling gap of a thallium-based high-temperature superconductor crystal, 15:2950 (J;US)
Microwave characterization of high-temperature superconductors, 15:2921 (R;US)
THEORETICAL DATA
Two-centre electron scattering phase shifts calculated to higher orders using the generalized JWKB method, 15:4131 (R;XA)
THERAPEUTIC AGENTS
See DRUGS
THERMAL ANALYSIS
3D thermal stress analysis of WIPP [Waste Isolation Pilot Plant] Room T RH TRU [Remote Handled Transuranic] experiments, 15:2235 (R;US)
THERMAL BARRIERS
Stabilities of dimension and thermal-resistance of ASR-ORB carbon for thermal barrier materials of HTTR, 15:2491 (R;JP;In Japanese)
THERMAL COMFORT
Preliminary study to a demonstration building climatic design program in the Ivory Coast, 15:2664 (R;FR;In French)
Simulation of energy consumption by taking thermal comfort into account, 15:2701 (R;NO)
THERMAL ENERGY STORAGE EQUIPMENT
Fuel savings in the heavy trucking industry through cool storage: Technical progress report, June 20–September 19, 1989, 15:2563 (R;US)
Operation and performance of commercial cool storage systems: Volume 2, 1988 cooling season and project summary, 15:2565 (R;US)
Thermal energy storage. July 1987-September 1989 (Citations from the NTIS data base). Report for July 1987-September 1989, 15:2566 (R;US)
THERMAL FATIGUE
Total strain version of strainrange partitioning for thermomechanical fatigue at low strains, 15:2846 (RA;US)
THERMAL FISSION
Data for decay Heat Predictions Proceedings of a specialists' meeting, 15:4121 (R;FR)
THERMAL INSULATION
Evaluation of airborne-asbestos concentrations before and during an O and M (operations and maintenance) activity: A case study, 15:3451 (R;US)
Evaluation of the thermal performance of the building envelope of existing buildings, 15:2707 (R;FI;In Finnish)
Research and technology plans for FY 1989 and accomplishments for FY 1988, 15:2977 (R;US)
THERMAL POLLUTION
Columbia River situation: A semi-technical review, 15:3548 (R;US)
THERMAL POLLUTION (AIR)
See AIR POLLUTION
THERMAL POLLUTION
THERMAL POLLUTION (WATER)
See THERMAL POLLUTION
WATER POLLUTION
THERMAL RADIATION
Numerical integration method of radiative exchange (NIMREX), 15:3113 (RA;DK)
THERMAL STORAGE
See HEAT STORAGE
THERMIONIC DIODES
Spectroscopic determination of the electrostatic potential profile in a plasma-prefilled ion diode, 15:3230 (J;US)
THERMOCOUPLES
Low cross-section Mo-Nb thermocouples for nuclear application: The state-of-the-art, 15:2831 (R;US)
THERMODYNAMIC MODEL
Study of the energetic proton production in relativistic heavy ions Ne + nuclei collisions, using Diogene detector. Hadronic matter temperature, 15:4068 (R;FR;In French)
THERMOELECTRICITY
Electrothermal guns – a theoretical investigation of factors for optimal performance. Technical report, 15:2660 (R;US)
THERMOLUMINESCENT DOSEMETERS
Light sensitivity of .13 mm thick LiF-teflon thermoluminesence dosimeters, 15:4185 (R;US)
Performance of special extremity dosemeters of BeO in fields of x and gamma radiation, 15:3335 (R;BR;In Portuguese)
THERMONUCLEAR DEVICES
See also CLOSED PLASMA DEVICES
ICF DEVICES
Measurements of environmental radiations and radioactivities in Toki, 5, 15:3476 (R;JP;In Japanese)
Neutronics issues for a laboratory microfusion facility, 15:4479 (BA;US)
THERMONUCLEAR REACTIONS
See also MUON-CATALYZED FUSION
Fracto-fusion. Mechanism of cold fusion, 15:4156 (R;JP)
THERMONUCLEAR REACTOR COOLING SYSTEMS
Heat transfer in condensation of lithium vapors, 15:4404 (R;US)
THERMONUCLEAR REACTOR MATERIALS
A semiautomated computer-interactive dynamic impact testing system, 15:4397 (R;US)
Optimization of the testing volumes with respect to neutron flux levels in the two-target high flux D-Li neutron source for the international fusion materials irradiation facility, 15:4435 (R;US)

[Graphite and carbon/carbon composition]: Foreign trip report, September 17, 1988–September 28, 1988, 15:2979 (R;US)

THERMONUCLEAR REACTOR WALLS
See also FIRST WALL
Microwave cavity studies for thermal testing of ceramic breeder materials, 15:2944 (BA;US)

THERMONUCLEAR REACTORS
See also ION BEAM FUSION REACTORS
LASER FUSION REACTORS
MAGNETIC MIRROR TYPE REACTORS
STELLARATOR TYPE REACTORS
TOKAMAK TYPE REACTORS
Accelerator and Fusion Research Division: 1988 summary of activities, 15:3259 (R;US)
Advanced fusion MHD power conversion using the CFAR [compact fusion advanced Rankine] cycle concept, 15:4444 (R;US)
Agreement between the USSR State Committee on the Use of Nuclear Power and the Department of Energy of the USA regarding joint studies in the field of controlled thermonuclear fusion and plasma physics, 15:4403 (TG;US)
Heat transfer, 15:2805 (B;US)
Microwave superheaters for fusion, 15:4464 (BA;US)
Neutronics design of self-cooled lithium blanket and shield for the high wall loading TITAN RFP reactor, 15:4466 (BA;US)
Proceedings of US-Japan workshop on new generation experiments and reactors (joined by EC), 15:4440 (R;JP)
Ripple loss of alpha particles in ITER, 15:4340 (R;JP)
Translations from Russian publications of proceedings of the international conference on neutron physics, Kiev, 14-18 September 1987, 15:4416 (R;XA)

THERMONUCLEAR WEAPONS

THERMOPILES
See THERMOCOUPLES

THICKNESS
Development of the method for measuring the thickness of a milled peat layer, 15:2090 (R;FI;In Finnish)

THIN FILMS
Effects of nitrogen pulsing on sputter-deposited beryllium films, 15:2855 (R;US)
Enhanced oxidation of $TiSi_2$ films by As^+ implantation, 15:2990 (BA;US)
Hybrid solar cells based on DC magnetron sputtered films of n-ITO on APMOVPE grown p-InP, 15:2317 (BA;US)
Interface velocity transients during melting of a-Si/c-Si thin films, 15:3000 (BA;US)
Ion beam modification of film stress and the effectiveness of thin film encapsulants on GaAs, 15:3001 (BA;US)
Plasma-activated ion-beam reactive sputtering of NbN thin films, 15:2898 (R;US)
Safety considerations for high-efficiency crystalline-silicon solar cell fabrication, 15:2316 (BA;US)
Surface magneto-optical studies of ultrathin ferromagnetic films, 15:2822 (R;US)

THIOETHERS
See SULFIDES

THIRRING MODEL
Thirring model on a Riemann surface, 15:4048 (J;US)

THORAX
See CHEST

THORIUM
Thorium re-improvement of residues from thorium purification plants, 15:2169 (R;BR;In Portuguese)
U, Th and K distributions inferred from regional geology and the terrestrial radiation profiles in India, 15:3505 (R;IN)

THORIUM 220
Spectroscopic investigations of the neutron-deficient nuclei ^{220}Th and ^{222}Th, 15:4116 (RA;DE;In German)

THORIUM 222
Spectroscopic investigations of the neutron-deficient nuclei ^{220}Th and ^{222}Th, 15:4116 (RA;DE;In German)

THORIUM 228
Development of sequential analytical method for the determination of U-238, U-234, Th-232, Th-230, Th-228, Ra-226 and Ra-228 and its application in mineral waters, 15:3046 (R;BR;In Portuguese)

THORIUM 230
Development of sequential analytical method for the determination of U-238, U-234, Th-232, Th-230, Th-228, Ra-226 and Ra-228 and its application in mineral waters, 15:3046 (R;BR;In Portuguese)

THORIUM 232
Development of sequential analytical method for the determination of U-238, U-234, Th-232, Th-230, Th-228, Ra-226 and Ra-228 and its application in mineral waters, 15:3046 (R;BR;In Portuguese)
Investigation of many-phonon excitations in ^{232}Th, 15:4114 (RA;DE;In German)
Measurements of prompt fission neutron spectra and double-differential neutron inelastic-scattering cross sections for ^{238}U and ^{232}Th, 15:4119 (R;JP;In Japanese)
Results of the radiological survey at 133 Maywood Avenue, Maywood, New Jersey (MJ025), 15:3510 (R;US)
Results of the radiological survey at 72 Sidney Stret, Lodi, New Jersey (LJ067), 15:3509 (R;US)

THORIUM 232 TARGET
Heavy ion induced transfer reactions with ^{232}Th by the Crystal Ball, 15:4115 (RA;DE;In German)
Investigation of many-phonon excitations in ^{232}Th, 15:4114 (RA;DE;In German)

THORIUM ISOTOPES
See also THORIUM 220
THORIUM 222
THORIUM 228
THORIUM 230
THORIUM 232
Heavy ion induced transfer reactions with ^{232}Th by the Crystal Ball, 15:4115 (RA;DE;In German)

THORIUM NITRATES
Obtention of crystals feom thorium nitrate using microwave as heating source, 15:3103 (R;BR;In Portuguese)

THORIUM OXIDES
Program of research and development on the thorium utilization in PWRS. Final report (1979-1988), 15:2449 (R;DE)

THORON
See RADON 220

THREE MILE ISLAND-2 REACTOR
Comparison of thermal and mechanical responses of the TMI-2 reactor vessel, 15:2524 (R;US)
DOE modifications to the MAAP [Modular Accident Analysis Program] code: Volume 6, Core melt progression modeling and benchmarking WBS 3.4.8, 15:2515 (R;US)
Fission product relocation and behavior in the TMI-2 reactor vessel, 15:2486 (R;US)
Just how much water is required to cool a molten core?, 15:2519 (R;US)
Quality Assurance in the removal and transport of the TMI-2 core, 15:2523 (R;US)
TMI-2 data qualification and data bases, 15:2520 (R;US)
Verification of the ORIGEN2 code analysis for the TMI-2 reactor core, 15:2485 (R;US)

THYROID HORMONES
Quality control scheme for thyroid related hormones measured by radioimmunoassay. Final report for the period 1 January 1985 - 1 April 1989, 15:3620 (R;XA)

THYROID STIMULATING HORMONE
See TSH

TIBER-X TOKAMAK
Cryogenic magnet case and distributed structural materials for high-field superconducting magnets, 15:4473 (BA;US)
High-field superconducting solenoids for the TIBER II PF system, 15:4472 (BA;US)

TIGHT SANDS
See SANDSTONES

TIME-OF-FLIGHT MASS SPECTROMETERS
Analysis of surface composition of a Martian moon with the instrument LIMA-D onboard the Mars mission PHOBOS, 15:3349 (RA;DE;In German)

Calculations on a third order energy focusing time-of-flight mass spectrometer, 15:3352 (RA;DE;In German)
CoMA, an instrument for the detailed in-situ analysis of collected cometary particulates, 15:3348 (RA;DE;In German)
Development of a laser ion source for xenon, 15:3295 (RA;DE;In German)

TIME-OF-FLIGHT SPECTROMETERS
See also TIME-OF-FLIGHT MASS SPECTROMETERS
Low energy neutral particle energy analyser by time of flight method, 15:4420 (R;JP;In Japanese)

TIME-OF-SEASON PRICING
See SEASONAL VARIATIONS

TIME-REVERSAL INVARIANCE
See T INVARIANCE

TIN 119
Anomalous local hopping of Sn impurities in lead, 15:2881 (J;US)

TIN 120 REACTIONS
Study of multi-fragmentation in collisions of heavy ions, 15:4096 (RA;DE;In German)

TIN 120 TARGET
Deep-inelastic myon-nucleus scattering at the CERN SPS; EMC and NMC Collaboration, 15:3956 (RA;DE;In German)
Single neutron transfer reactions induced by polarized ^{7}Li ions, 15:4136 (RA;DE)
Study of multi-fragmentation in collisions of heavy ions, 15:4096 (RA;DE;In German)

TIN 124 TARGET
Systematics of the (^{18}O,^{20}Ne) reaction and the determination of the mass excess of ^{122}Cd, 15:4093 (RA;DE;In German)

TIN ISOTOPES
See also TIN 119
Neutron cross sections of tin and cadmium isotopes in the range of 0.5-2.0 MeV, 15:4098 (RA;SU;In Russian)

TISSUES
See also ANIMAL TISSUES
Comparison of digestion procedures used for the determination of boron in biological tissues by ICP-AES [inductively-coupled, plasma-atomic emission spectroscopy], 15:3609 (R;US)
Maximum entropy and equations of state for random cellular structures, 15:2969 (R;US)

TITANIUM
Excimer laser mixing of titanium layers on AISI 304 stainless steel, 15:2866 (BA;US)
Optical waveguide formation by ion implantation of Ti or Ag, 15:2940 (BA;US)

TITANIUM 48
Validity of the adiabatic rotational model in the case of the Hexadecupole operator, 15:4129 (R;XA)

TITANIUM 50
Validity of the adiabatic rotational model in the case of the Hexadecupole operator, 15:4129 (R;XA)

TITANIUM 52
Validity of the adiabatic rotational model in the case of the Hexadecupole operator, 15:4129 (R;XA)

TITANIUM ALLOYS
See also NITINOL
TITANIUM BASE ALLOYS
Electronic origin of the intermediate phase of NiTi, 15:2892 (J;US)
Enhanced oxidation of $TiSi_2$ films by As^+ implantation, 15:2990 (BA;US)
Exploratory study of niobium, titanium, zirconium, and tantalum aluminides. Final report, 1 March 1988-31 May 1989, 15:2807 (R;US)
Structure and insulator material choices for the TITAN reversed-field-pinch reactor study, 15:4470 (BA;US)
The dose, temperature, and projectile-mass dependence for irradiation-induced amorphization of CuTi, 15:2873 (J;US)
The projectile mass dependence of the amorphization process and the critical temperature in the ion irradiated CuTi, 15:2858 (BA;US)

TITANIUM BASE ALLOYS
Influence of microstructure and microdamage processes on fracture at high loading rates. Final report, 1 February 1986-30 September 1988, 15:2806 (R;US)

TITANIUM COMPOUNDS
See also TITANIUM OXIDES
Cluster-impact fusion, 15:4240 (J;US)

TITANIUM OXIDES
A cross-sectional TEM study of the effects of annealing conditions on the regrowth of lead-implanted single crystal calcium titanate, 15:2941 (BA;US)
Calculation of optical transport and localization quantities, 15:2962 (J;US)
Electron paramagnetic resonance investigations of divalent cobalt in single crystals of perovskite ($CaTiO_3$), 15:3023 (J;US)
Raman spectroscopy of nanophase TiO_2, 15:2946 (J;US)

TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS

TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS

TMTSF
Theory of unusual anisotropy of magnetoresistance in organic superconductors, 15:3011 (J;US)

TOKAMAK DEVICES
See also ALCATOR DEVICE
ASDEX TOKAMAK
COMPACT IGNITION TOKAMAK
ITER TOKAMAK
JFT-2M TOKAMAK
TRIAM-1 TOKAMAK
VERSATOR TOKAMAK
Status of work on TSP, T-15 and other OTR units, 15:4401 (TG;US)

Ballooning Instability
Alpha modification of Tokamak ballooning instabilities, 15:4304 (R;US)

Confinement Time
Uncertainties associated with extrapolating L mode energy confinement to ITER and CIT, 15:4305 (R;US)

Current-Drive Heating
Effect of energetic particle absorption on fast wave current drive, 15:4312 (R;US)
Efficiency of current drive by pulsed injection of REB, 15:4335 (RA;JP)

Data Acquisition Systems
The MTX [Microwave Tokamak Experiment] data acquisition system, 15:4358 (R;US)

Fuel Injection Systems
Acceleration of small, light projectiles (including hydrogen isotopes) to high speeds using a two-stage light gas gun, 15:4396 (R;US)

Icr Heating
Fundamental studies of fusion plasmas: Annual performance report, 15:4307 (R;US)

Impurities
Control of ash accumulation by induced-fishbones, 15:4398 (R;US)

Joule Heating
OHMIC ignition in a single-turn-coil Tokamak (IGNITEX), 15:4457 (BA;US)

Meetings
Proceedings of the Japan-U.S. workshop P-118 on vacuum technologies for fusion devices, 15:4419 (R;JP)

Non-Inductive Current Drive
Particle simulation on high power ECH current drive, 15:4338 (RA;JP)

Pellet Injection
The ORNL plasma fueling program, 15:4388 (R;US)

Plasma Confinement
Self-consistent radial sheath, 15:4380 (J;US)

Plasma Diagnostics
MTX [Microwave Tokamak Experiment] diagnostic and auxiliary systems for confinement, transport, and plasma physics studies, 15:4352 (R;US)
Magnetic microtearing coherence in tokamak plasmas, 15:4311 (R;FR;In French)
Temperature fluctuations and transport in a tokamak edge plasma, 15:4379 (J;US)

Plasma Disruption
Computation of electromagnetic effects in a tokamak due to a plasma disruption, 15:4303 (R;US)
Plasma Instability
Stability of the Global Alfven Eigenmode in the presence of fusion alpha particles in an ignited tokamak plasma, 15:4308 (R;US)
Pressure Gradients
Study of electron density and pressure profile behavior in a tokamak plasma, 15:4351 (R;US)
Research Programs
Basic research results on controlled thermonuclear fusion and plasma physics in the USSR between July 1987 and July 1988, 15:4400 (TG;US)
Tearing Instability
Magnetic microtearing coherence in tokamak plasmas, 15:4311 (R;FR;In French)
Transport Theory
Advanced toroidal theory: Progress report, 15:4306 (R;US)
Vacuum Systems
Proceedings of the Japan-U.S. workshop P-118 on vacuum technologies for fusion devices, 15:4419 (R;JP)

TOXIC MATERIALS
See also TOXINS
Air Pollution
Information on substances for review as toxic air contaminants. Summary report, January 1984-February 1989 (Final), 15:3430 (R;US)
Air Pollution Control
Air toxics control situation room. Report for July 1988-March 1989, 15:3450 (R;US)
Air Pollution Monitoring
Evaluation of emission sources from creosote wood-treatment operations. Final report, 15:2747 (R;US)
Air Quality
Beryllium dispersion near explosive firing tables: A comparison of computed and observed results, 15:3468 (R;US)
Bioassay
Comparison of bioassays for assessing sediment toxicity in Puget Sound. (Appendices included). Report for 1988-1989 (Final), 15:3561 (R;US)
Biological Accumulation
Accumulation patterns of heavy metals and chlorinated hydrocarbons by sea otters, Enhydra lutris, in California. Final report, 15:3788 (R;US)
Carcinogens
Genetic activity profiles: Use in management of risk from genotoxic substances in the environment, 15:3766 (R;US)
Catalogs
Hints and search strategies for the substances listed in the Accident Ordinance, 15:3803 (R;DE;In German)
Data Base Management
Registry of Toxic Effects of Chemical Substances (RTECS), 1988 computer tape. Data file, 15:3790 (R;US)
Forecasting
Beryllium dispersion near explosive firing tables: A comparison of computed and observed results, 15:3468 (R;US)
Health Hazards
Air toxics control situation room. Report for July 1988-March 1989, 15:3450 (R;US)
Methods used in the United States for the assessment and management of health risk due to chemicals, 15:3773 (R;US)
Information Dissemination
Testimony of the National Institute for Occupational Safety and Health on the Occupational Safety and Health Administration's proposed rule on hazard communication, 15:3684 (R;US)
Mutagenesis
Pilot investigation of indoor-outdoor and personal PM10 (thoracic) and associated ionic compounds and mutagenic activity. Final report, February 1987-April 1989, 15:3447 (R;US)
Mutagens
Genetic activity profiles: Use in management of risk from genotoxic substances in the environment, 15:3766 (R;US)
Respiration
Pathophysiological and disease constraints on aerosol delivery, 15:3767 (R;US)
Risk Assessment
Assessment of ecologic risks related to chemical exposure: Methods and strategies used in the United States, 15:3772 (R;US)
Genetic-activity profiles and hazard assessment, 15:3768 (R;US)
Waste Disposal
Analytical methods necessary to implement risk-based criteria for chemicals in municipal sludge, 15:2775 (R;US)
Application of a simple short-term bioassay for the identification of genotoxins from hazardous wastes, 15:3782 (R;US)
Water Pollution
Methods for aquatic toxicity-identification evaluations. Phase 2. Toxicity identification procedures. Technical report, 15:3550 (R;US)
Methods for aquatic toxicity-identification evaluations. Phase 3. Toxicity confirmation procedures. Technical report, 15:3549 (R;US)
Water Pollution Control
Structural properties for determining mechanisms of toxic action, 15:3778 (R;US)

TOXICITY
Attempted use of zinc in vivo to protect against nitrogen mustard toxicity in tumor-free and in L1210 leukemia-bearing $B6D2F_1$ mice, 15:3764 (R;US)
Detection of genetic hazards from environmental chemicals with plant test systems, 15:3776 (R;US)
Electrophysiological systems for neurotoxicity field testing: PEARL II and alternatives, 15:3780 (R;US)
Environmental considerations for the conduct of surrogate tests in the Engineering Demonstration System, 15:3791 (R;US)

Genetic-activity profiles and hazard assessment, 15:3768 (R;US)
Methods for aquatic toxicity-identification evaluations. Phase 2. Toxicity identification procedures. Technical report, 15:3550 (R;US)
Use of genotoxic activity profiles in assessment of carcinogenesis and transmissible genetic effects, 15:3775 (R;US)
Utility of short-term tests for genetic toxicity, 15:3612 (R;US)

TOXINS
Electrophysiological systems for neurotoxicity field testing: PEARL II and alternatives, 15:3780 (R;US)

TRADE
Convention on international trade in endangered species of wild fauna and flora. 1987 annual report. Final report, 15:3613 (R;US)
International aspects of restrictions of ozone-depleting substances, 15:3462 (R;US)

TRITIUM
Atmospheric detritiation system performance, 15:4406 (R;US)
Development and application of an on-line tritium production rate measuring method, 15:4421 (R;JP)
Interpretation of recent LAMPF results on D T MU formation, 15:4073 (R;US)
Management of tritium wastes in the United Kingdom. A survey of present and future arisings, review of possible disposal options and areas where further R and D may be needed to develop a management strategy for the future, 15:2179 (R;GB)
Model for calculating room air and surface tritium concentrations, 15:3480 (R;GB)
Neutrino mass: Recent results, 15:3959 (R;US)

TRITIUM COMPOUNDS
HTO deposition through gas exchange between soil and atmosphere, 15:3507 (R;DE;In German)

TRITIUM SYSTEMS TEST ASSEMBLY
The Breeding Blanket Interface (BBI) and the Tritium Systems Test Assembly (TSTA), 15:4393 (R;US)

TRITIUM TARGET
Muon spectrum and convoy effects after muon-catalyzed fusion, 15:4177 (J;US)

TROPOSPHERE
Atmospheric depositional characteristics of Beryllium 7 and Lead 210 along Southeastern Virginia coast, 15:3490 (J;US)
Global tropospheric chemistry: Chemical fluxes in the global atmosphere, 15:3393 (R;US)

Ozone and other issues in global atmospheric chemistry, 15:3394 (B;US)
Tropospheric nitric oxide measurements, 15:3418 (RA;US)

TRU WASTES
See ALPHA-BEARING WASTES

TRX-1
See REVERSE-FIELD PINCH

TSH
Quality control scheme for thyroid related hormones measured by radioimmunoassay. Final report for the period 1 January 1985 - 1 April 1989, 15:3620 (R;XA)

TSTA
See TRITIUM SYSTEMS TEST ASSEMBLY

TUBES
Comparison of photodesorption yields from aluminum stainless and Cu-plated beam tubes, 15:3285 (R;US)
Multiloop integral system test (MIST): Test Group 34, Steam generator tube rupture: Final report: Volume 6, 15:2548 (R;US)
Multiloop integral system test (MIST): Test Group 36, Pump operation: Final report: Volume 8, 15:2550 (R;US)

TUBES (CONDUITS)
See PIPES

TUFF
A sensitivity study of near-field thermomechanical conditions in tuff, 15:2227 (R;US)
Predicting flow through low-permeability, partially saturated, fractured rock: A review of modeling and experimental efforts at Yucca Mountain, 15:2234 (R;US)

TUMOR CELLS
Induction of sister chromatid exchanges by direct and indirect chemical agents in a human teratoma cell line, 15:3608 (R;US)

TUMORS
See NEOPLASMS

TUNGSTEN
Tungsten and tungsten-alloy powder metallurgy: Powder production and applications-excluding lamps. November 1971-July 1989 (Citations from the US Patent data base). Report for November 1971-July 1989, 15:2847 (R;US)

TUNGSTEN 184 TARGET
High energetic photons from heavy ion collisions, 15:4105 (RA;DE;In German)

TUNGSTEN ALLOYS
See also TUNGSTEN BASE ALLOYS
TUNGSTEN BRONZE
Formation of metastable structures and amorphous phases in Cu-W alloys using the triode sputtering technique, 15:2860 (BA;US)
Rhenium alloying of tungsten heavy alloys, 15:2808 (R;US)

TUNGSTEN BASE ALLOYS
Strain aging in tungsten-heavy alloys. Final report, 15:2810 (R;US)
Tungsten and tungsten-alloy powder metallurgy: Powder production and applications-excluding lamps. November 1971-July 1989 (Citations from the US Patent data base). Report for November 1971-July 1989, 15:2847 (R;US)

TUNGSTEN BRONZE
Growth of tungsten bronze family crystals. Final technical report, 6 May 1985-30 November 1988, 15:2809 (R;US)

TUNGSTEN CARBIDES
Tungsten and tungsten-alloy powder metallurgy: Powder production and applications-excluding lamps. November 1971-July 1989 (Citations from the US Patent data base). Report for November 1971-July 1989, 15:2847 (R;US)

TURBINE BLADES
Air Flow
Experimental investigations of the rotor loads and the rotor-induced flow of a two-bladed wind turbine model in the low speed wind tunnel of DLR, 15:2378 (RA;DK)
Cooling
Coolant passage heat transfer with rotation, 15:3201 (RA;US)
Dynamic Loads
Generation of fatigue loads on Windane 40/2, 15:2382 (R;DK;In Danish)
Prediction of stochastic blade responses using a filtered noise turbulence model in the FLAP code, 15:2393 (BA;US)
Prediction of stochastic blade responses using measured wind speed data as input to the FLAP code, 15:2392 (BA;US)
Fatigue
Constitutive modelling of single crystal and directionally solidified superalloys, 15:2843 (RA;US)
Generation of fatigue loads on Windane 40/2, 15:2382 (R;DK;In Danish)
Flow Visualization
Location of flow separation on an 11 m wind turbine blade by means of flow visualization and a two dimensional airfoil code, 15:2373 (RA;DK)
Fluid Flow
Coolant passage heat transfer with rotation, 15:3201 (RA;US)
Foils
Aerofoil design and testing (Wind turbines), 15:2370 (RA;DK)
Airfoil design for horizontal axis wind turbines, 15:2377 (RA;DK)
Design of aerofoils for wind turbine use, 15:2375 (RA;DK)
Wind tunnel tests of airfoil sections extended to high angles of attack, 15:2371 (RA;DK)
Heat Transfer
Coolant passage heat transfer with rotation, 15:3201 (RA;US)
Pressure Drop
Coolant passage heat transfer with rotation, 15:3201 (RA;US)
Rotation
Some physical and numerical aspects of wind turbine aerodynamics, 15:2366 (RA;DK)
Service Life
Gas turbine blade life assessment and repair guide: Final report, 15:2414 (R;US)
Stress Analysis
Fatigue characterization of a VAWT blade material, 15:2396 (BA;US)
Probabilistic structural analysis methods of hot engine structures, 15:3248 (R;US)
Three-dimensional inelastic analysis methods for hot section components, 15:3237 (RA;US)
Surface Forces
On the usefulness of surface pressure calculations with a panel method for wind turbines, 15:2374 (RA;DK)
Wind Loads
Derivation of three-dimensional airfoil data on the basis of experiment and theory, 15:2372 (RA;DK)

TURBULENT FLOW
Comparison of turbulence measurement methods, 15:3195 (RA;US)
Head-on collision of viscous vortex rings, 15:3205 (RA;US)
Phase decorrelation, streamwise vortices and acoustic radiation in mixing layers, 15:3204 (RA;US)
Simulations of local Nusselt number using an algebraic stress model (ASM) for turbulent flow in a square 180 degree bend, 15:3937 (R;US)
Studying turbulence using numerical simulation databases, 2. Proceedings of the 1988 Summer Program, 15:3203 (R;US)
Survey of measurements and measuring techniques in rapidly distorted compressible turbulent boundary layers, 15:3185 (R;FR)
Two- and three-dimensional turbine blade row flow field simulations, 15:3200 (RA;US)
User manual and program documentation for the "TUFCA" flow program, 15:3112 (RA;DK;In Danish)

TURKEY
Current measurement studies around the Cesme Peninsula (Turkey), 15:3569 (R;XA)

TURNOVER (RADIONUCLIDES)

Land Pollution
Bench-scale fixation of soils from the Tacoma Tar Pits Superfund Site. Final report, 15:3521 (R;US)
Installation-Restoration Program Preliminary Assessment Bethel Radio Relay Station, Alaska, 15:2717 (R;US)
Installation-Restoration Program Preliminary Assessment Kalakaket Creek Radio Relay Station, Alaska, 15:2716 (R;US)
Installation-Restoration Program Preliminary Assessment, Bear Creek Radio Relay Station, Alaska, 15:2721 (R;US)
Installation-Restoration Program Preliminary Assessment, Big Mountain Radio Relay Station, Alaska, 15:2723 (R;US)
Installation-Restoration Program Preliminary Assessment, Canyon Creek Radio Relay Station, Alaska, 15:2722 (R;US)
Installation-Restoration Program Preliminary Assessment, Gold King Creek Radio Relay Station, Alaska, 15:2720 (R;US)
Installation-Restoration Program Preliminary Assessment, Granite Mountain Radio Relay Station, Alaska, 15:2719 (R;US)
Installation-Restoration Program Preliminary Assessment, Naknek Recreational Camps, Alaska, 15:2718 (R;US)
Superfund Record of Decision (EPA Region 1): Cannon Engineering, MA. (First Remedial Action), March 1988. Final report, 15:3527 (R;US)
Superfund Record of Decision (EPA Region 10): Commencement Bay/Near Shore, WA. (First Remedial Action), December 1988, 15:3526 (R;US)
Superfund Record of Decision (EPA Region 2): Ciba-Geigy, NJ. (First Remedial Action), April 1989, 15:3530 (R;US)
Superfund Record of Decision (EPA Region 2): Clothier Disposal Site, Oswego County, New York, December 28, 1988. First remedial action, 15:3591 (R;US)
Superfund Record of Decision (EPA Region 2): Lipari Landfill, Mantua Township, Gloucester County, New Jersey, July 11, 1988. Third remedial action. Final report, 15:3579 (R;US)
Superfund Record of Decision (EPA Region 3): M. W. /Manufacturing, PA. (First Remedial Action), March 1989, 15:3534 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump Site, PA. (Second Remedial Action), September 1988, 15:3525 (R;US)
Superfund Record of Decision (EPA Region 3): Tyson's Dump, PA. (First remedial action), March 1988. Final report, 15:3589 (R;US)
Superfund Record of Decision (EPA Region 5): Belvidere Landfill, IL. (First Remedial Action), June 1988, 15:3522 (R;US)
Superfund Record of Decision (EPA Region 5): Poer Farm, IN. (First Remedial Action), September 1988. Final report, 15:3523 (R;US)
Superfund Record of Decision (EPA Region 5): Summit National Site, Deerfield, OH. June 1988. First Remedial Action. Final report, 15:3528 (R;US)
Superfund Record of Decision (EPA Region 6): Pesses Chemical, TX. (First Remedial Action), December 1988. Final report, 15:3532 (R;US)
Superfund Record of Decision (EPA Region 6): South Valley/Edmunds Street, NM. (Second Remedial Action), June 1988, 15:3524 (R;US)
Superfund Record of Decision (EPA Region 7): Findett, MO. (First Remedial Action), December 1988, 15:3500 (R;US)
Superfund Record of Decision (EPA Region 7): Todtz, Lawrence Farm, IA. (First Remedial Action), November 1988. Final report, 15:3531 (R;US)

Land Reclamation
Superfund Record of Decision (EPA Region 8): Libby Ground Water Contamination, MT. (Second Remedial Action), December 1988, 15:3529 (R;US)

Manuals
Safe disposal of hazardous wastes: The special needs and problems of developing countries. Volume 1-Volume 3. World Bank technical paper, 15:2750 (R;US)

Mutagens
Application of a simple short-term bioassay for the identification of genotoxins from hazardous wastes, 15:3782 (R;US)

Risk Assessment
Analytical methods necessary to implement risk-based criteria for chemicals in municipal sludge, 15:2775 (R;US)
Below Regulatory Concern (BRC) Owners Group: A comparison of the EPA generic cost-benefit analysis with an industry-specific analysis: Final report, 15:2195 (R;US)

Site Characterization
Air quality monitoring at toxic waste sites: A Hanford perspective, 15:3464 (R;US)

Water Pollution
Influence of discharge and urbanization on the concentration, speciation, and bioavailability of trace metals in the Raritan River, New Jersey. Final report, 15:3551 (R;US)
Installation-Restoration Program Preliminary Assessment Bethel Radio Relay Station, Alaska, 15:2717 (R;US)
Installation-Restoration Program Preliminary Assessment Kalakaket Creek Radio Relay Station, Alaska, 15:2716 (R;US)
Installation-Restoration Program Preliminary Assessment, Bear Creek Radio Relay Station, Alaska, 15:2721 (R;US)
Installation-Restoration Program Preliminary Assessment, Big Mountain Radio Relay Station, Alaska, 15:2723 (R;US)
Installation-Restoration Program Preliminary Assessment, Canyon Creek Radio Relay Station, Alaska, 15:2722 (R;US)
Installation-Restoration Program Preliminary Assessment, Gold King Creek Radio Relay Station, Alaska, 15:2720 (R;US)
Installation-Restoration Program Preliminary Assessment, Granite Mountain Radio Relay Station, Alaska, 15:2719 (R;US)
Installation-Restoration Program Preliminary Assessment, Naknek Recreational Camps, Alaska, 15:2718 (R;US)

ROD (Record of Decision) annual report, FY 1988, 15:3590 (R;US)
Superfund Record of Decision (EPA Region 1): Cannon Engineering, MA. (First Remedial Action), March 1988. Final report, 15:3527 (R;US)
Superfund Record of Decision (EPA Region 10): Commencement Bay/Near Shore, WA. (First Remedial Action), December 1988, 15:3526 (R;US)
Superfund Record of Decision (EPA Region 2): Ciba-Geigy, NJ. (First Remedial Action), April 1989, 15:3530 (R;US)

Spectral characteristics of arc-heated low density plasma flows (3). Helium plasma, 15:3892 (R;JP;In Japanese)
WIND TURBINE ARRAYS
An initial look at the dynamics of the microscale flow field within a large wind farm in response to variations in the natural inflow, 15:2384 (R;US)
Windmills standing on the sea bed at Dvalegrunden. Draft project, 15:2364 (R;DK;In Danish)
WIND TURBINES
See also HORIZONTAL AXIS TURBINES
VERTICAL AXIS TURBINES
Aerodynamics
Joint action on aerodynamics of wind turbines, 15:2365 (R;DK)
Joint action on aerodynamics of wind turbines. Supplement, 15:2379 (R;DK)
Prediction of stochastic blade responses using a filtered noise turbulence model in the FLAP code, 15:2393 (BA;US)
Prediction of stochastic blade responses using measured wind speed data as input to the FLAP code, 15:2392 (BA;US)
Some physical and numerical aspects of wind turbine aerodynamics, 15:2366 (RA;DK)
Air Flow
Two simple models for dynamic inflow (Wind turbines), 15:2369 (RA;DK)
Computerized Control Systems
Development of the University of Massachusetts wind/diesel simulator, 15:2399 (BA;US)
Control
Adaptive pitch control for power regulation of the MS-2 wind turbine, 15:2363 (R;GB)
Fatigue
Preliminary results from the fatigue testing of northern power systems 100KW wind turbine, 15:2405 (BA;US)
Simplified fatigue damage and crack growth calculations for wind turbines, 15:2397 (BA;US)
Flow Models
Estimation of turbulence variance and scale, simplified for wind turbine applications, 15:2389 (BA;US)
Results from actuator surface theory applications on wind turbine rotors, 15:2376 (RA;DK)
Fracture Mechanics
Crack propagation analysis of WECS components using the LIFE2 computer code, 15:2398 (BA;US)
Meetings
Joint action on aerodynamics of wind turbines, 15:2365 (R;DK)
Metering
Advances in three-dimensional turbulence measurement capability, 15:2388 (BA;US)
Noise Pollution Abatement
Noise from larger windmills. Principles for the construction of windmills that produce less noise, 15:2380 (R;DK;In Danish)
Performance
A case study of a no storage wind/diesel system: Block Island, 15:2400 (BA;US)
Proceedings of the eighth ASME wind energy symposium, 15:2387 (B;US)
Performance Testing
Aerofoil design and testing (Wind turbines), 15:2370 (RA;DK)
Performance methods (again—), 15:2368 (RA;DK)
Rotors
Derivation of three-dimensional airfoil data on the basis of experiment and theory, 15:2372 (RA;DK)
WEG MS-2 stall-regulated rotor study, 15:2362 (R;GB)
Turbine Blades
Generation of fatigue loads on Windane 40/2, 15:2382 (R;DK;In Danish)
WINDOWS
A thermally insulating vacuum window, 15:2708 (BA;US)
A versatile procedure for calculating heat transfer through windows, 15:2690 (R;US)
Effect of shading devices on residential energy use in Austin, Texas. Research report, 15:2694 (R;US)
Spectral model for instantaneous advanced window performance, 15:2338 (BA;US)
Window 3.1: A computer tool for analyzing window thermal performance, 15:2342 (BA;US)
WINDSCALE REPROCESSING PLANT
See SELLAFIELD REPROCESSING PLANT
WINSTON COLLECTORS
See COMPOUND PARABOLIC CONCENTRATORS
WIPP
Geotechnical Field Data and Analysis Report, July 1987–June 1988: Volume 1, 15:2190 (R;US)
Geotechnical Field Data and Analysis Report, July 1987–June 1988: Volume 2, 15:2191 (R;US)
Quality assurance guidance for TRUPACT-II [Transuranic Package Transporter-II] payload control, 15:2189 (R;US)
Waste Isolation Pilot Plant (WIPP) TRU waste shipment dry run preoperational checkout plan, 15:2192 (R;US)
WISCONSIN
Water resources data for Wisconsin, Water Year 1988. Water-data report (Annual), 1 October 1987-30 September 1988, 15:3559 (R;US)
Wisconsin waste reduction and recovery plan, 15:2745 (R;US)
WOLFRAM
See TUNGSTEN
WOMEN
Simple application of probability model for the mean age at marriage, 15:4277 (R;XA)
WOOD
Combustion of fixed-bed in grate firing, 15:3115 (R;FI;In Finnish)
Effects of acid deposition on painted wood substrates, 15:3432 (R;US)
Handling characteristics of wood fuels - angle of repose for different assortments, 15:2274 (R;SE;In Swedish)
Separation of wood chips for energy production, 15:2275 (R;SE;In Swedish)
WOOD ALCOHOL
See METHANOL
WOOD BURNING APPLIANCES
Measurement of condensable vapor contribution to PM10 emissions, 15:2696 (R;US)
WOOD FUELS
Fuel-supply structure of wood-fired power plants in the Northeast: Loggers' perspective. Forest Service research paper, 15:2273 (R;US)
WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Evaluation of emission sources from creosote wood-treatment operations. Final report, 15:2747 (R;US)
Small-quantity generator's handbook for managing RCRA (Resource Conservation and Recovery Act) wastes. Wood-treating industries, 15:2737 (R;US)

Superfund Record of Decision (EPA Region 4): American Creosote Works, TN. (First Remedial Action), December 1988, 15:3533 (R;US)

WOOD WASTES
Flue gas condensation in stoking system for wood chips, 15:2272 (R;DK;In Danish)
Wisconsin waste reduction and recovery plan, 15:2745 (R;US)

WOOD-FUEL POWER PLANTS
Fuel-supply structure of wood-fired power plants in the Northeast: Loggers' perspective. Forest Service research paper, 15:2273 (R;US)

WORKERS
See PERSONNEL

X

X RADIATION
See also SOFT X RADIATION
Center for X-ray Optics, 1988, 15:3264 (R;US)
Glancing angle x-ray studies of oxide films: Revision, 15:2903 (R;US)
Radiobiology of ultrasoft X rays. IV. Flat and round-shaped hamster cells (CHO-10B, HS-23), 15:3754 (J;US)
X and UV time resolving diagnostics for X-ray laser experiments, 15:4369 (BA;US)

X-RASERS
See X-RAY LASERS

X-RAY DIFFRACTION
Comment on "Speckle in the diffraction patterns of Hendricks-Teller and icosahedral glass models", 15:4241 (J;US)
Evaluation of a linear photodiode array detector for synchrotron small-angle x-ray scattering measurements, 15:3231 (J;US)

X-RAY DIFFRACTOMETERS
Studies of the ternary phase diagram U-Pu-O between 1000 and 2000deg C. Structural and physico-chemical properties of $Pu_xU_yO_z$ mixed oxides with a view to applications as fuel, 15:2919 (R;DE;In German)

X-RAY DOSIMETRY
Ionizing radiations dosimetry: new results in the megagray range, 15:4184 (R;FR;In French)

X-RAY EQUIPMENT
Conduct of local dosimetry in X-ray diagnosis, 15:4197 (R;DD;In German)

X-RAY LASERS
Prospects for a soft x-ray FEL powered by a relativistic-klystron high-gradient accelerator (RK-HGA), 15:3167 (R;US)

X-RAY RADIOGRAPHY
Technique for chest radiography for pneumoconiosis, 15:3678 (R;US)

XENON
Anharmonic damping in rare-gas multilayers, 15:2888 (J;US)
Experimental study of atomic structure in strong electromagnetic fields, 15:3916 (J;US)

XENON CHLORIDES
Ultrahigh brightness XeCl laser system, 15:3170 (BA;US)

XENON FLUORIDES
Dissociation and vibrational relaxation of XeF by various collision partners, 15:3146 (R;US)

XENON IONS
Development of a laser ion source for xenon, 15:3295 (RA;DE;In German)
Direct and resonance contributions to electron-impact excitation of n=2 to n=3 transitions in neonlike ions, 15:3907 (J;US)

XYLENES
Upgrading of light Fischer-Tropsch products: Quarterly report No. 6, January 1, 1988–March 31, 1988, 15:2264 (R;US)

Y

Y*RESONANCES
See BARYONS

YANG-MILLS THEORY
Global gauge anomalies for theories with the Green-Schwarz local-anomaly-cancellation mechanism, 15:4055 (J;US)
Towards a 'pointless' generalisation of Yang-Mills theory, 15:4046 (R;GB)
Universe as a topological defect in a higher-dimensional Einstein-Yang-Mills theory, 15:3827 (R;JP)
Vortex-like and string-like solutions for the 2+1 dimensional SU(2) Yang-Mills theory with the Chern-Simons term, 15:4037 (R;XA)

YOLK
See EGGS

YTTERBIUM 153
The study of exotic N $\simeq$ 82 nuclei using the Daresbury recoil mass separator, 15:4101 (R;US)

YTTERBIUM ISOTOPES
See also YTTERBIUM 153
Measurement of g-factors in Yb isotopes, 15:4103 (RA;DE)

YTTRIUM
First-principles total-energy calculations on Y and α-$YH_{0.5}$, 15:2889 (J;US)
Study for the determination of samarium, europium,terbium, dysprosium and yttrium in gadolinium oxide matrix by means of atomic absorption spectrophotometry using a graphite furnace, 15:3058 (R;BR;In Portuguese)

YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM COMPOUNDS

YTTRIUM COMPOUNDS
See also YTTRIUM HYDRIDES
YTTRIUM OXIDES
Electron-positron momentum distribution measurements of high-T superconductors and related systems, 15:4258 (R;US)
Electronic materials high-T_c superconductivity polymers and composites structural materials surface science and catalysts industry participation: Annual report, 1988, 15:2923 (R;US)
Fermi surfaces by positron annihilation in $YBa_2Cu_3O_x$, 15:4255 (R;US)
Processing and fabrication of high-temperature oxide superconductors. Annual report, 1 August 1988-30 June 1989, 15:2897 (R;US)
The possible occurrence of multi-phase behavior in the high T_c superconductor $YBa_2Cu_3O_x$, 15:4249 (R;US)

YTTRIUM HYDRIDES
First-principles total-energy calculations on Y and α-$YH_{0.5}$, 15:2889 (J;US)

YTTRIUM OXIDES
^{17}O nuclear-magnetic-resonance spectroscopic study of high-T_c superconductors, 15:2957 (J;US)
Anisotropy of oxygen tracer diffusion in $YBa_2Cu_3O_{7-\delta}$ single crystals, 15:2914 (R;US)
Creep of chromia and yttria-doped chromia, 15:2902 (R;US)
Dissipation measurement in high T_c superconductors with electromagnetic probes, 15:2916 (R;US)
Effect of heat treatment time and temperature of the properties of $YBa_2Cu_3O_{7-x}$, 15:2945 (J;US)
Ion implantation of sputtered Y-Ba-Cu-O films, 15:2951 (J;US)
Linear electron-hole-electron pair model of high-temperature superconductivity in $La_{2-x}M_xCuO_4$ and $YBa_2Cu_3O_{7-y}$: 2, Dependence of the superconducting transition temperatures on pressure and on hole concentration, 15:4251 (R;US)
Local atomic displacements in high T_c oxides studied by pulsed neutron scattering, 15:2905 (R;US)
Mean-field theory of oxygen-vacancy ordering in $YBa_2Cu_3O_{7-\delta}$, 15:2961 (J;US)
Microstructures of Y123 films on $SrTiO_3$, $LaGaO_3$ and $LaAlO_3$, 15:2922 (R;US)
States of partial order in $YBa_2Cu_3O_z$, 15:2948 (J;US)
[Dynamics of magnetic fluctuations in high-T_c materials]: Foreign trip report, October 5–October 15, 1989, 15:4257 (R;US)

YUCCA MOUNTAIN
Evaluation of the post-emplacement environment of high level radioactive waste packages at Yucca Mountain, Nevada (Yucca Mountain project), 15:2239 (R;US)

Preliminary integrated calculation of radionuclide cation and anion transport at Yucca Mountain using a geochemical model, 15:2204 (R;US)

Z

Z CODES
Abstract for Zeiss editor presentation, 15:4524 (R;US)
Z NEUTRAL BOSONS
B physics at the Z^0 pole, 15:3966 (R;US)
Flavor-changing decays of the Z^0 and leptoquarks, 15:4015 (J;US)
Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZEA MAYS
See MAIZE
ZEOLITES
Electron microscopy study of morphology and composition of a ferrisilicate catalyst, 15:2989 (BA;US)
High resolution electron microscopic study of the growth of denser phases on zeolite Y and zeolite L, 15:2935 (BA;US)
Investigation of the formation and chemical aspects of coke deposits occurring on acid, monofunctional zeolite catalysts through typical reactions with hydrocarbons, 15:2270 (R;DE;In German)
Key chemicals from synthesis gas - development of novel zeolites as catalysts for conversion of methanol into hydrocarbons, 15:2028 (R;DE;In German)
ZINC
Attempted use of zinc in vivo to protect against nitrogen mustard toxicity in tumor-free and in L1210 leukemia-bearing $B6D2F_1$ mice, 15:3764 (R;US)
Biological materials residues from pressurized decomposition with nitric acid. Identification of reaction products and their impact on inverse voltammetric element analysis, 15:3062 (R;DE;In German)
Comment on "Self-similarity of diffusion-limited aggregates and electrodeposition clusters", 15:2880 (J;US)
Health-hazard evaluation report HETA-88-244-1951, Orrville Bronze and Aluminum Company, Orrville, Ohio, 15:3457 (R;US)
Nucleation and propagation of cracks at grain boundaries in zinc bicrystals, 15:2875 (J;US)
The secondary slurry-zinc/air battery: Final report, 15:2579 (R;US)
Zinc electrode and rechargeable zinc-air battery, 15:2589 (P;US)
ZINC 64 TARGET
Direct decay of giant resonances in medium-heavy nuclei, 15:4089 (RA;DE;In German)
ZINC ARSENIDES
Antiphase domain boundary formation in single-crystal chalcopyrite-structure $ZnGeAs_2$ grown on GaAs, 15:3013 (J;US)
ZINC CHLORIDES
Health-hazard evaluation report HETA 87-109-1950, North Riverside Fire Department, North Riverside, Illinois, 15:3458 (R;US)
ZINC OXIDES
Pore structure and reactivity changes in hot coal gas desulfurization sorbents: Technical progress report, July–September 1989, 15:2067 (R;US)
ZINC TELLURIDES
Lattice relaxation of *DX*-like donors in $Zn_xCd_{1-x}Te$, 15:3029 (J;US)
ZINC-AIR BATTERIES
The secondary slurry-zinc/air battery: Final report, 15:2579 (R;US)
Zinc electrode and rechargeable zinc-air battery, 15:2589 (P;US)
ZINC-BROMINE BATTERIES
Analysis of life cycle costs for electric vans with advanced battery systems, 15:2583 (B;US)
Development of advanced battery systems for vehicle applications, 15:2587 (B;US)
ZIRCONIUM 90 REACTIONS
Heavy ion induced transfer reactions with ^{232}Th by the Crystal Ball, 15:4115 (RA;DE;In German)
Investigation of many-phonon excitations in ^{232}Th, 15:4114 (RA;DE;In German)
ZIRCONIUM 90 TARGET
Quasielastic scattering of polarized ^{23}Na, 15:4097 (RA;DE;In German)
ZIRCONIUM 95
Zirconium nitrate preparation and analytical method of zirconium determination in extraction experiments. pt.1, 15:3043 (R;BR;In Portuguese)
ZIRCONIUM ALLOYS
Elastic instability during amorphization of intermetallic compounds by charged-particle beams, 15:2861 (BA;US)
Exploratory study of niobium, titanium, zirconium, and tantalum aluminides. Final report, 1 March 1988-31 May 1989, 15:2807 (R;US)
Ion-beam mixing and amorphization in Au/Zr bilayers, 15:2859 (BA;US)
Lattice dynamics of quenched diffuse ω phase in $Zr_{0.8}Nb_{0.2}$, 15:2884 (J;US)
Spin dynamics of amorphous $Fe_{90-x}Ni_xZr_{10}$, 15:2819 (R;US)
ZIRCONIUM OXIDES
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: Final report for Task 2, 15:2262 (R;US)
High-temperature corrosion of heat exchanger materials, 15:2911 (R;US)
Measurements of complex permittivity of microwave substrates in the 20 to 300 K temperature range from 26.5 to 40.0 GHz, 15:2928 (R;US)
Solid oxide fuel cells electrodes based on IN_2O_3-$PRrO_{1.83}$-ZrO_2, 15:2659 (R;US)
Synthesis of oxide powders by plasma vaporization of solutions, 15:2938 (BA;US)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Contract No.	Abstract No.	Report No.
AC01-85FE60850	**General Sciences Corp., Laurel, MD (USA)**

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Report Number	*Abstract Number*	*Source of Availability*	*GPO Dep.*	*Order Number*	*Distribution Category*

Codes Used on Index Lines

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

Document Types

J	Journal article
TJ	Translation of a journal article
R	Report

ORDER FORM

DOE and DOE contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ ZIP _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ ZIP _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no. _____

☐ Check/Money Order enclosed for $ _____

☐ Charge to my ☐ American Express ☐ VISA ☐ MasterCard

_____ _____
Account Number Card expiration date

☐ Ship & Bill (see below for restrictions)

Employer identification number (9 digits) __ __ - _ _ _ _ _ _ _

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

IV. SELECTIONS

_____ _____

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
